St. Croix Courier - Feb. 3, 1955 Saint John Group Find Rich Copper Ore at Musquash. - A group of Saint John area businessmen, having observed the success of mining projects originating outside of the province, some time ago decided to undertake mineral exploration and development in New Brunswick. They subscribed a substantial sum of money, taking the original financial risk, and went in search of a promising mineral showing. In this they were particularly fortunate, having secured a copper discovery in Saint John and Kings Counties, in the Musquash area. Holdings total 146 mining claims covering 5,640 acres. The property is in an area not previously explored or developed as to its mineral potentialities. A copper discovery has been made and random samples of ore, obtained by surface stripping and blasting have returned copper values from 1.24% to 14.85%, with samples showing 2.5% lead and small values in gold and silver. The company, called Loch Alva Mines Limited, has secured the services of an experienced and fully qualified mining engineer in the person of C.T. Bischoff, who has had a long experience in copper development, notably with Noranda Mines Limited which has been highly successful in copper operations in the Rouyn and Gaspe areas of Quebec. Mr. Bischoff has carried out a geophysical survey of the property and reports a number of promising anomalies, not only in the area of the original discovery, but in other sections of the holdings. This survey is now being interpreted and mapped, to guide future stripping and diamond drilling operations. The originators of the company are well known Saint John businessmen, including Geo. A. Cameron, druggist, with numerous business interests in the area; R.B. Emerson, in the department store business; K.P. Lawton, of the legal firm of Lawton and Riley; H.C. Parker, lumberman; R.F. Strebb, distributor. The company is capitalized at 5,000,000 shares of $1 par, with approximately 1,400,000 shares issued for properties and expenses to date."

URN: 0550 / IDX_Names: Loch Alva;

St. Croix Courier - Feb. 10, 1955 and Kings County Record - Feb. 10, 1955 ADVERTISEMENT:Loch Alva Mines Limited (No Personal Liability) New Copper Development in New Brunswick. In a new copper area, not previously explored, located at Loch Alva, near Musquash, a short distance south from Saint John, N.B., a comprehensive program of exploration and development has been started and partially completed. The following features of the operation render it somewhat unique: - The company was formed and work initiated by a group of well known business professional and professional men from the Saint John, N.B. area. - All original financing, covering acquisition of the properties, engineering, trenching, sampling,and geophysical exploration, was done privately by this group. - Work has included geophysical and geochemical surveys, now nearing completion. - Operations are under the immediate direction of a qualified mining engineer, Carl T. Bischoff, P. Eng., who has had extensive copper mining experience at Noranda, Quebec, and elsewhere and under the general supervision of local directors. - Good copper values have been secured in surface sampling. - A light diamond drill has been bought and is now on the property. This will be used to sample to shallow depths the most promising of the anomalies disclosed in the geophysical survey and the area of actual surface showings. - The company hopes to interest New Brunswick citizens in this venture, which has to date shown promising results. Sampling Results Copper samples, assayed by J.T. Donald & Co. of Montreal, have returned the following results: No.1 - 1.83% copper No.4 - 4.56% copper No.2 - 1.24% copper No.5 - 0.88% copper No.3 - 6.72% copper No.6 - 0.47% copper No.7 - 14.85% copper The above are character samples, indicating the presence of good copper values at various locations on the property. In view of the present high assays obtained and the current increase in copper prices, this speculative venture offers interesting potentialities. Engineers Report Excerpts from the report of Carl T. Bischoff, P.Eng., dated January 7th, 1955. 'During the week of January 8th I re-examined and took grab samples of some of the presently known occurrences of copper on the Loch Alva property in the Musquash area near Saint John, N.B. 'You will note that the known mineralized zones and the geophysical anomalies trend roughly northeast. It is also apparent that while the showings provide some geophysical evidence there are stronger indications of sulphide mineralization a few hundred feet away. Strong shearing has been noted trending parallel to the showings and anomalies, which may have provided at some points adequate fracturing for the emplacement of large bodies of ore. Results to date are definitely encouraging and upon completion of the present survey we should have sufficient data for planning an intelligent program of diamond drilling.' Company Structure and Personnel. The company is capitalized at 5,000,000 shares of $1 par, of which 1,400,000 shares have been issued. Of the issued shares 1,150,000 shares are pooled. Officers and Directors of the Company are - Rupert B. Emmerson President & Treasurer Rothesay, N.B. Ralph F. Streb Vice president Lancaster, N.B. Geo. A. Cameron Man.-director Saint John, N.B. Hardy C. Parker Chairman of Board Welsford, N.B. Kenneth P. Lawton Secretary & director Rothesay, N.B. The directors are all business and professional men living in the Saint John, N.B. area. -- Limited Share Offering The Company is Making a Limited Share Offering Of 100,000 shares at 60 cents per share and reserves the right to allocate a lesser amount in the event of oversubscription, of which there is already some evidence. -- Directors hope to enlist the support and interest of New Brunswick people and to this end append the two following coupons, which may be filled out and sent in to the company address below: -- Loch Alva Mines Limited 123 Princess St., Saint John, N.B. Enclosed find my cheque for $... to cover ... shares of Loch Alva Mines Limited at 60 cents per share and I agree to accept a lesser amount in the event of oversubscriptions. -- Loch Alva Mines Limited 123 Princess St., Saint John, N.B. I am interested in receiving further information on your company's operations and plans, without obligation. NAME .... ADDRESS ...."

URN: 0563 / IDX_Names: Lepreau River;

St. Croix Courier - Jul. 13, 1899 Lepreau. - Mr. Stafford has a fine piece of gold which was found on the Lepreau river and is about as fine a specimen as has been seen in the province."

URN: 0577 / 0579 / IDX_Names: Beaver Harbor; Woodlands Cove;

S.J. Daily News - May 26, 1870 IMPORTANT MINING DISTRICT.- About forty miles down the Bay shore is a picturesque indentation of the coast known as Beaver Harbour, at one time the most flourishing town in the Province, for here settled a large number of families of Friends from Pennsylvania, who built up a town and, taking up lands beyond, entered upon the business of trading and farming. They exhibited their love and devotion to their denomination leader by giving his name to the whole section of country which has ever since been known as Pennfield. The town rapidly extended around the shores of the harbour, and what with the advantages afforded for fishing, trading, shipbuilding and farming, they soon became a happy and prosperous people. They lived in two and three story houses, which were provided with all the comforts and many of the luxuries of the times. Suddenly, however, the place was devastated by fire, which sweeping down through the woods from the high lands, consumed the whole town, and the people, with few exceptions, becoming disheartened removed to other localities. Since that time Beaver Harbour has remained a small fishing village, shut off from the rest of the world by its position, with the waves quietly lapping its gravelly beach, which extends to the very doors of the houses scattered around its bend. At the South western end of the Harbour rises a bold rocky promontory, known as Wright's Head, into the sides of which the waves have washed deep fissures and gullies, and from whose top a view may be obtained of the Western Isles, dotting the Bay in front, the noble L'Etang, - with a harbour sufficient to permit the whole British navy to deploy upon its calm bosom, and one of the finest on the Atlantic coast - to the right, the many indentations of coast to the left, and the undulating country stretching away over Pennfield to St. George at the back. It is at this place that new and valuable deposits of a metal, composed of silver and lead, have been lately found, and appearances indicate that with the proper appliances a highly profitable return will be obtained from its working. The shore at the Eastern end of the Harbour islower and more broken in its character, and at this point copper has been found in such quantities as bid fair to prove of extreme value. A short distance from this toward the North, there is a stretch of country said to contain large deposits of iron, and beyond this again the formationleads geologists to the conclusion that coal in paying quantities may be obtained, indeed coal was once quarried in a rough manner from the gullies in the rocks, and the place is still known as Simpson's coalpit. Attention is just now being strongly turned to this locality, and if the experiments and explorations now going on prove successful, it is more than probable that Beaver Harbour will more than resume its first dimensions, with a large mining and manufacturing population, in addition to its already thrifty and happy families of fisherman."

URN: 0582 / IDX_Names: Crow Cove;
Sep. 1871 - Copied from: St. Croix Courier - Sep. 12, 1901 30 Years Ago. - We are informed on reliable authority, that copper ore has been found in two places in the parish of Pennfield. Near Crow Harbor is a lode twenty five feet wide. Some very rich specimens have been taken from the surface. Another vein at Beaver Harbor is four feet in width and contains copper mixed with lead and perhaps silver. Both are believed to be very valuable."

URN: 0582 / 0577 / IDX_Names: Crow Cove; Beaver Harbor;
S.J. Daily News - Sep. 16, 1871 and Union Advocate - Sep. 28, 1871 More copper in Charlotte County. - Copper ore has been found in two places in the parish of Pennfield. Near Crow Harbor is a lode twenty-five feet wide. Some very rich specimens have been taken from the surface. Another vein at Beaver Harbor is four feet in width, and contains copper mixed with lead and perhaps silver. Both deposits are believed to be very valuable."

URN: 0582 / 0577 / 2059 / IDX_Names: Crow Cove; Beaver Harbor; Digdeguash Copper;
St. Croix Courier - Sep. 14, 1871 and Carleton Sentenil - Sep. 23, 1871 Valuable mineral deposits in Charlotte County.-It was our pleasure some time since to record valuable mineral discoveries in Digdeguash. We are now informed on reliable authority that copper ore has been found in two places in the Parish of Pennfield. Near Crow Harbor is a lode twenty-five feet wide. Some very rich specimens have been taken from the surface. Another vein at Beaver Harbor is four feet in width, and contains copper mixed with lead and perhaps silver. Both deposits are believed to be very valuable."

URN: 0586 / IDX_Names: Magaguadavic River / Silver Island;
St. Croix Courier - Apr. 26, 1877 Mineral Discovery.- A mineral deposit, supposed to be silver and lead, has been discovered on a small island in the Magaguadavic, near the Basin, the property of Mr. I. Bradbury. The seam is 9 inches in width, and it has been traced to the main land in the vicinity of McKenzie's Mills, where it is said to be, in some places as much as nine feet wide. Samples have been sent to Boston for analysis."

URN: 0586 / IDX_Names: Magaguadavic River / Silver Island;
Morning Freeman - Sep. 14, 1877 Charlotte Co.- Last week ten miners came from the United States to operate on the Bradbury silver mine, situated on an island in the Magaguadavic about a mile below St. George. A specimen of the ore can be seen at the store of Isaac McElroy, Esq."

Daily Telegraph - Sep. 17, 1877 Silver Island, St. George, N.B. - At St. George, that place of marvels, a discovery which may be of much importance, has lately been made. A short distance below the village there is an island in the river in which there was found a vein said to carry copper, lead and silver; of the latter metal a notable amount sufficient to induce some intelligent citizens of the United States to secure it. They have been at work for some time and have got out probably two tons of ore, each barrel of which is said to be worth $500 for the silver which it contains. A short time however will demonstrate the fact as to the paying qualities of the lode. The people of St. George are getting excited over the discovery, and the neighbouring country is being thoroughly searched for the precious metal."

Daily Telegraph - Sep. 21, 1877 From St. George, Silver Island. - Mining excitement here is running high ever since the purchase of Silver Island. This Island is situated about a mile below the town of Saint George, contains perhaps half an acre, is composed of trap and has running across it a mineral vein carrying lead, copper and a certain percentage of silver, how much is known only to the buyer and seller since no provincial assays have been made to test its richness in the nobler metal. The vein has every appearance of being a true fissure vein with distinctly marked walls. The lode or vein stone is from seven inches to a foot in width, indeed in some places it is said to be wider. Isaac Bradbury, Esq., has for a length of time owned this island, which it is said he bought for the purpose of erecting a steam saw mill on it. It had been known for a long time that there was a small vein of metal crossing the island, and at the time of the silver lead discoveries in Maine, Mr. Bradbury came to Saint George and carried away forty pounds of the ore, which he afterwards said was rich in silver. It is genuinely understood here that Mr. Bradbury has sold the island for $5,000, and that he has received his pay, a few weeks or months will, however, determine the richness of this deposit. Near St. George there are many veins of metal, sometimes consisting of copper and lead, sometimes of lead alone. In an assay made of ore from Pennfield by the assayer at the School of Mines, Columbia College, traces of gold were found. The principal vein stones in this section of Charlotte are either of quartz, barytes, fluor or lime spar. It is not at all improbable that at some no very distant day this section of Charlotte may be prolific in the production of lead, silver and copper, especially of the latter metal which is found in various places extending east from Letete for a distance of ten or fifteen miles, traversing rocks of various character. Any one doubting the existence of these metals here can easily satisfy himself by making a visit, when he will find plenty to exhibit specimens of ore to him or to show him mineral localities."

Morning Freeman - Sep. 25, 1877 The Magaguadavic. - Stunning stories are told of the richness of the ore discovered lately on the Island below St. George. Forty pounds of the ore yielded, it is said, eleven pounds of lead, four pounds of silver and a nugget of gold. As yet only a few men are at work at this wonderful mine."

Morning Freeman - Apr. 13, 1878 The silver mine at St. George, and appurtenances, were seized by the Sheriff, on Wednesday, 10th inst., at the instance of some parties holding a claim against the Edgemoggin Mining Company, of Sedgewick, Me. During the night a quantity of ore, barreled up, was tumbled into the shaft, and the buildings - a blacksmith shop and tool house - were set fire to and burned. There are several hundred dollars due the men who have been working at the mine during the winter, and they are, in consequence of the situation of affairs, very anxious as to the result. As the mine is valuable, it is to be hoped matters will be satisfactorily adjusted at an early day."

URN: 0586 / IDX_Names: Magaguadavic River / Silver Island;

St. Croix Courier - Aug. 15, 1878 The Mineral Wealth of Charlotte County.- To the Editor of the St. Croix Courier:- Dear Sir:- As there appears to be writers in favor of every branch of industry that our country claims, I feel anxious that something may appear in the columns of your papers relative to the probable mineral wealth of Charlotte County, and particularly the southern portion known as the parishes of West Isles, St. George, and along the shores of Pennfield. I do not notice this section of the country with any partiality, but particularly because I have explored it thoroughly with a view to its mineral wealth, and feel prepared to assert, here or elsewhere, that it contains all that is necessary to induce capitalists to invest with an aim to success. The section of County I have already indicated contains mineral veins of a most promising magnitude, and are traceable miles in the course, producing silver, lead, copper, bismuth and other valuable sulphurets at various points of their outcrops. I have had stones or quartz taken from the backs of some of the veins that yielded by actual assay from fifteen to twenty ounces of pure silver per ton, and from thirty to forty dollars worth of lead and copper, remember, this is only the stone from the surface and not the ore as when concentrated deeper in the veins, which is invariably of greater richness. Is this not sufficient evidence that we may have valuable mines if the veins were developed to a moderate depth. I am prepared to avert having seen the ores, the amount or remains of soluble sulphate and other necessary mineral matter, these veins contain; that they must eventually become of great value to the country. All that is requisite is a small capital and judicious management with experience obtained in this section of the country, then we may only await the early prosperous results, and the first to hold stock in the properties will reap the reward. It is true there has been some capital expended on the Southern or the copper bearing range with a view to develop the veins, and promising deposits of rich copper ores found; but that range being somewhat broken by cross fractures and thereby greatly disturbed, has led the managers astray; and I might add, that the greater part of some of the expenditures was paid out for yachting the managers about, doing unnecessary work and erecting unnecessary buildings before the veins were properly dealt with, thereby discouraging the parties who produced the funds. However, their works will only serve as a guide to a strict observer in future attempts at mining in this section of the country. The veins I have already pointed out that produced the silver, lead and copper, hold their positions about two miles north of the southern or copper range, and are firmly marked cutting their way through the surface formations with little or no disturbance, and showing every hopeful indication. It is also in this range the Little island on the Magaguadavic River, that produced lead very rich in silver is located. And I firmly state, on the grounds of my knowledge of prospecting for minerals and mining, that we have in the southern section of the Parish of St. George mineral veins worthy of capital investments and a strict investigation. I have no doubt, many of the readers of your paper are as well aware as myself, that there are almost innumerable harbors along the coast I refer to, with the best possible shipping facilities. Now this mining district I refer to is right at home with us, and is not like some painted description of a Stock Company away in the Black hills or in the western country, but is so near to us that most any one can visit it for themselves and be their own witness. And if any feel anxious to invest in mining business, do not buy stock on some flowery report of a mine at a great distance, but let us try if we have any capital to invest, to develop the probable wealth of our own country and thereby be the means of

Moncton Daily Times - Feb. 1, 1878 Silver Ore. - There is a fine specimen of silver ore of remarkable richness in Mr. Geo. Hutchinson's window, at the store of Mr. C. Murray, King Street. This ore was brought up from St. George by Mr. G.H. Clark, Esq., of Carleton, and sent to the Globe. It was obtained at the mine, which is on a small island in the Magaguadavic River, just below the village. Active operations are being there carried on by an American company, under the management of Capt. Bullock, and a considerable quantity of the ore has been taken out. Its discovery was a little singular. Mr. Bullock was master of a steam tug employed on the river, and one day he found it necessary to go ashore to fasten a hawser. While there the outcrop was found, which led to the operations. A shaft over thirty feet deep has been sunk, and the vein which, on the surface, was six inches wide has opened to two feet. The ore comes up in quartz mixed with lead, and all the experts who have examined it say that it is remarkably rich in the pure silver. - St. John Globe."

Morning Freeman - Feb. 2, 1878 The silver mine at St. George is being worked, and has developed a remarkably rich vein. From present appearances the deposit is a good one, and many persons, at first incredulous about the existence of silver there at all, have become thoroughly convinced of the great value of the mine. An old Nevada man told the writer, that a lode as good as that would find ready sale in the West, and would be worked on a larger scale. He said there was no doubt

Morning Freeman - Feb. 7, 1878 Charlotte Co. - Work in the St. George Silver Mine is temporarily suspended. The company operating the mine are Americans, and some home trouble caused the suspension. This is to be regretted, as the lode never was so promising as at present, and it is only a question of time as to its development."

Eastport Sentinel - Jul. 23, 1890 Pleasure and Speculation at St. George. - Veryfine specimens of copper ore have recently been shown here, found upon the property of A.J. Seely, St. George,N.B., which from an assay by Professor Burwash, ore from same lode is said to have yielded 32 per cent. The property is situated at St. George, New Brunswick; has a frontage on the river of about a mile from the head of the Basin to the vicinity of Silver Island, and over a mile to the southeast, in all eight hundred acres. There has been great expectations, minerally speaking, concerning this property, and several applications have been made to procure the option of purchase. No blasting has ever as yet been done, but the surface indications of copper, silver, and it is said also of gold, are flattering. There is a fine trouting stream running through the property, with a fall of from 25 to 30 feet at the basin where the lower dam is erected, and a good chance for a reservoir dam that would make it a first class water power for crushing ore, or a manufactory of any description. A vessel of 200 tons can lay at the mill and load or discharge at pleasure. This would seem to be a chance to combine pleasure with a speculation which to say the least, is promising. There are the days in which fish and game preserves of themselves are an attraction. Mr. Seely will put this property, at a reasonable figure, into a prospecting company of sufficient capital, and will take stock for the quarter part of purchase money."

URN: 0590 / IDX_Names: Lepreau Magnetite;

Daily Telegraph - Mar. 21, 1872 Our Iron Ores. - We referred, the other day, to the feasibility of sending our iron ores to England, seeing that England is now getting such ores from Spain. Yesterday Mr. Jed Downey, of Portland, showed us specimens of some excellent iron ore, which may be had in abundance at a point on Western Extension. It crops up in great abundance. It would be a service if some of our merchants would find what prices such ores would bring in England. Quantities could often be sent in ballast or at low rates of freight."

Daily Telegraph - Mar. 22, 1872 Our Iron Ores; Why Not Manufacture Them? - Saint John, N.B., March 31, 1872. To the Editor of the Telegraph and Journal. 11 Sir: Noticing in an article in your paper on the desirability of shipping our iron ores to Great Britain in competition with Spain and other countries, the thought occurred to me, how much better it would be to have them smelted in the Province. I am aware that efforts of this kind have been more or less failures, but that is no reason why if pursued on a different plan it should not be a success. I know that the raw materials can be cheaply produced, and if the works were established near the city, where limestone is abundant, and of easy access both by rail and water, so that coal and fireclay from Grand Lake, and coal from Nova Scotia could be procured easily and cheaply, I do not see anything to prevent its being a lucrative investment. Hoping these few remarks may lead to a full consideration of such an important enterprise is the wish of a Friend To Progress."

May 1898 - Copied from: St. Croix Courier - May 1, 1958 60 Years Ago. - Lepreau. - John Wright has taken out a mining license to search for minerals from the falls at the mouth of the Lepreau River, running about two and a half miles. He intends beginning to work at once. His iron mine, he is assured by those who have tested it, will prove valuable. There is plenty of it and of good quality."

St. Croix Courier - Dec. 14, 1899 The Wright mine has closed down for the winter months, but expects to begin work in the early spring."

St. Croix Courier - Nov. 16, 1899 Lepreau. - One of our professional men has located an iron mine, but in an entirely different direction from the Wright mine."

St. Croix Courier - Oct. 12, 1899 Lepreau. - Quite a crew of men are employed at the Wright mine, with a prospect of steady work. Some buildings have been erected, and more men are expected this week. A new vein has been discovered that promises well."

St. Croix Courier - Oct. 26, 1899 Lepreau. - The Wright mine seems to be panning out well if one can judge by the stir and work going on. A number of men are employed and things are beginning to look lively in that direction."

St. Andrews Beacon - Sep. 7, 1899 L.B. Knight has secured a license to prospect for minerals on 30 areas of the Wright property, situated on the northern side of St. Andrews road, to the west of Lepreaux River."

St. Croix Courier - Sep. 28, 1899 John Wright has sold his mine to an English company for $7000. He seems to be satisfied with the price paid for it. The company intend working it at once."

St. Croix Courier - Jun. 26, 1902 Lepreau. - There is a prospect of the Wright mine being worked soon and also the mine at Pocologan. The company is putting up some buildings for the workmen."

St. Croix Courier - Dec. 8, 1904 Lepreau. - At the iron area work is not progressing since the election. The diamond drill has been shifted to a new spot and is now boring at the angle of sixty-six degrees, but beyond this no other work is going on at present."

St. Croix Courier - Dec. 15, 1904 Lepreau. - Work on the diamond drill at the iron mines is progressing favorably, both a day and a night shift being on. It is not likely any further work sinking the shaft at 33, will be done at present, or at least until after the company is incorporated."

St. Croix Courier - Jul. 14, 1904 Lepreau. - The operations of the diamond drill at the iron areas are progressing favorably and it is reasonably expected that, before long, good indications of ore will be struck."

URN: 0590 / IDX_Names: Lepreau Magnetite;

St. Croix Courier - Jun. 30, 1904 Lepreau. - The government diamond drill which has been working on the iron areas under lease to C.V. Wetmore, has been obliged to suspend operations owing to the set of diamonds having worn out. It is to be hoped that drilling will be resumed in the near future, as it is a pity that the development of an industry that promises to be of such benefit to the country, should be retarded by the indifference of the present government to its proper obligations."

St. Andrews Beacon - Nov. 24, 1904 John S. McLennan and Chas. V. Wetmore, Sydney; L.B. Knight, St. John; Chas. W. Young, St. Stephen, and A.D. Wetmore, Truro, are applying for incorporation as 'The New Brunswick Iron Co., Ltd.', with a capital of $1,000,000 in $100 shares. Valuable iron deposits, it is claimed, have been found in the vicinity of Lepreaux, and this company is being organized to work them, - to erect works, run railways and steamers, etc. Boring operations have been carried on for some time to ascertain the extent of the iron deposits, and these are understood to show that there is an abundant supply. It is also understood that the ore is of a very superior quality, finer, the reports go, than any hitherto found in either Canada or the United States, and equal to the highest grades known anywhere. This, if thoroughly established, will make the discovery a particularly valuable one and may lead to the establishment of valuable industries. Recently an expert from the geological staff at Ottawa visited the property, and his reports are understood to have fully confirmed that of the company's engineers. It is also significant that a big steel manufacturer from Duluth, the greatest mining centre in America, recently inspected the property and made minute enquiries about the extent of the deposit, etc."

Evening Times - Oct. 3, 1904 Mining Official Arrives In Town. - Will Make a Study of New Brunswick Mineral Deposits for Dominion Government. - E. Nystrom, of the Department of Mines, arrived today from Ottawa and is registered at the Royal. At the request of a St. John syndicate, Mr.Nystrom will inspect an iron deposit in this section of the Province after which he will be in a position to give the public some further information on the subject. For the present he can only say that, if the property is as rich in ore as represented, it will mean a valuable addition to the discovered mineral wealth of New Brunswick. The Department of Mines is now preparing an exhaustive publication on the mineral resources of Canada."

St. Croix Courier - Oct. 6, 1904 Lepreau. - The sinking of the shaft at thirty three is progressing very favorably and there is every expectation that a good lead of pay ore will shortly be reached. Other work on these areas is progressing as usual."

St. Andrews Beacon - Oct. 27, 1904 Iron Near Lepreau. - A Sydney despatch to the Telegraph says that C.V. Wetmore, of that place, is developing an extensive deposit of iron ore at Lepreaux (N.B.), that the ore has been recently examined by Swedish experts and found to be of exceedingly good quality, resembling Swedish ore, which is very rich in magnetic properties, more than any other deposits on this side of the Atlantic. A Company, it is said, was organized some time ago and work of development is to be prosecuted vigorously."

St. Croix Courier - Sep. 8, 1904 Lepreau. - Operations at the iron mines are progressing. A steam drill has arrived and a shaft is being sunk. The government diamond drill is still working, with good prospects."

St. Croix Courier - Sep. 22, 1904 Lepreau. - Work at the iron mines is progressing favorably, a steam drill being at work on the western division of the area, sinking a shaft which is now down about fifteen feet. The government diamond drill is boring about two miles further east. A surveying party is engaged on this area and good results are being obtained."

St. Andrews Beacon - Aug. 3, 1905 Lepreaux Iron. - The prospects for the New Mine Are Good. - (St. John Sun). - The New Brunswick Iron Co., formed last winter to investigate and, if the test proved satisfactory, to operate the iron mines at Lepreaux, feel quite encouraged in the matter from the results of recent tests. The engineer employed by the company, Mr. Anderberg, who is a graduate of the Stockholm mining school, says that the ore is equal in quality to the highest grades of Swedish ore, the grade which is not exported, but kept for home uses. The ore found in the Lepreaux mine is said to have an average of from 63 to 67 per cent of iron, with a very small quantity of sulphur and a little phosphorus. The ground for which a right of search was procured has been partly surveyed at a considerable cost, and the remainder will be surveyed in the near future. The company are at present boring to test the ore. Six borings have been made already, the deepest being about a thousand feet. They are using for this purpose the government diamond drill. The nearest ore struck was about fifteen feet from the surface. Mr. Cameron, who lives at Lepreaux Station, claims the distinction of having been the first to discover that the ore was of value. He says he called the attention of C.V. Wetmore, of Sydney, to this fact in May, 1903. The first ore, he states, was found on the property of John Wright, about a mile and a half west of Lepreaux Station. Mr. Wetmore shortly after obtained a right of search for two square miles of territory. Two engineers were sent by him from Sydney during the winter to look the property over and examine the ore. In December of the following year one of the engineers came back with instructions to look further into the matter. This engineer, Mr. Anderberg, has remained there ever since. Last winter Mr. Wetmore formed the New Brunswick Iron Co., of which he is president, to take charge of the work. These iron fields are well situated to carry on extensive mining operations should they prove as successful as the proprietors hope for. The natural advantages are splendid. Within 2« miles is a good harbor where an ore dock can be established. As the iron strip crosses the Lepreaux river just below the falls, about two miles from the station - these waterfalls could be utilized to supply the power for operating the mines."

St. Croix Courier - Aug. 10, 1905 Lepreau. - Work is progressing at the iron areas, that at the New Brunswick Iron Co.'s being pushed vigorously, while good indications of a large deposit have been found on the ground under license to Jones

URN: 0590 / IDX_Names: Lepreau Magnetite;

St. Croix Courier - Dec. 21, 1905 Promising Mineral Beds. - The Iron Deposits at Lepreau to be Developed by an Enterprising Company. - Present Indications Warrant Great Hopes. - (Sun). - A meeting of the directors of the New Brunswick Iron Co. was held at the Dufferin hotel Friday evening. James F. Robertson, of St. John, and R.N. Hickson, of Montreal, were elected to the board of directors. The other directors are C.V. Wetmore, J.S. McLarren, A.O. Wetmore and C.W. Young. Mr. Wetmore is president and Mr. McLarren vice president. J.S. McLarren, C.W. Young and R.N. Hickson were appointed an executive committee to take charge of the management of the company's affairs, and will give their personal attention to the development of the property. Mr. McLarren, who was formerly a director of the Iron and Steel Co., will act as chairman of the executive committee. Millions Estimated. - The reports of the engineers who have been for some months exploring the company's property at Lepreaux, were most encouraging. They have found the existence of magnetic iron ore of a very high quality, and estimate that the property contains at least 18,000,000 tons of this ore. They have drilled six holes, and will continue at work until the main body is located. If the hopes of the directors and the expectations of the engineers are realized, shafts will be sunk and a complete equipment of apparatus for mining and hauling the ore will be immediately installed. Blast furnaces and rolling mills will be erected similar to those at Sydney and the Soo. The directors feel confident that they have a most valuable property, and intend to develop it to the limit, and expect it to become one of the greatest industries in the country."

St. Andrews Beacon - Jan. 19, 1905 Lepreaux Iron Co. - Fredericton, Jan. 11. - Letters patent have been issued incorporating John S. McLennan, of Sydney; Charles W. Young, of St. Stephen; L.B. Knight, of St. John; A.D. Wetmore, of Truro; and Charles V. Wetmore, of Sydney, as the New Brunswick Iron Company, Limited, with a capital of $1,000,000. Organization of the Company has been completed. The following directors were elected: John S. McLennan, Sydney; C.W. Young, St. Stephen; A.D. Wetmore, Truro: L.B. Knight, St. John: C.V. Wetmore, Sydney. The directors met subsequently and elected the following officers: C.V. Wetmore, president; John McLennan, vice president; Peter Clinch, secretary. The property of the company is situated at Lepreaux. For over a year a small staff of men have been at work and the results of their investigations have been very satisfactory to the gentlemen who compose the company. The number of men employed will be gradually increased and the work of mining the ore on a large scale will be commenced just as soon as possible. It will be necessary to erect docks at Lepreaux, which offers excellent shipping facilities, and work in this direction will be immediately proceeded with. The ore found at Lepreaux is classified as magnetite, or magnetic ore, and the company believe that the supply is practically unlimited. Operations will be conducted on a large scale and it is expected that the Sydney works will prove a large customer. The ore will also be shipped in quantities to the United States, Germany and England. The capital stock of the company is $1,000,000 and the fact that no stock is being offered for sale indicates the faith of the promoters in the soundness of the enterprise."

St. Andrews Beacon - Jun. 15, 1905 Mr. Chas. V. Wetmore told a St. John reporter that satisfactory progress was being made at the iron ore mines at Lepreaux. The diamond drill is being used to bore, and holes to the depth of 500 and 600 feet have been made. As soon as the operations are completed a shaft will be sunk and the ore removed."

St. Andrews Beacon - May 18, 1905 Lepreaux Iron Mines. - It is understood that the gentlemen who compose the New Brunswick Iron Co., whose properties are situated at Lepreaux, are highly delighted with the reports of the value of the deposits which have been made by their experts. The promoters of the enterprise believe they have at Lepreaux property of great value. The ore, which is of the magnetic variety, is said to be present in almost unlimited quantities, according to all indications. There is talk even at the early date of rolling mills being established there similar to the Sydney works and a great and flourishing industry may in time be developed at Lepreaux. The company has had a gang of men at work all winter prospecting under the direction of A. Anderberg, and the number will be increased considerably in the near future, it is understood, and the extensive development of the properties proceeded with. - Sun."

St. Croix Courier - Nov. 23, 1905 Iron in Charlotte. - A Pennsylvania Expert to Sink a Deep Shaft at the Lepreaux Mines. - Developments at the iron areas down at Lepreaux continue to give very encouraging results, and an expert from Pennsylvania has been engaged to sink a deep shaft. Referring to the matter the St. John Globe of Wednesday last says: [see St. Andrews Beacon - Nov. 23, 1905]"

St. Andrews Beacon - Nov. 23, 1905 Will Sink a Shaft at Lepreaux Iron Mine. - A visitor in the city today was Mr. W.F. Patterson, of Pittsburg, Pa. Mr. Patterson left at noon for New Glasgow, the object of his visit being to buy machinery to be used in sinking a shaft on the property of the New Brunswick Iron Company at Lepreaux. Mr. Patterson will return at once and hopes in ten days or a fortnight to have a crew of men to work. He will make a shaft 7x15 feet and the contract is to sink it five hundred feet. Mr. Patterson told the globe that he would build houses at the works employing some forty or fifty, and that the work would be continued day and night until completed. Announcement that the work is to be commenced at once is the best possible evidence that the company promoted by Mr. C.F. Wetmore and which has been carrying on exploration work for the past two years has become convinced that the time for more vigorous work has arrived, and that iron will be found in quantity and quality to justify expectations. Mr. Patterson himself expressed to the Globe his entire satisfaction with the outlook and said work that he has already done in Nova Scotia has convinced him that this country is rich in mineral wealth. In fact he is now considering bringing his family down and starting some work on his own account in Nova Scotia. Mr. Patterson has been engaged in sinking shafts at the Acadia Mines in Pictou and at Torbrook, and at the former has made a world's record. Two shafts have been sunk 12x14 feet, one going 1,300, and the other 1,210 feet. Those have opened up a seam of coal forty eight feet thick the largest ever discovered, and Mr. Patterson says it is of a fine quality. Work was begun in May, 1904, and during last three months Mr. Patterson's men averaged about one hundred and twenty five feet each month. Talking of this great work he paid the Nova Scotia workmen the compliment of being the finest he had ever employed, and said he would bring a number of them here to work on the Lepreaux shaft. - St. John Globe."

URN: 0590 / IDX_Names: Lepreau Magnetite;

St. Croix Courier - Sep. 24, 1905 Geologists at Lepreau. - Professor Ells and Professor Fletcher, of the government geological survey, are at Lepreau and from there to Canterbury, York County. Prof. Ells in his work at Lepreau and Canterbury has discovered certain rock formations which closely resemble those revealed by the explorations of Prof. Fletcher in the district south of Wolfville and at Horton Bluff and Gaspereaux, in Nova Scotia. The iron ore belt has been traced in Nova Scotia to a point east of the line which divides the counties of Kings and Annapolis. The efforts of the geologists will now be directed towards determining whether this belt extends through New Brunswick or not, and if so to

St. Croix Courier - Sep. 28, 1905 Lepreau. - Professors Ells and Fletcher, of the geological department, Ottawa, paid Lepreau a short visit last week."

St. Andrews Beacon - Apr. 12, 1906 Iron at Lepreaux. - Mr. Chas. Cameron, of Lepreaux, was in town last week. He speaks in glowing terms of the prospects of the iron-mining industry there. The company will resume operations in about two weeks and preparations are being actively pushed in the meantime. Much new machinery is to be procured, and all connected with the venture are hopeful of the best results."

St. Andrews Beacon - Jan. 4, 1906 Lepreaux Iron Mine. - There is a project on foot to greatly enlarge the business of the New Brunswick Iron Co., which owns valuable iron ore property at Lepreaux. The present company is capitalized at $1,000,000, but the scheme under way now will provide for a mich greater capitalization and a more extensive plant. One of the men interested in the deal says that it was altogether likely that a large smelting plant would be erected at Lepreaux before very long, and that mining on a large scale would be gone into. Reports that have been made by experts indicate that there is a large amount of the finest quality of iron ore, and it only needs that the property be developed on a large scale to make it one of the richest and best iron mines on the American continent. If the scheme now under way is carried out successfully, it should mean a great boom for the village of Lepreaux, as a large number of men would have to be

St. Croix Courier - Mar. 8, 1906 Lepreau. - Work on the New Brunswick Iron Co.'s property is progressing favorably under the circumstances, the only drawback being a scarcity of water which makes it necessary to haul water by team, at least until rain comes and fills the reservoirs."

St. Andrews Beacon - Mar. 29, 1906 St. George. - Operations have been suspended at the iron mine at Lepreaux and it is not known when work will be resumed."

St. Croix Courier - May 17, 1906 Lepreau. - We regret to have to record the death of one of our best known citizens, John A. Wright. Mr. Wright, for many years, resided at McAdam Junction and at one time was in the employ of the New Brunswick Railway. He was well known in St. Stephen and was a member of Sussex Lodge F. and A.M. He was a man who was universally liked and respected, ready to give a good word or land a helping hand to anyone who needed it. He was the discoverer of the iron deposits at Lepreau (which were first found on his land) and tried for years to get them exploited. One of his greatest desires was to live long enough to see them developed. Mr. Wright had been ill for over a year and had suffered greatly and death must have come as a great release from his sufferings. He was about sixty years of age and leaves a widow, four sons and three daughters, besides brothers and sisters, to mourn their loss."

St. Croix Courier - Dec. 12, 1907 and St. Andrews Beacon - Dec. 12, 1907 Lepreaux Iron Deposits. - Dominion Iron and Steel Co. Will Work Them. - (St. John Sun). - The Sun is in a position to announce that the Dominion Iron and Steel Company have leased the property of the New Brunswick Iron Company at Lepreaux and will proceed at once to open up the property on a large scale. They have also purchased 2,000 shares of the company's treasury stock, at $25 a share. They will bear all the cost of development work, which will involve the expenditure of a very large sum of money, and things will boom in the Lepreaux district as a result. The company already have Axel Anderberg, the mining engineer, who made a thorough examination of the property for the N.B. Iron Company, on the ground, and the work will be pushed rapidly. The ore is what is known as magnetite, and is said to be equal in quality to the celebrated Swedish ore. It is very high in iron and low in sulphur. The best indication, however, that the proposition is one of big value is the fact that the Dominion Iron and Steel Co., has taken hold of it and with their immense resources no doubt a great industry will be built up at Lepreaux. The logical outcome is for smelting works to be erected and the iron manufactured where it is produced. The New Brunswick Iron Co. had spent about $40,000 on the property when they were obliged by lack of funds to abandon the work a year ago. The Dominion Iron and Steel Co. have known of the value of the deposit though, and were only awaiting an opportunity to interest themselves in it. The lease is for eighty years. Mr. Anderberg for the past year has been with the Lackawanna Iron Co., at Lebanon, Pa., and resigned to go with the Dominion Iron and Steel Co., when they leased this property. The directors of the St. John Iron Co. are James F. Robertson, St. John; J.S. MacLannan, Sydney; and C.V. Wetmore, Sydney. Mr. Wetmore is president, Mr. Crowell vice president, and Peter Clinch, secretary-treasurer."

Granite Town Greetings - Nov. 13, 1907 The good news that the Dominion I. & S. Co. are going to work the N.B. Iron Co.'s areas here, is very much appreciated especially by your correspondent who was the one who induced the promoters of the N.B. Iron Co. to take up the matter. It will be of inestimable value in furnishing work to this section of the country. We are glad to welcome Mr. Anderberg who was formerly in charge of the work here, and who we presume will continue it under the D.I. & S. Co. Mr. Anderberg was recently assistant superintendent of Iron Works at Lebanon, Pa."

URN: 0590 / IDX_Names: Lepreau Magnetite;

St. Croix Courier - Nov. 14, 1907 Lepreau. - The good news that the Dominion Iron and Steel Co. is going to work the New Brunswick Iron Co.'s area here is very much appreciated, especially by your correspondent, who was the one who induces the promoters of the New Brunswick Iron Co. to take the matter up. It will be of inestimable value in furnishing work to this section of the country. We are glad to welcome back Mr. Anderburg, M.E., who was formerly in charge of the work here, and who, we presume, will continue it under the Dominion Iron and Steel Co. Mr. Anderburg was recently assistant superintendent of iron works at Lebanon, Pa."

St. Andrews Beacon - Oct. 10, 1907 Recent developments in connection with the properties at Lepreaux owned by the New Brunswick Iron Company indicate the Dominion Iron and Steel Company may take over the property and begin mining operations on a large scale."

Granite Town Greetings - Oct. 23, 1907 and St. Croix Courier - Oct. 24, 1907 To Develop Iron Deposits at Point Lepreau. - Sydney, Oct. 19. - The directors of the Lepreau iron mines, at a special meeting this morning at the office of Mr. C.V. Wetmore, received and accepted the offer made to them by the Dominion Iron and Steel Company to rent them areas at Point Lepreau. The lease will be made for eighty years and it is the intention of the new owners to begin prospecting at once. The iron deposits are believed to be very extensive and of a very high grade. The expectation is that for the present at least the new owners will confine their operations in New Brunswick to mining the ore and shipping it to the furnaces here in Sydney to be smelted. The Steel Co. will pay 25 cents royalty on all iron taken out and must work the mine continuously. They will take treasury stock for their development at $25 share value on hundred. Not more than two thousand shares will be given in any event, no matter how much money is spent developing. The board of directors is as follows: C.V. Wetmore; P.A. Crowell, vice president; J.S. McLennan, Jas. F. Robertson, of St. John, and F.P. Jones, general manager of steel works. At the meeting three fourths of the stock was represented. - Globe."

St. Andrews Beacon - Oct. 24, 1907 Lepreaux Iron Mines. - Leased by the Dominion I.&S. Company. - Halifax, N.S., Oct. 19. - The Lepreaux iron mine company's directors met at Sydney this morning when the proposition to lease their iron areas to the D.I.&S. Co., was received and was accepted. The lease will be for eight years and the D.I.&S. Co., will commence prospecting at once. The steel co. will pay 25 cents royalty on all iron taken out and must work the mine continuously. They will take treasury stock for their development work at 25 dollars per share, the par value to be one hundred. Not more than two thousand shares will be given in any event no matter how much money is spent in developing. The directors are C.V. Wetmore, president, F.A. Crowell, vice president, J.S. McLennan, Jas. F. Robertson, of St. John and F.P. Jones, general manager of the steel works. The meeting was represented by three fourths of the stock."

St. Andrews Beacon - Sep. 12, 1907Talking with the St. John Globe about the Point Lepreaux iron deposits, Mr. C.V. Wetmore said arrangements had at last been made with a very large concern which will at once start development work. Upwards of two hundred thousand will be spent, he said, and he expected to see operations commenced in a few weeks."

Granite Town Greetings - Sep. 18, 1907 Lepreaux Iron Mines. - Mr. C.V. Wetmore is in the city today. Talking with the Globe about the Point Lepreaux iron deposits, Mr. Wetmore said arrangements had at last been made with a very large concern which will at once start development work. Upwards of two hundred thousand will be spent, he said, and he expected to see operations commenced in a few weeks. It remained to be seen whether or not the new concern would eventually establish a manufacturing plant there, or whether they would ship the ore to be manufactured elsewhere. The latter course would be the one followed for a time at least, but he hoped to see it give place to a more substantial

St. Croix Courier - Sep. 19, 1907 Lepreau Iron Mines. - (Globe). - C.V. Wetmore is in the city today. Talking with the Globe about the Point Lepreaux iron deposits, Mr. Wetmore said arrangements had at last been made with a very large concern which will at once start development work. Upwards of two hundred thousand will be spent, he said, and he expected to see operations commenced in a few weeks. It remained to be seen whether or not the new concern would eventually establish a manufacturing plant there, or whether they would ship the ore to be manufactured elsewhere. The latter course would be the one followed for a time at least, but he hoped to see it give place to a more substantial development."

St. Croix Courier - Apr. 9, 1908 and Granite Town Greetings - Apr. 15, 1908 Lepreau. - Work at the iron areas by the percussion drill was stopped and the drill removed. It is understood the drill did not work as fast as was expected. A more rapid drill will likely be sent to take up the work as it is evident the D.I. and S. Co. intends to push development as fast as

Granite Town Greetings - Feb. 5, 1908 Lepreau. - We understand that T.R. Kent has the contract from the Dominion Steel Co. to bore a test hole on the areas leased from the N.B. Iron Co. The drill machinery is expected here any day now."

St. Croix Courier - Feb. 13, 1908 Lepreau. - A car of coal arrived here on the 8th for use in the drilling operation at the iron areas. The drilling machinery arrived Monday."

URN: 0590 / IDX_Names: Lepreau Magnetite;

St. Croix Courier - Feb. 13, 1908 and St. Andrews Beacon - Feb. 13, 1908 Development of Iron Deposits at Lepreaux. - St. John, Feb. 2. - Negotiations have just been concluded which will bring the mineral wealth of New Brunswick and particularly the resources of the county of St. John, into great prominence and will, it is thought, eventually lead to extensive developments. An eighty year lease of the large iron properties at Lepreaux, owned by the New Brunswick Iron Company, has been given to the Dominion Iron & Steel Company, on the basis that the lessees pay a royalty of twenty five cents a ton for all ore lifted, whether for shipment or smelting at the mines. An agreement to this effect was signed in Sydney (C.B.) on Wednesday by F.P. Jones, general manager and C.S. Cameron, secretary for the iron and steel company, and C.V. Wetmore, acting for the New Brunswick Iron Company. The signature of Peter Clinch, of St. John, the secretary of the local company, who is now out of the city, will be added as soon as he returns to St. John. Speaking of future prospects, Mr. Wetmore said great developments could be looked for at Lepreaux. Under the terms of the agreement the Dominion Iron & Steel Company were to carry on continuous operations to the full capacity of the plant unless prevented by the weather or some unforeseen reason. The equipment was to be supplied by them and on all ore mined the New Brunswick company were to receive a royalty of twenty five cents a ton. Mr. Wetmore said he was unable to speak for the lessees as to their plans whether they would build a smelter at Lepreaux or ship the ore to Sydney, but he would not be surprised if a large Bessemer steel plant were established some time at the mines. The Dominion Company had agreed to take the treasury stock of the New Brunswick company at $25 a share, and spent the money in the development of the property. Asked for some particulars of the deposit, Mr. Wetmore said the property was about two and a half miles square and situated on the line of the New Brunswick Southern railway, which, in fact cut through it. It was close to tide water of the Bay of Fundy, which would be an advantage for shipment. A close study of the ore had been made by a number of experts and it had been pronounced the finest deposit of the kind in Canada. Mr. Wetmore added that a contract for boring had already been placed with Thomas R. Kent, of St. George, in order to locate the size and direction of the seams. Mr. Kent has already started removing his plant to the property and would probably start operations before the end of this week. - Sydney Post"

St. Croix Courier - Feb. 20, 1908 Lepreau. - We understand that T.R. Kent has the contract from the Dominion Steel Co. to bore a test hole on the areas leased from the N.B. Iron Co. The drill machinery is expected here any day."

Granite Town Greetings. - Jul. 15, 1908 A. J. Anderberg, mining engineer, who is in charge of the iron ore properties at Lepreaux, under lease to the Dominion Steel Company, was married yesterday afternoon at 3 o'clock to Elizabeth Jane Brown, of New River, Charlotte County. The wedding took place at the home of Mr. Jordan, Paradise Row, in the presence of a number of friends and relatives including the father, mother and sister of the bride. Rev. David Lang performed the ceremony. Mr. and Mrs. Anderberg left last evening for Montreal to sail for Liverpool on a wedding tour, which will include a visit to Stockholm, Sweden, where Mr. Anderberg belongs. They expect to be absent two or three months. - Telegraph."

Granite Town Greetings. - Mar. 25, 1908 Thomas R. Kent, contractor for Artesian Wells, St. George, N.B., and a former resident of this place visited Sussex on Thursday. Mr. Kent has not been in Sussex for two years and notes many changes and is pleased to see the town flourishing. Mr. Kent has some heavy contracts for drilling, among them is an extensive well for the Iron Works, Lepreaux, one for the St. John Railway Co., and one for the Government. - Sussex

St. Croix Courier - Mar. 29, 1906 Prospects in Iron. - A Scientist Talks of Mineral Deposits in Charlotte County. - (St. John Times.) - The Times on Thursday last told of the unsuccessful experiments at the Sault, showing that magnetite could be profitably made into pig iron by utilizing electricity in the process of smelting. It is interesting to note that there are large deposits of magnetite in New Brunswick and its development, if the electrical process is really a success, would mean much for the province. Dr. George F. Matthew, discussing the subject with a Times representative this morning, said: 'There are several localities in New Brunswick where both magnetite and hematite can be found, At West Beach, for instance, there is good magnetite; and at Lepreaux explorations with a magnetic instrument seem to show the existence of extensive deposits. 'Hematite is known and has been worked nearWoodstock, and there are extensive deposits on theTetagouche River in Gloucester county. 'As regards the electrical smelting of Lepreau ore,' continued Dr. Matthew, 'there is an excellent water power on the New River, not far from the mine, from which power could be had for producing electricity. 'North of St. Stephen, near Moore's Mills, there are considerable veins of pyrrhotite, which being near the line of railway, might be available for the production of ferro-nickel pig under the new process.' Referring again to Lepreau, Dr. Matthew pointedout that there are large peat bogs in the vicinity of the magnetite deposit, and the surrounding country is more or less wooded."

URN: 0590 / R8 / IDX_Names: Lepreau Magnetite; Dipper Harbor/ Lepreau Coal;
St. Croix Courier - Jun. 2, 1904 Dr. Ells and Mr. Johnson, of the geological department, paid a short visit to Lepreau last week, to have a look at the iron and coal areas."

URN: 0597 / IDX_Names: Simpson Island;
Eastport Sentenil - Sep. 10, 1861 The St. John Courier says a schooner is lying at one of the wharves in that city with about forty tons of copper ore on board, which was obtained at Simpson's Island, Charlotte County, N.B., near Eastport."

St. Andrews Standard - Sep. 10, 1862 and Morning Freeman - Sep. 11, 1862 Copper Ore. - There is now lying Leavitt's wharf a schooner having on board about 40 tons of Copper Ore, from which it expected that between thirty and forty per cent. of pure copper can be extracted. This material was obtained from Simpson's Island, Charlotte County, about six miles distant from Eastport, Me. It is found in a 3 narrow belt of land extending over a greater portion the Island. Much of it is like sand, except in color, and can be shovelled out without the slightest difficulty. The Company who have secured the Island is composed of persons belonging to this City. They are now having the material so far obtained, barrelled up for the purpose of forwarding to England, where the pure metal will be extracted in the furnaces prepared for such purposes, and no doubt their researches and labors will be richly rewarded. The specimens we have seen indicate uncommon

Morning News - Sep. 12, 1862 Copper Ore. - A specimen of the copper ore which has recently been taken from an extensive deposit on Simpson's Island, Charlotte County, can be seen at this office. It is thought that a very large per centage of pure copper can be obtained from it - say £25 to the ton. The piece left with us appears to be a surface gathering. We hope the mine will turn out well."

St. Andrews Standard - May 7, 1873 Copper Mines. - Work at the Copper mines on Simpson's Island, is to be resumed in a few days. The quality of the copper is reported to be excellent, and the supply unlimited."

URN: 0597 / IDX_Names: Simpson Island;
Dec. 1889 - Copied from: St. Croix Courier - Dec. 4, 1919 30 Years Ago. - Charlotte county will soon have added to her other industries a copper mine. The mine is situated on Simpson's Island, a small island in the neighborhood of Deer Island. The process of developing the mine has been going on slowly for two or three years. Professor Hind, of Nova Scotia, has written a very comprehensive and flattering report on the character of the metal found, and there is good reason to believe that the syndicate of American capitalists who intend working the mine will make money out of the venture."

Evening Gazette - Nov. 16, 1889 and Moncton Daily Transcript - Nov. 18, 1889 and St. Croix Courier - Nov. 21, 1889 New Brunswick Copper Mine Purchased.- It is rumored that the copper mine on an island off the coast of New Brunswick in Passamaquoddy Bay has been or is about to be purchased by an American company, which has been incorporated with a capital of $2,000,000. Mr. H.B. Witter and some other Nova Scotians are interested in this property, and are to receive a preliminary cash payment of $100,000 on signing the papers. The total amount to be paid by them for the property is stated to be $400,000 and Mr. Witter is to be the manager of the company.- Critic."

St. Andrews Beacon - Nov. 28, 1889 and Evening Gazette - Nov. 29,1889 and Daily Telegraph - Dec. 10, 1889 and Daily Times - Dec. 12, 1889 Charlotte County will soon have added to her other industries a copper mine. The mine is situated on Simpson's Island, a small island in the neighborhood of Deer Island. This island is the property of Mr. James Lord, of Lord's Cove, Deer Island. The process of developing the mine has been going on slowly for two or three years. Prof. Hinds, of Nova Scotia, has written a very comprehensive and flattering report on the character of the metal found, and there is good reason to believe that the syndicate of American capitalists, who intend working the mine, will make money

Daily Times - Aug. 28, 1890 The Halifax Chronicle says: The Simpson Island copper mine, situated in Passamaquoddy Bay, near Eastport, Me., and owned by T. K. Jenkins and John F. Crowe, has been sold to an American company for $225,000 in stock. A company has been formed and incorporated in Boston with a capital of $1,000,000 in 100,000 shares at $10 and work is being vigorously prosecuted, and it is expected to be a bonanza to the American stockholders. It is said Messrs. Jenkins and Crowe paid $2,000 for the mine."

S.J. Evening Gazette - Sep. 1, 1890 The Simpson Island copper mine, situate in Passamaquoddy bay, near Eastport, Me., and owned by T.K. Jenkins and John F. Crowe, has been sold to an American company for $225,000 in stock. A company in Boston with a capital of $1,000,000 in 100,000 shares at $10 and work is being vigorous;y prosecuted and it is expected to be a bonanza to the American stockholders. It is said Messrs. Jenkins and Crowe paid $2,000 for the mine."

St. Andrews Beacon - Sep. 4, 1890 The Simpson Island copper mine has been sold to a company formed by Boston parties for $250,000 stock, it is said."

Chignecto Post - Sep. 4, 1890 Says an exchange: The Simpson island copper mine situated in Passamaquoddy Bay, near Eastport, Me. and owned by T.K. Jenkins and John F. Crow, has been sold to an American Co. for $225,000 in stock. A company has been formed and incorporated in Boston with a capital stock of $1,000,000 shares at $10 and work is being vigorously prosecuted and it is expected to be a bonanza to the American stock-holders. It is said Messrs. Jenkins and Crowe paid $2,000 for the mine."

St. Andrews Beacon - Jun. 8, 1893 Notice is given of the incorporation of Henry B.Witter, of Boston, mining engineer; Fred P. Greenwood, merchant, and James F. Marley, of the same place, manufacturer, James M. Lord, of West Isles, Charlotte County, fisherman; Eben A. Holmes, of Eastport, lawyer, for the purpose of mining and developing mine properties, and the acquiring, buying, leasing and holding real estate, with such plant, machinery and property as may be necessary and convenient for all the purposes of successfully prosecuting that object. The company is called the West Isles Mining Company. It has a capital of $100,000, divided into 100,000 shares of $10 each."

St. Andrews Beacon - Sep. 14, 1893 James Lord, who is interested in the copper mines at Simpson's Island, went up river on Monday. He reports that good progress is being made in his mining operations."

Semi-Weekly Telegraph - May 13, 1899Grand Manan Copper. - Fredericton, May 11. - There was an interesting case argued
here today before the Surveyor General Dunn. Some time ago a Boston syndicate acquired the rights and started to develop copper deposits at West Isle, Grand Manan. Work was begun but after a short time was given up, and licence fees were not paid. Recently Messrs. J.F. Neary, of Kentville, N.S.; C.W. Jacobs, of Boston, and K.J. McKenzie, of Lowell, applied for a lease of these mining areas. The old company protested against the lease being issued, claiming that their rights were still good. The matter was argued this morning before the Surveyor General, Mr. W.C.H. Grimmer, of St. Stephen, representing the old company and Hon. William Pugsley the applicants. It was decided to grant the application for

URN: 0597 / IDX_Names: Simpson Island;

St. Andrews Beacon - May 18, 1899 Charlotte County Copper. - A somewhat interesting case was before the Surveyor General at his office this morning, says the Fredericton Gleaner, of Thursday last. It seems that several years ago a number of gentlemen, among whom were some Boston capitalists, organized a company to develop and mine the copper deposits at West Isles, Charlotte County. After partially developing the property the company abandoned it, and for the past five years had not paid any license fees to the Crown Land Department. Recently another company was formed and this new company had applied to the Department to search upon the same property as held by the old company. This application the original company resisted upon the ground that they had a prior claim to the property, while the new company contended that by their failure to work the mines and to pay the required license fees they had forfeited all previous claims, and the case for both parties was heard before the Surveyor General. Dr. Pugsley and G.G. Ruel, of St. John represented the new company, and W.C.H. Grimmer, of St. Stephen, appeared for the original owners. Other interested gentlemen present were W.C. Jacobs, of Boston; Kenneth J. McKenzie, of Lowell; J.F. Neary and H.B. Willett, of Kentville, N.S., and P.H. Gillmor of Calais. It was decided that by their neglect to work the property and failure to pay the license fees that the original company had forfeited their rights to it and that the Crown Land Department has a right to issue license to another company to search upon and work the property. The recent rise in the price of copper has given added importance to deposits of copper in Charlotte County, and may mean much towards their further development and profitable working."

St. Croix Courier - May 18, 1899 Mining Investigation. - A West Isles Difficulty Disposed of by the Surveyor General (Herald). - Surveyor General Dunn held an investigation at the crown land office this morning into s difficulty which has lately arisen between parties interested in copper mining in the county of Charlotte. It appears that Messrs. J.F. Neary, of Kentville, N.S., W.C. Jacobs of Boston and Kenneth J. McKenzie of Lowell, and others associated with them, lately, made application for a lease of mining areas on West Isle, where rich deposits of copper are supposed to exist. It seems that some years ago a lease of the same areas had been granted to the West Isle mining company, but the company by non-payment of rental and failure to work the mine, practically forfeited the right to the lease. Notwithstanding this, however, members of the old company strongly protested against a lease of the property being granted to another syndicate, taking the view that they should be allowed to renew their lease, if they desired to do so. All the gentlemen named above were present at the investigation held this morning. W.C.H. Grimmer of St. Stephen appeared in the interests of members of the old company, and Hon. Dr. Pugsley on behalf of Messrs. Neary, McKenzie and Jacobs. The whole matter was fully ventilated and the surveyor general, after listening to both sides of the case, decided to grant the application for a lease to the gentlemen representing the proposed new company."

St. Andrews Beacon - Apr. 12, 1900 and St. Croix Courier - Apr. 19, 1900 Work will be resumed by the Island Copper Mining Company at Simpson's Island in a few weeks. Reginald D. Woodward, of New York, is the chief promoter of this company. He is very sanguine of success. - Beacon"

St. Croix Courier - Dec. 27, 1900 R.P. Getty, mining expert, has gone to Simpson's Island with a steam drill and is pushing the work along in the copper mines at that place."

St. Andrews Beacon - Sep. 27, 1900 The copper operations which are being carried on by the Island's Mining company, near

Deer Island, are being conducted very satisfactorily. A good quantity of ore was struck alongside the shore. It was found impossible to mine it there and a drift is being excavated from a point further inland. Mr. James S. Lord is superintending the work, under Mr. Geddes, a New York engineer."

St. Andrews Beacon - Jan. 17, 1901 Copper Mining in Charlotte. - The Islands Mining Company is making good progress with its operations on Simpson's Island. Under the supervision of J. Stevenson Lord, ten men have been employed for some time in sinking a shaft from the island underneath the water, where the bulk of the ore is to be found, They have got down sixty feet and are turning out a fine quality of copper ore. The island is also rich in silver. A steam drill will begin work

St. Croix Courier - Oct. 31, 1901 It is reported that the copper mines on Simpson's Island, of which R.P. Getty, mining expert, is in charge, is producing ore of a very valuable quality. Mr. Getty and the company are much encouraged and will commence operations on a much larger scale shortly."

St. Croix Courier - Jan. 9, 1902 Simpson Island Mine. - Mining operations on Simpson's Island, under the direction of R.P. Getty, mining engineer, are being conducted on quite an extensive scale, some twenty men being actively engaged mining copper ore, largely mixed with silver, which yields about $35 to the ton. The main shaft has been sunk a distance of one hundred and twenty five feet and has reached a most paying lead. The blasting operations are conducted in the latest improved way by electricity and the amount of ore taken from the mines daily is satisfactory to the stockholders. The men are comfortably housed and well fed, and are putting in some good work. Communication to the island is made by the steamer Goldmark during the winter months. In the spring the company intends putting on a steamer of their own, when operations will be conducted on a much larger scale, diamond drills, crushers and other expensive machinery being added to the plant, which will enable the company to put some finished products on the market early in the season."

St. Andrews Beacon - May 29, 1902 Work has not yet been resumed in the Simpson copper mine. Last season's labor bill is still unpaid, but the company hope to meet their obligations shortly."

URN: 0597 / IDX_Names: Simpson Island;

S.J. Star - Nov. 27, 1902 and Weekly Record - Fri., Dec. 5, 1902 There are two copper mines being worked in thelower section of Charlotte county, and with promisingresults in both cases. J. Stevenson Lord, who is looking after the interests of the company working the Simpson Island mine, says they are making good progress in their drift towards the vein. The outlook is very favorable. - St. Andrews Beacon."

St. Croix Courier - Aug. 5, 1907 Mining on Deer Island. - Operations Resumed at the Simpson's Island Copper Mine. - The Eastport correspondent of a Bangor paper says: Deer Island, one of the neighboring Canadian possessions, is enjoying a mining boom on a small scale, operations having been resumed on the property known as Simpson's Island copper mine, which is controlled by New York parties. W.H. Berry, a well known resident of St. Stephen, is in charge of the preparatory work now being done at the mine, and is very sanguine as to the amount of business to be carried on there at an early date. The mine was first exploited by Capt. James Lord, who had confidence in the value of the deposits, but being handicapped by reason of insufficient capital with which to work the property in an economical manner during a time when the price of the metal was considerably lower than it is at present and the mining methods were less modern than now, his experience as a mine owner was disheartening. The property was finally secured by an English and American syndicate and worked for a time, but operations were suspended a number of years ago, since which time copper has increased materially in value so that is is now considered the mine can be worked at a profit. It is stated that several properties in the neighboring county of Charlotte, N.B., owned by English companies are to be given a careful prospecting with a view to determining their value, and if ore is found in paying quantities the several known orebearing properties and much adjoining land, will be taken over by a company of English and American capitalists which will amalgamate with various independent holders of mining lands."

Granite Town Greetings - Feb. 19, 1908 Lepreau Iron. - A despatch from St. John to the Sydney Post, on February 5th, says: Negotiations, have just been completed which will bring the mineral wealth of New Brunswick into great prominence, and will, it is thought, eventually lead to extensive developments. An eighty year lease of the large iron properties at Lepreau, owned by the New Brunswick Iron company, has been given to the Dominion Iron and Steel Company, on the basis that the lessees pay a royalty, of 25 cents a ton for all ore lifted, whether for shipment or smelting at mines. An Agreement to this effect was signed in Sydney Wednesday by F.P. Jones, general manager and C.S. Cameron, secretary for the Iron and Steel Company, and C.V. Wetmore, acting for the New Brunswick Company. The signature of Peter Clinch, of St. John, the secretary of the local company, who is out of the city, will be added as soon as he returns to St. John. It had been known for some time that negotiations were in progress, and when Mr. Wetmore, who is one of the directors, was asked when in the city yesterday, accompanied by Alex. Anderberg, the company's engineer, whether matters had yet been arranged, he replied that a lease had been signed and that the agreement was now in effect. Speaking of future prospects, Mr. Wetmore said that great developments could be looked for at Lepreau. Under the terms of the agreement the Dominion Iron and Steel Company were to carry on continuous operation to the full capacity of the plant, unless prevented by the weather or some unforeseen reason. The equipment was to be supplied by the Steel Company, and on all ore mined the New Brunswick company were to receive a royalty of 25 cents a ton. Mr. Wetmore said he was unable to speak for the lessees as to their plans whether they would build a smelter at Lepreau or ship ore to Sydney, but, he would not be surprised if a large bessemer steel plant was established some time at the mines. The Dominion Company has engaged to take the treasury stock of the New Brunswick Company at $25 a share and spend the money in the development of the property. Asked for some particulars of the deposit, Mr. Wetmore said the property was about two and a half miles square and situated on the line of the New Brunswick Southern Railway, which, in fact, cut through it. It was close to the tide water of the Bay of Fundy, which would be an advantage for shipment. A close study of the ore had been made by a number of experts and it had been pronounced the finest of the kind in Canada. Mr. Wetmore added that a contract for boring had already been placed with Thomas R. Kent, of St. George in order to locate the size and direct the seams. Mr. Kent had already started removing his plant to the property, and would probably start operations before the end of this week."

Granite Town Greetings - Mar. 18, 1908 Work at Lepreaux Being Pushed. - Since the Dominion Iron and Steel Co. entered upon the development of the Lepreaux iron deposits there has been a lively demand for the stock of the St. John Iron Company, but all those who can afford to hold it are refusing to sell. The work of drilling is going forward as rapidly as the weather will permit, and the staff of men employed there is being augmented from time to time. By the first of June there will probably be a hundred men at work. The Dominion Iron and Steel Co. have unbounded confidence in the great value of the property and will spend a lot of money in development operations the coming summer."

URN: 0597 / 0019 / IDX_Names: Simpson Island; Wheal Louisiana Copper;

Carleton Sentinel - Apr. 16, 1864 A correspondent in Charlotte in forms that a mining engineer, and about a dozen practical miners, will shortly be at work in that County on a rich copper mine. We believe that it is situated in the neighborhood of New River or Letete. These are not the only localities in Charlotte in which copper may be found. We published sometime ago an account of the copper ores being found on Simpson's Island, as described by Mr. Matthew. We have also heard of very rich lead ores being found near St. Andrews. The mining operations to which we refer are undertaken by a wealthy English Company. - We believe also that Messrs. Chipman and Bolton of St. Stephen are interested in the matter, and have been the means of directing the attention of the English capitalists to the enterprise. If we are not misinformed, a gentleman in this city, now somewhat prominently before the public, will be no loser by the success of the Charlotte mining operations, as he is an interested party."

St. Andrews Beacon - Sep. 7, 1899 and St. Croix Courier - Sep. 14, 1899 Charlotte County Copper Mines. - The mining which is being carried on at Adams Island, Mr. Jas. Lord's copper mine, is producing satisfactory results. About a ton and a half of splendid ore is in sight. Theprospecting on Simpson's Island is also proceeding satisfactorily. The work is being carried on under the supervision of two New York engineers. It is rumored that the copper interests of these two islands will be merged together and a strong company formed to operate them."

URN: 0597 / LEGI / IDX_Names: Simpson Island; Legislation, etc.;

St. Andrews Beacon - Feb. 9, 1893 and St. Croix Courier - Feb. 9, 1893 The last Royal Gazette contains notice of the application for the incorporation of The West Isles Mining Company. The purposes for which such incorporation is sought are - Mining and developing mining properties, and the acquiring, buying, leasing and holding real estate, with such plant, machinery and property as may be necessary and convenient for all the purposes of successfully prosecuting that object. The office or chief place of business shall be in St. Stephen. The capital stock is $1,000,000, divided into 100,000 shares of $10 each. The applicants are: Henry B. Witter, Boston, miner; James M. Lord, West Isles, Charlotte county, fisherman; Fred P, Greenwood, Boston, merchant; Eben A, Holmes, Eastport, merchant; James F. Marley, Boston, manufacturer, and Samuel D. Leavitt, Eastport, lawyer. The first three are to be the first or provisional directors."

URN: 0599 / IDX_Names: Long Island;

St. Andrews Beacon - Jul. 21, 1892 and S.J. Daily Sun - Jul. 22, 1892 A Silver Bearing Island.- Among the islands in the archipelago at the eastern extremity of St. Andrews Bay is one known as Long Island, though for what reason it should be called Long no one seems to be able to tell. Just now considerable interest attaches to this island from the fact that quantities of silver-bearing ore have been found around its shores. Samples of this ore which have been assayed show it to possess a value of $11.53 to the ton. This is not very rich, but as the test was made from the surface croppings, the owners of the island, Messrs. Pendleton and Grimmer, think that the value of the ore will increase the further down it goes. For several days past they have had a couple of men engaged in sinking a shaft on the island, but as the point where the mineral appears is below high-water mark, progress has necessarily been very slow. On Thursday afternoon, Messrs. Pendleton's little steamer Bessie Ardella took a party over to inspect the island. The BEACON representative accompanied them. A pleasant hour's run brought the steamer to the island. The miner, who has been engaged in sinking the shaft, was able to show fine specimens of ore, but it was very much scattered. With the hope of obtaining a concentrated vein it was determined to prospect further up on the island. If such vein is found, it is probable that the work of mining will be proceeded with more vigorously."

URN: 0603 / IDX_Names: Frye Island;

St. Andrews Beacon - May 30, 1889 We were shown this week a fine sample of silver ore which has taken recently from a vein at Frye's Island. Mr. Frye is now down about twenty feet, and the deeper he goes the better does the ore become."

S.J. Daily Sun - Aug. 14, 1893 and St. Andrews Beacon - Aug. 17, 1893 New Industry at St. George. - Charles Taylor, anative of St. John, for many years a resident of Montreal, was in the city on Saturday, as vigorous, mentally and physically, as most men of forty, though he has passed his seventy-sixth year. For thirty five years Mr. Taylor has been employed in mining, and was among the earliest prospectors for gold in Nova Scotia. At present he is prospecting for sulphur barytes, about eight miles from St. George, and is quite hopeful of success. This mineral, which is used in the manufacture of sulphuric acid, was mined at that place somewhat extensively some sixteen years ago, but the mines were abandoned, not because they were unproductive, but for want of means. Mr. Taylor has six or eight men employed pumping out the old shafts and opening other pits on the main lead, which show up well so far. If successful, this industry will employ 200 men about the mines, to say nothing of those who will be employed in freighting the product. Ships of large size can be brought to lie at points 1 1/2, 1 and 1/2 miles from the mines, and within 1/4 of a mile from the pits there is a stream where the mineral can be stamped, washed and concentrated for the market. Mr. Taylor and his associates have secured an area two miles in length on the lead and a working license from the government. Mr. Taylor remarked in his conversation with the Sun representative that as the iron age had for the present destroyed the shipbuilding industry of the province, the lumber had been cut pretty close, and as the country was not eminently an agricultural one, our people should give more attention to the development of our mineral resources, of the magnitude of which they have little conception."

S.J. Daily Sun - Dec. 5, 1879 Revenue Silver Mining Company. - This company have just issued their prospectus, showing that the important statements contained in it are vouched for by the following board of officers, all gentlemen of standing: - D.W. Clark, Esq., President; James W. Hersey, Secretary; Henry Vaughan, Horace Farrington, J.H. Harding and Albert Betts, Esquires, directors. The property lies at Letete, six miles from St. Andrews and nine miles from Eastport, a shaft having been sunk into the vein at a point within half a mile of the port of shipment. The vein rock can be traced several miles, and the ore body is about 30 ft. wide. At 5 ft. deep the yield to the ton, by assay of Prof. Burwash,Provincial Assayer:- At 5 feet deep yield, 10 ozs. 8 dwt. Silver, $12.25 32 per cent, or 640 lbs. of lead, 35.20 and 4 ozs. 5 dwts. Gold to the ton of lead 85.00 – $132.45/ton Several other analyses were made from ores taken from 5 to 20 feet deep, yielded, by the returns from the assayer, as follows: - Lead per ton of rock No. 1, 96 lbs., and silver 25 ozs per ton of lead, ... $34.03 Lead per ton of rock No. 2, 121 lbs., and silver 33 ozs per ton of lead, ... $59.25 Lead per ton of rock No. 3, 126 lbs., and silver 31 ozs per ton of lead, ... $42.55 Again:- 35 per cent., or 70 lbs. of lead ... $48.50 Silver, 18 ozs., troy, to ton of lead ... 20.70 -- $61.20 Again: - Lead, 52 per cent, or 1040 lbs. ..$57.20 Silver, 11 ozs., ... 12.65 Gold, 4 dwts., ... 4.00 – $73.85/ton Again:- No. 1. 24 per cent. Of lead, or 480 lbs., $26.40 Silver, 28 1/2 ozs. ... 32.77 --$59.17 No. 2. Lead, 15 per cent., or 300 ;bs., $16.50 Silver, 29 ozs., ... 33.35 – $49.85 Samples of the ore were submitted to the State Assayer at Boston, S.P. Sharpless, Esq., and yielded as follows: - Lead, 1118 lbs. per ton, value 5 1/2 cents, $61.50 Silver, 13 ozs. At $1.15, ... 14.95 -- $76.45/ton Another piece of ore was also sent to the Scientific Publishing Company's Office, New York, and the following is the result of the value and quantity per ton: - Lead, 1297 lbs. per ton, value 5 1/2 cents, $71.23 Silver, 10.95 ozs., ... 12.70 – $83.93/ton The ore is present in abundance and the cost of mining and shipment is represented as comparatively light. Besides being near water, a good post road leads through the property and the Southern Railway when completed will pass within seven miles of it. A boarding house for miners, blacksmith shop, and other buildings have been erected, and also appliances for raising the ore, and the Company propose erecting a concentrating furnace for abstracting the metal from the ores and reducing it to Bullion, in which form it will be shipped. The undertaking appears to be in good hands and we hope to hear of its being a success."

S.J. Daily Sun - Dec. 12, 1879 Silver Mining in Maine. - ...Our Province is considerably interested in these mining operations, since the Revenue Silver Mine at Letete, in Charlotte County, is understood to be on the same veins as those of Blue Hill and others in Maine..."

Moncton Daily Times - Nov. 1, 1879 and Bay Pilot - Nov. 6, 1879 Revenue Silver Mining Company. - Notice is given in this week's Royal Gazette that Henry Vaughan, D.W. Clark, R.S. DeVeber, Albert Betts, John H. Harding, and Mount

McDonald, of the City of Saint John, in the City of Saint John, and W. R. Stockbridge of Boston, State of Massachusetts, United States, have filed in the Office of the Provincial Secretary, a Memorandum of Association, for the incorporation of A Company to be styled the 'Revenue Silver Mining Company'. The object of the company is the digging, raising, mining, and treatment of the Lead and Silver Ores of LeTete, in the County of Charlotte, with a capital of one hundred and fifty thousand dollars ($150,000), to be divided into thirty thousand shares at five dollars each. The Office or principal place of business is to be at the City of Saint John."

Daily News - Nov. 24, 1879 Revenue Silver Mining Company. - The Revenue Silver Mining Company was organized on Saturday afternoon at a meeting of those interested in the company held at the office of Henry Vaughan, Esq., Water street. Messrs D.W. Clark, Henry Vaughan, Albert Betts, John H. Harding and J. Pettigrove were elected as the directors of the company; bye laws were adopted and it was decided to open a transfer office at Boston, at which place Mr. Pettigrove will act as agent for the company. At a meeting of the directors held after the adjournment of the general meeting, Mr. D.W. Clark was elected president, Mr. Fred S. Harding was appointed treasurer, and Mr. J.S. Hersey secretary. Mont. McDonald, Esq., was appointed solicitor. The silver mine is situated at LeTete, Charlotte county, and operations will be begun there at once. The prospects are very encouraging, as the ore has been assayed and found to be

Daily Telegraph - Nov. 24, 1879 Silver Mining. - The Revenue Silver Mining Company met at the office of Henry Vaughan, Esq., on Saturday afternoon, pursuant to adjournment, The company was duly organized and the following directors elected: Messrs. D.W. Clark, Henry Vaughan, Horace Farrington, Albert Betts and J.H. Harding. At a subsequent meeting of the directors, Mr. D.W. Clark was chosen president, Mr. James Hersey secretary, and Mr. Levi Simpson manager at the mines. The prospects of the company are considered very promising."

Clark, Henry Vaughan, Horace Farrington, Albert Betts and J.H. Harding. at a subsequent meeting of the directors, Mr. D.W. Clark was chosen President, Mr. James Hersey, Secretary, and Mr. Levi Simpson, Manager at the mines. The mines are at L'Etete, Charlotte Co."

St. Croix Courier - Nov. 27, 1879 The Revenue Silver Mining Company was organized on Saturday afternoon, in St. John, for the purpose of working the silver mine at Letete in this County. The ore is said to be rich and the supply almost

Morning Freeman - Nov. 29, 1879 Silver Mining Co. - A number of gentlemen interested in the silver mine at Le Tete, Charlotte County, held a meeting, recently, and organized a company, to be known as the Revenue Silver Mining Company. Directors were elected as follows: D.W. Clark, H. Vaughan, A. Betts, J.H. Harding and J. Pettigrove. D.W. Clark was afterwards elected President, F.S Harding, Treasurer, and J.S. Hersey, Secretary. Operations at the nine will be

S.J. Globe - Oct. 31, 1879 Silver Mining in Charlotte County. - Messrs. Henry Vaughan, D.W. Clark, R.S. Deveber, Albert Betts, John H. Harding and Mont. McDonald, of St. John, and W.R. Stockbridge, of Boston, Mass., have filed in the Provincial Secretary's office a memorandum of association, for the incorporation of a company to be styled the Revenue Silver Mining Company. The object of the company is the digging, raising, mining and treatment of the lead and silver ores of LeTete, in the county of Charlotte, with such other things as are incident to the attainment of that object, with a capital of $150,000, to be divided into thirty thousand shares of five dollars. The office or principal place of business is to be at

URN: 0604 / IDX_Names: Simpson Mine;

Bay Pilot - Jan. 1, 1880 Revenue Silver Mining Co'y. - This company have just issued their prospectus, showing that the important statements contained in it are vouched for by the following board of officers, all gentlemen of standing: - D.W. Clarke, Esq., President; James W. Hersey, Secretary; Henry Vaughan, Horace Farrington, J.H. Harding and Albert Betts, Esquires, directors. The property lies at LeTete six miles from St. Andrews and nine miles from Eastport, a shaft having been sunk into the vein at a point within half a mile of the port of shipment. The vein rock can be traced for several miles, and the ore body is about 30 ft. wide. At 5 ft deep the yield to the ton, by assay of Prof. Burwash, Provincial Assayer: - At 5 feet deep yield 10 ozs 8 dwt silver $12.25 32 per cent., or 640 lbs. of lead, 35.20 and 4 ozs. 5 dwts gold -- to ton of lead 85.00 $132.45 a ton The ore is present in abundance and the cost of mining and shipment is represented as comparatively light. Besides being near water, a good post road leads through the property and the Grand Southern Railway when completed will pass within seven miles of it. A boarding house for miners, blacksmith shop and other buildings have been erected, and also appliance for raising the ore, and the Company propose erecting a concentrating furnace for abstracting the metal from the ores and reducing it to Bullion, in which form it will be shipped. The undertaking appears to be in good hands and we hope to hear of its being a success. - Tel."

S.J. Daily Sun - Feb. 1, 1882 ADVERTISEMENT: Notice to Stockholders The Revenue Silver Mining Company's annual meeting will be held at the Company's Office, 102 Water street, on Monday, February 6, at 3 p.m. By order. C.A. Vaughan, sec'y."

Daily News - Nov. 7, 1882 Notice. A meeting of the Revenue Consolidated Mining Company, will be held on Saturday, the 11th day of November next, at three o'clock in the afternoon, at the office of Henry Vaughan, in building No. 102 Water street, in the city of Saint John, for the purpose of organizing the said Corporation, pursuant to the provisions of Section 13, Chap. 98, Consolidated Statutes of New Brunswick. Dated at the city of Saint John in the Province of New Brunswick, the thirtieth day of October, A.D. 1882. Daniel W. Clark, Albert Betts, Henry Duffell, Henry Vaughan, John H. Harding."

S.J. Globe - Oct. 27, 1882 and Daily Telegraph - Oct. 28, 1882 and Weekly Transcript - Nov. 1, 1882 New Mining Company. - Messrs. Daniel W. Clark, Albert Betts, Henry Vaughan, Henry Duffell and John H. Harding, have filed a memorandum of association for the incorporation of the Revenue Consolidated Mining Company, the object of the company is the prospecting for minerals, the digging, mining, crushing, smelting and raising of ores and minerals, and the carrying on of general mining business. Capital stock $250,000 in 50,000 shares of $5 each."

S.J. Daily Telegraph - Dec. 6, 1979 Silver Mining at Letete. - The prospectus of the Company which owns this property contains many encouraging facts. The ores found include lead, silver, and gold, in quantities which promise to be

St. Croix Courier - Apr. 29, 1880 Our Mining Industries.- Since the universal business depression of late years has begun to pass away, increased attention has been devoted to our mining interests. The mineral riches of Charlotte County have long been known and acknowledged, and it gratifies us to observe that of late months a fresh impetus has been given to their development. It cannot be denied that there is verge and scope enough in Charlotte for the profitable employment of capital and enterprise. The whole coast line from Lepreaux, where the anthracite coal deposit is found, around Letite where rich copper oreabounds, along the Mascarene shore and up the Magaguadavic river on both sides to the village of St. George may be described as a solid bed of silver ore, intermixed with galena, gold, etc. We recently made reference to several of the mines at Mascarene which are being operated with very gratifying prospects. At the Revenue Mine which is being vigorously prosecuted with very satisfactory results, preparations are being made to erect a crusher and other machinery. At the Dick & Williamson Mine machinery will shortly be erected and it is in contemplation to put up smelting works also. The ore is rich in silver and galena with some gold. The lodes extend inland, and some four miles distant they cross the Magaguadavic River, appearing on Silver Island, so called, and running northward. On the northern shore of the river, which is here about 200 yards wide, the vein reappears, on what is known as the Hart property, the mining rights of which have recently been secured by Mr. F.W. Andrews of this town. The mine was worked by some parties about a year ago but was surrendered to the lessor owing to insufficiency of capital to continue operations. We have recently been put in possession of some interesting facts in reference to this mine which we have pleasure in presenting to our readers. The vein is four feet wide on the top of the ground, and assays made of the ore from the surface by Professor Bailey of the New Brunswick University indicate 75 per cent of galena and 18 ounces of silver. An assay made by Prof. Fraser shows a considerable proportion of gold. The vein in this property is the true argentiferous vein. It is crossed by several smaller veins and so far as operated shows the same quality of ore, galena and silver as produced from the Silver Mine which was so successfully worked for a time, and on which operations will shortly be resumed. It is distant about 40 rods from Silver Island. Excavations to the depth only of 16 feet were made by the former proprietors, but they assert their firm belief that it is the true argentiferous lode and that with capital enough to sink the mine to the requisite depth it must be a specially remunerative property. The ore taken from the very surface, it will be seen from the assays above given, is very rich, more so indeed than that of many mines now paying large dividends in different states of the Union. The character of the

Charlotte County coast, bordering as it does on Maine, bears a very close resemblance to that state where such rich mines have so recently discovered as the Sullivan the Blue-hill etc., and where the discovery of minerals is almost of daily occurrence. At all the mines and mining privileges in and about St. George the facilities for shipment are unexcelled, and the Hart property is admirably situated in this respect. This is a feature of very material importance in the carrying on of mining operations. The Grand Southern Railway also when completed will pass near it and afford additional facilities for transportation. Of all the mines in this section none promised better on opening than this, none having had ore so rich on the surface. That it may be all that is anticipated and claimed for it by practiced men is earnestly to be desired."

Geology - General;

S.J. Daily Sun - Oct. 7, 1880 Minerals No. 2. - Geological Sequence Collection of the N.H.S. - Passing around to the northern side of the table where the mineral exhibits are placed another upright case comes into view, containing a collection of New Brunswick minerals, the property of the Natural History Society. They are chiefly for the instruction of the student and geologist, and with this object are arranged in geological sequence; that is, the minerals of each of the rock formations which exist in the Province are grouped together and so arranged that they present to the eye the natural succession of the formations in time, the oldest, or Laurentian, which from its position is called the fundamental or formation gneiss in Scotland, being represented by a row of minerals on the lower shelf - minerals which have been found mostly in the neighborhood of St. John. On looking over them we observe that they are mostly minerals from the limestones of the Town of Portland, together with ornamental varieties of these limestones, and a few minerals and ores from the gneissic rocks. The second shelf contains the minerals of the Huronian, a formation which in other parts of America has proved to be rich in metalliferous deposits. One is not surprised, therefore, to see a preponderance of the ores of metals among the minerals on this shelf. There are here also specimens of the Indian pipe stone, and of barytes, a mineral used in the manufacture of paint. More than half of the minerals on this shelf are from the metalliferous belt of rocks extending from Mispeck to Upper Salmon River in Albert County. On the third shelf are shown minerals of Silurian formation. Here also there is a great preponderance of metallic ores, including iron, lead, antimony, manganese, copper and zinc. The ores of this formation are from various parts of the Province, including the coast of Charlotte County, York

County and the neighborhood of Woodstock and Bathurst. The localities of antimony ore are in this formation, and it is the one in which gold has (so far) been found in this Province. The Devonian formation present but a meager display of minerals, rock crystal from Musquash and anthracite from Lepreaux being all that are shown from it. The next formation, however, abounds in handsome and valuable minerals. Such are the manganese ores, which, though occurring in the Silurian, are in far greater abundance and perfection in this. Agate, carnelian, and chalcedony, ornamental stones, are chiefly found in this formation (Lower Carboniferous) in New Brunswick. Gypsum, alabaster and albertite are also valuable minerals, and abundant in this formation. With the exception of coal the next formation(Coal Measures) does not show valuable minerals in any abundance except at Bathurst, where there is a considerable deposit of copper mixed with lignite or coal. This copper deposit is interesting as showing how organic matter (decaying plants, &c.) can seize upon metals in solution in water and produce ore bed; and it is also interesting as showing how the minerals of one formation may be derived from another, for the copper ore the Tetu-a-gouche (Bathurst) of the Silurian slates are considered to be the source of the copper in the coal measures near Bathurst. From the Triassic, which in New Brunswick is confined to the island of Grand Manan, only two minerals are shown, and they are of a kind quite abundant in the North Mountains of Nova Scotia. Lastly, on the top shelf are displayed the minerals which have been found in the recent deposits of New Brunswick, viz., the surfaces, clays, sand, etc. The ores shown in this group are due to chemical changes which have transferred them from older formations, as the Silurian and the coal measures to the surface bed. The most interesting mineral shown here is the selenite crystal of gypsum taken from a spring in Sussex, showing how the formation of mineral species in crystalline form is going on at present time. Altogether, this collection, though not very large, is sufficient to show the great range in time during which the minerals species of New Brunswick have been formed, and the preponderance of certain kinds (as the metallic ores) in some formations and scarcity in others. Other Collections of Minerals in The Exhibition. - This case contains also a small collection of combustible minerals of New Brunswick, which is complete, however, in that it contains specimens from all the districts where combustible minerals in quantity sufficient to be economically available for fuel has beenfound. The collection contains coal from Grand Lake, anthracite from Lepreaux, bituminous shale from the Caledonia works in Albert, and other minerals of less importance. On the table beside the case containing theexhibit of the Natural History Society stands a flat case with the ores and products of the Revenue Silver Mining Company, whose mine is situated on Letete Peninsula in Charlotte Co. They exhibit a quantity of specimens of galena and zinc blende, which, by the analyses of Prof. Jno. Burwash, are shown to contain both silver and gold in quantities from $16 to $22 per ton, the gold appearing mostly in the blende-ore. This company show in their case a sample of the ore ground to a fine powder, and in the same dish a button of silver, produced by the reducing process which the powder undergoes, as a sample of the actual product of the mine. Next the box of silver ores is a handsome show case in which Mr. Wm. F. Best exhibits a tastefully arranged collection of Useful Minerals of New Brunswick, comprising such as are used for fuel for the production of metals, and various processes in the arts. Among these may be mentioned coal from Grand Lake, Albert Coal, from Hillsboro, Red Granite, from St. George, atnimony ore and metal, Pottery clay, Iron ore from Woodstock, Manganese from Sussex, Graphite from Portland, and Lime from various localities, with Red Ochre, Lead ore, etc. On the opposite side of the table is a case containing samples of silver ore from Yarmouth, N.S., sent by Mr. F. Killam and others by Mr. R. Sentall, fromKing's County, N.B. There are also turned and polished balls of red granite from the workshop of Mr. O'Neill, at St. George. In this case also Mr. Markham has placed his Electric Batteries to show the means by which that powerful and useful explosive dynamite, or giant powder, is operated in the modern methods of mining. Near by, on the table, stands a box of copper conducting wire, so that all the necessary apparatus, except the fuse, caps and the dynamite are present. Between the two stands Mr. Markham's case ofManganese ores, showing all the varieties worked at the mine, including Pyrolusite (the most valuable),manganite, a variety supposed to be braunite and an ore mixed with iron. Hematite iron ore encrusting the manganese, is also shown. These latter ores were formerly thrown away as waste products, but have now become valuable in connection with the modern processes used in the production of steel. Beside Mr. Markham's case is a box of silver-lead ore from Mr. Wanamake of St. Martin's. The crown ornament of the Mineral Department for beauty and elegance, is the display of Petroleum and its products from the wells of Ontario. Nothing could be more chaste and striking than the ornamental work in paraffine wax, exhibited under Mr. Bullock's charge, in a large show case in the middle of the table. The centre is occupied by a handsome pyramid in bleached wax and the ends by ornamental tablets of the same material. The rest of the case is filled by masses of wax and various ornamental objects made from it. On the table near by are samples of crude wax, and of the tar, gum and coke taken from the distilling retorts; and also of the oil in various conditions, from the crude oil as it flows from the wells, to the products prepared for lubricating purposes and for illumination. Scattered through the building are other exhibits which may be considered as belonging to the Department of Minerals, such as the trophy of the Spring Hill Mining Co.; the marble manufactures of Messrs. McNamee, the freestone of the Budres & Bay of Fundy Co.'s and of J.M.Steeves and Co., &c. But most of those have been described elsewhere."

URN: 0604 / 2056 / IDX_Names: Simpson Mine; Ganong Mine;

Daily Telegraph - Aug. 10, 1880 Nova Scotia mining (long) .... Silver Mining in New Brunswick is carried on at the Revenue mines, Mascarene, in Charlotte county, in which Mr. J.H. Harding and others are interested. Many tons of ore have been taken up, and the yield is considered very encouraging. There are at least two other silver leads worked in the same neighborhood, under the auspices of Messrs. Ganong and other parties from St. Stephen."

URN: 0604 / G3 / GEOL / IDX_Names: Simpson Mine; Granite; Geology - General;

Daily Telegraph - Oct. 8, 1880 Minerals. - We had to limit our reporter yesterday in this department. He continues his notes today. ..... Canadian petroleum and its products are exhibited by Mr. Joseph Black..... In the collection of minerals from the Mechanics Institute, which we already enumerated, pretty specimens of amianthus or rock-silk, and asbestos from Charlotte Co., are to be seen. They occur in serpentine, a green mineral, of which specimens are also exhibited.On the upper shelf Mr. John O'Neil exhibits polished granite, red and grey.The zinc blende in the collection of the Revenue Silver Mining Co. contains 1.13-00 oz. troy weight of gold to the ton, not 13-00 as reported in our issue of yesterday. Probably if the mine were deepened a larger percentage might be found. The specimens from which the assays were made were taken from 10 to 15 feet below the surface only. The silver and lead ores found in this company's mine at Letete are worth $61.20 per ton, according to the assay of Prof. Burwash. The mine has not been sunk more than 50 feet yet. Nova Scotia

S.J. Daily News - Oct. 6, 1869 Notes of a trip to Charlotte County.- ... In company with a gentleman from St. John who is interested in mining operations, I drove down to L'Etang, where a copper and lead mine has lately been opened by a Halifax company, and from the specimens of ore they have already taken out they are quite sanguine of its becoming a profitable speculation. I understood there was a larger mine at L'Etete, where a number of men are employed, and which is being worked to great advantage. In fact, the whole vicinity abounds with copper and lead, which I believe, with enterprise and capital to develop these minerals, would prove a source of wealth to the owners, as well as give great impetus to the trade of this county. S."

URN: 0606 / IDX_Names: Hatt Farm;
Morning Freeman - Oct. 26, 1877 Rich Galena Mine. - Mr. Henry Murphy, of St. George, brought to our office a very rich looking specimen of galena ore, embedded in quartz. This was taken from the surface of a lode lately discovered on the farm of Mr. Hatt, of L'Etang, Co. Charlotte. The lode is three and a half feet wide, and runs to the sea side, where it shows for the whole distance on the face of the cliff, which is eighteen feet high. The lode is known to extend to the length of three-quarters of a mile. Some of the ore taken from the surface was tested lately and found to contain one hundred and fifty pounds of lead, and three pounds five pwts. of silver to the ton of ore. The whole district appears to abound in minerals, and should receive the attention of capitalists. This mine, if it prove to be as rich and as easily worked as it promises to be, should yield a handsome return on any reasonable investment."

URN: 0608 / IDX_Names: Dick Farm;
S.J. Globe - Jan. 9, 1879 Notice is given in the Royal Gazette of the incorporation of Thaddeus W. Dick, Isaac Williamson and Stephen H. Dick, of Letete, and Solomon B. Pool, Calais, and John Wetherbee, Boston, under the name of the Dick and Williamson Mining Co., to develop and work the mining property on Lot No. 7 on the Mascarene Grant, St. George. Capital 100,000 shares at $1 each. Office at the mine."

URN: 0608 / IDX_Names: Dick Farm;
S.J. Daily Sun - Jan. 9, 1880 and St. Croix Courier - Jan. 15, 1880 New Companies. - Notice is given in the Royal Gazette of the incorporation of Thaddeus W. Dick, Isaac Williamson and Stephen H. Dick, of Letete, and Solomon B. Pool, Calais, and John Wetherbee, Boston, under the name of the Dick and Williamson Mining Co., to develop and work the mining property on Lot No. 7 on the Mascarene Grant, St. George, capital: 100,000 shares at $1 each. Office at the mine."

St. Croix Courier - Sep. 17, 1908 30 Years Ago. - We have in our office samples of rock from the mines of Thaddeus Dick, containing galenite, etc., which has been assayed by Professor Burwash, provincial assayer, and yielding 26 ounces, 7 dwt of silver to the ton. Another assay gives copper, silver and lead about equal parts, say about $15.000 to the ton."

URN: 0608 / 0604 / 0311 / 2056 / IDX_Names: Dick Farm; Simpson Mine; Letete Mine; Ganong Mine;
Bay Pilot - Aug. 12, 1880 To the Editor of the Bay Pilot: Mascarene, St. George, N.B. July 31st 1880 Sir:- In your number of July 29th I notices an article on the probable productiveness of the minerals of Charlotte County, signed J.B.K. on which I beg leave, through your valuable columns, to make a few comments. He claims to have tested galena from all parts of the Province and has not found a sufficient amount of silver in any samples to pay the cost of extracting. I wish to state, that by the Patterson Process lead ores are successfully desilvered as low as 3 ounces per ton of metallic lead. And at the Dick & Williamson Mine, in Mascarene, St, George, N.B., the surface galena has yielded in every assay upward of 25 ounces of silver, and in many, from 1/4 of an ounce to 21 dwt. of gold per ton, with from 55 to 65 per cent of pure lead, which has given our surface ores when dressed a value of from $65, to $105 per ton. The Boardman, Revenue and Mascarene Mines, on the same belt, produces ores of the same class. I don't wish to convey the idea that we have quantity of the above ores on the surface to pay the necessary outlay of developing the mines and purchasing the machinery &c., but when such ores are found in veins of such magnitude, with abundance of remains of soluble sulphates, our hopes for the future need not fail us. He also stated. A separate assay and of choice samples is of no importance whatever, either qualitative or quantitative value. Now to say the least, we can only ascertain if our veins contain true value in their surface ores by actual analysis, and their probable productiveness by their geological and mineralogical features. He further mentioned a 3 per cent. error, I too claim it an error, but do not wish all men in this section of the

County, interested in said business, to be held up to the public as novices because an inexperienced man made an error. Again he said, The effectual working of a mine cannot be done by book reading but by long and practical experience. He should have added, and such experience to be obtained in the district in which the mines are to be operated. For we have the monuments of either inexperience or careless neglect left behind in this section of the County in the form of the Wheal Louisiana Mine, and others formerly worked by men whose knowledge and practical experience was obtained in foreign countries, principally Cornwall or Devon, Eng. which has been a great injury to some very promising copper properties in this part of the County, and would say in conclusion, that hard has been the task to raise mining from the state of lethargy into which it has been plunged by such management in this place. Thad. W. Dick"

URN: 0608 / 0604 / 2056 / IDX_Names: Dick Farm; Simpson Mine; Ganong Mine;

St. Croix Courier - Jun. 17, 1880 An Exploring Visit to the Mascarene Mines.- On Saturday at about 2 p.m. two prominent gentlemen of St. Stephen, accompanied by a member of the Courier staff, started in the yacht Jessie M. for Mascarene, for the purpose of visiting the mines at that place, and of seeing for themselves that portion of Charlotte County so famed of late for its rich mineral deposits. A strong northerly wind was blowing and the boat, skipped merrily over the waves, passing, in rapid succession, the Raven's Head, Devil's Head, Doucett's Island, and other points of the river and bay all well known to local boatmen, and, after a sail of three hours and a half, reached the shore a short distance above the village of Letete. The party landed on a fine gravelly beach, above which was a beautiful green spot, sheltered on one side by a lofty cliff and on the other by a growth of scrub spruce. Here, as everything had been arranged for a night in camp, the tent was pitched, a fire kindled and a heavy meal partaken of. Then, each having assumed an easy position before the blazing logs, cigars were lighted and past experiences recalled and related for mutual entertainment. The member of the party who had taken upon himself the duties of maid-of-all-work having washed the dishes and made a bed of canvas and quilts, the light was extinguished and soon all were asleep except the Courier man, who, whether disturbed by the prickings of a guilty conscience or disquieted by the change of situation, could not rest until at last, lulled by the mingled harmony of the song of some frogs, which occupied an adjacent marsh, the splash of the waters on the shore and the vociferous snoring of his companions, he succumbed to the influence of the god of dreams. Early next morning the journey to the mines was begun. Calling on the way at the residence of Capt. Simpson, who conducts the mining operations of the Revenue Company, the party were joined by that gentleman and the genial Mr. Thieckens of St. George. Continuing their onward march, they passed some cuts where the Mascarene Company had been prospecting, and at length arrived at the scene of the operations of the Revenue Company. Capt. Simpson has sunk a shaft to the depth of about forty feet and some fine specimens of are have been obtained. The representative of the Courier, accompanied by the captain, descended the shaft and saw the numerous passages which have been run in every direction, in search of the main lode. Buildings have been erected and the neighborhood presents every appearance of a vigorous prosecution of the work. The Ganong Bros. and Haley & Boardman mine was next visited. Although the operations at this point have not been extensive, the results of prospecting show a large deposit of mineral matter and, no doubt, when the shaft is sunk, the yield will be considerable. The vein worked by the Revenue Company and that on which the hopes of Dick & Williamson corporation depend both cross this lot, and the prospect of success, is even more favorable here than in either of the other mines visited. The members of the party then directed their steps to the Dick & Williamson property, which was reached after a long tramp over a rough road. Mr. Dick has erected a residence and other necessary buildings right on the ground. All his operations have been carried on in a hill which, from an examination of the ores obtained from several parts of it, seems to be composed principally of copper, lead and silver ores. At the surface, the main shaft is about 160 feet above the level of the sea and extends downward 36 feet. Lately, the expectations of discovering a lode sufficiently large and rich to repay the company for the expenses attending their operations have been strengthened by the discovery of several small veins in one of the galleries running out from the main shaft, which, while continually growing larger, appear to tend towards one another so that hopes are entertained of a union of all these in one. The company intend to purchase a borer, by which a depth of 250 feet may be reached and the work of prospecting considerably facilitated. Mr. Dick has strong and reasonable faith in the richness of the deposits in the ground which he is working and thinks that in the end, his perseverance will be rewarded. Having obtained several specimens of ore the party retraced their steps to the shore and after having a hearty hand-shaking of the friends they had met, took up the tent, packed it, together with the cooking utensils, on board, and re-embarked. The boat's bow was turned towards home, the sheet hauled flat aft in response to the breeze the Jessie M. careened gracefully over and dashed forward, and being fairly started, each one settled himself

URN: 0612 / IDX_Names: Oliver Cameron;

St. Andrews Beacon - Sep. 14, 1893 St. George.- Mr. Clarke, who has opened the copper mine at Back Bay, states that the lead has turned out all he expected and he anticipates a large and valuable find of copper. He expects to employ a large number of men in the near future."

URN: 0632 / IDX_Names: Moores Mills;

S.J. Daily News - Aug. 13, 1872 and Carleton Sentenil - Aug. 17, 1872 and Morning Freeman - Aug. 20, 1872 Mines at St.

Stephen. - The Calais Times speaks of some valuable mines which have recently been discovered at St. David's, Charlotte Co., ten miles from St. Stephen, and on the line of the St. Stephen Branch Railway. The specimens present the appearance of being richly impregnated with minerals, which from a careful analysis have been proved to be copper, silver and lead. The quartz containing these metals is found near the surface, and becomes richer as the depth increases. The mineral veins extend over six or seven hundred acres, and wherever examined give indications of possessing a high proportion of metal. As the mines are but a few miles distant from a shipping port, and possesses every facility for transportation, they can be worked with comparatively small expense. These mines are owned mainly by Mr. George M.

URN: 0632 / IDX_Names: Moores Mills;

St. Croix Courier - Aug. 22, 1872 and St. Andrews Standard - Aug. 28, 1872 Mineral Deposits in St. David.- The parish of St. David promises to be fruitful in mineral wealth. Professor Bailey's explorations satisfied him on this point several years ago, but little was said on the subject until last year, when Capt. William Porter, who had experience in mines abroad, began a systematic plan of investigation and was before long rewarded with abundant discoveries. He and Geo. Porter, Esq., have succeeded in obtaining the right of mining on 700 acres of land where lead, silver and copper ores are found in great abundance. The mining leases cover the farms of Messrs. Connick, Spalding, Douglass, B. McCann and Maxwell. This summer there has been a good deal of prospecting done, and the Messrs. Porter have sunk several shafts with most encouraging results. The writer recently visited the place, which was situated in the parish of St. David, about two miles beyond Moore's Mills. The ore, which appears to be inexhaustible, gives indications of great richness. They have been analyzed by Messrs. Merrick and Gray, of Boston, and are found to be very valuable. These deposits are so situated that the expense of procuring them must be small. Located so near the line of Railway, transportation would be comparatively easy; and we think we see in this an enterprise that cannot fail to add materially to the wealth of our County and Province. We hope a good strong company will be formed so that these mines may be successfully operated."

S.J. Daily Telegraph - Mar. 29, 1880 St. Stephen. - Mining. - It is rumored that a company has been formed in England to work a copper mine near Moore's Mills. Charlotte County abounds in valuable minerals, and may yet become a rich mining

St. Croix Courier - Aug. 21, 1902 30 Years Ago. - The parish of St. David promises to be rich in mineral wealth. Professor Bailey's explorations satisfied him on this point several years ago, but little was said on the subject until last year when Captain Wm. Porter, who had experience in mines abroad, began a systematic plan of investigation and was rewarded with abundant discoveries. He and Geo. M. Porter have obtained the mining right on seven hundred acres of land where lead, silver and copper ores are found ingreat abundance. The mining leases cover the farms of Messrs. Connick, Spalding, Douglas, McCann and Maxwell. Several shafts have been sunk with most encouraging results."

St. Croix Courier - Apr. 15, 1880 Our Mining Industries.- Mining in Charlotte County is about to assume a leading position among our local industries. It has long been known that this country is rich in minerals, which only await the application of capital and enterprise to make them a most productive source of wealth. We are glad to know therefore, that there development is no longer a matter of speculation, but that operations are now in progress which will become still more active during the coming summer. Considerable activity, we are pleased to learn, has lately been manifested at Mascarene. Men are now actively employed in the Revenue Mine at that place, which is controlled by St. John parties. An assay of the ore, as we are informed, shows that it produces $132 of silver and 4 ounces of gold to the ton. Great activity prevails at the Dick & Williamson mine, and the sum of $7000 has been guaranteed towards putting up machinery at once. Former assays of the ore from this mine gave $98 in silver and gold, $21 of which was in gold. Within the last few days ore richer than any before found has been struck and the prospects of the mine are constantly increasing. The stock has increased 100 per cent and holders have no disposition to sell. The Mascarene Mining Company are also placing themselves in a position to start operations at once, a number of the stockholders from St. Stephen and Calais having gone to St. George the other day with that object in view. The stock, we learn, has recently advanced 50 per cent., and no more shares are to be sold at present. As soon as spring opens work is to be commenced on Silver Island, near St. George, known as the Bradbury Mine, now owned by parties in Boston. The Hartt Mine, in the same vicinity, recently owned by Thieckens & McLean, which embraces 16 acres, has recently changed hands, and arrangements are now being made to work the mine. It covers part of the same lode as Silver Island, which is known to be so rich, and will no doubt prove equally as productive. The shipping facilities from all these mines are the very best. It is stated also that a company will shortly"

Moncton Daily Times - Apr. 8, 1880 St. Stephen. - A company in England are to commence operations during the summer, in a copper minenear Moore's Mills, to determine whether there is enough to make the thing pay the working or mot. That locality is also said to have a lead and a gold mine."

URN: 0633 / IDX_Names: Basswood Ridge;

St. Croix Courier - Dec. 21, 1977 Written in 1939 by pupils of Basswood Ridge School. - Gold Mine. - One day when Walker Blakely was examining the land he had lately purchased from the Cumming's lot, he discovered a rock projecting from the ground with crystals on it. It occurred to him at the time that it might be gold. This thought remained with him and when prospectors came to Scotch Ridge he had them come and look his land over. They believed the rocks had gold in them so they started blasting July 10, 1929. They worked it considerably during the year. Specimens were sent to Milton Hershey in Montreal. He found a small percentage of gold and a trace of silver. He would allow $2.40 a ton, which is very good for top material. The men who worked in the mine were Walter Blakely, Herbert Linton, Stillman Matheson, Harvey Caldwell, Colin Smith and Ernest Matheson. The mine wasn't worked to any extent because they hadn't the proper instruments to work with. They could borrow a diamond drill but they would have been responsible for any damage done to it. It hasn't been opened again for three years because of the lack of capital."

URN: 0633 / 0007 / 2033 / IDX_Names: Basswood Ridge; Lake George Antimony; Scotch Ridge;

Agriculture and Geology of Maine, 1862 - by S.L. Goodale, pp. 423-424 Gold ... Across the river in New Brunswick, upon land of Mr. Bolton of St. Stephens, is another locality where gold has been found. Its distance from Sprague's Falls cannot be very great, as it is about nine miles north-west from the Calais Bridge. The exact locality of the gold is in plumbaginous slate, very black and greasy. Near it is a large boss of quartz, with sub veins of quartz running through it; and there are also near by veins of quartz containing pyrites. These two localities are the most promising of anything seen by us in the St. Croix country. ... Mr. Steadman ... A very remarkable vein of the sulphuret of antimony has recently been opened in Prince William, New Brunswick. It is not a great distance from the Maine boundary; and the rock is the same mica schist

URN: 0639 / IDX_Names: Dickson Brook;

N.B. Courier - Jul. 12, 1862 Williams Copper Mining Company, Incorporated under Act of Assembly, April, 1862. This mine is opened in the Parish of Alma, Albert County, Capital $120,000.00 in 6000 shares of $20.00 each, limited liability. The undersigned has received instructions to dispose of One Thousand Shares of the above named Mining Stock, at a bonus of two dollars per share; this bonus to cover a portion of the outlay incurred up to the present date, in the cost of exploration, the first years rent of the Mining lease, labor driving adit level 175 feet, and sinking shaft 25 feet, with the cost of tools, &c., &c. Purchasers of the stock will be placed on the same feeling as the original holders of the shares, and will be only liable for such calls or assessments as may be ordered by the Directors for the time being, to carry out the objects of the Company. The Mine, and the land on which it is situated, is held under lease from Mr. James McKinley on favorable and equitable terms. The deposit of ore, at and near the surface of this Williams' Mine, is seldom exceeded on this, or on the European Continent, and from being situated within a mile of a place of shipment on the Bay of Fundy, of easy access, and open navigation ten months in the year, its advantages are of the highest order for the profitable carrying out of Mining operations. The locality, and the extent of the lode of ore, have been inspected by prominent Mining Engineers from Cornwall, England, the United States, and of this Province, who all concur in opinion, that so far as the lode has been examined, it affords indications of a most extensive deposit which may yield thousands of tons of copper ore for a series of years. The Mining of Copper Ore is generally considered most profitable. Referring to the London Mining Journal of the 23rd August last, we find that in Cornwall, the Buller Mine, upon an outlay of £1280 stg., has yielded in profits £287,884 and at one period was sold for £500,000. The Travessan Mine upon an outlay of £32 10s. 0d per share, has sold for £2,700 0s. 0d. per share, its profits attaining the sum of £449,040 0s. 0d. Browny, West Tretheltan and Tretheltan Mines upon trifling outlays, speedily realized £200,000 0s. 0d., value of ores and £80,000 0s. 0d. of profits. Copper Hill Mine, is selling for £85 per share or 100 per cent premium, and is declaring handsome dividends. East Basset Mine sold at one time for £100,000 0s. 0d., and North Basset for £250,000 0s. 0d., and the expenditure upon both mines amount to only £27,104 0s. 0d. The Basset Mine, £2,624 0s. 0d., paid up less declared dividends to the amount of £299, 520 0s. 0d., and has sold at £400 per share. The above statistics belong in a single small district in England. To take a wider range we may mention South Caradan Mine £1 5s. 0d. per share paid up, now selling at £350 per share. The Devon great consols, £1 0s. 0d. per share paid up, now selling for £450 per share. It is a well known fact that no metal fluctuates less in price than copper, if we except gold and silver; and that next to iron, copper attains the largest consumption from its being so extensively used in the industrial arts. It is estimated that an outlay, not to exceed one dollar per share, will fully test the capabilities of the Williams Mine for profitable working in future. The subscription list of shares will be kept open until the 1st November, subscribers will have the right of voting in the Directors and Office bearers and passing the bye-laws of the Company. A plan of the property can be seen at the office of the undersigned. St. John, Oct. 1862 Wm. McKay."

Morning News - Mar. 5, 1862 Fredericton. - Tilly ... (introduced) ... one ... (bill) .... to incorporate the Williams Mining Co."

URN: 0639 / IDX_Names: Dickson Brook;

Morning Freeman - Sep. 11, 1862 We were shown on Wednesday morning a lot of copper ore from Upper Salmon River, Albert county, which, if the information afforded be correct, is one of the most promising discoveries yet made in the Province. This mine is owned by the Williams Mining Company. We are informed that the ore was first found in alluvial soil, and afterwards traced to the solid rock, where a vein of from six to eight feet was found. The walls are distinct, the surface having been stripped the vein is visible for a considerable distance. The sample taken from one of the casks shown us is, we are assured, worth from £25 to £30 sterling per ton. A block of ore, from this mine, weighing 300 lbs. lies at the office of William Davison, Esq., Princess street, for inspection."

Morning News - Sep. 15, 1862 The Williams Mining Company. - A specimen of the copper ore, taken from this company's mine, which is located in the parish of Alma, Albert County, can be seen at this office. Some shipments have been made to England, where it brought about $107 per ton, and some to the States, realizing $112 per ton. We hope the future operations of the Company may be successful."

N.B. Reporter - Sep. 19, 1862 The Williams Mining Company. - A specimen of the copper ore, taken from the company's mine, which is situated in the parish of Alma, Albert County can be seen at this Office. Some shipments have been made to England, where it brought about $107 per ton, and some to the States, realizing $112 per ton. We hope the future operations of the company may be successful. - News"

S.J. Daily News - Aug. 19, 1870 Copper Mines, Albert County.- An Alma, A.C., correspondent informs the Moncton Times that the Copper Mines there are turning out well. He says that the mine in charge of Mr. Waters is exceedingly rich and that abundance of copper is obtained from that under the control of Mr. Garrett. Mr. G has only ten men employed at present, but more will be added shortly. He has a shaft sunk about 60 feet."

Chignecto Post, Page 2 - Thursday, August 25, 1870 NEW BRUNSWICK NEWS - The copper ore at Alma, Albert County is rich and abundant; two mines are being worked."

Daily Telegraph - Jun. 2, 1870 The Alma Copper Mines, the property of Mr. A Garrett, are attracting the attention of mining gentlemen. They are situated in the Parish of Alma, about four miles east of Point Wolf, and one to two miles west of Salmon River, near the coast. Several new buildings have been erected, and fifteen to twenty men are regularly employed. The property embraces about two hundred acres of land, on which some eight or ten tests have been made, in each case developing a fine appearance of copper. The main shaft has been sunk 45 feet, passing through several copper veins, and reaching a large deposit, showing a surface of 9 feet wide, the vein being probably 2 feet thick, and of indefinite extent. The yield of pure copper is all the way from 3 to 30 per cent., the average being about twenty per cent. Mr. Garrett has been at work about three months, and has raised and has on hand over three hundred tons of ore, which is destined, probably, for Swansea, Wales. Specimens of the ore may be seen at this office. The undertaking, we believe, is likely to prove remunerative, as may be inferred from the fact that a number of New York capitalists will probably invest in the

S.J. Daily Sun - Aug. 8, 1879 Albert. - Prospecting for copper is now the order of the day in the parish of Alma. The matter has been favorably reported upon in what is called the McKinley claim, lands have been leased, and work, it is said, will be begun almost immediately. Should employment be given to an hundred men, as is reported, it will be a grand thing these

Moncton Daily Times - Aug. 20, 1879 Alma, Aug. 16. - A gentleman connected with a Newfoundland copper mining firm has been prospecting for copper in this vicinity, and has leased a lot some three miles below the village, from which there had previously been copper ore taken."

Chignecto Post - Oct. 9, 1879 Copper in Albert County.- Dr. Earle, agent forMr. Ellershansen, of Newfoundland copper notoriety, has secured a number of leases at Salmon River preparatory to prospecting for copper. He will superintend operations there himself this fall."

Weekly Transcript - Aug. 23, 1882 Albert County Notes. - It is expected that mining operations will be commenced in the parish of Alma before very long. That section presents some of the finest indications of copper and silver to be found in the county, and several attempts have been made to develop them, but have not been prosecuted to any great extent. Mr. Alex Harrigan has taken mining leases of a large areain the interest of some Boston capitalists who intend to thoroughly prospect the locality. Mr. Harrigan has made several visits to the locus a quo, and from what he has seen, feels very sanguine of striking a large body of metal. Of his anticipations are realized, it will be a fine thing for Alma, a good thing for the county, and a big thing for the Company. Copper and silver are not the only precious and"

Chignecto Post - Aug. 24, 1882 Mr. Alex. Harrigan, agent for Boston parties, has been prospecting Alma, A.C., and has found copper, and secured leases."
URN: 0639 / IDX_Names: Dickson Brook;

S.J. Daily Sun - Nov. 17, 1882 Mining.- Mr. Harrigan has a number of men working a copper mine on the property of Mr. George McKinley, Alma. Two shafts have been sunk, one 28 feet deep and another 12 feet deep. In the former the seam of ore is 18 inches wide and in the latter 2 inches wide. The rock is free milling ore and the mine gives promise of being very valuable. A large quantity of this ore has been shipped to Boston. - Maple Leaf."

Chignecto Post - Nov. 23, 1882 Two shafts have been sunk in the property of Mr.Geo. McKinley, Alma, and a vein of copper ore 18 inches thick has been found. The Maple Leaf says a large quantity has been shipped to Boston."

Weekly Freeman - Nov. 25, 1882 Work is being prosecuted at a copper mine on the property of Geo. McKinley, Alma, A.C. Some of the ore has been shipped to Boston."

S.J. Daily Sun - Dec. 4, 1891 A large quartz vein carrying copper of excellent quality has lately been uncovered in the parish of Alma, Albert county. Active measures for its development will probably be undertaken at an early date."

Moncton Daily Transcript - Dec. 4, 1891 Copper Vein in Albert County.- A large quartz vein carrying copper of excellent quality has lately been uncovered in the parish of Alma, Albert County. Active measures for its development will probably be undertaken at an early date."

Daily Telegraph - Dec. 5, 1891 Copper in Albert County. - Mr. A.E. MacIntyre, of this city, has analyzed specimens of the ore from a small crop lead near the great quartz vein referred to in our report of yesterday, averaging 21 per cent of

Moncton Daily Times - Dec. 5, 1891 Copper in Albert County. - A large fissure vein of copper bearing quartz has recently been discovered near Alma, in Albert county, and is now receiving the attention of mining experts interested in its

S.J. Daily Sun - Dec. 5, 1891 Copper Ore in Albert County. - Samples of copper ore, taken from a small cross vein, near the large fissure vein of copper bearing quartz recently found near Alma, have been analyzed by Mr. McIntyre. They show twenty-one per cent. of metallic copper."

Moncton Daily Times - Dec. 8, 1891 Copper Ore. - Twenty one per cent. of metallic copper ore was returned as the result of the analysis of samples of ore from the McKinley farm near Alma, Albert Co."

Moncton Daily Transcript - Dec. 10, 1891 Copper in Albert County. - The J. McKinley farm, near Alma, in Albert county, during the past twenty-five years or more, has been the scene of many and varied explorations for copper; where, extending over and beyond this farm, northerly, small pieces of copper ore, widely distributed, had been found, and where, of later date, Mr. James I. Fellows and others interested with him discovered a small vein containing very rich ore, but not of sufficient extent to be worked profitably. The finding of a large boulder in the road ditch a few years ago, induced other operations of cutting and tunnelling without success. These facts having come to the knowledge of the Mineral Developing Company of this city, they recently instituted a further search which has resulted in the discovery of a large fissure vein of copper- bearing quartz, extending a mile or more in a northerly direction across the McKinley farm, supposed to carry the parent vein from which the ore of the cross vein and boulder was supplied. - St. John Globe."

Moncton Daily Times - Dec. 11, 1891 and Chignecto Post - Dec. 17, 1891 Copper in Albert County. - Says the St. John Gazette: Some twenty five years ago attention was first called to the existence of copper ore on the McKinley grant, near Alma. A party of St. John gentlemen numbering four, of whom Mr. James I. Fellows was one, visited the premises. The exhibit then consisted of specimens that had been turned over to Mr. McKinley when plowing in his field. No vein had then been discovered. Some years later Mr. Fellows found on his farm a small cross vein of three or four inches and removed several tons of ore of a very fine quality but owing to the narrowness of the vein, it could not be profitably worked and was abandoned. Of latter date still, a boulder of about three hundred pounds, carrying about eighty per cent of copper was uncovered in a road ditch not many yards from the cross vein, and gave rise to numerous cuttings and tunnelling without finding the parent vein, search for which was again abandoned. During the past autumn the Mineral Development Company of this city instituted a further search by an expert of wide experience in copper and silver mining, with the result that discovery has been made of a very broad and lengthy fissure vein of copper bearing quartz, extending for a mile or more, across and beyond the McKinley, Boyle and other grants, and supposed to carry the present vein from which the cross vein is an offshoot."

Weekly Record - Fri. Dec. 11, 1891 The recent discovery at Alma, A. Co., of copper- bearing quartz in a fissure vein of great width and length, the ore from which is superior quality, will probably be followed by early efforts to determine the quantity of ore which may be found available for shipment."
URN: 0639 / IDX_Names: Dickson Brook;

S.J. Daily Sun - Dec. 15, 1891 Albert County Copper. - Since the last notice of the discovery of the large copper-bearing quartz vein near Alma, James Robertson, miner, late underground foreman of the Albert coal mines at Hillsboro, and Chas. A. Calhoun, licensee of the Alma copper property, have returned from prospecting northward on this vein, and report its continued extension a long way beyond points previously uncovered."

Daily Telegraph - Dec. 15, 1891 and Moncton Daily Transcript - Dec. 15, 1891 and Moncton Daily Times - Dec. 16, 1891

Copper in Albert County. - Mr. Chas. A. Calhoun, of Albert Mines, who has license to search the Alma copper property, accompanied by Mr. James Robertson, miner, late underground foreman for the once celebrated Albert coal mines, have recently returned from a further exploration of the great copper bearing quartz vein lately discovered there and reports the extension of this vein northerly a long way beyond what had been previously known; now about a mile long, showing at outcrop a breadth of 10 to 15 feet."

S.J. Globe - Feb. 26, 1891 and Evening Gazette - Mar. 20, 1891 and S.J. Daily Sun - Mar. 20, 1891 Joint Stock Companies... The Royal Gazette of March 18th has notice of three new joint stock companies. The New Brunswick Mineral Developing company, whose object is shown by its name, has $50,000 capital. The incorporators are J. deWolfe Spurr, G. Wetmore Merritt, Henry Allison Drury, Robert Caldwell Elkin and Byron Gordon Taylor. The first three are the Provisional

Daily Telegraph - Aug. 24, 1892 and Daily Times - Aug. 25, 1892 New Brunswick Mineral Development Company. - A meeting of applicants for shares in the proposed Alma Copper Company was held at the office of the New Brunswick Mineral Development Company on Tuesday. The meeting was called for the following purposes:To present the report by the company of evidence of increasing quantities of copper ore developed in their explorations upon the property in the parish of Alma in Albert county, and To give notice that the second 5,000 shares mentioned in the prospectus of the proposed Alma Copper Company will be open for ten days for applications for allotment. The report showed that $1,225 has already been paid on shares and that the expenditures have been about $1,300. Active operations in exploring were begun in March last and many evidences of valuable copper ore have been found. The Mineral Developing Company recommended the further prosecution of researches once the prospects of rich reward for the venture were far better now than when operating commenced. The report was accepted. Capt. Brown, mining superintendent at Alma reported verbally on the operations. Mr. A.E. McIntyre, analytical chemist, had examined some of the quartz and found 38.48 per cent of pure copper, which is an unusually large quantity. Mr. J. DeWolfe Spurr is the president of the company."

URN: 0639 / IDX_Names: Dickson Brook;

S.J. Daily Sun - Aug. 24, 1892 The Alma Copper Company. - A Most Gratifying Report Submitted to the Shareholders at a Meeting Yesterday. - A meeting of the applicants for shares in the proposed Alma Copper Company was held at the office of the New Brunswick Mineral Developing company yesterday afternoon. The meeting was held for the purpose of hearing a report of increased quantities of rich copper ore developed by explorations upon the property at Alma, A.C.; to give notice that the second five thousand shares mentioned in the prospectus of the proposed Alma Copper company will be open for applications for allotments to afford to each applicant having this priority of right an opportunity to determine whether he will or will not apply for any or all of the shares. The report presented was as follows: The New Brunswick Mineral Developing company presents the following report, pursuant to its obligations set forth on the prospectus of the Alma Copper company. That J. deWolfe Spurr is in possession of the assignment to him of the crown license mentioned and set forth on page eight of the prospectus, and holds the same in trust for the uses and purposes stated in said prospectus. That applications for the first 5,000 shares offered were duly received. Twenty-five cents per share has been paid on 4,900 of these shares, amounting to $1,225. That the expenditures to date, with liabilities incurred, will amount to about $1,500. That active explorations superintended by Captain O.B. Brown were begun about 1st March last, continued that month, discontinued during the month of April, resumed on the 2nd of May and thence continued to this date, with the following results: That the fissure vein of copper bearing quartz referred to in the first page of the prospectus has been explored, vast bodies of quartz showing copper have been exposed on its middle section near the top of the mountain. There is a large exposure, apparently of the same vein, about half a mile to the southward and eastward, near the foot of the mountain, a large out crop, supposed to be a continuance southward of the above vein, called the Brook Lead , showing some very fine specimens of copper, proved to be drift; a similar outcrop in said brook a few hundred feet above proved also to be drift; in both cases the character of these drifts indicates that they have not come from afar. That after exploration made on northern and middle sections of the great quartz vein, it was thought desirable to limit present and near future explorations to the southern section of the property, for the reason that section offered better and more varied facilities for conducting them, was nearer to a public highway and harbors, and was the location covering the best exhibits of copper ore. That recent and present explorings have been confined to the said southern section. Several minor pits and trenches of varied proportions were made; one of the latter is being now extended, as a tunnel, towards the hillside to meet the bed rock at a point on line between the Fellow's shaft, and where so large an amount of surface boulders of very rich copper ore was discovered near the brook. Samples of this ore are now on exhibition at this office. The find was made on 16th July, about two hundred and fifty feet west of the Fellow's shaft, one hundred and sixty feet north of the main road; westward of location of the larger roadside boulder referred to in prospectus. That the location of the roadside boulder was prospected. In its immediate vicinity a few very rich specimens were found. In a northwest direction, about two hundred feet distant, the very rich ore, mentioned in the last preceding paragraph, was found. That upon the cross vein, mentioned on page three of the prospectus, a shaft had been commenced prior to our occupancy. This shaft was cleaned out in March last, but owing to the severity of the weather it could not then be conveniently explored. Work has since resumed in this shaft, with very promising prospects as the sinking has advanced. That the specimens found in the drift afford evidence of the existence of a large body of valuable copper ore at some point within the mining rights to be controlled by the proposed Alma Copper company. These specimens are rough and sharp, with ragged edges, presenting no abrasion or smoothness, which would have resulted had they drifted any distance. That the broken character of the ground, which lies between the shaft and the location of the rich surface specimens of ore found to the westward, favors the belief that the explorations over this section will not only account for the presence of specimens found, but will uncover the source from which they came. That the New Brunswick Mineral Developing Company recommend the further prosecution of researches as provided by the terms set forth in the prospectus of the Alma Copper Mining company, since the prospects of rich reward for the venture are far better now than when operations were commenced. The report was adopted and the company decided to take up the balance of the shares and proceed with the work. Capt. Brown was present and made a verbal report, which was deemed highly satisfactory. Some handsome specimens of the ore were shown at the meeting, some of

Evening Gazette - Aug. 24, 1892 Alma Copper Company. - A meeting of the applicants for shares in the proposed Alma Copper company was held at the office of the New Brunswick Mineral Developing Company yesterday afternoon. The meeting was held for the purpose of hearing the report of increased quantities of rich copper ore developed by explorations upon the property of Alma, A.C.; to give notice that the second five thousand shares mentioned in the prospectus of the proposed Alma Copper company will be open for ten days for applications for allotments; to afford to each applicant having this priority of right an opportunity to determine whether he will or will not apply for any or all of the shares. A report was presented which was found satisfactory and adopted. The report stated that the New Brunswick Mineral Developing company recommend the further prosecution of researches as provided by the terms set forth in the prospectus of the Alma Copper company, since the prospects of rich reward for the venture are far better now than when operations were commenced. The company decided to take up the balance of the shares and proceed with the work."

Weekly Record - Fri. Aug. 26, 1892 That there remains considerable wealth in New Brunswick which is as yet undiscovered was made evident by the recent explorations upon the property of the Alma Copper Company at Alma, A. Co. Some very fine specimensof copper have been found, some of which assayed 38.43 per cent. All that is needed is capital and as the shares of the company will be open for ten days for applications for allotment, there is some hope of success. We do not know if the Freeze mine is near the place where this last lucky find is or not."

Moncton Transcript - Aug. 31, 1892 Alma. - Good specimens of copper ore are taken out of the Watters mine. Operations are still going on in"

URN: 0639 / IDX_Names: Dickson Brook;

S.J. Daily Sun - Dec. 14, 1892 Alma. - The Alma Copper Mining company have a number of men employed prospecting for mineral about a quarter of a mile from this village. The indications are said to be excellent."

Daily Telegraph - Jan. 16, 1892 The Alma Copper Co. - The New Brunswick Mineral Developing Company of this city secured all mining rights reserved by a license to search from the crown, which covers the great copper bearing quartz lead recently noticed in our columns, has issued its prospectus for the Alma Copper company upon the conditions set forth in the prospectus, a copy of which may be had or mailed, on application to 105 Prince William street. The preliminary cost of exploring, developing and determining the value of the property, before incurring the regular cost of mining operations is provided for somewhat on the co- operative plan, each applicant for shares will pay a certain rate per share, receive his allotments and secure the prior right of application for as many more shares, in the meantime having opportunity for obtaining information while preliminary developments are being made."

S.J. Globe - Jan. 16, 1892 Alma Copper Mining. - The office of the New Brunswick Mineral Developing Company is at 100 Prince Wm. street. The president is Mr. J. deWolfe Spurr; the secretary, Mr. G. Wetmore Merritt. A fissure vein of copper-bearing quartz of immense extent has been found in Alma, Albert county, and this vein the above named company proposes to develop. Experts have pronounced the ore to be very rich. The mining location is convenient both as regards water and rail carriage, and should further and fuller exploration justify the existing assumptions the property will prove to be a good one. The preliminary cost of exploring, developing and determining the value of the property, before incurring the regular cost of mining operations, is provided for somewhat on the co-operative plan. Each applicant for shares will pay twenty five cents per share, receive his allotment and secure the prior right of application for as many more shares, in the meantime having opportunity of obtaining information while preliminary developments are being made."

S.J. Daily Sun - Jan. 16, 1892 and Evening Gazette - Jan. 16, 1892 Prospectus of the Alma Copper Co. - Capitalists and others disposed to speculate in a copper mining venture should at once apply to J. deWolfe Spurr or G.Wetmore Merritt for a copy of the prospectus of the Alma Copper company at the office of the New Brunswick Mineral Development Company, 105 Prince Wm. street. The prospectus points out that the location of the veins is most favorable from every standpoint. There is abundance of water. They are near the public highway, within three miles of the Albert Southern railway, and the tidewater harbor for small vessels at Alma, and still nearer but not so easy of access to the breakwater harbor at Herring Cove for larger tonnage. The preliminary cost of exploring, developing and determining the value of the property, before incurring the regular cost of mining operations, is provided for somewhat on the co-operative plan. Each applicant for shares will pay twenty-five cents per share, receive his allotment and secure the prior right of application for as many more shares, in the meantime having opportunity of obtaining information while preliminary developments are

Evening Gazette - Mar. 2, 1892 Mining Notes. - The Alma Copper Mining Venture. -The Albert Coal Seam to be Reopened. - The New Brunswick Mineral Developing Company has met with good success in the work of organizing the Alma Copper Company, which is to open up the fissure vein of copper bearing quartz in Alma, Albert Co., N.B. The first five thousand shares of stock has all been subscribed, thus furnishing the funds needed for beginning the work of opening up to ascertain the value of the veins. Captain O.B. Brown, an expert in silver and copper mining, who has expressed the opinion that the vein to be opened up does carry a large body of ore, was to meet Mr. James Robertson, formerly underground manager at the Albert mines at Alma, today and with a number of men they were to commence operations upon the big fissure vein. The first work, of course, will be to determine the course and dip of the vein, and then to choose a site for the sinking of a shaft. The work will be pushed forward as fast as possible. The Mineral Developing Company has also secured possession of the Albert coal areas and propose to proceed soon with the work of opening them up in places to determine whether or not there is a sufficient body of coal there to make the mining of it profitable. A company made an attempt several years ago, to open up this coal vein on the Barrett property near Edgett's Landing, but owing to lack of funds or some other cause, they did not continue their operations long enough to determine whether there was a good solid body of coal there worth mining. They left off in a fissure, five to six feet wide showing 18 to 20 inches of Albertite coal with gravel on either side of it. It is believed that deeper down there may be a good solid vein."

S.J. Daily Sun - Oct. 15, 1885 Sussex, Oct. 14. - Yesterday Dr. Goodfellow disposed of a manganese mine to a company of enterprising capitalists in the United States, representatives of whom are now here and express themselves confident that they have secured a big bonanza from the doctor which will not only prove remunerative to the contracting parties, but will prove of great commercial value to the country and the locality in which it is situated. The doctor speaks cheeringly of other spots over which he has passed. He is to commence the unearthing of ores on his lot adjoining the one he disposed of to Messrs. Freeze & McLean (McLeod??). It is fully believed that American capital and enterprise will soon show itself in the counties of Albert and Kings in opening up mineral treasures which are now hidden beneath the surface awaiting the

Weekly Transcript - Jul. 28, 1886 Albert Co. - Two gentlemen from New York visited Gowland Mountain, Elgin, last week to see a manganese mine, of which there seems to be a large quantity in that locality."

Moncton Daily Times - Nov. 26, 1889 and Moncton Daily Transcript - Nov. 26, 1889 and Weekly Record - Fri., Nov. 22, 1889 and S.J. Evening Gazette - Nov. 22, 1889 Dr. Goodfellow is about taking steps to develop a manganese property near Elgin, A. Co., in which he is interested. It is hoped his efforts will be crowned with success."

URN: 0643 / IDX_Names: Gowland Mountain;

S.J. Daily Sun - Jul. 22, 1890 Sussex. - Dr. W.W. Goodfellow, who has just returned from an extended mineral exploration, is said to be again in luck, having discovered a large manganese deposit not far from Elgin, Albert Co., and in the vicinity of the railroad."

Weekly Record - Fri., Jul. 25, 1890 Dr. Wm. Goodfellow, who has returned from one of his prospecting tours, reports the discovery of manganese on a property situated not far from Elgin, A. Co. The doctor proposes to bond the property and then form a company to work the same."

Moncton Daily Transcript - Nov. 7, 1890 and S.J. Daily Sun - Nov. 10, 1890 Developing Mining Property. - Companies Formed For The Development of Local Manganese Mines. - Dr. A.B. Chandler has returned from a visit to Boston where he has succeeded in interesting American capitalists in the development of valuable mineral properties - some being located in Westmorland and Albert counties and others in Nova Scotia. A Company has been formed to work manganese mines on the properties of Messrs. Beck and Keith at Gowland's (Golden) Mountain, Elgin, on property owned by a Mr. Hanlan. On property of a Mr. Steeves, a Moncton company has already sunk a shaft twenty feet down, in a four foot lead. Some very superior needle ore has been taken out. In the course of a few weeks the American company nominated by Mr. Chandler will commence operations by sinking shafts on the Steeves property which has ore of a quality similar to that on the Hanlan property. American capitalists will also work manganese mines on the property of Messrs. Beck and Keith near Salisbury station in Westmorland County. Dr. Chandler also promoted during his absence a New York company to work on an extensive scale, gold mining in the formation known as Gray's conglomerate in Colchester and Halifax Counties. The yield in these latter mines is likely to be large."

Weekly Record - Fri., Nov. 14, 1890 According to reports in papers it is understood that Dr. A.H. Chandler and others of Moncton have been successful in inducing capitalists in Boston to develop the manganese deposits in or near Elgin, Albert County."

Kings County Record - Mar. 4, 1937 License Taken On Manganese. - Securing of Option Near Elgin First Step in Mining Development. - A new commencement in the development of the mineral resources of Albert county appears to be assured. During this week I.G.O. Fenton, representing L.A. Sewell, Montreal, visited Petitcodiac and took up the options on the Ernest Harrison license at Gowland Mountain, two miles from Elgin. This license covers a rich manganese deposit which comes to the surface on the side of Gowland Mountain. Mr. Harrison during the years he held the property mined a considerable quantity of the mineral and shipped several carloads to Sydney, N.S., to be used in the manufacture of steel. To make the project a success, it was necessary to operate with more capital, and the new owners are proceeding at once to uncover the vein near the surface and block out a body of ore. Five or six men are expected to go to work on Monday. The site of the mine is two miles from the railway station, with a gravity haul and electric power available for mining. While much will depend on the quantity and location of the ore, it is considered possible that a mill will be installed for the production of ferro- manganese for use in steel manufacture. Mr. Fenton is optimistic regarding the results."

Daily Telegraph - Aug. 7, 1880 Albert County. - ... Mineral Deposits. - Albert affords a fine field for the geological explorer, and the justly celebrated Hugh Miller would have found, here, many Schools and Schoolmasters to excite interest and stimulate his favorite study. Accepted theories might, however, be more disturbed than strengthened by a critical examination of the characteristics of this district. A considerable belt of metalliferous rock,follows the higher ranges from Shepody Mountain, westward to St. John County, and contains more or less of gold, copper, tin, iron and telluride -

quicksilver has lately been discovered, the locality known only to a few, andasbestos is reported near the western line, a short wayfrom the Bay shore. Alma is the parish richest in metals so far as known, and the copper beds there have exchanged owners at high rates, though little has yet been done in working. Pockets of manganese may be seen at Waterside and Germantown in Harvey and in Hopewell, where theMessrs. Steadman expended $60,000 in erecting works for manufacturing chemical products from local deposits. Lime rock is plentiful in Elgin, Harvey, Hillsborough and Hopewell, and in the last named parish, a company is engaged in its burning and preparation for market. Marble exists in several places, but has not yet attracted the attention of capitalists.Very fine freestone is found all along the shore of the bay and on the Petitcodiac. Two quarries at St. Mary's and one at Curryville on the railway line are being worked at present. Gypsum of the best grade outcrops in many places.The rock is being exported from Hopewell, about 3,000 tons being now ready for shipment; and in Hillsborough the Albert Manufacturing Co., at present managed by Joseph T. Tompkins, Esq., has, since 1854, carried on a large business. The proposed capital was œ50,000, and, in this case, the objects of the original charter have been exceptionally well carried out, though always laboring under the disadvantage of the high tariff of the United States. The company has continuously afforded local work for a number of men at all seasons, and has greatly promoted the carrying trade. Railways have been built; a superior factory has been erected to replace the one burned; and, with the necessary equipment of wharves, stores, warehouses, etc., the company has added much to the appearance of the village. The excavating, road making, trucking, cooperage work, grinding, calcining, barrelling, shipping, etc., have for a number of years secured for Hillsborough a hum of which few villages can boast. The recent increase of 7 « per cent duty on imported calcined plaster has, perhaps, enabled the company to place larger quantities in the Canadian markets, whatever may have been the counteracting influences of the tariff regarding it in other directions. The Hillsborough Plaster and Railroad Company of 1851 has not continuously operated. Other valuable gypsum properties are held by Sir A.J. Smith and others. Of these James Blight, Esq., is local agent, and this gentleman, in fact, did a great deal of initiatory work in developing the business. Coal in limited seams may be seen in everyparish, mostly cannel of inferior quality, but the most important carboniferous deposit, yet discovered, lies in the interior of Hillsborough. This has long been called Albertite, and was first noticed, accidentally, by the Messrs. Duffy in 1848, was obtained from the Crown in January, 1850, a mining licence over a mile square, and their rights were shortly purchased for œ3,000 by a company, of whom the late Edward Allison, Esq., was the chief promoter. A charter was granted in 1852, and the noted lawsuit ensued between Henry Gesner, Esq., a proprietor of the soil, vs. the Albertite Mining Co. Wilmot, J., the late Hon, J.M. Johnson and Hon. J.H. Gray, now a B.C. judge, were among the counsel employed. The trial lasted several weeks, and the twelve jurors, who were instructed to determine and report, what the substance was, must have found their first lessons in geology rather tedious while listening to words of learned length and thundering sound, employed in the testimony as given by several of the most celebrated scientific men of the Continent. The substance had the chemical properties of coal, but the geological formation differed from all recognized theories. It differed from the Trinidad asphaltum in luster and fracture. The savants were evidently puzzled; but the jury said it was coal. A later conclusion, however, made it consolidated oil, and it is now known under the name of Albertite. Between costly litigation and unskilful management the net earnings were small till, in the person of John Byers, Esq., the company secured the services of one, who combined practical knowledge with executive ability. In one year about 15,000 tons were shipped, worth $15 per ton on the wharf. Latterly the export is less, as the drifts are at great depth, and the facilities for cheap working are becoming more impaired. It is hoped that further searches may restore confidence in the extent of this valuable article. Albertite is also found in minute quantities in Midland and other parts of Elgin and in Hillsborough, and it is known to exist in Hopewell in considerable quantities, by an old discovery; when its value was unknown, which late searches have failed to recover. The Princess Alexandra, East Albert and Prince of Wales companies, of which Mr. Blight is manager, have each expended large sums in freehold leases and prospecting work, but excepting the finding of comparatively narrow veins of Albertite nothing has resulted beyond the very useful employment of labor in the locality. In Rosevale and other districts are found large quantities of oil shale or bituminous rock, containing about 45 to 50 gallons of refined oil per ton, besides a residuum of pitch or asphaltum, making the whole volatile matter over 60 gallons to the ton. The oil is very pure and exceedingly valuable for illuminating purposes. Mineral oil exudes from the soil on McLatchey's farm in Hillsboro, and at Hopewell Hill, but the coming millionaire, who will first strike a flowing fountain, is not yet known, either to himself or others."

A considerable belt of metalliferous rock,follows the higher ranges from Shepody Mountain, westward to St. John County, and contains more or less of gold, copper, tin, iron and telluride - quicksilver has lately been discovered, the locality known only to a few, andasbestos is reported near the western line, a short wayfrom the Bay shore. Alma is the parish richest in metals so far as known, and the copper beds there have exchanged owners at high rates, though little has yet been done in working. Pockets of manganese may be seen at

Waterside and Germantown in Harvey and in Hopewell, where theMessrs. Steadman expended $60,000 in erecting works for manufacturing chemical products from local deposits. Lime rock is plentiful in Elgin, Harvey, Hillsborough and Hopewell, and in the last named parish, a company is engaged in its burning and preparation for market. Marble exists in several places, but has not yet attracted the attention of capitalists.Very fine freestone is found all along the shore of the bay and on the Petitcodiac. Two quarries at St. Mary's and one at Curryville on the railway line are being worked at present. Gypsum of the best grade outcrops in many places.The rock is being exported from Hopewell, about 3,000 tons being now ready for shipment; and in Hillsborough the Albert Manufacturing Co., at present managed by Joseph T. Tompkins, Esq., has, since 1854, carried on a large business. The proposed capital was œ50,000, and, in this case, the objects of the original charter have been exceptionally well carried out, though always laboring under the disadvantage of the high tariff of the United States. The company has continuously afforded local work for a number of men at all seasons, and has greatly promoted the carrying trade. Railways have been built; a superior factory has been erected to replace the one burned; and, with the necessary equipment of wharves, stores, warehouses, etc., the company has added much to the appearance of the village. The excavating, road making, trucking, cooperage work, grinding, calcining, barrelling, shipping, etc., have for a number of years secured for Hillsborough a hum of which few villages can boast. The recent increase of 7 « per cent duty on imported calcined plaster has, perhaps, enabled the company to place larger quantities in the Canadian markets, whatever may have been the counteracting influences of the tariff regarding it in other directions. The Hillsborough Plaster and Railroad Company of 1851 has not continuously operated. Other valuable gypsum properties are held by Sir A.J. Smith and others. Of these James Blight, Esq., is local agent, and this gentleman, in fact, did a great deal of initiatory work in developing the business. Coal in limited seams may be seen in everyparish, mostly cannel of inferior quality, but the most important carboniferous deposit, yet discovered, lies in the interior of Hillsborough. This has long been called Albertite, and was first noticed, accidentally, by the Messrs. Duffy in 1848, was obtained from the Crown in January, 1850, a mining licence over a mile square, and their rights were shortly purchased for œ3,000 by a company, of whom the late Edward Allison, Esq., was the chief promoter. A charter was granted in 1852, and the noted lawsuit ensued between Henry Gesner, Esq., a proprietor of the soil, vs. the Albertite Mining Co. Wilmot, J., the late Hon, J.M. Johnson and Hon. J.H. Gray, now a B.C. judge, were among the counsel employed. The trial lasted several weeks, and the twelve jurors, who were instructed to determine and report, what the substance was, must have found their first lessons in geology rather tedious while listening to words of learned length and thundering sound, employed in the testimony as given by several of the most celebrated scientific men of the Continent. The substance had the chemical properties of coal, but the geological formation differed from all recognized theories. It differed from the Trinidad asphaltum in luster and fracture. The savants were evidently puzzled; but the jury said it was coal. A later conclusion, however, made it consolidated oil, and it is now known under the name of Albertite. Between costly litigation and unskilful management the net earnings were small till, in the person of John Byers, Esq., the company secured the services of one, who combined practical knowledge with executive ability. In one year about 15,000 tons were shipped, worth $15 per ton on the wharf. Latterly the export is less, as the drifts are at great depth, and the facilities for cheap working are becoming more impaired. It is hoped that further searches may restore confidence in the extent of this valuable article. Albertite is also found in minute quantities in Midland and other parts of Elgin and in Hillsborough, and it is known to exist in Hopewell in considerable quantities, by an old discovery; when its value was unknown, which late searches have failed to recover. The Princess Alexandra, East Albert and Prince of Wales companies, of which Mr. Blight is manager, have each expended large sums in freehold leases and prospecting work, but excepting the finding of comparatively narrow veins of Albertite nothing has resulted beyond the very useful employment of labor in the locality. In Rosevale and other districts are found large quantities of oil shale or bituminous rock, containing about 45 to 50 gallons of refined oil per ton, besides a residuum of pitch or asphaltum, making the whole volatile matter over 60 gallons to the ton. The oil is very pure and exceedingly valuable for illuminating purposes. Mineral oil exudes from the soil on McLatchey's farm in Hillsboro, and at Hopewell Hill, but the coming millionaire, who will first strike a flowing fountain, is not yet known, either to himself or others."

URN: 0651 / IDX_Names: Midway;

Albert County Journal, Page 1 - Wednesday, October 10, 1917 - Copper Found Near Riverside, Albert County -Riverside, Albert - October 4 - There is quite an extensive mining boom on in this part of Albert county. Some months ago Mr. Henry Copp, of Midway, about seven miles from here, discovered a vein of copper running through his property. On investigating he found it extended from Waterside to Mary's Point a distance of thirteen miles. He, his three sons, and two son-in-laws, with Mr. W. J. Carnwath, promptly took out a mining lease of the whole territory. He has mining engineers examine the seams and the ore assayed, and the results have been very satisfactory. There are two seams, one sixty-five and the other twenty-five feet wide. The pitch of the rock is 65 degrees, which indicate that the seam is over one thousand feet deep. The samples of ore indicate that the ore is very rich in copper. The owners have given an option on the property to a syndicate headed by Hubbard of Chicago for seven hundred and fifty thousand dollars, and the chances now are that before another year an extensive mining operation will be in full swing on the upper waters of Shepody."

URN: 0662 / IDX_Names: Vernon Mine;

Daily Telegraph - Jul. 22, 1864 Vernon Copper Mines. - Owen Jones, Esq., the Manager of the Vernon Copper Mining Company, has, we understand, just returned from the mines, accompanied by Professor Petherick and one of the Directors; and we are informed that the Professor's report upon the working and future of the mines is most favorable. A large force of miners are employed on three very rich veins, which are proving of great extent and value. Blasting can be heard for miles around the country, and everything is life and activity. At night the lights of the night crews can be seen a great distance off in the Bay. Preparations are now being made to erect an immense breakwater and powerful machinery for crushing and stamping the ore. The Mines are situated near Martin's Head, St. John County, directly on the shore of the Bay of Fundy. The Company was formed in April last by some of the leading merchants of Boston, with a capital of $300,000, with power to increase tp $500,000. The stock is principally owned in Boston. R. Bayard, Esq., is the Provincial

Morning Freeman - Jun. 18, 1864 At the first annual meeting of ""the Vernon Mining and Smelting Company' held at the Company's Offices in the Custom House Building in the city of Saint John, on Saturday the 11th day of June inst., for the purpose of organising the said company and electing officers for the ensuing year, the following gentlemen were unanimously chosen directors:- Joseph S. Fay, E.R. Mudge, George H. Jones, Charles Desmond, Robertson Bayard. At a subsequent meeting of the Directors held on the same day and at the same place, Joseph S. Fay was chosen President and Treasurer of said company and Owen Jones, Secretary and Manager. Owen Jones, Secretary."

S.J. Daily News - Jun. 20, 1864 and St. Andrews Standard - Jun. 22, 1864 At the annual meeting of the ""Vernon Mining and Smelting Company"", held in this city a few days ago, the following gentlemen were chosen as Directors: Joseph S. Fay, E.R. Mudge, George H. Jones, Charles Demond, Robertson Bayard. At a subsequent meeting of the Directors Joseph H. Fay was chosen President and Treasurer, and Owen Jones, Secretary and Manager."

Daily Telegraph - Mar. 24, 1864 and Colonial Farmer - Mar. 28, 1864 Mr. James Vernon has disposed of his copper mine in Albert County to some parties in Boston. The price named is $20,000."

St. Andrews Standard - Sep. 7, 1864 On the 14th ult., a man of the name of Lord, employed by the Vernon Mining Company, was missing, and although active search was made, was not discovered until the 22nd, when he was found lying at the foot of a precipice fully 200 feet high, over which he had evidently fallen. The body being in so decomposed a state rendered it impossible to remove it, and consequently the interment took place on the spot by erecting a mound over the remains.-[Telegraph"

Morning Freeman - Aug. 1, 1865 and Colonial Farmer - Aug. 7, 1865 We are pleased to learn that the Vernon Mining and Smelting Company have struck a large vein of copper of most superior quality and will now commence operations on a large scale. This mine, as our readers are aware, is situated on the Bay of Fundy shore about eight miles from Point Wolf, and promises to yield a handsome return, for labor and capital invested, judging from the flattering reports of experienced and scientific men, and, if so, other copper mines in the immediate vicinity and different part of the country, will doubtless be worked immediately. - Eastern Advocate."

S.J. Daily Globe - Jul. 29, 1865 We are pleased to learn that the Vermont (Vernon?) Mining and Smelting Company have struck a large vein of copper of most superior quality and will now commence operations on a large scale. This mine, as our readers are aware, is situated on the Bay of Fundy shore about eight miles from Point Wolf, and promises to yield a handsome return, for labor and capital invested, judging from the flattering reports of experienced and scientific men, and, if so, other copper mines in the immediate vicinity and different parts of the County, will doubtless be worked immediately.

St. Andrews Standard - Jun. 13, 1865 and Morning Freeman - Jun. 13, 1865 At the Annual Meeting of the Vernon Mining and

Smelting Company held at the Company's offices in the Custom House Building, in the City of St. John, at 12 o'clock noon on Saturday, the 10th of inst., for the purpose of electing officers for the ensuing year, the following gentlemen were unanimously chosen Directors:- George H. Jones, E.R. Mudge, Chas. Demond, Henry Saltonstall, Robertson Bayard. At a subsequent meeting of the Directors held on the same day and place, George H. Jones was elected President and Treasurer of the said Company, and Owen Jones, Secretary and treasurer.-[Globe"

St. Andrews Standard - Jun. 12, 1867 Sale of Stock.- All of the Stock, Land, etc., of the Vernon Mining Company was offered for sale today at Chubb's Corner, by Mr. Hubbard, and was knocked down for 600 dollars. Mr. Hubbard offered ten share and Mr. Stewart forty shares of Commercial Bank Stock, but they were held for fifty per cent.-[Globe"

URN: 0662 / IDX_Names: Vernon Mine;

Daily Times - Nov. 26, 1896 Albert Co. - Hopewell Hill, Nov. 19. - In the death of Gideon Vernon of Harvey, who passed away yesterday at the advanced age of 84 years, this county loses one of its oldest and most widely known residents. Mr. Vernon was a native of St. John county, and came to Point Wolfe when a young man, where he purchased a milling property, and conducted an extensive lumbering business for many years, accumulating a large amount of wealth. He also opened a copper mine there, which he operated for some time, and subsequently sold for a large sum. After disposing of his lumbering interests at Point Wolfe, the deceased removed to Harvey, where he passed the remaining years of his life, having built what, at the time, was considered the finest private residence in the county. For many years Mr. Vernon had large interests in shipping property. Many of the immediate relatives of the deceased were, at one time, prominent residents of St. John. His wife, who was the widow of the late Austin Bray, survives him. He leaves no family. The deceased was of an especially charitable disposition and a friend of the sick and needy."

Weekly Record - Fri., Jul. 11, 1902 Another new copper company has been put on the market so to speak. It is known as the Maritime Copper Company and is located at what is known as the old Vernon Copper mine, near Alma, Albert Co. Mr. Robt. Dryden is chief promoter of the same and has associated with him a Mr. Alperson, a practical mining man from the western States, who has thoroughly examined the place and reported most favorably. Work of getting out a quantity of the ore and sending it to Perthamboy, N.J. is now to be commenced where it will be subjected to a practical test as to its value. The owners are confident it will pay at least $20 per ton."

S.J. Star - Nov. 5, 1902 Up Goose Creek. - The Flushing took a party of gentlemen consisting of Surveyor-General Dunn, Colonel Alperson, of New York; George H. Trueman and George McSweeney, of Moncton; Mr. Davidson, of London, Eng., and J.P. Carritte, W.E. Raymond and A.E. McIntyre, of this city to Goose Creek, St. John county yesterday, to visit the mining properties of the Maritime Copper & Reduction Company near that place."

Weekly Record - Fri., Apr. 24, 1903 Work is progressing vigorously on the new copper mine known as the Vernon Mine, St. John Co., on Bay Shore. Mr. Robt. Dryden has severed his connection as Manager of the mine. The owners are confident they have a bonanza. A second company have some 4 square miles secured surrounding this mine and propose next summer taking steps to have same developed. Some Moncton, St. John and Salisbury gentlemen are interested."

Weekly Record - Fri., Jul. 10, 1903 Col. Alperson, of the Vernon mine, near Alma, has just returned from Moncton. The Col. says that excellent work is being done at the Vernon mine under the superintendence of William McLaughlin and there is every appearance of a large body of rich ore being struck in a very short time."

Weekly Record - Fri., Mar. 6, 1903 Work of developing the copper, gold and silver mine on the Bay Shore and generally known as the Vernon mine, is being vigorously pushed forward. Mr. Robt. Dryden, who took up this territory some two years or so ago, is in charge of the work there and is largely interested in the company. The chances are that if prudently and economically managed the property and the adjoining ones, will equal many of the richest mines in the western U.S., or British Columbia. Let us keep our spare capital at home, and develop our own resources."

Weekly Record - Fri., Apr. 15, 1904 Alma. - Col. William Alperson, manager of the Vernon Copper Mines, is at the Alma

Weekly Record - Fri., Apr. 29, 1904 Alma. - We have a real Jap in the village .... skipped from a vessel at Hopewell Cape .... have gone to work at the Vernon mine ....."

Kings County Record - Dec. 9, 1904 Alma. - Dec. 5. - Col. Alperson, manager of the Vernon Copper Mine is at the Alma

Kings County Record - Jul. 22, 1904 Alma. - Col. Alperson, manager of the Vernon Copper mine, has been in the village for several days. Last week he had E.G. Evans, C.E., of Hampton, assisted by G.K. Lutwick, Alma, W. Raymond, St. John, and Ernest Weiner, Hampton, U.N.B. students, surveying the mining property and flagging the various leads."

Weekly Record - Fri., Jun. 3, 1904 Alma. - Colonel Alperson, manager of the Vernon copper mine was here last week."

Weekly Record - Fri., Jun. 17, 1904 Alma. - Col. Alperson, Messrs. Rundel and Brown were here last Saturday in the interest of the Vernon Copper mine which is temporarily closed. Mr. Brown who is a western miner, visited the mine and expressed the opinion that the mine when fully developed, would be a bonanza for the owners."

URN: 0662 / IDX_Names: Vernon Mine;

Evening Times - Nov. 9, 1904 Col. Alperson. - Says There is Money in New Brunswick Copper. - Col. Wm. Alperson, of New York, the well known mining expert and promoter, is in the city and is staying at the Royal. Col. Alperson is the chief stock-holder in the Maritime Copper Co., and has just returned from a visit to the company's property at Goose Creek. It will be remembered that this mine has not been operated for some months, but in the meantime prospecting has been going on all over the company's properties. There are now under lease seven square miles and more ground is being attached. Col. Alperson was called on by a Times reporter this morning and during the course of the conversation said:- 'I was up to Goose Creek looking over some new ground and seeing about other ground which is being prospected. The company is putting in full supplies for the winter months.' Continuing, Col. Alperson said:- 'This is a very valuable property and when developed will pay more dividends than any other commercial enterprise in this country. There is an unlimited supply of ore, but it takes time to open up such a property.' Col. Alperson has had many years of experience in mining throughout the west and south, particularly in California, Nevada and British Columbia and the fact that he came to New Brunswick some years ago and invested this money in the copper mining business goes to show that he believes there is money to be made and plenty of it. The Maritime Copper Co. is controlled by provincial people, St. John men also being stock holders. Col. Alperson will return to Moncton tomorrow."

Kings County Record - Sep. 23, 1904 Alma. - Col. Alperson came here last Thursday. Hesays disputes about the mining rights are about settled and that prospecting will soon be resumed at the Vernon mine."

Kings County Record - Jan. 20, 1905 Alma. - Col. Alperson, manager of the Vernon Copper Mine, has a small crew on the works this winter."

Kings County Record - Jun. 23, 1905 Col. Alperson spent last week at the Vernon Copper Mine thoroughly examining the copper indications on the surface and in both the old and new tunnels. He brought away with him 27 specimens of ore taken from different places. The Colonel says that the day is not far distant when that mine will be a bonanza to some one."

Kings County Record - Oct. 27, 1905 Alma. - Work has resumed again at Vernon Copper Mine. Leonard Martin is the local manager and William McLaughlan manager at the mine."

Kings County Record - May 17, 1907 Alma. - May 4. - Mr. Lee Davenport, an expert Mining Engineer, was here recently and visited the Vernon Copper Mine. He expressed himself as being satisfied that there was an abundance of valuable copper ore for the Company that would develop it the right way. He was shown over the mining property by Capt. L. Martin, who while descending the hill side fell and dislocated his left shoulder. Mr. Davenport proved himself a surgeon also, as he immediately replaced the injured limb."

North Shore Leader - Jun. 26, 1908 Purchase of Copper Mines. - Negotiations are about completed for the purchase of the copper mines at Goose Creek owned by the American Copper Company. The prospective purchasers are New York capitalists and include Dr. Hugo Von Hagen, well known in this province. The mines are located at Bay Shore, near Goose Creek, a few miles below Alma, Albert County."

Kings County Record - Jun. 4, 1909 Alma. - Dr. Von Hagan, New York, President of the Company operating the Vernon Copper mine, visited the work last week and expressed himself highly pleased with the outlook. He spoke of erecting a smelter at the works during the summer."

Kings County Record - Jun. 18, 1909 Alma. - Wm. McLaughlan, submanager at the Vernon mine, was at Dorchester, Moncton and other places hiring men to work in the mine. The kind of workmen he wants appear to be very scarce."

Kings County Record - Jun. 10, 1910 Alma. - Sheriff Carter, was in this village last Tuesday to sell the motor boat belonging to the Company that operated the Vernon Copper Mine last year. The sale was forbidden and the boat was not

Daily Gleaner - Oct. 11, 1911 New Mining Company. - Notice is published in the Royal Gazette today of the application of Messrs. Frank A. O'Neil, James Penington, Hugh Ross Lyons and Howard R. Richey, of Montreal, and George H. Trueman, of Moncton, for incorporation as the Vernon Consolidated Mines, Limited, to carry on a general Mining business in this province, with headquarters at Moncton. The proposed capital stock of the company is $1,500,000."

Evening Times-Star - Oct. 12, 1911 Application has been made for the incorporation of the Vernon Consolidated Mines Ltd., with head office at Moncton for the purpose of mining lease number 94 and to carry on general mining operations. The capital is to be $1,500,00 in shares of $1 each. The applicants are Frank A. O'Neil, James Pennington, Hugh Ross Lyons and Howard R. Ritchie, of Montreal, and George H. Trueman, of Moncton."
URN: 0662 / IDX_Names: Vernon Mine;
Campbellton Graphic - Oct. 20, 1911 To Mine In N.B. - In Wednesday's issue of the Royal Gazette notice is given of E.A. Reilley, solicitor, of Moncton, of the application for a charter incorporating the Vernon Consolidated Mines Ltd., with a capital of $1,500,00, divided into shares $100 each. The objects of the company are to carry on mining operations. The incorporators are Frank A. O'Neil, James Pennington, Hugh R. Lyons, Howard R. Richey, all of Montreal, and Geo. H.

Kings County Record - Aug. 2, 1912 The arrival of Mosco Nici, M.E., of Montreal, the latter part of last week and his proceeding to Vernon Copper Mine on Bay of Fundy Shore, via Goose Creek, intimates that the taking over and the developing and working of the rich copper ores at this place is likely now to be proceeded with on good business lines. A strong company has been organized to take this matter in hand and it is to be hoped good paying results may be attained in this property, which has passed through so many unsuccessful attempts in the past. The ore from the mines is what is known as 'bornite', and is especially high in copper values."

S.J. Globe - Jul. 27, 1912 Montreal, July 27. - Armand Moscoicime left last evening on business connected with the Vernon Consolidated Mines, Limited, to inspect and report upon the company's copper property at Goose Creek, N.B."

Daily Telegraph - Aug. 7, 1880 The Gold Areas in New Brunswick. - Mr. Edward Gilpin, inspector of mines for Nova Scotia, has published a book on the Mines of Nova Scotia, already noticed in the Telegraph, in which, at several places, he alludes to the mineral wealth of New Brunswick. Among other things which the book contains is a history and description of the gold mines of Nova Scotia; and the author advocates the prosecution of the survey of that Province at the joint expense of the Dominion and Provincial Governments. Mr. Gilpin does not seem to make any allusion to the discovery of gold in New Brunswick, and it may be well to say something about the localities where the precious metal has been met with in this Province. Gold is not very uncommon in certain metamorphic or altered rocks, such as slates and quartzites; but, while not unfrequently present in such rocks, it is usually found in such minute quantities that the cost of extraction swallows up the value of the product. When this is not the case, and the gold occurs in greater abundance, there is a chance for mining it with profit. As Quebec, to the north of New Brunswick and Nova Scotia to the south, both have their gold mines, it is not unreasonable to look for gold in the similar rocks of New Brunswick. There are parts of the province where such a search would probably be undertaken in vain. Those unpromising regions are the following: 1st. The large area (about one quarter of the province) occupied by the coal measures. This area may be roughly described as a triangle having its base on the Gulf of St. Lawrence, and its apex at Oromocto Lake in York County. Then there is another large tract where the rocks are those of the lower carboniferous series, mostly red sandstone and shale. This also may be regarded as barren of gold. Finally, there are several large areas of intrusive granite and hard trap rocks in which gold hardly need bt looked for. The most promising parts of the province for gold prospecting are the belts of metamorphic slates found on both sides of the great triangular area of coal measures. The discovery of gold in these rocks has been announced on several occasions, and in some cases the discovery has been verified. Prof. H.Y. Hind, who was employed to make a survey of the northern part of New Brunswick, reported the presence of gold in small quantities in several of the streams flowing from the highlands of that region. Afterward Mr. Charles Robb was sent down by the Geological Survey of Canada to investigate this region and appears to confirm the discovery of gold on the Serpentine, a branch of theTobique. He does not, however, speak very hopefully of the result obtained up to the time of his visit, for he says: It would require the expenditure of a larger amount of capital than has hither to been applied, in order to establish the profitably auriferous character of the region. Gold, it is asserted, was found on the Muniac stream last year, and it has this year been reported from streams further south in Carleton County. On the south side of the coal measures gold has been found in the vicinity of St. Stephen as described by Prof. L.W. Bailey's report on the mines and minerals of New Brunswick, and it was discovered in the analysis of ores from the Le Tete peninsula, and was found by Dr.A.A. Hayes, of Boston, in samples sent from near Randall's quarry and Lime Kiln at L'Etang. These localities are in Charlotte county, but there is another further east, namely the Vernon mine in Albert county, in the ores of which, according to the report cited, Dr. Hayes discovered gold to the value of $22 to the ton. That more frequent and valuable discoveries of gold have not been made in New Brunswick need not be thought surprising when it is considered that by far the greater part of the country is forest clad, and elsewhere the ledges are mostly concealed by earth. There is but a short coast-line in the districts where gold may be expected to be found, and in this respect the advantages for discovering are much less than in Nova Scotia. There are so many indications of the existence of gold in New Brunswick that it is quite probable that remunerative deposits may yet be found, and gold mining be established as one of the regular industries of the Province. The remunerative character of gold mining in Nova Scotia, as recently reported, may stimulate search for the same precious metal in New Brunswick."

URN: 0662 / 0663 / IDX_Names: Vernon Mine; Mild Brook;

Weekly Record - Fri., Sep. 19, 1902 William Alperson, managing director of the Maritime Copper and Reduction Co., returned yesterday from a visit to the company's mine in Albert Co. He is delighted with the prospects of the mine. The carload of ore shipped by the Maritime Copper and Reduction Co., has been reported on, and Mr. Alperson expresses himself delighted with the assay made by Ledoux & Co. He says the carload lot of ore was assayed in three bundles, the first showing per ton 22.91 per cent. copper, $3.00 gold and $4.00 silver. The second yielded 8.54 per cent. copper, $1.30 gold and $2.80 silver, while the third showed 4.08 per cent. copper, $1.30 gold and $3.00 silver."

URN: 0662 / 0663 / 0880 / IDX_Names: Vernon Mine; Mild Brook; Goose Creek;

Gazette - Nov. 5, 1896 Point Wolfe Gold Mine. - Discovery of a New Ledge of Ore Which is Believed to be Rich in Gold, Copper and Silver. - (Moncton Times). - The Mile Brook Mining & Reduction Company of Moncton, have recently discovered a new ledge of ore on their property at Point Wolfe, A. Co., which has every indication of being rich in gold, silver and copper. At a meeting of the company in the office of Mr. G.B. Lutz, one of the directors, Monday night, it was decided to sink a 20 foot shaft. Men were put to work on the new ledge some days ago, and already about 75 tons of ore have been excavated. The new ledge is from 15 to 20 feet wide and from the reports on the samples made by LeDoux & Co., analysts of New York, great things are expected from the new mine. The hands employed will be increased to eight or nine. On an average eight men have been at work for the company during the summer. This company recently secured a lease of mining property situated at Goose Creek, near St. Martin's Head.This makes about fifteen miles of mining territory owned by the Mile End Brook & Reduction Co between Alma and St. Martin's Head. Three mines have been opened up on the property, and the reports of the analysis have been as satisfactory as could reasonably be desired. The Company have spent about $10,000 in explorations on their property. Mr. R.M. Dryden, manager of the operations being carried on, has spent twenty-five years mining in the West and says there is as fine a mineral belt on the property as he ever saw in his life. The only thing required is capital to develop the mines. It is stated on very good authority that Mr. H.J. Bennett, of Hopewell Cape who owns a copper mine at the lower end of Albert County, has sold a half interest in his property for $20,000, to Mr. Harding of St. John, who represents an English syndicate."

URN: 0662 / 0755 / IDX_Names: Vernon Mine; Annidale Mine;
Kings County Record - Aug. 2, 1912 The copper mine at Annidale, near Scotch Settlement, amy also be looked into by these same Montreal people, who are being represented by Mosco Nici,M.A., before he returns to Montreal. This one is different from the Vernon Mine, being a very rich chalcopyrite, carrying good values in copper, gold and silver."

URN: 0662 / 0880 / IDX_Names: Vernon Mine; Goose Creek;
Weekly Record - Fri., Mar. 11, 1904 Alma, March 7. - .... Col. Alperson, manager of the Vernon mine, who has been spending the winter in the West, was here a few days last week. R.M. Dryden, manager of the Copper Cliff Mining Co., has spent the last two weeks in Moncton and other cities in the interests of his mine .... Major Dawson, of Hampton, a heavy stock holder in the Vernon Copper Mine, spent a few days in the village last week."

URN: 0662 / J8 / GEOL / IDX_Names: Vernon Mine; Albert Mines; Geology - General;
Daily Morning Telegraph - May 9, 1865 Professor Hind's Report. -The Report is entitled ""A Preliminary Report on the Geology of New Brunswick, together with a Special Reporton the distribution of the Quebec Group in the Province."" It contains 293 pages, is divided into twelve chapters, and is supplied with an Appendix and a copious Index. Several maps in manuscript, illustrating the Geology of particular parts of the Province, were laid before the House at the same time as the report. The introduction contains a notice of what has been done by other Geologists in relation to the Rocks of the Province. A ""most creditable and able paper"" by our young townsman Mr. G.F. Matthew, is referred to in the language between our quotation marks. The late Dr. Robb's labours are highly spoken of, and the author ""ventures to express not only a very high opinion of the value of the work he has left behind him, but a strong appreciation of his trustworthy observations and of his scrupulously conscientious record of facts."" His works ""manifest viewsin relation to the once vexed question of the nature of Albertite (Albert Coal, so-called), which he would probably long since have successfully developed, had the Almighty been pleased to have prolonged his life."" The Introductory Chapter also contains a correspondence between Professor Hind and Sir W.E. Logan, in which Sir William most generously agrees on behalf of himself and his colleagues, Professor Hunt and Mr. Billings, ""to institute a comparison between the Geology of Canada, and that of her sister Colony, and in some degree to make available our ascertained results in forwarding your (Professor Hind's) investigations and promoting the development of her mineral resources."" Sir William also states that, ""In making serviceable in the investigation, the experience and practice we have acquired on the Canadian Survey, we should be only carrying out a suggestion which has already been placed before the respective colonies, by the adoption of which the labour of the investigation would be shortened and the cost cheapened, while a unity of design would be given to the whole subject, rendering the result, both economic and scientific, intelligible to the world with much less study than would otherwise be required."" Sir William asks no recompense for this laborious undertaking, and even offers to defray the expenses of the transmission of the specimens to Canada, if they become the property of the Geological Museum at Montreal. He adverts to the existence of the ""Quebec Group"" in New Brunswick, and points out its immense importance to the Province. The First Chapter is devoted to ""Leading Geographical Features"" and embraces some notices of the early history, derived chiefly from the Relations of the Jesuits, which abound in interesting memoranda respecting the condition of th country between the years 1611 and 2 672. As these ""Relations"" are written in the quaint old French of the period to which they relate, it is probable that some new historical facts will be found in this chapter possessing general interest; but as our object is to give an outline of the Geological features of the Province, we pass on to the second chapter, which relates to the nomenclature adopted by Professor Hind and to an outline of the Geology of New Brunswick. The nomenclature by which our rock formations are distinguished, is essentially the same as that adopted by Sir William Logan in Canada and recommended by Sir Roderick Murchison, the Director of the Geological Survey of the British Isles. Prof. Hind strongly objects to the introduction of a new nomenclature; he quotes Sir W. Logan's words in support of the necessity for employing names already well known in America and Europe in preference to new names for well known rock masses, and he argues that by this means a uniform system of colouring can be given to a Geological Map of the whole of British North America and the adjoining States of the Union, and an opportunity offered of ""rendering homage to those

whose labours have aided us in understanding our own rocks,"" and ""that a stranger to the geographical position of the part of the country they represent may not be subjected to the trouble and loss of time which a new nomenclature so often involves."" In this respect we notice at the outset a marked difference between the Report of Professor Hind and the ""Observations on the Geology of southern New Brunswick"" by Professor L.W. Bailey, Messrs. Geo. F. Matthew and C.S. Hartt, which was laid before the House simultaneously with Professor Hind's Report. These gentlemen have introduced many new names for the Rock formations they have described and coloured on their Map with separate tints. - They have their ""Portland Group,"" ""Coldbrook Group,"" ""Saint John Group,"" ""Bloomsbury Group,"" ""Little River Group,"" ""Mispeck Group,"" ""Kingston Group,"" and ""Mica Schist Formation."" They employ on their Map fifteen different colours, and as Professor Bailey states, ""as far as possible the colours chosen are intended to represent the prevailing colour of the formations which they indicate."" In Chapter II, we find a lengthy description of the character and age of the Granite belt which stretches from the Atlantic coast of Maine to the Bay of Chaleurs. It is our guide to the leading Geological features of the country, and is stated to consist of a large number of narrow belts, not less than ten having been observed on the Miramichi. - The important Metalliferous Slates of the ""Quebec Group"" come up between these narrow granite belts, which are represented to be of Devonian age. The southern Granite Belt is next described, and its relation to the metal-bearing series of the Quebec Group pointed out. Chapter III relates to the Carboniferous Series of 3 ew Brunswick. This is divided into the Lower and Upper Carboniferous, the Lower rocks being found in the Tobique Valley and on the rim of the Coal Basin from Bathurst to Oromocto, and thence to Westmorland, Albert and part of King's Counties. There are no workable seams of coal in these rocks, but abundance of Limestone, Gypsum, Grits for millstones, and sand-stones, firestones, ochres, bog manganese, &c. The base of these rocks consists of the Albert shales, which are described as very valuable rocks, more than one thousand feet thick, and in many places capable of yielding from 60 to 90 gallons of crude oil to the ton. They are regarded as of great importance as a source of Gas fuel for regenerating gas-furnaces, which are fast superceding the old blast and reverbatory furnaces in Europe and England. The true coal measures are shown by fossil remains to exist at Grand Lake, and the opinion is expressed that valuable workable seams of Coal will be found all the way from Grand Lake to the mouth of the Richibucto on the Gulf coast. Chapter 5, is altogether devoted to a discussion of questions relating to the origin of Albertite, and the Albert Shales. Albertite is shown to be an inspissated or hardened petroleum, and Professor Hind states that it will most probably be found in remunerative quantities from Apohaqui Station to Westmorland County, along a ridge in a North-Easterly direction, and along another ridge passing through the Albert Mine in a direction South-West and North-East. - The Petroleum, from which the Albertite originated, is stated to have its source in underlying Devonian rocks of the same age as those which yield the oil in Canada and Pennsylvania. The opinions of numerous Geologists are enumerated and discussed, and credit is given to Dr. Robb for having hinted at its true origin some fifteen years ago. Professor Bailey in 1864 pronounced it to be ""undoubtedly"" a highly bituminous coal, but we find from his recent ""Observations"" that he has changed his mind and now tells us that, ""in the opinion of Mr. Matthew and myself, the Albertite is neither coal nor jet, but an exydized oil, derived from the decomposition of fish remains, and subsequently changed by chemical action."" (Observations, &c., page 105.) The Petroleum Wells are next noticed, but Professor Hind thinks that the prospectors, where they are now working will have to sink 1200 to 1500 feet before they tap the main source of supply, for at the Albert Mine they have already sunk their shaft 1,000 feet, and found no petroleum. We notice, however, in a paragraph having reference to boring for brines, that petroleum might be reached in part of Sussex, and an adjoining parish. There are Parishes north, south, east and west of Sussex; which Parish is it? Among the conclusions advanced with reference to the origin of Albertite, the Professor states that there were two 4 eriods of injection from below, and that it occurs in all the rocks of Lower Carboniferous and, probably, Upper Devonian age, in this valley of the Kennebecasis and Peticodiac. Its distribution, as well as the occurrence in force of the Albert Shales, is regarded as of vast importance to the Province. A notice of the gas regenerative furnaces, by Sir Michael Faraday, is introduced in connection with the Albert shales of King's, Albert, and Westmorland Counties, and the opinion expressed that there is no reason why extensive metallurgical operations should not be carried on in the Province by means of the gas fuel of the above named counties. Chpater 6 is occupied with a description of theDevonian Series, and a lengthy account is given of the Vernon Mines, and the origin of the copper ores on the coast of the Bay of Fundy. These ores are stated to originate from copper-bearing intrusive traps, which have a wide and most important development in St. Martin's parish, east and west of the Vernon mines. The close of this Chapter brings us to page 126 of the Report; we shall continue the notice of the remaining six chapters in our next issue. [NEXT ISSUE MISSING]"

Royal Gazette - May 9, 1860 Cap. LXXXI. An Act to incorporate the Saint John and Albert Mining Company. Section. Section. 1. Company incorporated. 5. Liability for debts. 2. Capital, amount and 6. Act void if 25 per division of shares. Cent of capital be not 3. First meeting, time and subscribed within one place of. Year. 4. Liability of stockholders for stock subscribed. Passed 9th April 1860. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That James Vernon, Gideon Vernon, and their associates, successors, and assigns, shall be and they are hereby declared to be a body corporate and politic, by the name of ""The Saint John and Albert Mining Company,"" have all the general powers and privileges made incident to a Corporation by Act of Assembly of this Province, for the purpose of mining, smelting, and refining of Copper and Copper ore, and all other ores, minerals, metals, and metallic minerals, and vending the same, and such other business as may be incident thereto. 2. The capital stock of the said Company shall be two hundred and fifty thousand pounds, divided into fifty thousand shares of five pounds each. . The first meeting of said Corporation shall be held at such time and place in this Province as may be appointed by the said James Vernon. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, for the purpose of, or to carry on the operations for which the said Company is incorporated; which call or or assessment may be sued for by the said Corporation and and recovered in any Court of competent jurisdiction. 5. That the joint stock and property alone of the said Corporation shall be responsible for the debts and engagements of the same. 6. That unless twenty five per cent of the capital stock shall be subscribed within one year from the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation shall be terminated."

Royal Gazette - Apr. 20, 1864 Passed 13th April: An Act to incorporate the Vernon Mining and Smelting Company."

URN: 0662 / LEGI / IDX_Names: Vernon Mine; Legislation, etc.;

Royal Gazette - May 18, 1864 Cap. LIX. An Act to incorporate the Vernon Mining and Smelting Company. Section. Section. 1. Company incorporated, 5. Stock alone liable. Proviso. 6. Place of business of 2. When first meeting held. Company. 3. Capital. 7. Amount of work to be 4. Liability of stockholders paid in, and when. For calls. Passed 18th April 1864. Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That Owen Jones, Charles Desmond, Joseph S. Fay, and George H. Jones, and their associates, successors and assigns, shall be and are hereby declared to be a body corporate and politic, by the name of ""The Vernon Mining and Smelting Company,"" and by that name shall have full power and lawful authority to have, hold, own and enjoy in any way, real estate in this Province, in fee simple or otherwise, and may alienate, encumber, lease, sell or otherwise deal with the same in any way; and shall by that name have all the general rights, owers, and privileges, and shall be under the same liabilites, provisos, and restrictions, as are contained and set forth in Chapter 119, Title xxxi, of the Revised Statutes, ""Of Corporations""; and also in and by an Act 11 made and passed in the twenty fifth year of the Reign of Her present Majesty, intituled An Act relating to Corporations, and of any Act or Acts made or to be made in addition to or amendment of the same or either of them, for the purpose of mining, smelting and refining of copper and copper ores, and other ores, minerals, metals, and metallic minerals, and vending the same, and such other business as may incident thereto; provided nevertheless, that the aggregate value of real estate to be held by the said Corporation in this Province at any one time shall in no case exceed the value of fifty thousand dollars in amount. 2. The first meeting of said Corporation shall be held at such time and place in this Province as may be appointed by a majority of the herein before mentioned persons. 3. The capital stock of the said Company shall be three hundred thousand dollars, divided into thirty thousand shares of ten dollars each; provided however, that the said Corporation, whenever they may deem it advisable so to do, shall have power to extend the said capital stock of the said Corporation to five hundred thousand dollars, and shall increase the number of shares accordingly, and that such increase may be made from time to time in such sums, portions of the said increase, as the said Corporation may think expedient. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed for by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, for the purposes of, or to carry on the operations for which the said Company is incorporated; which call or assessment may be sued for and recovered in any Court in this Province of competent jursidiction. 5. That the joint stock and property alone of the said Corporation shall be responsible for the debts and engagements of the same. 6. That the said Corporation shall keep an office at the City of Saint John in this Province, and an agent there for the transaction of business connected with the said Corporation, and that such office shall be and be deemed their principal place of business; and service upon such agent of all processes, notices, or other documents, shall in all cases be deemed and taken to be lawful service on such Corporation. 7. That unless fifteen per cent of the said capital stock shall be subscribed and paid in within one year from the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation shall be and be deemed to be terminated."

The Office or chief place of business of the Company is to beestablished at the City of Moncton, in the County of Westmorland. The amount of the capital stock of the said company is to be $500,000, to be divided into 500,000 shares of the par value of $1.00 each. The said G. Barrett Lutz, Isaac N. Wilbur and Robert M. Dryden are to be the first or Provisional Directors of the Company."

Moncton Daily Times - Aug. 28, 1895 Albert County Gold Mine. - Capt. Edgett's schooner sailed from this port on Monday with a cargo of provisions, etc., for the gold mine being worked near Point Wolfe by some Moncton capitalists. Some eight or ten men engaged at the mine at present."

S.J. Daily Sun - Dec. 19, 1895 Sussex. - Men are pushing work at the Dryden gold mine near Point Wolfe, and it is said that Senator Poirier of Moncton, representing a company, has offered the handsome sum of $25,000 for the mines."

S.J. Daily Sun - Dec. 19, 1895 Sussex. - Men are pushing work at the Dryden goldmine near Point Wolfe, and it is said that Senator Poirier of Moncton, representing a company, has offered the handsome sum of $25,000 for the mines."

Weekly Record - Fri., Jul. 5, 1895 and Moncton Daily Times - Jul. 6, 1895 The Moncton syndicate which is prospecting at Point Wolfe, A. Co., appear to have struck it rich if the ore recently tested is a fair sample of what is to befound there. R.M. Dryden, who has charge of the operations there, has had some of the ore sent to Halifax to be tested. The analysis shows to the ton as follows: Gold, $28.85; silver, $1.50; copper, 33 per cent., making a total of $50. If these figures are correct the property is a bonanza."

S.J. Daily Sun - Jul. 24, 1895 Robert Crosbie, Theophilus B. LeBlanc, Steadman Crandall, G. Barrett Lutz, Isaac N. Wilbur and Robert M. Dryden, all of Moncton, have applied for a charter constituting themselves and others as the Mild Brook Mining and Reduction company: The object of the company is to carry on the business of mining, and acquiring, working, sale and disposal of mines, and minerals. The office of the company is to be in Moncton. The amount of the capital stock is $500,000, divided into 500,000 shares of the value of $1 each."

Moncton Daily Times - Jun. 27, 1895 Gold Mine. - A number of Moncton gentlemen are interested in some gold mining claims in the lower end of Albert County, which it is believed can be profitably worked. The company interested in the property in question is composed of Messrs. G.B. Lutz, L.N. Wilbur, T.B. LeBlanc, Robert Dryden and Robert Crosby. The company has two claims, one near Alma and another a little further down. The property near Alma is being developed on a small scale and six men are now at work getting out ore which is to be shipped to New York to be crushed. It is proposed to ship about ten tons as an experiment and it is now about ready for shipment. Mr. Lutz has a lot of specimens taken from the property and they are pronounced to be above the average. Mr. Dryden, who is a former Westmorland county boy, has spent the most of his life mining in California. From his experience he believes that a profitable gold mine will soon be in operation where they are now engaged."

URN: 0663 / IDX_Names: Mild Brook;

Weekly Record - Fri., May 31, 1895 and Moncton Daily Times - Jun. 1, 1895 Sussex is to be the headquarters of a mining company, who are to commence work next Monday prospecting for gold at Pt. Wolfe, A. Co. Mr. Robert Dryden, a native of N.B., but who has spent the past 25 years in California, is the promoter, and together with some monied men from Moncton will prosecute the search for the precious metal at the place mentioned. He was in town on Wednesday purchasing supplies, which are to be sent through to the Bay Shore, where he will keep eight men at work prospecting. His experience of 25 years in California has lead him to the belief that there is gold at Pt. Wolfe, and he is ready to risk some money in

S.J. Daily Sun - Nov. 29, 1895 Searching For Minerals. - Applications have been made by the undermentioned persons for mining licences, to search for minerals under the General Mining Act and amended acts, on lands described as follows: For license to search - Silas C. McMann, in Queens county, beginning at the S.W. angle of Application No. 1888 for license to search on Long's Creek, east of Salmon River; thence running by the magnet east 7/8 of a mile, south 2 1/2 miles, west 2 1/2 miles, north 2 1/2 miles, and thence east 1 5/8 miles to the beginning. Excepting the surface coal on granted lands. For prospecting license - Isaac N. Wilbur, in Albert county, on lot 6, granted to James McKinley and Robert Rankin, also on grant of lot 1 to said Robt. Rankin, and 25 acre lot granted to G. Alcorn on Cannon's Brook.Mild Brook Mining and Reduction company, in Albert county, on lot 1, 2, 3 and H, granted respectively to John H. Harding, James Tier and Hugh Duhan, northern side of Bay of Fundy, east of Mild Brook. Mild Brook Mining and Reduction Company, in Albert county, on lot 1 granted to Wm. J. Bedell, and lot 2, granted to John H. Harding, northern side of the Bay of Fundy, east of Mild

Daily Times - Oct. 16, 1895 Mild Brook Mining and Reduction Co. - The first meeting of the Directors of the Mild Brook Mining and Reduction Co. was held in the Company's office in Moncton yesterday afternoon, there being present: G.B. Lutz, I.N. Wilbur, J.M. Beaton, Robert Dryden, Watson Lutz, Theo. M. LeBlanc and S. Crandall, the above being full Board of Directors. At a subsequent meeting of the Board the following officers were appointed: G.B. Lutes, president. I.N. Wilbur, vice president. J.M. Beaton, Secretary. Steadman Crandall, treasurer. Robert Dryden, manager. The company intend pushing the work vigorously and a prospectus is being prepared. In order to raise funds to develop the works, 50,000 one dollar shares will be placed on the market at 25 cents each."

Chignecto Post - Oct. 31, 1895 The directors of the Mild Brook Mining and Reduction Co. was held in Moncton last week. In order to raise funds to develop the works, 50,000 one dollar shares will be placed on the market at 25 cents each. The following appointments were made: G.B. Lutz, president; I.N. Wilbur, vice-president; J.M. Beaton, secretary; Steadman Crandall, treasurer; Robert Dryden, manager."

Daily Times - Sep. 7, 1895 Point Wolfe Gold Mine. - Result of Assays Made by Ledoux & Co. of New York. - A Times reporter on Thursday was shown specimens of the ore taken from the Point Wolfe gold mine, which is being worked by a number of Moncton gentlemen. Assays of this ore have been made by Ledoux & Company of New York, one of the most reliable firms in this line of business, and their reports are very satisfactory indeed. In fact so well satisfied are the gentlemen developing the mine with the result of their tests, that they are proceeding to erect the necessary buildings required in the working of the mine. Already a house 40x25, for the accommodation of the workmen, a blacksmith shop and barn have been put up. The field of operation is about a mile below Point Wolfe, on the Bay of Fundy. Three tunnels have so far been constructed, one 320 feet, another 250 feet and a third 50 feet in length. The ore is found in what appears to be almost unlimited quantities in a mountain over 1000 feet high. The assays show that the ore is rich in silver, copper and gold. In one test Ledoux & Co. report that the assay showed 473.10 ounces of silver and 1.10 of an ounce of gold in a standard ton ore. In a sample of copper ore 1 oz. 1 dwt. and 7 grains of gold to the ton was found to exist. In the last assay made, Ledoux & Co. reported gold 2.75 ounces and silver 352.21 to the ton. In a letter accompanying one of these reports Ledoux & Co. says: A cursory examination of the small red sample of ore received with the other two led us to believe that it was not worth while putting you to any expense assaying it. Closer chemical test, however, showed us that our first opinion was wrong, and you will see from the certificate of assay sent herewith that the sample is most extraordinarily rich, and we concluded without asking you that you would want it assayed. If the sample sent us is at all representative of the mine this is a very good find, and you can sell the ore itself at a very high price. In consequence of these favorable reports from such a reliable firm as Ledoux & Co., the Mill Brook Mining and Reduction company intend to construct a crusher and concentrator immediately at the mine. In the meantime ore is being gotten out and a considerable quantity will be ready for crushing by the time the machinery is in working order. The gentlemen interested in the Point Wolfe mine are Messrs. G.B. Lutz, I.N. Wilbur, Theo. B. LeBlanc, R. Dryden, R. Crosby, Steadman Crandall, John Beaton and Watson Lutz. Mr. Dryden, who is an experienced miner, is in charge of the work at the mine. The provisional directors are Messrs. G.B. Lutz, I.N. Wilbur and R. Dryden."

URN: 0663 / IDX_Names: Mild Brook;

Moncton Daily Transcript - Sep. 10, 1895 Messrs. I.N. Wilbur, B. Lutz, J. Beaton, J. Steeves and T.B. LeBlanc drove to Point Wolfe, A. Co. yesterday, to inquire into the gold mine at that place on which they are interested."

Moncton Daily Times - Sep. 11, 1895 Mining in Albert County. - The following applications for mining licences in Albert County are recorded: D.C. Cleveland - Lots 56, 57, 58, 59, granted respectively to Jeremiah O'Connor, John O'Connor, Richard Tucker and Chas. Campbell, on the North side of theShepody Road, east of Salmon River.Robert M. Dryden and Robert Crosbie - About one half mile on each side of Mild Brook, at mouth, and running back one mile from Bay of Fundy shore, according to Deputy Patterson's survey made July 29th, 1895. Robert Crosbie - On the Copper Mine Road, east of Mild Brook, and north of Bay of Fundy, in the parish of Alma, according to a survey made by Deputy John W. Patterson,

S.J. Daily Sun - Apr. 20, 1896 and Chignecto Post - Apr. 23, 1896 Moncton. - A rich find of ore has been made at Point Wolf gold mine, 4 1/2 feet thick, equal to the stringers previously taken out that yielded 65 per cent. copper, with 11 ounces of silver and $4 to $5 gold per ton. It is said to be true fissure vein and it is thought it will prove a bonanza."

St. Andrews Beacon - Apr. 23, 1896 and St. Croix Courier - Apr. 23, 1896 A rich find of ore has been made at Point Wolfe, Westmorland county gold mine. It is thought it will prove a bonanza."

Gazette - Apr. 23, 1896 Struck It Rich. - A rich vein of ore has been struck at the Point Wolfe, Albert Co., gold mine. The miners have had stringers of good ore all along and last week it widened to 4« feet. The ore taken out is said to be equal to the samples previously found, which yielded 65 per cent pure copper and $4 to $5 worth of gold per ton. The manager, Mr. Dryden, who has had many years experience in California and other mines, says it is the truest fissure vein he ever saw and the owners of stock are greatly elated."

Weekly Record - Fri., Feb. 21, 1896 For some time past prospecting mining operations have been carried on at Point Wolfe in Albert Co., by Mr. R.M. Dryden, and so far the prospect for a remunerative return for the capital invested, are excellent. Mr. Dryden was in Sussex on Wednesday and showed some specimens of rock that gave promise of a rich yield. We trust that Mr. Dryden will be successful in finding some of the valuable minerals which are believed to be stored away in great quantity in various localities throughout the province."

St. Croix Courier - Nov. 12, 1896 An important find of ore, rich in gold, silver and copper, has been made at Point Wolfe, Albert County, where parties have been working for some time. It has been decided to sink a twenty foot shaft, and eight or ten men will be put to work at once. Fifteen miles of area have been taken up."

St. Andrews Beacon - Nov. 12, 1896 The Mile Brook Mining & Reduction Company, of Moncton, have recently discovered a new ledge of ore on their property at Point Wolfe, A. Co., which has every indication of being rich in gold, silver and

S.J. Daily Sun - Oct. 1, 1896 and Weekly Record - Fri., Oct. 2, 1896 Point Wolfe gold mine has suspended operations for want of funds. The company has had Mr. Douglas, themine owner and president of the Colorado syndicate examine the mines. He has advised them, it is claimed, to push operations in the mines. The company is endeavoring to interest Nova Scotia capital - Amherst Press."

Weekly Record - Fri., Oct. 9, 1896 POINT WOLFE GOLD MINE. - The following taken from Wednesday's Moncton Times will be read with interest by a great many of our readers: The Mile Brook Mining & Reduction Company of Moncton have recently discovered a new ledge of ore on their property at Point Wolfe, A. Co., which has every indication of being rich in gold, silver and copper. At a meeting of the company in the offices of Mr. G.B. Lutz, one of the directors, Monday night, it was decided to sink a 20 foot shaft. Men were put to work on the new ledge some days ago, and already about 75 tons of ore have been excavated. The new ledge is from 15 to 20 feet wide and from the reports made by Ledoux & Co., analysts, of New York great things are expected from the new mine. The hands employed will be increased to eight or nine. On an average eight men have been at work for the company during the summer."

Moncton Daily Times - Jul. 7, 1897 Point Wolfe Mine Sold. - The Point Wolfe Gold Mining Company have sold their mine to an English syndicate who will take charge of it immediately. Mr. Leckie, of Leckie & Sons, Truro, representatives of the English company, was in town this week completing arrangements. Mr. Dryden, who has had charge of the mine in the past will have control in the future. It is understood that work will be commenced on the 15th inst."

N.B. Reporter - Jul. 7, 1897 The gold mine at Point Wolfe operated by the Moncton Company has been sold to an English company represented by Leckie & Sons of Truro. The work of development will be prosecuted on an extensive scale."
URN: 0663 / IDX_Names: Mild Brook;
Weekly Record Fri., Jul. 9, 1897 The Point Wolfe Gold Mining Company have sold their mine to an English Syndicate who will take charge of it immediately. Mr. Leckey, of Leckey & Sons, Truro, representatives of the English company, was in town this week completing arrangements. Mr. Dryden, who has had charge of the mine in the past, will have control in the future. It is understood that work will be commenced on the 15th inst.- MONCTON TIMES"

St. Croix Courier - May 20, 1897 Some vigorous mining operations are likely to be carried on in Albert County during the coming summer. The Pt. Wolfe copper and gold belts will probably be fully developed and it is rumored an English syndicate is seriously considering the purchase of another property of a similar kind in the same county in which some well known St. John people are interested."

St. John Star - Oct. 11, 1902 and Weekly Record - Fri., Oct. 17, 1902Pt. Wolfe Copper Mine. - John T. Nelson, who spent ten years in the Rossland and Slocan mining regions, says the Point Wolfe copper property is one of the biggest propositions he ever walked over. There are, he says, millions of tons of ore, all above ground and easily available. He says a smelter should be built there, and he believes the company intend to erect one. They are now building pier and breakwater and preparing to build houses."

S.J. Star - Sep. 13, 1902 A company with a capital of a million and a half, with R.M. Dryden as manager, is developing a copper mine at Alma, Albert county. A 600 foot tunnel is being driven, and Mr. Lockwood, a mining expert of Colorado, says it will open up a million tons of ore. A wharf and breakwater are being built."

Weekly Record - Fri., Dec. 25, 1903 Alma. - ... The Copper Cliff Mining Company are now prospecting the Mile Brook mine under the management of R.M. Dryden."

Weekly Record - Fri., May 15, 1903 The Record learns that preliminary steps are being taken to form another company to examine, develop and work the large and probably paying bodies of copper, gold and silver a short distance below Alma and not far distant from the operations being carried on by the Maritime Copper Reduction Co., in the counties of St. John and Albert of which the public will possibly soon hear some further details."

Kings County Record - Aug. 12, 1904 Annual Meeting of the Copper Cliff Mining Co. - The annual meeting of the Copper Cliff Mining Co., Ltd., took place at the company's office, in Moncton, Aug. 2nd inst., and quite a number of the shareholders therein were present. The reports of F.W. Givan, president; W.J. Weldon, secretary, and R.M. Dryden, resident manager, were then submitted to the shareholders, and were full and satisfactory to all present, being unanimously adopted and confirmed. The reports and accounts presented show the company to be in a good financial position, with all claims paid to date, notwithstanding the numerous rumors to the contrary, which have been given to the public. A considerable sum had been spent in prospecting and opening up the ore outcrops at various points, and good ore bodies have been met with, without flagging the leads. On the Mild Brook Company's areas now controlled by the Copper Cliff Mining Company work of producing ore has been and is now going on regularly at or near Point Wolfe. In the near future a shipment of this ore will be made to Jersey City for test. The ore now being mined shows fine high grade copper, and will also carry gold and silver values as well. There is every reason to believe that the near future will witness the development and working of this property on a large scale. The directors for the ensuing year were as follows: F.W. Givan, Geo. J. Robb, S.S. Ryan, M.P.P., Hon. F.J. Sweeney, W.J. Weldon, of Moncton; A.E. Brown and W.H. McQuade, St. John; J.P. Sherry, Memramcook; E.A. Charters, Sussex; D.B. McDonald, P.E. Island, and James Barnes, M.P.P., Buctouche. All the shareholders present were well satisfied with the information presented at the meeting, and were unanimous in endorsing the acts of the directors, executive committee and resident manager. A.B. Copp, Esq., of Sackville, was re-appointed as the company's solicitor, and H. Arthur Peters, of Moncton, was appointed as auditor."

Kings County Record - Aug. 12, 1904 R.M. Dryden, local manager of the Copper Cliff Mining Co., is pushing the work at the Mile Brook mine."

Kings County Record - Jul. 15, 1904 Manager R.M. Dryden has a number of men working at the Mile Brook Copper mine. He intends mining a large quantity of ore which will be shipped to New York and smelted."

Kings County Record - Jan. 20, 1905 Alma. - R.M. Dryden, manager of the Copper Cliff Mining Co., went to Moncton last week on a business trip."

Kings County Record - Oct. 23, 1925 Alma. - The West Isles Mining Co. property at Mile Brook was sold the first of the month to pay delinquent taxes. The property was bid in by the Bonny River Co. They now have contractors on it, cutting and hauling logs to a convenient place which logs will be sawed by the Strayhorne Hickey Co."

Morning Journal - Feb. 7, 1866 Rock Records of New Brunswick - A Lecture, by Professor L.W. Bailey, A.M. (continued) : Let us return again from our wanderings to our starting point, the river and City of St. John. I have already said that a large portion of the town rests upon the hardened clays and sands of old Primordial beaches. Towards the lower portion of the city, however, near the present site of the gasworks, and thence extending downwards and outwards into the Harbour, are beds of a very different character, and formed at a much later period; they now rest conformably or nearly so on the older Silurian rocks, and not against their tilted edges, showing us the latter had been slightly, if at all, raised before the beds now under consideration were deposited. As the earlier Azoic rocks formed an island, along whose sides the waves washed up the earlier Silurian beaches, so the latter in turn, formed a shore for the deposition of the later Devonian beds. These latter are very various and of great thickness, fully 10,000 feet indeed, showing that this portion of the Province always changeable, but comparatively firm during the Silurian period, had again become the theatre of 4 rapid oscillations. Volcanoes were again active on a gigantic scale. The high ridge in the Parish of Simonds, known as Bloomsbury Mount, represents one of these volcanic vents and is indeed composed of the materials, once molten lava and glowing ashes, thrown from the earth's interior. The fiery streams spread far and wide. We may still trace them over much of the country, crossing the Harbor from Red Head to Manawagonish, while in Charlotte County, similar outbreaks formed the wild and picturesque hills of Chamcook and the St. Croix. But these eruptions were in part at least submarine and therefore less destructive in their action. Nor did they characterize the whole age, being most powerful at its beginning and its close. For immense periods the land was comparatively undisturbed. It was probably of an upland rather than of a marshy character, and was clothed to some extent with vegetation. Ferns, with the most graceful of foliage, were abundant and probably farlarger than now, while trunks of pines found here and there imbedded in the rocks, tell us that there were also forms of terrestrial animal life. Insects we know hadmade their appearance, for we may find their remains, still beautifully preserved, in their stony tombs. In the cliffs of Carleton the action of the sea is constantly revealing their curious forms, and both ferns and insects may be there obtained with little difficulty. Some of them were like our modern Day Fly, though far larger, while others more nearly recall our common locust. The honor due to the discovery of these interesting remains, interesting because they are the very earliest traces of insect life yet found upon the globe, is due to a native of your Province, now absent in Brazil, and is such as may well stimulate others to similar researches. In the seas of the Devonian age there had also been an introduction of new forms of life. Fishes, nowhere to be found in the earlier seas, now lived in vast numbers, and, to judge from their remains, of very great size. Though not yet recognized in the rocks of the Province they are abundant in the Devonian beds of New York, and especially in Scotland, where the writings of Hugh Miller have rendered famous the Old Red Sandstone beds which formed their place of burial. I would gladly here delay to describe in more detail these curious inhabitants of the ancient ocean, but as my purpose in this lecture is chiefly to confine myself to the actual occurrences and fossil animals of our own Province, and as many curious changes yet remain to be described, I must deny myself the pleasure. I cannot, however, dismiss the consideration of the great Devonian age, without calling your attention to the large area which the rocks of this period now occupy in your own and adjacent counties, and the promise which they afford of large and valuable mineral deposits. The greater portion of the Parish of St. Martins, in St. John County, fully one half of Albert County, and a portion probably of King's, are covered by them. The large and rich deposits of iron ore at West Beach and Black Riverappertain to this series, as do also the Vernon Copper Mines at Goose Creek, and the Alma and Gordon Mines at Salmon River. At those and at many other localities the ores are good and promise to be abundant, while there is every reason to expect that when the woods, which now everywhere densely cover this promising district, shall have been removed, new and equally rich deposits will be found. The metalliferous beds, in many peculiarities, very closely resemble the copper bearing rocks of the ""eastern townships"" in Canada, and may, like them, yield rich returns of iron, lead, zinc, copper, nickel, chromium and titanium, as well as silver and gold. The presence of these metals in the rocks of the Devonian series naturally leads us to the consideration of their origin - and now I must invite your attention, while I endeavour to make plain to you one of the grandest events in the geological history of New Brunswick, an event indeed which not only marked the period in which it occurred, but which has also done much to shape the whole subsequent history of the Province. Recall if you please to your minds the series of changes which we have so far witnessed. We commenced, you will remember, our geologic history with the elevation of the Portland island as a low narrow strip of land, and have found that as the periods advanced, this island gradually increased in extent by the deposition of new beds around its borders, the results of wave action and the currents of the sea. The movement, however, was not wholly one of elevation, for the Primordial rocks are found on both sides of the Portland Ridge, and both they and the later Silurian and Devonian strata probably once covered its summit, showing that a dpression, equal at least to their thickness must also have taken place. As this thickness amounts to over 12,000 feet by actual measurement, it follows of neccesity that which belongs to the Devonian ..?.. being formed near the ocean level, the Portland rocks must have been 12,000 feet below that level, a difference equal to the depth of the great telegraphic plateau in the present

Atlantic Ocean. There were then, through all these earlier times, movements of vast extent in this portion of America. They were, however, probably slow in their action, perhaps not exceeding a foot in a century, and though of constant recurrence and of sufficient magnitude to change the geographical conditions of the continent, did not disturb the general tranquility, nor result in any wide-spread extermination of life. We have seen that these oscillations became more and more frequent towards the close of the Devonian age and that volcanic action, upon a gigantic scale, then plainly indicated increasing instability in the earth's solid crust. Vast force had been long at work, of which those outbursts were but the signs, and though from time to time they might find some local vent, their action was only delayed and not subdued. The strain upon the continent was becoming greater and greater with every successive era. At last it could be withstood no longer, the period of tranquility was over, and an era of disturbance, or upheavals, and of mountain-making now began on a vast scale. The strata which in all the earlier periods must have been horizontal or nearly so, (for water can only deposit horizontal beds), were now pressed into gigantic folds, huge crevices were opened here and there to the profoundest depths, and from these depths issued hot vapors and mineral exhalations or streams of fiery fluids, poring over and baking by their intense heat the surrounding rocks. Everywhere around us we may trace the signs of this eventful period. You may see it in every street of your city. The beds, above which we sit, once soft sand and clay upon the beach, now stand in many places quite on end, and are at times even turned completely over, while they have at the same time been hardened into compact and unyielding slates. Nor has this taken place upon a small scale only. Whatever Silurian or Devonian rocks are found in the Province, they are similarly folded and hardened. Some of these folds are of gigantic size, the span being as much as several miles and the height not less than 2000 feet. Of course, when these folds were forming, the rocky beds must have been far softer and more pliant than at present, yet, they did not always yield. Near the summits of the folds, where of course the stream was greatest, they frequently gave way, and deep chasms or gigantic cracks were formed. Sometimes the beds on one side of the fissure would slide down along those on the other, and there is a locality, a few miles south of and parallel to Loch Lomond, where the beds have thus slid bodily down to a depth of at least 5000 feet, an amount more than double the height of any or our existing mountains. Through the crack or chasm formed by the fracture volcanic matter poured forth, and cooling as it reached the surface, now fills the crevice

URN: 0663 / 0662 / IDX_Names: Mild Brook; Vernon Mine;

Daily Times - Nov. 4, 1896 Point Wolfe Gold Mine. - Discovery of a New Ledge of Ore Which is Believed to be Rich in Gold, Copper and Silver. - The Mile Brook Mining & Reduction Company, of Moncton, have recently discovered a new ledge of ore on their property at Point Wolfe, A. Co., which has every indication of being rich in gold, silver and copper. At a meeting of the company in the office of Mr. G.B. Lutz, one of the directors, Monday night, it was decided to sink a 20 foot shaft. Men were put to work on the new ledge some days ago, and already about 75 tons of ore have been excavated. The new ledge is from 15 to 20 feet wide and from the reports on the samples made by Ledoux & Co., Analysts, of New York, great things are expected from the new mine. The hands employed will be increased to eight or nine. On an average eight men have been at work for the company during the summer. This company recently secured a lease of mining property situated at Goose Creek, near St. Martin's Head. This makes about fifteen miles of mining territory owned by the Mile End Brook & Reduction Co. between Alma and St. Martin's Head. Three mines have been opened up on the property, and the reports of the analysts have been as satisfactory as could reasonably be desired. The company have spent about $10,000 in explorations on their property. Mr. R.M. Dryden, manager of the operations being carried on, has spent twenty five years mining in the West, and says there is as fine a mineral belt on the property as he ever saw in his life. The only thing required is capital to develop the mines. It is stated on very good authority that Mr. H.J."

Weekly Record - Fri., Nov. 7, 1902 Much interest is being evinced in the development of the Maritimes Ore Reduction Company's property at or near Point Wolfe, known as the Vernon Copper Mine. A number of workmen are engaged in putting in roads, breakwaters, etc., and developing the mine. The ore runs from 10 per cent to 22 per cent copper and carries gold to value of $4.00 to $6.00 per ton and silver from $4.00 to $12.00 per ton. It is said on good authority there is abundance of ore in sight and a smelter will no doubt be in operation at an early day. A large amount of the company's stock has been sold in the Maritime provinces, at 45c per share or 15c on the dollar; par value of shares $3.00. Capital of Company $1,500,000, incorporated under Nova Scotia laws. The company owns one square mile of 640 acres. The next 2 square miles are held by two Moncton gentlemen, who stand in to come into the market at an early day."

Weekly Record - Fri., May 22, 1903 The necessary charter has been taken out for the formation of a copper company to operate in Albert County east of the present Vernon Copper Mining Co. A number of well-known gentlemen in New Brunswick and Nova Scotia will be interested in the operations. The details of formation of company are in charge of E.A. Charters, of this place. More specific details will be made public a little later on."

Kings County Record - Apr. 6, 1906 Alma. - L. Martin, who was in Moncton the early part of this week, thinks that the indications are good for considerable mining prospecting in the vicinity of Alma this summer. During the past winter William McLaughlan has opened up some leads of valuable copper at the Vernon mine. It would be a great boon to this section if a mine could be opened up and successfully operated."

URN: 0663 / 0662 / IDX_Names: Mild Brook; Vernon Mine;

Moncton Daily Times - Dec. 5, 1893 Albert Co. Mineral Deposits. - A Correspondent of the Times Gives Some Facts Concerning Earlier Mining Operations. - Point Wolfe, Dec. 2. - I hinted some time ago that I would furnish you with some notes on the mineral deposits of this vicinity. Since then I have been patiently enquiring as to former prospecting and expenditure in the lower part of Albert and the upper part of St. John County. Perhaps my information is not as full as it might be, but such as I have will give to the Times, trusting that it may prove interesting to some of your readers. As a people we know too little about our own country, and it needs only to be better known to be more appreciated. I was a few years ago in the province of Ontario, where I fell in with a gentleman, who, I am ashamed to say, asked if N.B. was a part of Canada or the United States . I hope that such cases as that are rare. I was more surprised at the time than I would be now to hear such a statement from that source, as we had not then heard tell of Edward Farrar's annexation crusade, but in spite of him, N.B. is not and I hope never will be a part of Uncle Sam's possessions. But I have digressed. About 25 years ago an English company beganprospecting for copper below Goose River, a short distance from here out in St. John Co. The prospects were excellent, and a large crew of men were put to work. The management does not seem to have been wise, as extravagance marked their operations from the beginning. Instead of continuing their operations to underground work, a large part of it was above ground. Before they knew how the ore would turn out, they had the place cleared up, laid off in streets, and a large number of houses built, one man told me that he put up five in one summer for them. They likewise built a schoolhouse, a large store, a wharf and put up the frame of a large church, but it was not completed. Another crew of men was employed in building a road from Goose River into the mine. In the mine itself about 30 men were employed. At one time it is said that the place was a busy little town of 100 inhabitants. But its prosperity was short lived, but not till good ore was found, and a vessel load was got out on the wharf. A storm broke up the wharf and the copper was lost. This put an end to the work and the place was abandoned, as the company was tired of the way their money had been spent. About $10,000 was spent in all. It is probable that had the management been more economical the mine would still be worked. Shortly afterthis the West Isle Mining Co. of England, began prospecting two miles below Point Wolfe, on the bay shore. Your correspondent had the privilege of viewing the old workings a few days ago. A couple of buildings are still standing but the workings are gradually filling up, and quite large trees are growing close up alongside the houses, which are in a very dilapidated condition. Mismanagement ruled here, but the company was not so liberal in advancing money, so that only about $2,200 was spent. It is said that some ore was being found when the work was given up. A man by the name of Watters was manager. About half way between Point Wolfe and Salmon River, as one drives along the road, can be seen where another company dropped $3,000 or $4,000 in looking for copper, but it does not seem as if they found any very large quantity of it. It was at this point that Capt. Brown had a crew of men at work a year ago, and must have spent a few hundred dollars; one is quite safe in saying at least $50,000 has been spent on this side of Salmon River alone in prospecting for copper. Throughout the whole range that I have mentioned the surface indications of copper are prominent. In talking to a man who is largely interested in mining, he gave as his opinion that copper existed here in large quantities, if the right place would be struck. I will not take up more of your valued space this time. Perhaps I will give you some notes in the near future on the lumber industry of Alma. A. ..?.."

Weekly Record - Fri., Feb. 19, 1904 E.A. Charters was called to Moncton on Monday to attend a business meeting of the Executive Committee of the Copper Cliff Mining Co. (Ltd.), which proposes opening up the Copper mine in Alma and St. John counties in the near future."

URN: 0663 / A2 / E2 / IDX_Names: Mild Brook; Albert / Kings County Oil Shales; Oil and Gas - Kings Co.;

Weekly Record - Fri., May 19, 1899 A Mining Boom On. - A party of five Americans including expert mining engineers and representatives of capitalists, arrived to the city Wednesday afternoon by the C.P.R. their special mission being the inspection of mining properties in Albert County, concerning which the public has already been informed. The party, which is registered at the Brunswick consists of J.H. Cremier, an iron and copper mining expert of Cleveland; R.L. Martin, coal mining expert engineer of Pittsburg; R. Dufl (?) of Boston; A.H. Mugford and Major H.G. Cotlin, of New York city, the latter also being a mining engineer. They left this morning by teams for Baltimore incompany with Mr. M. Lodge and Mr. J.R. McDonald, of New York, who has been in Moncton for some time past in connection with the enterprise, to inspect the cannel coal property. They will probably spend a couple of days there. From there they go to Point Wolfe to examine thecopper and iron deposits in that region and will afterwards visit an iron property in Nova Scotia belonging to Mr. Lodge. Mr. Lodge, who is the original promoter of the movement for the development of the mining properties referred to, has been working up to the point of getting a deputation of mining engineers and capitalists to inspect the field and take hold of the project, and the present delegation is the fruit of his labors. The prospects now look bright for these mining properties, that have been so long lying idle, being worked, and the mineral resources of Albert being developed during the coming summer. Mr. Lodge's iron property in Nova Scotia and the properties in Albert are to be amalgamated under one company, and the probabilities are that the proposed company will be formed under the laws of New Brunswick. One of the undertakings talked of is the construction of a railway by the company from Baltimore to a point on the I.C.R., or to a deep water terminus on the Bay of Fundy for shipping purposes. A couple of other American mining engineers are expected here to-day to commence a survey of New Brunswick with a view to the development of the oil industry - Moncton Times."

URN: 0663 / B8 / IDX_Names: Mild Brook; Dunsinane Coal;

Daily Times - Oct. 26, 1895 An Albert county correspondent writes: The gold mine, situated one and a half miles from the Vaughan mill, at Point Wolfe, is the great attraction just now for the visiting stranger. This mine, as is generally known, is owned by a number of enterprising capitalists of Moncton and turns out a superior quality of gold, silver and copper ore. At present there is considerable excitement over the discovery of a new vein or seam, said to be larger and richer than either of the other two. A new crusher and separator will be brought here and set up 4 about the first of November, and the work will then be pushed forward rapidly. Mr. John White and other gentlemen of St. Johnwho are associated with him in the development of the coal seams at Dunsinane, Kings county, have had two carloads of the coal mined from the upper seam and sent to St. John for trial. Although the coal is taken from near the surface it is of good appearance and is an excellent burning coal in an open grate. In stoves it does not clinker, but leaves a reddish brown ash. The property, which is being further prospected, is situated near Dunsinane, about three miles from Penobsquis, and is only a very short distance from the line of the I.C.R. So far two seams have been discovered, an upper one of 17 inches and another 10 feet below of 13 inches. The proprietors will further examine and develop the property this autumn, and are hopeful of finding coal in sufficient quantity to justify the erection of workings on a large scale."

URN: 0663 / S5 / IDX_Names: Mild Brook; Albert County Coal (some Albertite);

Moncton Daily Times - Oct. 16, 1880 Albert County News (From the Maple Leaf). - Copper Mine. - Mr. Daniel Cleveland, Alma, is at present engaged opening up a copper mine at the foot of Sinclair Hill. There can be no doubt that the Alma and Point Wolfehills are yet to prove a source of wealth to their inhabitants. It still remains to be proved, whether or not the elevated land known as Joel's Head contains a sufficiency of coal to pay the working. It is certain that it exists there, in greater or less quantities."

Daily Times - Apr. 6, 1898 Albert County. - (Special correspondence of the Daily Times). - Alma, April 4. - Robt. Dryden, who is prospecting for coal, is now boring on the farm of Edgar Martin in Hebron. The party he had boring for him in the shaft on the brook got discouraged and abandoned the work when they came in contact with a hard band of rock about one hundred and thirty feet from the surface. Leonard Martin, who is interested with Mr. Dryden in prospecting is trying to get the government's diamond borer to continue the boring in the shaft on the Brook.The present lessees of the mines at Mild Brook and Goose Creek are about closing with a company, who will spend $8000 prospecting at the aforementioned mines during the coming summer."

Semi-Weekly Telegraph - May 20, 1899 New Brunswick's Mineral Resources. - Have Attracted the Attention of American Capitalists and Scientific Men Who Are Going to Exploit Them. - Moncton, May 17. - A party of five mining engineers and representatives of American capitalists arrived here this afternoon from the United States to look over coal, copper and iron properties in Albert County and Nova Scotia with a view to the organization of a company with a large capital for the development of mining properties, the party consisting of Mr. Mugford of New York, J.W. Crenner, of Pittsburg. Mr. Martin of Cleveland, R. Duff of Boston, Major Catlin of New York, and J.R. McDonald. The latter have been in the provinces for some months prospecting. This party goes to Albert county tomorrow toinspect the Carmel coal property at Baltimore and also to look over copper and iron property at Point Wolfe. M. Lodge, who has been working for some years interesting American capitalists in New Brunswick mining enterprises, has the party in charge and the prospects are good for the organization of a company and the development of mining properties in Albert and other parts of the provinces. The construction of a railway from Baltimore,Albert county, to a point on the I.C.R., or a deep water terminus on the Bay of

Fundy, is one of the projects talked of in connection with the proposed mining operations. Two engineers are expected to be here tomorrow to commence a survey of the province with the view of developing the oil industry."

URN: 0666 / IDX_Names: Muniac River;

Carleton Sentenil - Aug. 5, 1876 Kintore Notes. - Gold on the Muniac. - A good many years ago it had become known that gold was to be found on the Muniac, and at that time some parties intended to begin work of gold digging. - It was, however, by some means or other, not commenced to any extent. Still, from time to time, the talk went round that gold was plenty, and that companies were about to engage in the undertaking on a large scale; but this also passed over, and no beginning made, except a passing look or a scrape among the pebbles of the Muniac. - But during the week the scene has been changed. Messrs. Babbit & Sadler, from St. John, have commenced operations in order to fully explore the bed of the stream. - They are digging down, and by the aid of a long wooden spout with holes made in the bottom, they are endeavoring to find out if the quantity of gold found would justify them in sinking a shaft, which they will be able to determine in a few days. We hope soon to be able to report great success. - Cor. to Telegraph."

Daily Telegraph - Aug. 8, 1876 Kintore Notes. - The prospect for gold. - Mr. Babbit and Captain Saddler have in the meantime left off their search for gold in the Muniac; they are perfectly satisfied that the gold is plentiful, and what is required is the sinking of a shaft to insure success; this, in the first instance, would incur a good deal of expense, but with such prospects that the quantity of gold would be great. We hope the government, or some able company, will at once go into the work on a large scale. We hope soon to learn that this has been done. ...... W."

Daily Telegraph - Aug. 24, 1876 Kintore. - Messrs. Babbit & Sadler have made another visit to the Muniac in search of gold. They report that the gold found is of the finest quality, but as far as they had gone the quantity found would not pay for working without going down a considerable depth."

Carleton Sentenil - Aug. 26, 1876 Grand Falls. - The party who have been prospecting for gold on the Muniac, have gone up the Tobique to the Serpentine, where they will spend some three or four weeks in search of colors."

Daily Telegraph - Sep. 11, 1876 Kintore. - Mr. Killam was out at the Muniac for an hour or two looking for gold; he showed us some nice fragments which he had dug up."

Daily Telegraph - Sep. 21, 1876 Poem on Muniac - refers to gold...."

URN: 0666 / IDX_Names: Muniac River;

Evening Telegraph - Jun. 13, 1877 Kintore. - Gold Mining. - It is reported that the gold diggings at the Muniac are again about to be commenced. Success ought to attend these labors this time."

Carleton Sentenil - Oct. 4, 1879 We have been shown some quite rich specimens, inquartz and in grains, of gold taken at the Muniac, where digging and washing is being prosecuted regularly and with excellent prospects as to the result. We are promised next week a detailed statement about the whole matter."

S.J. Daily Sun - Oct. 13, 1879 Gold in Victoria County. - Auriferous deposits have been found in Victoria County. For some weeks past investigations have been going on at Muniac, which have been attended with important results. Gold has been found in the bed of the stream and on the flat land adjoining, some 200 feet back from the river. The tests have thus far been made for the purpose of learning the extent of the deposits rather than for profit. The rock bed has not yet been reached, and some fine specimens have been discovered."

S.J. Daily Sun - Sep. 19, 1879 Andover. - GOLD. - Messrs. Longstaff, Vanwart and some other gentlemen from Woodstock, are prospecting for gold on the Muniac. They have a number of men at work."

S.J. Daily Sun - Sep. 20, 1879 Gold on Muniac. - We are informed that a Scotchwoman, some little time since, while washing clothes in the Muniac, found a piece of quartz rich in gold, for which she received $5 from a person who knew its value. A number of parties are again at work on this stream washing for gold, and are succeeding in obtaining it, but in what quantities we cannot say. T.W. Longstaff, Esq., we are informed, is at the head of the operation. We will be glad to hear

St. Croix Courier - Mar. 31, 1892 Minerals of New Brunswick. - Extracts from a Paper by Prof. L.W. Bailey, of the Geological Survey of Canada. - From a paper by Prof L.W. Bailey, written for the Canadian Mining and Mechanical Review and published in the Crown Land Report, we take the following extracts concerning minerals in Charlotte county:- New Brunswick has, as yet, certainly established no claim to prominence as a mineral producing country. This is the more remarkable as within her borders are not only to be found those geological formations which elsewhere are usually the seat of valuable ore deposits but these occupy extensive areas, and present features in the way of plication, metamorphism, granitic and igneous intrusions, which would greatly enhance the probability of occurrence of such deposits. It is, however, to be remembered that very large portions of the province, and particularly those which might be expected to be metalliferous, are still densely forest clad, and that while the limits and age of the different rock formations have been worked out and mapped with a considerable degree of accuracy by the officers of the Geological Survey, but little has yet been done in the way of intelligent and systematic prospecting. ANTHRACITE. - This mineral is found to be limitedin extent in the Devonian rocks in St. John county. In many instances it is evidently the result of alteration, wholly or in part, of the individual trunks of fossil trees scattered throughout the sandstones of the Devonian formation; but in a few cases the vegetable accumulations would seem to have been such as to give rise to actual beds of coal, though of no great thickness. The best known locality for these beds is that of Lepreaux basin, near the western border of St. John county, and not far from the mouth of the Lepreaux river. A seam of mixed coal and shale is here met with, having a total thickness of fifteen feet; but the shale is irregularly distributed through the coal, and the latter, where purest, does not exceed a thickness of four feet, while it also contains much earthy matter. Analyses of samples from the outcrop, made by Dr. Harrington, gave 36.38 per cent of ash. The beds at this locality are all highly disturbed, and the area over which they are distributed is but small. MOLYBDENITE. - Molybdenum sulphide, or molybdenite has been observed at several localities, but chiefly in connection with the gneissic and micaceous strata, which border the great central granitic axis of the province, or in the granite itself. It has been thusfound near St. Stephen in Charlotte County, near thegranite belt in York county, and below the Pabineau Fallson the Nepisiguit river in Gloucester county. At the second of these localities it appears to be quite abundant. GRAPHITE. - Graphite or plumbago, in a finelydivided state, is not unfrequently disseminated through the altered rocks of the older formations to which it imparts a dark color and more or less glossy aspect. It is most abundant with the pre-Cambrian rocks which are believed to represent the Laurentian system in St. John county. Much of the limestone of this formation is dark grey or even black from this cause, while in places the graphite assumes the form of veins, pockets or well defined beds. A band of this character crosses the mouth of the St. John river at the falls, and is traceable both east and west for several miles. Mining operations for its removal have been frequently undertaken, and at one time (1868-1870) about 6000 barrels per year, averaging when crushed and screened about 4 cwt. to the barrel, were removed. The beds vary in thickness from one to four feet. The mineral itself is somewhat impure and incapable of being directly applied to the uses for which the finer qualities of graphite are employed, but has been found to answer well for foundry facings, stove polishes and the like, and by appropriate treatment can be rendered available for other purposes as well. Quite recently these mines have been reopened. Of other formations containing considerable quantities of graphite may be mentioned the Cambro-Silurian and the Devonian. The slates and schists of the former, as found near St. Stephen and elsewhere in Charlotte county and in the parish of Canterbury, York county, are often highly plumbaginous, but neither in these nor in the Devonian are there any known deposits of economic value. GOLD. - The amount of positive information regarding the presence of this metal in New Brunswick at present possessed is very small. Reports of its discovery have indeed been frequent, but in the very few instances in which these appear to have eminated from reliable sources the amount of gold observed has been so small as to discourage further efforts to obtain it. While, however, the amount of the metal actually obtained is thus insignificant, it is worth while to notice that rocks very nearly resembling those of the auriferous belt of Nova Scotia, and believed to be of the same age, are largely developed there, and further, that it is in connection with these same rocks that very many of the reported discoveries of gold have been made. The rocks referred to are those comprising the slate and quartzite belts which border the great central granitic axis of York and Northumberland counties, and which with the latter traverse the entire breadth of the province. Much of this region is still densely forest clad and difficult of access, but should any portion of it prove to be auriferous the discovery would be of inestimable value to the province, as helping to open up an extensive region otherwise likely to remain permanently in a wilderness condition. Among the points in which gold has been reported in small quantities may be mentioned the vicinity of the St. Croix river in Charlotte county, theNashwaak river above Stanley, in York county, the Muniacriver, in Carleton county, and the Serpentine river, inVictoria county. (to be continued)"

URN: 0666 / H5 / IDX_Names: Muniac River; Victoria County Gold;

Carleton Sentinel - Oct. 11, 1879 Gold in Victoria County. - The fact that gold existed in this and the neighboring County of Victoria, is not of late discovery. For many years it has been known that the beds of the Becaguimic, Shktehawk, Muniac, some tributaries of the Tobique, and other streams were more or less auriferous. The late W.S. Shea, we believe, was one of the first to draw public attention to the above facts. After personally prospecting and experimenting, so strongly impressed was that gentleman with the belief that gold in paying quantities could be found along the streams above named, that he, associated with others, immediately secured the leases of the land through which some of them flowed. At the time we refer to Mr. S. and his associates made some practical tests in different sections of the County, but owing to the high price of labour and material was unable to experiment farther than simply to establish the fact of the presence of the precious metal. At that time, too, the gold was only found in the bed of the streams, and the obstacles presented by the water were of such a character as to prevent further tests without the outlay of a largeamount of capital. From time to time a number of gentlemen have been in consultation upon the subject, until this fall they determined to to investigate, and by more extensive and perfect arrangements convince themselves of the extent and character of the auriferous deposit on the Muniac. While we agree with the Company that it would not be wise to raise what might prove false expectations or create undue excitement in the public mind, still we think it but right to inform our readers as to the general character of the enterprise and intimate upon what the hopes of its success are based. During the past few weeks investigations, but with very crude appliances, have been going on at the Muniac, and these have been attended with important developments. Not only has gold been found in the bed of the stream but as well in the flat land adjoining, and to a distance of some two hundred feet from the bank of the river. Long years ago, doubtless, these flats formed the bed of the river; the surface consists of a rich alluvial deposit to the depth of between two and three feet; under this deposit is found two feet of gravel, and then comes clay, on the surface of which most of the metal is found; the clay contains a large portion of gravel, intermixed with which the golden grains are also found; the bed rock has not yet been reached. The tests thus far made have, of course, been more for the purpose of learning the extent of the auriferous deposit than for the profit which could be anticipated from mining with the simple apparatus so far employed. It must suffice for the present to say that some very fine specimens have already been discovered, and that so satisfactory have the experiments proved, that the gentlemen interested intend making immediate preparations for entering upon mining another season, aided by all the necessary and modern appliances, feeling assured that the same course has been followed in other mining districts where the inducements were far less than those presented on the Muniac. We wish the enterprising gentlemen success, and shall be glad from time to time to note the progress of their operations."

S.J. Daily News - Oct. 14, 1879 Gold in Victoria County, N.B. - The Carleton Sentinel, in its last issue, devotes a considerable portion of its editorial space to the consideration of the question of the gold deposits of Victoria County. It starts out by telling its readers that the existence of gold in Victoria is no new discovery, some shrewd people having been aware of the existence of several, valuable spots for years. It describes where, when and by whom gold was discovered, the efforts made by the prospectors of the olden time and now, and much else besides that is at least interesting to know. And it speaks encouragingly of the prospects of those who are delving after it now. Whether all that has been so far ascertained of its presence in the county will justify the expenditure of much time or means, it is not for us to say. At any rate,it is not well to be carried away by the enthusiasm of the moment in such matters. Gold-getting, like the ordinary kinds of wealth-getting, requires patient and persistent effort, steady endurance, and generally work of the very hardest kind, as many who have engaged in the business in past times can testify. Still, for all that, the fact that it is troublesome to get and difficult to find in considerable quantities, furnishes no proof that it does not exist in more than one section of the Province. Speaking of the presence of the auriferous material in Victoria, the editor of the Sentinel says: For many years it has been known that the beds of the Becaguimac, Shiktehawk, Muniac, some tributaries of the Tobique and other streams were more or less auriferous. The late W.S. Shea, we believe, was one of the first to draw public attention to the above facts. After personally prospecting and experimenting, so strongly impressed was that gentleman with the belief that gold lay in paying quantities could be found along the streams above named, that he, associated with others, immediately secured the leases of the land through which some of them flowed. At the time we refer to Mr. S. and his associates made some practical tests in different sections of the County, but owing to the high price of labor and material was unable to experiment farther than simply to establish the fact of the presence of the precious metal. At that time, too, the gold was only found in the bed of streams, and the obstacles presented by the water were of such a character as to prevent further tests without the outlay of a large amount of capital. From time to time a number of gentlemen have been in consultation upon the subject, until this fall they determined to investigate, and by more extensive and perfect arrangements convince themselves of the extent and character of the auriferous deposit on the Muniac. The Sentinel does not think it proper to raise what might prove false expectations nor to create undue excitement in the public mind. This is eminently proper. But it deems it right to inform its readers as to the general character of the latest enterprise, and to give some intimation of the grounds of its hopes of success. This is reasonable, and because it is so we append what follows: During the past few weeks investigations, but with very crude appliances, have been going on at the Muniac, and these have been attended with important developments. Not only has gold been found in the bed of the stream but as well in the flat land adjoining, and to a distance of some two hundred feet from the bank of the river. Long years ago, doubtless, these flats formed the bed of the river; the surface consists of a rich alluvial deposit to the depth of between two and three feet; under this deposit is found two feet of gravel, and then comes clay, on the surface of which most of the metal is found; the clay contains a large portion of gravel, intermixed with which the golden grains are also found; the bedrock has not yet been reached. The tests thus far made have, of course, been more for the purpose of learning the extent of the auriferous deposit than for the profit which could be anticipated from mining with the simple apparatus so far employed. It must suffice for the present to say that some very fine specimens have already been discovered, and that so satisfactory have the experiments proved, that the gentlemen interested intend making immediate preparations for entering upon mining another season, aided by all the necessary and modern appliances, feeling assured that the same course has been followed in other mining districts where the inducements were far less than those presented on the Muniac."

S.J. Daily Telegraph - Oct. 28, 1879 Traces of gold on the Tobique. - Portions of the rocks removed at the Narrows, having been preserved, two small specimens of them were sent to the Provincial assayer by your correspondent. These specimens were found to contain silver, with traces of gold. The portions sent were too small for a quantitative analysis. Prof. Burwash desires a larger quantity in order that he may fairly test the value of the rock. The required amount will be sent and, if the results are encouraging, we shall be pleased to further inform the public on the subject."

URN: 0678 / IDX_Names: Quaco Road;

Daily Telegraph - May 3, 1887 New Manganese Mine. - Mr. John A. Howard, of Shanklin, St. John County, has been fortunate in discovering manganese in the side of the mountain close to his dwelling house. The surface indications are good, and it is hoped that before long some capitalists will have a good paying mine in operation."

S.J. Gazette - May 29, 1894 Manganese near Ben Lomond. - Manganese has been discovered about two miles from the Ben Lomond house, in the county of St. John. A number of gentlemen who have been making an inspection believe the mineral is hid away there in large quantities. Messrs. W.E. Skillen and Thomas B. Jordan are said to be interesting themselves in it, and are endeavoring to form a company to develop the mine."

URN: 0688 / IDX_Names: Gold Mine Gully;

Moncton Daily Times - Sep. 13, 1880 Sussex. - Some valuable and rich specimens of silver ore have been found at Hammond, Kings Co., near Sussex."

S.J. Daily Sun - Oct. 22, 1881 Silver Mine in Kings. - Last week we were handed a sample of quartz taken from a mine lately found on the property of James F. Wanamake, Markhamville, Kings Co. The property has been leased by Messrs. Robinson, of Kings, and Sherman, formerly of the Albert Mines. Prof. Burwash, Sackville, assayed a sample and says that it contains 10 dwts of gold, 26 per cent of silver, and 22 per cent of lead to the ton. The vein is about 3 feet 4 feet wide, the outcrop about 1 foot. Mr. Robinson cleared 7 feet of the vein last year and is certain that he has got a good

Weekly Freeman - Oct. 29, 1881 A silver mine has been discovered on the property of James F. Wanamake, Markhamville, King's County."

S.J. Globe - Feb. 21, 1883 and Weekly Transcript - Feb. 21, 1883 and Daily News - Feb. 21, 1883 New Silver Mine. - Messrs. James Robinson, Sherman, and W.B. Webster have obtained a lease of the silver mine, at Hammond River, Kings County, and have taken preliminary steps towards the formation of a company to operate the mine and carry on a business. The mine was discovered some years ago, and samples of the ore have recently been sent to practical chemists in Sackville and St. John, who show from the analysis that silver, gold and lead were found. The silver ore is in abundance, and the lessees believe that during the summer mining operations will be commenced."

Moncton Daily Times - Feb. 22, 1883 and S. J. Daily Sun - Feb. 23, 1883 and Daily Telegraph - Feb. 23, 1883 Silver Mining. - Some years ago silver was discovered on the James F. Wanamake farm, Hammond River, Kings County. The deposit is situated about three miles from the St. Martin's and Upham R.R.. A lease of the land has been secured by Messrs. Jas. Robertson and Robert Shearman, of Albert Mines and D.N. Webster of Salisbury, and they will form a company to work the mine. Two of these gentlemen were in town yesterday and had samples of the ore. Analyses have been made by Prof. Burwash of Sackville and Mr. Best of St. John. Prof. Burwash's analysis shows: Lead, 26 per cent, Silver, 22 ounces troy to ton of lead, Gold, 10 pwt to ton."

Weekly Freeman - Mar. 3, 1883 A company is about being formed to work a silver mine discovered some time ago on James W. Wanamake's farm, Hammond River, K.C."

Weekly Record - Fri. May 9, 1890 It is stated that steps are being taken to develop the galena or silver and lead mine near the Hammond River, known as the Wanamake mine. We trust the information is correct and that a valuable property may be opened up in that vicinity."

Moncton Daily Transcript - May 12, 1890 It is stated that steps are being taken to develop the galena or silver and lead mine near the Hammond River, Kings Co., known as the Wanamake mine."

Weekly Record - Fri., Aug. 16, 1901 The work of prospecting for copper, lead and silver and gold is still going on quietly at the Wannamake place, Hillsdale on a branch of the Hammond River. It is said some very fine ore has been obtained but the prospectors are observing a discrete silence as to their doings."

URN: 0688 / 0007 / HILL / J8 / R8 / IDX_Names: Gold Mine Gully; Lake George Antimony; Grey Brook Gypsum; Albert Mines; Dipper Harbor/ Lepreau Coal;

S.J. Daily Sun - Oct. 6, 1880 Minerals of New Brunswick. The Mechanics' Institute Collection of Useful Minerals. - One of the first objects which strikes the eye on entering the Exhibition Building by the main entrance door is the show case displaying the exhibits of useful minerals of New Brunswick sent by the Mechanics' Institute. This includes the collections of ores and products of several mines which after the Exhibition will be permanently on view in the museum of the Mechanics' Institute. The lower shelf of this case contains three strongly contrasted groups of products. On the left arethe dark colored minerals of the Albert mine, which has long been famous as the source from which a mineral resembling coal in many of its properties and yet distinct from it has been obtained in paying quantities. Mr. Ketchum, the obliging manager of the works, has sent with the coal various objects of curiosity and interest which serve to illustrate its relations and mode of occurrence of the coal. There are specimens of brown shale in which the coal occurs in various conditions, some with fishes perfectly preserved; others with scattered fish scales; others again are specimens of shell in contorted layers and with glossy surface. There are also concretions resembling cocoanuts, each with some organic substance at the centre, as a fish or a scattered cluster of scales. Other specimens sent show how the albertite or coal intersects the layers of the shale and does not lie between, as would be the case with a true coal. Such fine samples and large masses of the coal as are presented to view in this case are now rarely obtained.On the right hand of the Albert Mine exhibit are displayed the products of the Albert Manufacturing Co., from the crude, snow-white gypsum to the finished vase of alabaster. These products (except the vase) came from Mr. Tompkins, the manager and part owner of the property. Various grades of the plaster rock cut into blocks of convenient form and size, serve to show the nature of the mineral on which Mr. Tompkins operates. Then in a set of glass bottles are shown the products of the factory. First samples of calcined plaster for use in dentistry, etc. Samples of raw ground gypsum are also shown in two varieties, one for agricultural purposes, the other for use in the arts, this latter being the variety known as terra alba. A small quantity of each preparation of the powdered mineral is placed on blue paper to make the shade of color more distinct and to prove its purity. The second and third shelves of this case are occupied by specimens of useful minerals brought from the museum of the Mechanics' Institute. The utility of these is partly illustrated by objects of art made from them. The metals are shown here in great variety, there being ores of iron, lead, antimony, molybdenum, manganese, copper and zinc, some from mines that have been worked, but are now abandoned, and others from mines that have been in operation for many years. Many varieties of copper ores and ores of iron and manganese ores are here displayed. Various spars and minerals of non-metallic lustre are also present, most of which are of importance in various processes in the arts. Some for ornament as agates, carnelian, serpentine, and marble. Others that have been useful to the aboriginal inhabitants of the Province of New Brunswick for weapons and tools, as quartz and chlorite and jasper. Others again which their successors now make use of for the various purposes of modern life, as heavy spar and mica for optical purposes. Marble chalcedony and rock crystal for ornamental uses. A third group of specimens in this collection includes the combustible minerals, such as peat, albertite, bituminous coal and anthracite. Perhaps the most varied series of specimens fromany mine contributed to this collection is that furnished by the Hon. Francis Hibbard, the product of the Lake George Antimony mine. Mr. H. has begun at the foundation and sent specimens of slate or country rock, in which the veins of antimony are found. Then he has also a sample of the ore, showing the vein stone (quartz) mixed with ore. Three grades of the ore as it is taken out of the vein are also exemplified by specimens. Coming after these are three samples of the crushed ore separated from the quartz and mud by screening and washing. This ore is deprived of its sulphur by roasting, and is then passed into the smelting furnace. Samples of the fluxes, salt cake and rosin, and of the charcoal used in smelting, are present with this exhibit. In smelting a vapor passes off, which is condensed in the chamber connected with the furnace, being the oxide of antimony. This is exhibited in two varieties, one cream colored and another not so pure and of a darker shade. The final products are shown by two examples, one of slag resulting from the smelting, the other the regulus (or metal) of a metallic aspect and peculiar fracture. Opposite to Mr. Hibbard's collection is oneshowing the anthracite coal of Lepreaux and its associated rocks. Although not as pure a variety as might be desired, this is a true coal, lighter than the English cannel, but of a peculiar granular texture that causes it to crumble easily. It is of much interest as being the only workable coal known of so great an antiquity (being a product of the Devonian age). The shale associated with it presents the same glossy surfaces as those seen on the shale of the Albert Mine in the lower part of the case, but while this is brown, the shale of Lepreaux is black, and to the uninitiated seems the more valuable part of the product mined. The country rocks associated with the Lepreaux anthracite are fully shown by the specimen that accompanied it, and are of the same kind as the rocks which may be seen on the shore near the Exhibition Building. There are the same grey sandstones and grits (Dadoxylon sandstones), which form the point outside the railway terminus; these underlie the coal. And there are also the red slates (Cordaite slates), which may be seen in layers with green slates a short distance further east along the shore, in front of the Exhibition grounds. At Lepreaux these slates have limestone with them, and this is shown by a sample sent by Mr. G.K. Hanson to whom the Exhibition is indebted for all the specimens received from Lepreaux. ...... Between the Lepreaux and Hibbard exhibit is a collection of pieces of galena bearing quartz said to beargentiferous, received from Mr. Wannamake, St. Martin's, and perhaps from hills on the south side of Hammond River. Beyond the case in which these various collections are placed, are other cases of minerals which we propose to describe in a future issue."

URN: 0690 / IDX_Names: Glebe Manganese;

Royal Gazette - Dec. 24, 1884 Government Notice. Under Chapter 98 of the Consolidated Statutes.These are to certify that John T. Watson, William H. Love, William Scott, John Ferguson, William Lawton, David S. Stewart, of Saint John, in the City and County of Saint John, E.J. Baxter, of Norton, in the County of King's, L.B. Deasy, Benjamin Kittredge, Richman R. Kittredge Jeremiah McGowan, F.J. Alley, William K. Kennard, J.C. Farrell, A.J. Grant, of Eden in the State of Maine, in the United States, have filed in the office of the Provincial Secretary a Memorandum of Association for the incorporation of a Company to be styled The Waterford Mining Company. The object of the Company is the mining of gold, silver, lead, coal, and all kinds of Minerals; buying, selling, holding, and dealing in lands and property for mining purposes; the doing, carrying on and transacting all kinds of business incidental to the carrying on of a general mining business, and the erection and maintaining of all the necessary buildings, works, and structures connected with the business, with a capital of two hundred thousand dollars, to be divided into forty thousand shares of five dollars each; and stating that the office or principle place of business is to be at Waterford, in the County of King's, in the Province of New Brunswick. Dated at Fredericton the 23rd day of December, A.D. 1884. David McLellan, Provincial Secretary. The above Memorandum of Association } is filed by Order in Council of date the} 23rd day of December, A.D. 1884. } David McLellan."

Royal Gazette - Jan. 14, 1885 Notice.The first meeting of the Waterford Mining Company is hereby called, and will be held at the office of Mr. C. N. Skinner, Barrister, in the City of Saint John, in the Province of New Brunswick, on Thursday the twenty second day of January next, at three o'clock in the afternoon. for the purpose of organizing the Corporation and doing every and any act that the said Company may lawfully do at such meeting under Chapter 98 of the Consolidated Statutes of said Province. Dated the 27th day of December, A.D., 1884 Benj. Kittredge, Jer. McGowan, R.H. Kittredge, F.J. Alley, L.B. Deasy, Edw. J. Baxter, A.J. Grant, John Ferguson."

S.J. Daily Sun - Jul. 30, 1885 Sussex. - Ore in considerable quantities is being hauled from mines in Dutch Valley to Sussex railway station, and is to be shipped to the United States."

Royal Gazette - Mar. 17, 1886 Notice. A General meeting of the Stockholders of the Waterford Mining Company will be held at the Office of C.N. Skinner, Barrister-at-Law, in the City of Saint John, on Saturday the tenth day of April next, at three o'clock in the afternoon, for the purpose of electing a Board of Directors, and transacting all the business of the Company that may be lawfully brought before the Meeting. Dated March 13th, A.D. 1886 C.N. Skinner, President. D.S.

Daily Telegraph - Aug. 19, 1887 Capt. Alley, of Bar Harbour, arrived yesterday and proceeded this morning with a mining engineer to inspect his manganese property. The captain reports business as booming at Bar Harbour."

Moncton Daily Transcript - Jun. 3, 1887 A VALUABLE MANGANESE MINE. - J.F. Alley, of Bar Harbor, has just returned from a business trip to Sussex, N.B. where he has been to visit a very valuable manganese mine with W.N. Gould, have been successfully engaged in developing for the past year. The productive area of this mine is one of the largest known, and is apparently inexhaustible. Much of the ore shows a test of over ninety per cent. - Bangor Commercial."

Daily Transcript - Jun. 8, 1887 and Chignecto Post - Jun. 9, 1887 A Valuable Manganese Mine. - J.F. Alley, of Bar Harbour, has just returned from a business trip to Sussex, N.B., where he has been to visit a very valuable manganese mine, which he in connection with W.N. Gould, have been successfully engaged in developing for the past year. The productive area of this mine is one of the largest known, and is apparently inexhaustible. Much of the ore shows a test of over ninety per cent. - Bangor Commercial."

Daily Telegraph - Mar. 4, 1887 Mr. Fred W. Stockton is preparing to ship manganese in large quantities soon. It is also expected operations on a large scale will be resumed in the Waterford manganese mines belonging to American gentlemen and gentlemen of this place."

Daily Telegraph - Oct. 11, 1888 Sussex. - .... Sussex has a mining craze which has taken hold of certain individuals, and mines and minerals are fully discussed. While digging in a mine a few miles from the village, a petrified skeleton of an animal of the carnivorous period was found, which was judged to be a Plesiosaurus."

Weekly Record - Fri. Jan. 25, 1889 and Saint John Evening Gazette - Jan. 26, 1889 It is the intention of the Glebe manganese property to haul a quantity of their ore to Sussex as soon as the roads will permit, and prepare it for market there. Prospects on this property are good."

Weekly Record - Fri., Jun. 14, 1889 Recent accounts say that the manganese deposits at Dutch Valley, on property of Messrs Alley and Gould, are showing up finely."

S.J. Globe - Mar. 18, 1889 Joseph Richardson, who was employed at Messrs.Gould & Alley's manganese mine, near Sussex, approached too close to a blast on Wednesday last, with the result that he was blown into the air, his leg shattered, and his body injured internally. He will scarcely recover."

URN: 0690 / IDX_Names: Glebe Manganese;

Saint John Evening Gazette - Mar. 18, 1889 A serious accident occurred on Wednesday last at the Glebe manganese mines near Sussex, owned by Messrs. Gould and Alley. Joseph Richardson, an employee contrary to express orders approached the spot where a charge had been placed within 20 minutes after the time of firing. The result was that Mr. Richardson was blown into the air and had a leg shattered, besides sustaining severe internal injuries. His recovery is

URN: 0690 / 0691 / IDX_Names: Glebe Manganese; Markhamville Manganese;

Daily Times - Dec. 28, 1886 Sussex. - The mining interest of Kings County are still progressing. Major Markham still sends away shipment after shipment of manganese. Mr. W. N. Gould, for and on behalf of American capitalists, is opening outa splendid manganese property on the Glebe lands, Dutch Valley. Other finds are also reported. The friends of A.E. McLeod and Elias Freeze, of Penobsquis, will be pleased to know that the information from Swansea, Wales,"

URN: 0690 / 0691 / 0763 / E5 / IDX_Names: Glebe Manganese; Markhamville Manganese; Jordan Mountain Manganese; Sussex/ Plumwesweep Salt;

Daily Telegraph - Oct. 15, 1887 Soil and Mineral Wealth. - Abounds in the Heart of Kings County. - .... One of the most important industries is manganese mining. There are several places where this valuable mineral is found in almost inexhaustible quantities. The two mines that are most largely worked are about eight and ten miles from Sussex.Large quantities of the ore are daily brought out in waggons, that being the only means of access to the mines. It is stored in a large building near the station, from which it is shipped principally to Boston and New York, where it is used mostly in refining iron and steel. The ore is of an excellent quality and is in the side of a hill, from which it is easily removed. Of late this business has made rapid progress and there is every indication to show that it will continue to enlarge. Another very important industry is the manufacture of fine white salt for table and dairy use. The salt springs are about four miles from Sussex, and only half a mile of level land between them and the railway. The valuable quality contained in the water of this place was discovered many years ago, but the necessary capital and enterprise not being forthcoming scarcely anything was done properly developing it till about a year ago, when borings were made to the depth of about 125 feet, which the capital possessed by the projectors not being sufficient to warrant further expense in that direction the boring was discontinued. Pipes were put down the hole to convey the brine to the evaporating pans, and the manufacture of salt commenced on a small scale, and has been steadily continued ever since. It was found that the percentage of salt in the water had increased, but not sufficient to enable the operators to manufacture the salt as cheaply as the imported article, notwithstanding the abundance and cheapness of fuel for evaporating purposes. Upon analysis it was found to be so much purer than any other that could be obtained that it readily brought the increased price made necessary by the conditions under which it is manufactured. It was pronounced the purest in the world, and wherever it has been exhibited it has always carried off the first prize. The owners are confident that if the boring were continued to the proper depth the percentage of salt would increase proportionally, and if they were carried down to the salt bed it would be possible to manufacture the salt as cheaply as it can be made elsewhere where the wells are 1000 feet deep or more, and its greater purity would enable it to compete successfully with salt which is made in Ontario, the United States or England. The water at present rises about 15 feet above the ground, and it was found that the deeper it was bored the greater was the volume and force with which it flowed from the well; this saves the cost of pumping. Here therefore is a chance for capitalists. It has been computed that an expenditure of about $15,000 or $20,000 would put this industry in a position to compete with any other place in the world, but this large amount is not possessed by the owners. As this would be a source of a large revenue to the country it is to be hoped that it will shortly be taken hold of by some enterprising capitalists and the production of this indispensible article of consumption brought to its proper proportions. Jeune Ecrivain. Sussex, Oct. 14."

URN: 0690 / 0763 / 0688 / 0030 / 0693 / 2030 / S6 / IDX_Names: Glebe Manganese; Jordan Mountain Manganese; Gold Mine Gully; Teahan Mine; Stewarton; Philamaroo Silver, Gold, Copper; Kent County Coal;

S.J. Globe - Oct. 31, 1887 and Daily Times - Oct. 31, 1887 New Brunswick Mining Items. - Halifax Critic. -The manganese property at the Glebe, owned by F.J. Alley and others, of Bar Harbour, Maine, is showing up finely, and some quantities of ore taken out recently, are worth upwards of $200 per ton. The uses of manganese to some part of the electric business will create a new demand for the same. Mr. Alley and others are also making somedevelopments at Waterford, on a belt of metals which seems promising. The ore consists of yellow sulphuret of copper, and other metals in combination.Work at the Mineral Vale Mine in New Ireland, Albert County, is also being pushed forward. One of the principal proprietors visited the United States recently to examine various modes ot treating this class of ores; and it is said concentrating machinery of the best and latest description will be put in shortly. The prospecting for antimony, at or near Springfield, is steadily progressing under the charge of Mr. Gilbert Crandall, of Moncton. It is said the outlook is favorable. Very little is being done in the way of coal development at Weldford, Kent County. No late advices have been received from that quarter.The extensive manganese deposit I have so often written you about, at Jordan Mountain of White's Mountain, owned by Stockton and others, is about being disposed of to a syndicate of capitalists from Baltimore. A sample piece of ore was recently shipped to the parties in Baltimore which weighed 1,800 lbs. There is every evidence that the sale is bona fide, and the owners will receive $40,000 in cash for the property. Should no hitch occur in the negotiations, which we sincerely trust will not be the case, it will give a great impetus to mining matters in this vicinity. The existence of five veins of galena not many miles from Sussex, which show evidence of containing considerable gold, is worthy of the attention of capitalists."

URN: 0690 / 2030 / IDX_Names: Glebe Manganese; Philamaroo Silver, Gold, Copper;

Daily Telegraph - Mar. 3, 1888 Capt. Alley, of Bar Harbour, is again here looking after his mining interests in Waterford. He reports the outlook as good and that mining operations will be actively prosecuted on both of the properties he has

S.J. Globe - Mar. 24, 1888 ADVERTISEMENT: Notice. -- A meeting of the Directors and stockholders of the Waterford Mining Company will be held at the office of C.N. Skinner, in Pugsley's Building, on the corner ofPrince William and Princess streets, in the City of Saint John, New Brunswick, on Saturday, the thirty first day of March, instant, at eleven o'clock in the forenoon, for the purpose of transferring the property of the company to The New Brunswick Silver and Gold Mining Company, and for general business of the Waterford Mining Company. Dated March 13, 1888. By order of the president, John T. Higgins, secretary."

Moncton Daily Transcript - Jan. 25, 1889 Mr F.J. Alley and other investors, of Bar Harbor, Maine, and the points in the United States, have been investing in manganese and other properties in Dutch Valley and above Waterford, Kings Co. The indication of a very extensive body of lead and silver ore is apparent."

URN: 0690 / 2030 / IDX_Names: Glebe Manganese; Philamaroo Silver, Gold, Copper;

Weekly Record - Fri., May. 24, 1889 The New Brunswick Gold and Silver Mining Company's Prospects, etc. For some time past the readers of the Record may have seen brief accounts of the doings of the above company at Cedar Camp, in the parish of Waterford. Avisit to the property on Friday the 17th inst is deemed worthy of notice in the columns of the Record. A pleasant drive through the Dutch Valley past Waterford brings us to the property of the New Brunswick Gold and Silver Mining Company where we find the work of development being proceeded within a systematic and business like manner. A snug shafthouse with a splendid boiler, hoisting and pumping gear in the best of condition, and a shaft 100 ft. on the southern side of the vein has been put down and is substantially and thoroughly timbered throughout. The material raised from this shaft consists of a shale or slaty matter mixed with bands of quartz which is fast assuming a durable and mineralogical appearance. The sinking of the shaft has developed mineral matter in the shape of pyrites, galena meconite (?meaning dark?), iron, etc. sufficient to warrant the belief that their exists in the main ore belt, mineral in paying quantities when once freely cross cut and opened up. In fact assays from time to time have shown returns in silver, lead and traces of gold in quantity enough to warrant the expense of development. We came away favorably impressed with all we saw and heard, and firmly believe that the time is not far distant when a good paying mining property will be in full operation in this charming and romantic region. On Saturday, the 18th., a delegation of the stockholders of this mine came to Sussex from St. John and Bar Harbor, Maine, when an annual meeting of the company took place in the Sussex Civil Court room which was kindly placed at the disposal of the company by Stipendiary Wallace. The usual business matters were transacted, and the views of a number of practical and experienced persons placed before the meeting. The election of officers for the ensuing year was then gone on with and the following persons were elected: W.H. Love, St. John. N.B., President; A.M. Foss, Bar Harbor, Maine; W. Fennell, do.; W.K. Kennard, Mr. Farrell, do., Directors. The Directors subsequently appointed a Mr. Sherman, of Bar Harbor, Maine, as Sec-Treas. The Directors and some of the stockholders then drove out to the mine and made a full inspection of the same and came away apparently well satisfied with what they saw. It is now understood that they will go on sinking the shaft probably 100 ft. further before cross cutting the main belt or lode which is a large one and it is hoped they will meet with abundant success as they will certainly deserve credit for the quiet and unostentatious manner in which they have pressed forward this development. To the President of the company, W.H. Love, of Scott, Lawton & Lore, of St. John; Mr. Arthur Foss, of Bar Harbor, Maine, Sec-Treasurer for the past year, and Mr. F.J. Alley, of Bar Harbor, Maine, Managing Director for the past year, much credit is due for the manner in which they have pushed forward the work of development of this company. Mr. Alley particularly who has for some time past been identified with the opening up and development of Manganese ore in Dutch Valley is well known in our midst, and is evidently the right man in the right place, and we trust he will often favor us with his presence as he is of that class that not only talks but acts, and has been the cause directly and indirectly of spending considerable amount of money in the locality. Such men are always welcome. The visitors left for home on Monday, the 20th, highly pleased with their trip to Sussex and vicinity, and we expect this will mot be the last visit they will pay us. I might add that the New Brunswick Gold and Silver Mining Company is incorporated under the laws of New Brunswick with a capital of $280,000, and that appearances are that it will become in the near future one of the most prominent and substantial concerns. Visitor May 20,

URN: 0690 / CAVE / IDX_Names: Glebe Manganese; Caves;

Daily Telegraph - Oct. 11, 1889 While exploring a natural cave, a portion of the Glebe manganese mine, near Waterford, a few days ago, Messrs. John C. Boyer and John Friars discovered underneath a lot of loose earth and stones the skeletons of seven moose and 15 wolves, in a good state of preservation. The conclusion arrived at was that theanimals had been buried in a landslide, as they were all near each other. One pair of moose antlers is on exhibition at the store of Mills Bros.

& Huestis. One of these measures nearly four feet from tip to tip."

Moncton Daily Transcript - Oct. 12, 1889 and Weekly Record - Fri., Oct. 18, 1889 A natural cave was discovered near the Glebe mine containing skeletons of 7 moose and 15 wolves ..."

1860 - Copied from: The Story of Sussex and Vicinity, by Grace Aiton, 1967, p. 141-42 Early in the 1860's the Pope Manufacturing Company of Boston opened the manganese mines at Markhamville ......"

Morning Freeman - Nov. 14, 1861 A mine of manganese in Kings County has lately been opened, and is now being worked. - The ore is nearly black, highly crystallized, and is being carted to the Railway Station at Sussex, for transport to this city, whence it is shipped to England. Last week, quantities of it were at the Sussex Station, affording ocular proof of the mineral wealth of New Brunswick. - Colonial Empire."

1862 - Copied from: The Story of Sussex and Vicinity, by Grace Aiton, 1967, p. 141-42 Early in the 1860's the Pope Manufacturing Company of Boston ... in 1862 some 225 tons of manganese were brought into Sussex for shipment."

URN: 0691 / IDX_Names: Markhamville Manganese;

1864 - Copied from: The Story of Sussex and Vicinity, by Grace Aiton, 1967, p. 141-42 ... In 1864 the mining business was operating as ""The Queens Manganese Company"", with 24 year-old Alfred Markham as manager. Mr. Markham, a native of Lincolnshire, had had a perilous journey to America earlier that year, when the liner on which he was a passenger was wrecked near Portland, Me., and 42 persons lost their lives. He reached shore in an open boat but lost all his possessions. For 25 years he was in charge of the mines, of which he had become owner, and the little settlement where they were located honored him by taking his name. During the years of operation the ore was hauled into Sussex for shipment and plans were being made to run a rail line to the settlement, but it was found that the ore was petering out."

S.J. Daily News - Oct. 18, 1867 Among the mineral specimens overlooked by our Reporter in his treatment of the Exhibition was one case of Manganese shown by A. Markham, Supt. Manganese Mining Company."

S.J. Daily News - Jan. 8, 1868 EXPLOSION IN A MINE. - We understand that a rather serious accident occurred at the Manganese Mines, Markhamville, King's Co. on Saturday, 4th inst., and in this wise. Five men were working at the time of the accident in one of the pits two hundred and fifty feet below the surface of the earth. One of the miners was engaged in charging a hole which had just been drilled for a blast. Mr. Markham stood alongside this man, while in the rear of both, a distance of some 6 feet, stood the companion of the man arranging the charge. Towards the mouth of the level were two other men shovelling out ore. Just as the miner had got the charge home and commenced to tamp up the hole, the gun-cotton exploded. For some little time after the explosion the men were oblivious to everything; but regaining consciousness they moved as fast as they could in the darkness in which they were enshrouded towards the mouth of the level. Mr. Markham, who, strange to say, was uninjured, managed on getting out to procure lights, and returning met the two miners. The site was a painful one. Both the men were covered with blood and dirt, and deprived at the time of the power of seeing. Mr. Markham aided them to regain the surface, and did all in his power to relieve the sufferers. Dr. Taylor, for whom a messenger had been despatched, soon arrived from Sussex, and exerted his utmost skill on the wounded men. Christy Leeson, one of the sufferers, is covered with flesh wounds, but there is no doubt that he will turn up all right if his sight can be retained. William Dodd, the other miner, an Englishman by birth, had two of his fingers blown off, but is expected soon to recover, although at present he is very low. The mystery of the whole affair is the escape of Mr. Markham. He stood close beside the miner tamping the hole, in a pit not more than 10 feet square, with the tamping bar a piece of 11.8 iron four feet long, and a number of rocks driven about by the explosion with great force, and yet was not wounded! His escape may certainly be regarded among things sometimes termed miraculous."

Daily Telegraph - Jan. 16, 1869 Sussex Manganese Mine. - We understand that this property has been taken possession of by the Sheriff of King's, at the suit of the Treasurer of the Company owning it, for moneys due him. There have been ten men at work in the Mine all winter, and these are still employed. The Company have spent about $60,000 on their property, and the mine is now in fine condition. It is not probable there will be any interruption of operations at present, or that the Company's interests will be more than temporarily affected."

Daily Telegraph - Jul. 7, 1869 A. Markham, Esq., Agent of the Manganese Mining Company, was a passenger from Boston by steamer New England yesterday. Mr. M. has been on a tour to Ottawa, Niagara Falls and Chicago."

Daily Telegraph - Aug. 21, 1876 Exports for 17th, 18th and 19th: Includes 20 tons of manganese."

1877 - Copied from: The Story of Sussex and Vicinity, by Grace Aiton, 1967, p. 124 William N. Goold, a native of Portland, Me., cameto Sussex following the Great Saint John Fire of 1877 with the intention of going to Markhamville to work in the manganese mines. ...."

Moncton Times - Aug. 13, 1877 Kings Co. - A quantity of manganese from the Manganese Mines, Markhamville, Kings Co., has lately been shipped to Jersey City to be used in manufacturing steel under a new process which, if successful, will probably lead to a largely increased demand for this article."

S.J. Daily Sun - Apr. 16, 1879 Manganese.- The manganese mines at Markhamville, Kings County, which were closed during the winter, are about to re-open, and it is understood that a very large business will be done during the coming summer. Mr. Markham shipped 100 tons per the bark Etta Stewart a few days ago for Bristol Channel, and is now shipping 300 tons in schr. Calvin for Philadelphia. This manganese is used in the manufacture of Bessemer steel."

S.J. Daily Sun - Aug. 8, 1879 Sussex. - Burglars have been at work at Markhamville it seems, and the Manager of the mines, Mr. Markham, offers $50 reward ....."

S.J. Daily Telegraph - Aug. 20, 1879 Manganese Shipments. - Mr. Markham has sought a new port to which he can export manganese. He is now about chartering a vessel to send this ore to Rotterdam. Large quantities are now at the Sussex freight station and teams are hauling every day."

S.J. Daily Telegraph - Oct. 27, 1879 Cleared St. John. - Barque Rutland, 1027, Roy, for Liverpool ... includes 118 tons manganese from A. Markham."

S.J. Daily Telegraph - Sep. 9, 1879 Manganese. - Mr. Markham is again loading cars at Sussex Station, with manganese, having agreed to ship another vessel load to a foreign port."

S.J. Daily Sun - Apr. 12, 1880 For the Manganese Mines. - Alfred Markham, Esq., arrived home from Boston by the Saturday evening train, with a lot of new machinery for the Manganese mines, Sussex, including an improved centrifugal pump purchased in New York and a fine engine made in Boston. Mr. Markham, in extending his operations, has been governed by the increasing demand for manganese."

S.J. Daily Sun - Apr. 28, 1880 Sussex.- Mr. Alfred Markham has his new machinery, pumps, engine, etc. in place at the Manganese Mines, but they have not been working yet. He is waiting for a portion of his boiler to arrive from St. John. He expected it today."

S.J. Daily News - Apr. 30, 1880 Queen Manganese Mining Co. - A meeting of this association is called to meet in the office of Chas. N. Skinner, Esq., on Wednesday. It is called for the purpose of organizing the company, passing by-laws, electing officers and transacting any other business that may be necessary."

Daily Telegraph - Aug. 14, 1880 Manganese for Katahdin. - Two car loads of manganese from Markhamville, that have come down the Intercolonial, are being taken to Carleton for shipment to Katahdin, Me., where it is said to be used in the

S.J. Daily Sun - Aug. 14, 1880 Manganese for the States. - Today Mr. Markham ships two car loads of manganese over the St. John and Maine Railway to the Katahdin Iron Works of Maine, near Milo. He is sending an average of a car load a month to these works where the mineral is utilized in the manufacture of the finest charcoal iron."

S.J. Daily News - Aug. 20, 1880 Sussex. - Shipment. - Mr. Alfred Markham, the pushing Manager of the Victoria Manganese Mines, still continues to send large quantities of his ore to the shed at Sussex Station where it is stored preparatory to shipment."

Daily Telegraph - Aug. 20, 1880 Manganese. - Mr. Markham still continues to send out large quantities of manganese."

Chignecto Post - Jul. 1, 1880 Mr. Markham will ship to Marseilles this week, 150 tons manganese per bark Emma G. Scammell. The first shipment made to France from Canada."

Daily Telegraph - Jul. 5, 1880 Sussex, July 5. - The Queen Manganese Company continue to ship large quantities of manganese."

S.J. Daily Sun - Jun. 4, 1880 The Manganese Mine at Markhamville. - Mr. Markhamis hauling about twelve tons of manganese a day to Sussex Station, to be forwarded to St. John, for shipment to Philadelphia. He is taking out of the mine from twelve to twenty tons a day."

S.J. Daily News - Jun. 7, 1880 Sussex. - Mr. Pope, of Boston, one of the Directors of the Queen Manganese Mines, is on a visit to Major Markham, of Markhamville, in this county. Your correspondent begs to be allowed to congratulate the gallant Major on his promotion to this military position."
URN: 0691 / IDX_Names: Markhamville Manganese;
S.J. Daily Telegraph - Jun. 7, 1880 Mr. Pope, of Boston, one of the directors of the Queen Manganese Company, is on a visit to Major Markham, of Markhamville, in this county. The many friends of the gallant Major congratulate him on the promotion he has received to this rank in the militia of this loyal county."

S.J. Daily Sun - Jun. 23, 1880 Manganese for England. - Mr. Markham is shipping in the bark Fanny M. 200 tons manganese to the West Coast of England, and by the bark Union 100 tons for Newport, Wales. The Fanny M. will commence to load on Thursday and the Union on Friday or Saturday, at the Government wharf, Lower Cove. Twenty-two car loads of manganese are now lying in the I.C.R. yard waiting for shipment."

S.J. Daily Sun - Jun. 24, 1880 A New Brunswick Manganese Mine. - Described by the Boston Commercial Bulletin. - Manganese is a mineral about which comparatively little is known by the great mass of men. Ask every man you meet what it is and from whence it is obtained and probably not one in twenty will be able to answer your questions. The encyclopedia gives it as a grayish metal, very difficult of fusion, which quickly oxidizes when exposed to air, falling into a black powder, called oxide of manganese. The ore is found near the surface like coal and iron, obtained by blasting and breaking, after which it is packed in barrels for shipment. It is found in various parts of this country; in Spain; in Saxony; and some very valuable mines are located in the State of Virginia. It is also found in many parts of the South and West. In fact the ore is plenty in this country, but much of it is of poor quality, and not worth the mining and shipping. W.C. Pope & Co., of Boston, have given considerable attention to this substance, having been engaged in mining and marketing it for the past ten or twelve years. They say that the valuable ore is of two qualities; that which is suitable for melting in a blast furnace with a very great heat, which is called ferro- manganese; and that which is chemically pure and readily falls into an oxide, called peroxide, or black oxide of manganese. Ferro-Manganese. - The ferro-manganese is the more common or less valuable form. It is used principally in the manufacture of steel called Bessemer Steel. It also hardens and toughens iron when blended with it, and within a year or two a patent has been taken out for blending it with copper, in which a beautiful bronze is produced. Messrs. Pope & Co.'s mine, in King's County, New Brunswick, is a representative of the best class of manganese mines for producing an ore of a high grade, being free from sulphur and phosphorus, which substances are detrimental to the production of steel. They do not claim, however, that this mine is remarkable for the chemical manganese it produces, but only for the smelting, or ferro-manganese ore. They claim that their mine in New Brunswick is capable of producing 30,000 or 40,000 tons of ore per year, if they find it profitable to get out so much; and also that mines in many other parts of the country would produce just as much or more, only that they are too far inland for freighting. The Price of Ore. - This ferro-manganese, packed in barrels, delivered on board vessels at St. John, is worth $15 the ton. And here persons interested in the mining of manganese, must be careful to draw a wide distinction. These same gentlemen offer to pay $50 per ton for all the chemical manganese they can get, although mining it to the extent of the product themselves. In fact there are but few mines in the country which produces this quality of manganese to any extent. One of these favored mines is in Nova Scotia, and the other in Virginia, as already referred to. The miners above mentioned pay their men $30 to $40 a ton, for getting out and sorting the chemical manganese, while for the ferro article it is worth but from $2 to $3. Hence if a man tells you he has a manganese mine, it makes a vast difference about the quality of the ore it produces. The chemical manganese is used principally in the manufacture of flint glass, and the purer the better. It is said that glass manufacturers are pleased to pay even $70 a ton for it, if it is sufficiently pure to warrant such a price, though the quantity they use is very limited, since a barrel or two will go a great way in glass manufacture. Pure Manganese. - The chemical manganese is rarely smelted and used as a metal, but is ground up, in which state oxidation quickly takes place, and it is then black oxide of manganese. The ferro-manganese is also ground up and oxidized and used in various ways, where chemical purity is not a necessary quality. In England large quantities of it are used in the manufacture of bleaching powders. The shipping of the cheaper quality of manganese is largely done as ballast, being stowed away in holds of vessels under deals and other lighter freights. In this way it is possible to get a rate of freightage so low as to make it pay to transport it. The manganese which is shipped from Spain and Saxony brings but $8 a ton here, while the New Brunswick ore is worth $15 for shipment to England. This difference in price is owing to the difference in quality, which later divergence always regulates the price of manganese. Manganese Bronze. - In manufacturing the new metal, manganese bronze, the ferro-manganese is used and is added in a melted state to the copper, which has to be brought up to a very high temperature. Immediately the ferro-manganese is immersed in copper, a very singular phenomenon occurs to that which takes place when it is added to the decarbonized iron in the Bessemer converter, viz: the free metallic manganese, having a strong affinity for oxygen, seizes upon and clears out of the copper any oxide of the metal it may contain, and renders it more close and homogenous. It is claimed that a certain quality of the new patent manganese bronze has the property of forging, rolling and working at a red heat as well as cold, and for this purpose it is cast in metal moulds into ingots or slabs of the requisite size and shape. From these it is rolled into rods, plates and sheets, or forged into shape for engineering purposes. In this state the metal when annealed has the strength and toughness of the best Bessemer or Siemens- Martin steel, having a tensile strength of thirty tons per square inch, an

URN: 0691 / IDX_Names: Markhamville Manganese;
Royal Gazette - May 5, 1880 Notice. The first meeting of the Queen Manganese Mining Company, for the purpose of organizing the Corporation, will be held at the Office of Charles N. Skinner, Barrister-at- law, in Pugsley's Building, corner of Prince William and Princess streets. in the City of Saint John, on Wednesday the fifth day of May next, at eleven o'clock in the forenoon, at which meeting Bye-laws of the Company will be passed, Officers elected, and any lawful business connected with the organization of the Company will be transacted. Saint John, N.B., April 21st, 1880. William Pope, William C. Pope. Alfred Earnshaw, J.F. Pope, C. Wesselhoeft, E.B. Callender, Alfred Markham, Subscribers to the Memorandum of Association of said Company."

S.J. Daily News - May 6, 1880 Queen Manganese Mining Company. - A meeting of this company was held yesterday in the office of C.N. Skinner, Esq. The meeting organized the company, established offices at Sussex and in Boston, elected directors (who live in Boston and Philadelphia), established by-laws, and did the ordinary business. A large amount of capital will be put in the concern and they have large orders for manganese from England and the United States."

Daily News - Nov. 6, 1880 Sussex Notes. - W.C. Pope, Esq., treasurer of the Queen Manganese Mining company, of Boston, and Horace B.Clapp, Esq., one of the city fathers of the city of Boston and a prominent insurance man in that city, are on a visit to Major Markham, Markhamville, Sussex. The Queen Manganese Mining Company, of which Major Markham is manager, are evidently intent in continuing these valuable works as well as further extending them. A great deal of costly machinery have recently been added to the works, the last piece being a drill, which costs something over $600. These mines have brought a great deal of capital into New Brunswick and has given a large number of men employment and homes in the vicinity of the works."

Daily Telegraph - Nov. 6, 1880 Prominent Visitors. - W.C. Pope, Esq., of Boston, Treasurer of the Queens Manganese Mining Company, and Horace B. Clapp, Esq., one of the city fathers of Boston and a prominent Insurance Manager, are on a visit to the above mines, and are guests of Major Markham."

Daily Telegraph - Nov. 6. 1880 The Queens Manganese Mining Company, of which Mr. Alfred Markham is the manager, intend more fully prosecuting their works. A great deal of costly machinery, including steam engines and other apparatus, have been put in use. The last piece which arrived here is a drill for perforating the earth. It cost nearly $4,000."

S.J. Daily Sun - Nov. 8, 1880 Manganese. - An advertisement from Alfred Markham, Esq., manager of the Manganese Mines at Markhamville, requests all parties who believe they have manganese on their properties to communicate with him. Mr. Markham has had a lengthened practical experience in the development of manganese mines, and is admirably qualified to handle property of this description."

S.J. Daily Sun - Nov. 8, 1880 Advertisement: Manganese! Notice to Farmers and Others. The Queen Manganese Mining Co. having all the necessary machinery and appliances for the development and working of mineral properties, invite all persons having deposits of what they may suppose to be Manganese on their lands to communicate with Alfred Markham Manager of Mines nov 8 d 1t w tf Markhamville, N.B."

Daily News - Nov. 10, 1880 ADVERTISEMENT: Manganese! Notice to Farmers and Others. The Queen Manganese Mining Co. having all the necessary machinery and appliances for the development and working of mineral properties, invite all persons having deposits of what they may suppose to be Manganese on their lands to communicate with Alfred Markham, Manager of Mines, Markhamville."

S.J. Daily Sun - Nov. 17, 1880 Mr. Markham is shipping one hundred tons of manganese to the west coast of England in the bark Emma G. Scammell."

S.J. Daily Sun - Oct. 20, 1880 The Queen Manganese Mining Company sent by steamer yesterday to their agent, Alfred Markham, Esq., a boring machine, and also two operators who will use this drill in the further development of their property at Markhamville. The machine is one of the most perfect of its kind, being the approved style in use in boring for oil. It is intended to aid in the discovery of additional pockets of ore, besides the five pockets which are now being worked. The machine and men go forward this morning by I.C. Railway. The new submerged rotary pump, which was put in operation at the mines on Monday, has fully come up to expectations and is throwing due a great stream of water."

S.J. Daily Sun - Sep. 30, 1880 Manganese for England and the States. - Major Markham is shipping 100 tons manganese in the Oscar Wendt, for Bristol Channel. The bark is now discharging coal at Merritt's wharf. Mr. Markham is sending twenty tons by the St. John & Maine Railway, to the Katahdin Iron Works."

S.J. Daily Sun - Apr. 1, 1881 Alfred Markham, Esq., manager of the Queen Manganese Company, left for Boston last night by the All Rail Line."

URN: 0691 / IDX_Names: Markhamville Manganese;

S.J. Daily Sun - Apr. 14, 1881 Sussex. - ...Large quantities of manganese are shipped from here to England and the United States every season from the manganese mines at Markhamville. A large shed to store the ore in was built last year in connexion with the I.C. Railway track."

S.J. Daily Sun - Aug. 25, 1881 King's County Manganese Mines Flooded. - The damage by rain and freshet in King's County is widespread. .... The rain has had the effect of closing up the operations at the manganese mines, Markhamville, the main pit being flooded. Mr. Markham attempted to check the flood by pumping, which was begun at 1 p.m. on Sunday and continued until Wednesday, when work was abandoned for the present."

S.J. Daily Sun - Aug. 25, 1881 Manganese For Boston By Rail. - Mr. Markham has sent to Boston by rail this summer some twelve car loads of manganese and some eight cars for Milo, Me. The ore is loaded on the cars at Sussex Station and has to be hauled across the ferry to Carleton and reloaded there. It costs $6 a car load for teaming, for want of a railway bridge across the St. John. - Ten (10) car loads (100 tins) manganese are coming from Sussex for shipment by the bark Eurydice, now discharging salt here, to Liverpool."

S.J. Daily Sun - Feb. 12, 1881 W.C. Pope, Esq., treasurer of the Queen Manganese Mining Company, is at the Dufferin. He has been on a visit to the mines at Markhamville, K.C. This company is shipping 150 tons of manganese in the bark Fanny M., to Bristol Channel."

Daily News - Feb. 14, 1881 Sussex. - The Queen Manganese Co., shipped from here today, ten carloads of manganese."

S.J. Daily Telegraph - Feb. 14, 1881 Sussex. - The Queen Manganese Co. shipped from here to-day 10 cars of

S.J. Daily Sun - Jul. 4, 1881 and Chignecto Post - Jul. 7, 1881 The Queen Manganese Co. (Alfred Markham manager) recently received a large portable engine from the Waterous Co. of Brantford, Ont., and a latest improved rotary saw mill from the Erie Iron Works, Pa., to be used in sawing lumber wanted in and about the mines. The company have five or six teams daily hauling ore to the Sussex station."

S.J. Daily Sun - Mar. 21, 1881 The Queen Manganese Mining Company, by their agent and manager, Mr. Markham, are shipping 110 tons manganese in Messrs. R.A. & J. Stewart's bark, Star of England, to Newport, Wales."

S.J. Daily Sun - Oct. 22, 1881 There came to Sussex yesterday, or the day before, a carload of machinery, rails, trollies, pumps, tables, and other apparatus, purchased by A. Markham, Esq., the well known manager of the Markhamville Manganese Mines, from the Albert Mining Company, Albert Mines, who having closed their works in that locality are now disposing of their machinery to those in want of anything in that line."

S.J. Daily Telegraph - Oct. 31, 1881 Major Markham continues to ship large quantities of manganese from this place; a number of cars are now being loaded."

S.J. Daily Sun - Dec. 16, 1882 Manganese. - The Queen Manganese Mining Company, of Markhamville, have succeeded in introducing into the U.S. the ore they have hitherto shipped to European ports for steel purposes. Mr. Markham shipped 20 tons in the schooner Mower for New York, yesterday. Owing to the very satisfactory state of the mines, Mr. Markham has kept his summer staff of about 40 men up to the present time, but intends reducing to the usual winter force on 1st January. The Company have orders on hand for ore to be shipped to Marseilles, Bristol Channel and Liverpool, but owing to the scarcity of vessels in port, these orders cannot be filed at present."

Daily News - Dec. 19, 1882 Manganese. - The Queen Manganese Mining Company, of Markhamville, have succeeded in introducing into the United States the ore they have hitherto shipped to European ports for steel purposes. Mr. Markham shipped 20 tons in the schooner Mower, for New York, lately. Owing to the very satisfactory state of the mines, says the Transcript, Mr. Markham has kept his summer staff of about 40 men up to the present time. but intends reducing to the usual winter force on 1st January. The company have also orders on hand for ore to be shipped to Marseilles, Bristol Channel and Liverpool."

Daily Telegraph - Sep. 2, 1882 Sussex. - Major Markham is shipping about 20 loads of manganese for St. John, to put aboard of the new ship Honolulu, for Liverpool, G.B."

Chignecto Post - Sep. 14, 1882 The yield of manganese at Markhamville, Kings, this year will amount to about 1500 tons, a slight decrease over previous years owing to the greater depth reached and difficulty of mining."

S.J. Daily News - Aug. 8, 1883 The Queen Manganese Mining Company will ship one hundred and fifty tons of that ore to Liverpool by Messrs. Troop & Son's new ship the Herald."

S.J. Daily News - Dec. 14, 1883 Manganese. - The manganese mines at Markhamville, Kings Co., have been worked continuously for over 25 years, and now produce ore valued at from $16 to $100 per ton."

N.B. Reporter - Dec. 19, 1883 Valuable Property. - It is stated that the manganese mines at Markhamville have been worked continuously for over twenty five years, and yield ore valued at from $16 to $100 per ton."

Daily News - Feb. 7, 1883 and Moncton Daily Times - Feb. 7, 1883 and S.J. Globe - Feb. 8, 1883 Manganese in New Brunswick and Nova Scotia. - This mineral is now being diligently sought after, both in New Brunswick and Nova Scotia, owing to the unlimited demand for the ore, occasioned by its increased consumption in the manufacture of iron and steel, in the making of glassware, and for many purposes in the arts, and by the exhaustion of the deposits, on the continent, from whence the English market was supplied. The ore is found embedded in the rock, in masses of various dimensions, running from the size of a bean to that of many pounds weight, and occurs both in a crystalline and massive state. Owing to the facility of separating the ore from the rock, the expense of mining is very small compared to that attending other ores. The rock in which it occurs being of a soft nature, all that is required, is to work it out with pick and shovel, and to collect the ore from it by the hand. A ready demand exists for all that can be obtained, and the supply is far below the market requirements, the price offered being $160 per ton of 2000 lbs. In New Brunswick, the Queen Manganese Company are successfully working at their mine, with splendid returns for their stockholders; the ore being sold in the United states and Great Britain. Their last shipment on the 1st of the month from St. John to London per ship Wallace amounted to 212 tons, representing a value of $33,920. In Nova Scotia, valuable mines have been discovered at Tenny Cape, Cheverie, Walton and Truro, giving ores of the best quality. At Tenny Cape and Cheverie the mines have been worked by the proprietors for some years, giving a very large return on the money invested in them, the output of ore being large, as shown by the reports published by the Department of Mines. At Walton, most valuable deposits have been discovered, and from thorough inspection this will be one of the largest mines in the province. A company is now being formed to work this mine, under the name of the Eureka Manganese Mining Company. At Truro, the St. James Manganese Company are in operation, and the outlook for the return from their mine is also very promising. From the various reports regarding manganese, and the high price that is obtained for it, we bespeak for Nova Scotia a most successful era in this branch of mining enterprise."

S. J. Daily Sun - Feb. 10, 1883 Queen Manganese. - Editor Sun. - My attention has been called to an article in the Halifax Herald of the 6th inst. - which has, I see, been copied by our evening papers, News and Globe - headed Manganese, containing statements which in the interests of truth I am compelled to correct. It is stated that the Queen Manganese Co. shipped in the Wallace 212 tons, representing a value of $33,920. This should be $3,392. I don't wish it to be understood that manganese is not worth more than $16 a ton, but the term manganese is about as definite as dry goods. The Queen

Manganese Company's mines at Markhamville produce almost all grades of ore, from that worth $16 a ton to ore worth $100, which is the best price that could be obtained to-day for any wholesale quantity of the highest class of ore known.

S. J. Daily Sun - Jan. 4, 1883 Personal. - Alfred Markham, Esq., manager of the Queen Manganese Co., left by the All Rail Line last night for New York. He will be gone a couple of weeks, at least."

Weekly Transcript - Jan. 10, 1883 Mining. - The Queen Manganese Mining Company, of Markhamville, N.B., have succeeded in introducing into the U.S. the ore they have hitherto shipped to European ports for steel purposes."

URN: 0691 / IDX_Names: Markhamville Manganese;

Daily Telegraph - Jan. 24, 1883 Major Markham has returned from a visit to the United States. He informed your correspondent that a great amount of additional machinery is about to be placed in the manganese mines, and that the output of manganese during the incoming year is likely to be greater than any previous year since the mines were opened."

Daily Telegraph - Jan. 29, 1883 The powerful Waterouse steam engines arrived here a day or two ago from Ontario, one being for Col. E.B. Beer, to be used for farming purposes, such as pressing hay, threshing, and many other things to which it can be readily adjusted. The other was brought here for Major Markham, to be used in the manganese mines."

S.J. Daily News - May 19, 1883 The Queen Manganese Mines at Markhamville, have just shipped a cargo of 105 tons to Liverpool."

S.J. Daily Sun - Apr. 2, 1884 Sussex. - Major Markham, manager of the Queens Manganese Mines, has imported a costly drill for the mines."

S.J. Daily Sun - Apr. 7, 1884 Sussex. - Major Markham also shipped a large quantity of manganese to Boston during the

S.J. Daily Sun - Jul. 22, 1884 Sussex. - Major Markham was in Sussex today attending the loading of ten cars of manganese to be shipped to the old country. The Major has made a strike of an exceedingly valuable ore recently, and speaks hopefully of the future of the works. A large new steam boiler is expected in a few days."

1885 - Copied from: The Story of Sussex and Vicinity, by Grace Aiton, 1967, p. 127 Prior to the opening of the first telephone service in Sussex, two telephones had been installed by the Bell Telephone Company of Canada at the manganese mines in Markhamville, connecting the manager's office with his home. This was believed to have been the first telephone service in the province."

S.J. Daily Sun - Dec. 3, 1885 Manganese. - Major Markham is loading fourteen cars with manganese ore at Sussex for shipment to Marseilles."

S.J. Daily Sun - Dec. 21, 1885 Sussex, Dec. 19. - Mr. Pope of Boston, treasurer of the Queen Manganese Co., has been spending a few days at the mines at Markhamville. He returned homeward today."

1885 - Copied from: Kings County Record - Feb. 3, 1966 Records Of Company Historian Bring Back Many Old Memories. - ... The Story of the Sussex Exchange was written by C.A. Kee, the New Brunswick Telephone Co. historian ... As early as 1885, the Bell Telephone Company of Canada was leasing two telephones to the Pope Manganese Company of Boston, Massachusetts, for a line between their mine at Markhamville and the residence of A. Markham, the manager of the Pope Manganese Company at Markhamville. This lease was taken over by the New Brunswick Telephone Company in 1889. These instruments were small magneto wall sets having no transmitter but two receivers, one of which served as a transmitter and one as a receiver, and instead of the later crank and gear generator a vibrating generator was used for signalling. We are fortunate in having one of these two telephones in our museum. ......"

S.J. Daily Sun - Jun. 10, 1885 Sussex, June 9. - Major Markham, the enterprising manager of the manganese mines at Markhamville, is, it is said to soon commence the work of making telephonic communication with Sussex. This undertaking goes to show that the manganese mines are still in a thriving condition and are likely to be so, and is evidence of the Major's push."

S.J. Daily Sun - Jun. 17, 1885 Manganese. - The new bark Abyssinia, now loading at this port, is taking in 150 tons of manganese from the Markhamville mines, for England."

Daily Telegraph - Oct. 15, 1885 Manganese Shipment. - Two hundred tons of manganese from the Markhamville

Manganese Company, has been shipped on board the John M. Blaikie for Liverpool."

Daily Telegraph - Sep. 22, 1885 Major Markham, manager of the extensive manganese mines at Markhamville returned from Halifax Saturday evening, where he had been attending the meetings of the society of mining engineers, of which he is a member. He speaks highly of the sumptuous treatment by the Haligonians."

URN: 0691 / IDX_Names: Markhamville Manganese;

S.J. Daily Sun - Sep. 26, 1885 W.C. Pope, of Boston, treasurer of the Manganese Co., operating the Markhamville mines, is on a visit to the mines. T.W. and S. Robinson, of South Wareham, Mass., two of the members of the American Institute of Mining Engineers, on their return from the Halifax meeting, have also been out to see the mines. These young gentlemen, who are graduates of the Institute of Technology of Boston, speak in the very highest terms of the Maritime Provinces and of the treatment they have received during their trip down east."

URN: 0691 / IDX_Names: Markhamville Manganese;

Daily Telegraph - Aug. 31, 1886 Manganese Mining. - A Visit to the Thriving Village of Markhamville. - How the Ore is Found and Taken Out. - A Walk Through Pits and Drifts. - Ten miles from the pleasant valley of Sussex, on the road leading to Hammond, are the celebrated manganese mines of Kings county, Markhamville, as the seat of this important industry is now called, is in the parish of Sussex, but very close to the parish line of Hammond. For twenty years the mines have been under the management of Major Alfred Markham, a highly esteemed officer of the Eighth Kings county cavalry. A few days ago a Telegraph reporter, at the invitation of the manager, visited the mines and spent a day among the drifts, tunnels and cuttings, from which large pockets of manganese have or are being taken. An hour's ride over the Intercolonial railway brings the visitor to Sussex, the nearest point on the railroad to Markhamville. Host McLean, of the Depot House, had a team in waiting to transport the visitor across country to the mines. The day was hot, but the horse was a nimble-footed animal, and in a little more than an hour after the ascent of a long hill a glimpse is had, through the second growth forest which crowns the hill top, of a pretty farm house surrounded by well tilled fields. This is the residence of Major Markham, or the major as everybody in Kings county calls him. The land slopes away from the house and finally expands into a broad intervale, through which the Hammond river, here little more than an incipient stream, flows an irregular course. The post road divides the fields just in front of the house, the barns being on the opposite side of the road. One of these where the horses used to convey the manganese to Sussex for shipment are stabled, is one of the largest, if not the largest, barn in the county. It is thoroughly fitted up - in fact in every direction are evidences of careful and painstaking management. The contour of the land in the vicinity of the mine is very irregular, and passing down the hill occasional glances are obtained of the various buildings located in the valley, which are used for one purpose or another in connexion with manganese mining. A sharp turn in the road gives the visitor a clear view of the mines, and a few minutes later Major Markham's office is reached. On the opposite side of the road is the Markhamville store, and close by it a rotary saw mill. Situated on a bye road, and almost in line with the office, are the washing shed and storage shed. The magazine for explosives is located on the hillside, and about 100 yards distant from it is the blacksmith shop. The workings are distributed at various points around the hill. In fact one cannot walk a hundred feet in any direction without stumbling over a trial pit or a huge cutting from which manganese in large or small quantities has not been taken. The mining of this ore differs materially from other classes of mining in this country, in asmuch as it is never found in regular veins but generally pockets - though sometimes it runs in irregular veins. Therefore, a large amount of prospecting has to be done each year in the search for new pockets when the old ones have become exhausted. Sometimes a pocket is supposed to be exhausted when another blast reveals a ton or more of first quality ore, which, when ready for the market, is as nearly valuable as silver. Manganese is found in many parts of the world, but the mines at Markhamville are the only mines that produce every known grade of manganese from the lowest to the most valuable qualities. The story of the discovery of manganese at Markhamville is interesting. Something over a quarter of a century ago, a farmer while travelling over the hill under which tons of manganese have been found, grasped a small tree and tearing it up by the roots, found a number of pieces of manganese amongst the earth, adhering to the jagged roots of the tree. The tiny crystals exposed to the rays of the sun for the first time sparkled like so many diamonds. Who can tell what feelings this discovery evoked in the mind of the man who made it. Mayhap he thought he had found the opening to a mine of silver and there passed before his wonderous eyes visions of untold wealth in the future. But whatever may have been his feelings he had the practical good sense to pick up some specimens for assay. The specimens proved to be rich and when they were shown to the late William Davidson he acquired the right to work the mines. Mr. Davidson carried on the business with indifferent success for a time, when he sold out to a syndicate of Boston capitalists. A company was immediately formed to work the mines, and Major Markham was engaged as manager. Unfortunately for the development of the mines, the stock became a speculative one. Large salaries were paid to various officers, who knew little of the mines, which, with the loose manner in which its product was handled in foreign markets, prevented its being worked at a profit and finally caused the collapse of the company. But even this did not close the mine, as afterwards the Queen Manganese Mining Company took hold of the property. The controlling interest in this company is held by Messrs. W.C. Pope & Co., a large and wealthy Boston house. Since they obtained possession the business of the concern has been differently managed, and under Major Markham's guidance the product has been carefully marketed. A large and extensive plant for working the mines has been gradually accumulated, until now all that is required to double the output is the addition of more working capital. After twenty years of experience about the mines of Markhamville, Manager Markham is thoroughly convinced that they still contain a supply of manganese a hundred fold greater than has yet been extracted from them. Leaving the comfortable office after a short talk with the major on his mining experiences, the reporter walked with him to a small shed on the hill side. The shed covered the opening to a long tunnel cut through earth and solid rock. An outcropping of manganese had been found in the side of the hill and followed up. At first the tunnel was so low that one could not walk upright in it. Suddenly Major Markham, who was in advance carrying the lantern, said: You have plenty of room to stretch yourself now, and so there was. Leaving the tunnel the visitor had entered a chamber, the ceiling of which seemed twenty feet high. Away in the distance could be heard the sounds of pick and hammer, and as the light moved about the reflection of crystalized manganese could be seen shining like stars in the walls and ceiling of the chamber. Running in different directions from the central chamber were several irregular cuttings from which pockets of valuable ore had been extracted. Clambering into one of these places, half a dozen of men were found at work drilling holes through the rock. Close beside them stood a suspicious book labelled dynamite, which told the purpose of the holes. A lead had been discovered in the chamber and the men were following it up. In prospecting it is usual to drill half a dozen holes, and, after they have been charged with dynamite, to fire the cartridge simultaneously by means of electricity, which brings out a huge section of rock and gives an opportunity for further examination of the cut. Every charge brings out more or less of manganese, and sometimes an immense pocket is discovered. Leaving the men to continue their labors the reporter went on his journey. Every part of the ground was made interesting by Major Markham, who would point to one small opening in the rock with the remark. We took 100 tons from that place, or we discovered 200 tons of the purest crystals in this place. Finally, after an upward climb of some distance, the reporter shoved his head through the ventilation shaft and discovered that he had made a short cut through the hill and come out quite a distance further up its side than he started in. Leaving these workings and taking another direction Manager Markham halted in front of an opening in the hill. Here another gang of men were found at work, but not prospecting. They had discovered a handsome pocket of the highest grade of crystalized ore, and were taking the greatest precautions that none of it would be lost in the blast about to be made. The sight inside the chamber was delightful. One seemed to be surrounded by all the stars in the firmament, and no matter in which direction the eyes were moved nothing but manganese crystals could be seen. Outside, piled up on a temporary bank made of planks, and sparkling in the sunlight, were several tons of crystalized ore. But time was limited, and after a journey through some deserted workings and a visit to two or three prospecting parties, the visitor was taken to the old porcupine den pit, from which last year upwards of 1,200 tons of good quality ore was extracted. This pit gets its name from the fact that just at its entrance was found quite a large opening in the rock, which had formerly been the home of innumerable generations of porcupines, for imbedded in two feet of manure, were found the skulls and bones of scores of these animals. Following up the lead discovered in the porcupine pit it was found that it approached closer to the surface, and for greater facility in mining, an open cut was made through the side of the hill to the locality of the manganese, which was found in a large bed. A tramway was run into the cut to facilitate the removal of the ore, which at the time of the reporter's visit was still being taken out in large quantities, while the lead seemed no nearer exhausted than when first discovered. This ore, unlike the other specimens seen, was soft and easily moved with a pick and shovel. Returning to the office, what is known as the Water pit was visited. Here was found some time ago a pocket of 3,000 tons of magnificent ore. The pit was being worked when a blast opened up a fissure in the rock from which flowed a stream of water two feet in diameter. Drains were built to carry off the water but finally the pit was closed and the water which maintains the same temperature summer and winter, was run through the wash shed. The pit was closed so far as mining was concerned by the discovery of water, but an unfailing supply of this great essential in mining was found, thus solving one of the great difficulties in the way of working the mines in winter. In all there are six pits in operation at the present time, and also several prospecting parties at work. A large portion of the output of the mines is shipped to Europe in bulk, to be used in steelmaking, but in addition to the process which consumes annually many tons of metallic manganese the ore is used in scores of other ways. Although the uninitiated may be surprised at statement, manganese is an article of general consumption. Mention has been made of the wash house. Here the chemical ores are dressed and washed preparatory to being ground up into different sizes. It would take too long to describe the various processes through which the ore passes before it is ready for shipment. Sufficient it is to say that for every process Major Markham has devised some simple machine which greatly reduces the labor of handling the ore and cheapens the production of the manufactured article. After the refuse matter has been separated from the ore the latter is dried and is then ready for grinding. Major Markham is a man of business, and believes in supplying his customers with just what they want. Therefore he makes up the manganese in every style from the finest dust, and from that upwards by a graduated scale to blocks the size of a small nut. A large plant is required to conduct such an extensive business as that at Markhamville. This includes steam drills, tramways, hoisting apparatus, gear, drills, and an unlimited supply of picks. Major Markham believes in supplying his men with the best of tools, as he finds that by so doing they are enabled to perform more work and to do their work better. The use of electricity in blasting is also a great saving, as it enables several shots to be fired at one time and this at far less risk to the men than by the old process. Large quantities of timber are used annually for shoring up the sides of tunnels and excavations. This lumber is cut in the saw mill on the premises. The mill is also equipped with other necessary machinery for the manufacture of different things used about the mines. The various tools of iron and steel are either made or repaired in the blacksmith shop and indeed everything that can be done by the employees of the company is done. A telephone line, erected at the expense of the company, connects the mines with Sussex, thus enabling business to be done by telegraph or cable with all parts of the world. The only difficulty now to be overcome is the long haul between Sussex and the mines. At present this is all done by team, but Major Markham hopes that in the near future the St. Martins & Upham railway will be connected with St. John, which will not only give shorter railway communication with this city, but would considerably shorten the haul from the mines to the railroad, and that, too, over an easier road. New Brunswick has not any mines that have been operated continuously for so long a period as those at Markhamville, and as the supply of manganese there seems inexhaustible, it is to be hoped that the time is not far distant when the hidden richness of these rough hills will be fully explored and the mines worked to their full capacity. At present about 50 men are furnished with steady employment operating the mines. The wages these men receive is almost wholly expended in the neighborhood and cannot but be beneficial. The further development of the mines would give employment to more men and materially add to the prosperity of that section of Kings county where the mines are located. The present output of the mines is about 2,000 tons annually."

S.J. Daily Sun - Feb. 23, 1886 Sussex. - Major Markham's telephone is proving of the greatest benefit, not alone to the enterprising major himself but to others in the vicinity of the manganese mines....."

S.J. Daily Sun - Feb. 23, 1886 The Queen Manganese Company are shipping, per S.S. Rowena, to London, 200 tons of manganese from their mines at Markhamville, Kings County."

S.J. Daily Sun - Jan. 4, 1886 Sussex. - The telephone communication between Sussex and the Queen Manganese Mines, Markhamville, a distance of 10 miles, was completed today. Major Markham, in Sussex, held a conversation with Mrs. Markham at their residence, at the mines, for the first time this afternoon. It is needless to say nothing private was said. The major received the congratulations of his friends."

S.J. Globe - Jan. 12, 1886 What New Brunswick Will Exhibit in London. - The preparations which are now making by New Brunswickers for a display at the great exhibition in London are very encouraging ... Mr. W.F. Best has received applications for space from the following: ... Minerals - Among the mineral exhibits will be three specimens of polished granite and two of freestone; also antimony, graphite coal, and plaster rock collected in the province.The fine collection of magnificent ore exhibited at the Antwerp exhibition from the Markhamville mines, will be forwarded to London. ......"

URN: 0691 / IDX_Names: Markhamville Manganese;

Daily Telegraph - Jan. 13, 1886 Colonial Exhibition. - ... Minerals - Among the mineral exhibits will be three specimens of polished granite and two of freestone; also antimony, graphite coal and plaster rock, collected in the province. The fine collection of magnificent ore exhibited at the Antwerp exhibition, from the Markhamville mines, will be forwarded to London."

Daily Telegraph - Jan. 23, 1886 Manganese Shipment. - Mr. Alfred Markham, representing the Queen Manganese mines at Markhamville, is in town shipping 800 tons of manganese for Liverpool. He states that manganese is now in stronger demand than for some time."

S.J. Daily Sun - Jan. 27, 1886 The Queen Manganese Co. is shipping one hundred tons of manganese in the bark Rowland Hill to Liverpool. Major Markham is seeking other vessels for the purpose of immediate shipments."

S.J. Daily Sun - Mar. 20, 1886 The Queen Manganese Company is shipping 100 tons of manganese to Liverpool, in the bark C.S. Parnell."

Daily Telegraph - Nov. 6, 1886 Sussex. - Major Markham, of Markhamville, manager of the Queens manganese mines, and his family have, for the winter, taken up residence in Sussex."

S.J. Daily Sun - Oct. 23, 1886 Major Markham is shipping one hundred tons of manganese from the Queen mines, to Liverpool in the bark Lady Rowena."

S.J. Daily Sun - Aug. 13, 1887 Sussex. - Major Markham, manager of the Markhamville mines, shipped from here yesterday for St. John over 100 tons of choice manganese. It will be taken from St. John to Bristol Channel, England, in a ship now in your port."

Chignecto Post - Dec. 1, 1887 The Queen Manganese Company of Markhamville, are shipping many cars of manganese to Boston per month."

Weekly Record - Fri., Dec. 23, 1887 Much excitement was caused at Queens Manganese Mines in Markhamville, yesterday, by the discovery of amost valuable lead of manganese in a spot not expected. Major Markham the spirited manager was so elated that he at once telephoned Jas. Titus & Co. to send 80 of the finest turkeys in market. He concluded to feast his men on this discovery, a discovery which will be valuable to the many to whom it gives constant employment, as well as to the owners and surrounding country."

Weekly Record - Fri., Dec. 23, 1887 The Queen Manganese Co., are shipping 65 tons of manganese to Liverpool in the bark, Young Eagle, now at St. John."

Moncton Daily Transcript - Dec. 27, 1887 Much excitement was caused at Queens Manganese Mines in Markhamville, the other day, by the discovery of a most valuable lead of manganese in an unsuspected spot."

S.J. Globe - Nov. 1, 1887 The Value of Manganese. - To the Editor of the Globe: Sir, - The paragraph in this evening's issue, headed New Brunswick Mining Items, from the Halifax Critic, is very mischievous and well calculated to cause trouble to those who are engaged in legitimate mining operations in this Province. This item states that manganese is worth upwards of $200 per ton. Now manganese may be sold by the ounce at that rate, but manganese ore is seldom sold for half the sum named. Yours faithfully, Oct. 31 Alf Markham."

Daily Telegraph - Nov. 2, 1887 Natural History Society. - ...... Mr. W.T.L. Reid, of Fredericton, sent some samples of a rare fossil sponge (dictyophyton) discovered by him recently near that city. ..... Major A. Markham sent an example of manganese ore containing a marine shell, conularia,showing the way in which this ore was originally deposited in the mud of the sea bottom. Mr. Jas. A. Estey, presented a carboniferous plant of a genus new to the society's collections."

Moncton Daily Transcript - Nov. 16, 1887 The Queen Manganese company of Markhamville are shipping several cars of manganese to Boston per month."

URN: 0691 / IDX_Names: Markhamville Manganese;

Daily Times - Oct. 31, 1887 New Brunswick Mining Items. - A correspondent of the Halifax Critic writes in regard to New Brunswick mining enterprises: The mines of Markhamville are shipping manganese as usual, and Major Markham is ever busy looking after the interests of his company."

Weekly Record - Fri., Sept. 16, 1887 Manganese in large quantities are coming from the Queen Manganese mines, this seems to be a never failing source of supply."

S.J. Daily Sun - Dec. 7, 1888 Sussex. - Major Markham, manager of the Queen manganese mines, who has been on a business trip to Philadelphia and other American cities, returned home this evening."

S.J. Daily Sun - Feb. 20, 1888 Personals. - Major Markham, accompanied by his daughter left on last evenings train for Boston to attend the annual meeting of the American institute of mining engineers, which meets on the 21st inst. The programme includes special excursions to the large manufacturing establishments, mills, factories, etc., in the vicinity of

S.J. Daily Sun - Jan. 4, 1888Markhamville. - Presentation to the Popular Manager of the Queen Manganese Mines. - On Major Markham's return home from New York and Boston on Saturday evening last, he was requested to attend at the Orange Hall at 7:30 o'clock when the room was filled with the employees, their wives and children. Mr. Armour Mills, acting as chairman, requested Major Markham to take a seat on the platform and Mr. Wilson to read the following address, which was very neatly prepared and enclosed in a handsome frame: Markhamville, N.B. January, 1st. 1888. To Major Alfred Markham, Manager Queen Manganese Mining Co.: Sir: We, the employees of the extensive mining concern of which you are the manager, desire to express the esteem and regard we hold towards you. We recognize to you an employer faithful alike to those who have given you the management of this important industry, as also to those who are under you. While you are ever watchful to the interests of capital, you are kind and considerate towards labour. We admire you as an intelligent mining engineer, skilled in the theory, and practical in its application. We admire you as the social and business leader and head of this community of Markhamville, so named in honour of yourself. We admire you for your connection with the militia system of the Dominion, believing as we do that a military organization is a necessity in every country, and that it should be the pride of the people; and we admire you for the example you have shown us as busy man, honorable and upright in your dealings. As a means of giving tangible expression to our feelings towards you, we ask you to accept from us the accompanying writing desk as a memento of the kind relations which have always existed between us, and we beg to wish you and Mrs. Markham, for whom we have the greatest regard, the compliments of the season and along life and prosperity. This was signed by 30 of the principal employees. The writing desk, which is large and handsome, bears the following inscription: Presented by the employees of Markhamville Manganese Mines to Major Markham, Manager, New

Year, 1888. Major Markham, in reply, said that when in New York on Wednesday last he was asked if he had ever had any trouble with his workmen, and replied that he had not, and that, while, during the twenty-two years he had had the management of the Markhamville Mines, there had arisen several questions on which he held one view and the men another, he had always been able to arrive at an adjustment without open rupture; and while he had not been presented with any addresses or gold headed canes he believed that the men liked and respected him - and this brought him to the subject matter of the evening, which was a somewhat singular occurrence after the conversation in New York, and was an entire surprise to him. He sincerely thanked the donors not only for the handsome present, but more particularly for the expressions of confidence and esteem contained in the address. There might have been times when some of the men considered him harsh, or severe, but he had considered it his duty to his employers to secure such results as he deemed best in their interests, though at the same time he had endeavored to treat the men well and without any favoritism. This he would continue to do. He considered that employers of labor had certain duties to their workmen, particularly in such places as Markhamville, and he would say in this connection that he was about arranging for a comfortable room where the men could spend the long winter evenings reading, playing games, or smoking, etc. He also stated that he expected engineers at Markhamville in about two weeks, surveying for a railroad up the valley of the Hammond River, and he hoped to see a live, active business village as well as a mining centre in this pretty valley. Mr. Markham again thanked the gentlemen present on behalf of Mrs. Markham and himself wished all present a very happy New Year. He was loudly applauded on taking his seat. The chairman requested all present to join in singing God Save the Queen, which was vigorously done, and so brought this very pleasant meeting to a close."

S.J. Globe - Jan. 4, 1888 Major Markham, of Markhamville, was presented by his employees on New Year's Eve with a complimentary address and a handsome writing desk."

Weekly Record - Fri., Jan. 6, 1888 Major Markham awarded a 'handsome writing desk' by his employees."

S.J. Daily Sun - Jul. 31, 1888 The Markhamville Mines. - Augustus Russ, the assignee and Henry D. Duffee, the late trustee of W.C. Pope & Co. of Boston, who owned and operated the manganese mines at Markhamville, Kings County, accompanied by Major Markham, who was the manager of the same, visited the mines on Saturday. The mines are being operated by Major Markham until the affairs of Pope & Co. are wound up."

URN: 0691 / IDX_Names: Markhamville Manganese;

S.J. Daily Sun - Jun. 9, 1888 Sussex. - Major Markham, the manager of the Queen Manganese company, is shipping 16 car loads of ore by I.C. Railway today. The manganese mines are being largely worked, about 40 men working below ground sending ore to the surface, where it is further handled by being crushed, sifted and ground and otherwise prepared

S.J. Daily Sun - May 3, 1888 Assignment of W.C. Pope & Co.- The Markhamville Mines Temporarily Shut Down. - In consequence of the failure of W.C. Pope & Co. of Boston, who were largely interested in the Queens Manganese Co., the mines at Markhamville, near Sussex, have been shut down temporarily. Thursday's Boston Traveller thus refers to the failure of the firm: W.C. Pope & Co., importers of varnish gums, etc., 174 High Street, Boston, have made an assignment for the benefit of their creditors to Henry D. Dupee, proprietor of the Walpole dye and chemical works. The liabilities are placed at over $100,000, the larger portion of which is said to be unsecured. The failure is attributed to depression in business and shrinkage in values. The firm is composed of William Carroll Pope and William Pope. It succeeded Hobbs, Pope & Co., April 1, 1879. A manganese mine in New Brunswick has been operated by the firm."

S.J. Daily Sun - May 8, 1888 Creditors of W.C. Pope & Co.- Boston, May 5.-There was a meeting of the creditors of W.C. Pope & Co. this morning, at the office of E.B. Callender, 19 Court street. The meeting was informal, no chairman being chosen. No objection was made to an assignment, except by the New York creditors. A summary of the firm's condition is as follows: Liabilities Secured....$73,371.83 Unsecured... 76,351.90 $149,689.73 Assets Nominal...$161,771.33 Actual (approximately)...100,000.00 There will be another meeting in a few days."

S.J. Daily Sun - May 22, 1888 Markhamville Mines Re-Opened. - Major Markham returned from Boston yesterday afternoon, having completed arrangements for running the mines, pending a final settlement of the estate of W.C. Pope & Co. The mines will be reopened today."

S.J. Globe - May 22 1888 The manganese mines at Markhamville, which closed down a few days ago in consequence of the failure of W.C. Pope & Co., Boston, have resumed operations."

Weekly Record quoting the Halifax Critic - Fri., Nov. 30, 1888 The Markhamville mines are still being worked inthe interest of trustees, and shipments of ore continue regularly."

S.J. Daily Sun - Oct. 1, 1888 Major Markham left on the midnight train last night for Quebec to attend a meeting of the American Institute of Mining Engineers to be held at Buffalo on 2nd, 3rd and 4th of October. Before returning the major will visit Chicago and other western cities on business connected with his manganese operations, which he has been vigorously prosecuting during the past summer. He has now about 40 hands in his employ in and about the mines."

Weekly Record - Fri., Oct. 5, 1888 Mr. Harrison of Baltimore, and Mr. Frink of St. John visited the mines at Markhamville on Wednesday, Mr.Harrison represents an American Syndicate, and it is thought a sale will be effected."

Daily Telegraph - Oct. 29, 1888 The Manganese Mines. - Major Markham, whose name is familiar with the readers of the Telegraph by his long connexion with the Markhamville, King's county, manganese mines, has recently returned from an extended business trip to the United States. He left home about a month ago, going to Bufalo, via Quebec and Montreal. At Buffalo he spent five days, attending a meeting of the mining engineers, after which he proceeded to Cleveland, thence to Chicago, St. Louis, Indianapolis, Cincinnati. Pittsburg, Philadelphia, New York and Boston, arriving in the city on Saturday afternoon. In most of these places the major reports having done a good business, taking large orders for manganese from the glass and varnish manufacturers. At Chicago and New York he also took orders from electricians. During his sojourn in Chicago he also witnessed a riot, the outgrowth of a strike among the horse car drivers. The mob consisted of about 2,000 persons who were driven by a large squad of police with drawn batons. As to the weather, he says that wherever he went the rain pour[illegible] torrents, every other day or so, just as it is here. At the Cincinnati exhibition, Major Markham met Hon. T.W. Anglin, who nad charge of the Ontario collection of minerals there. The ex-speaker of the commons was in excellent health and spirits."

S.J. Evening Gazette - Apr. 22, 1889 The Markhamville manganese mines have passed into the hands of the Pope Manganese Co., with Major Markham manager in New Brunswick and W.C. Pope manager in the United States."

S.J. Globe - Apr. 22, 1889 and S. J. Daily Sun - Apr. 22, 1889 Markhamville Manganese Mines. - These mines have passed into the hands of a new company in Boston known as the Pope Manganese company, with W.C. Pope as manager in the United States, and Major Markham as manager in New Brunswick. The new company commence operations on May 1st."

Fredericton Capital - Apr. 27, 1889 Markhamville Manganese Mines. - These mines have passed into the hands of a new company in Boston known as the Pope Manganese company with W.C. Pope as manager in the United States, and Major Markham as manager in New Brunswick. The new company commence operations on May 1st. - Sun."

URN: 0691 / IDX_Names: Markhamville Manganese;

S.J. Daily Sun - Aug. 1, 1889 Queen Manganese Mines. - Major Markham is rapidly fitting out the Queen Manganese mines with the most modern mechanical appliances. He has just put in one of Erastus Wiman's cyclone mills for grinding manganese, and has a first class diamond drill en route from Chicago. The borer will be used to prospect for manganese and other ores over a large area. The cyclone mill is of wondrous power and is used in upper Canada for crushing Lake Superior copper ore to an impalpable powder."

Weekly Record - Fri., Aug. 2, 1889 Major Markham is rapidly fitting out the Queen Manganese mines with the most modern mechanical appliances. He has just one of the Erasius Wiman's cyclone mills for grinding manganese and he has a first-class diamond drill en route from Chicago. The borer will be used to prospect for manganese and other ores over a large area. This cyclone mill is of wondrous power and is used in upper Canada for crushing Lake Superior copper to an

Weekly Record - Fri., Aug. 16, 1889 Major Markham, the popular and pushing agent for the Pope Manganese Co., passed an entry Wednesday in the Custom house at Sussex of a lot of machinery for the useof the manganese mines at Markhamville. Amongst which was a diamond drill and appliances the duty on which amounted to well on to $600, probably the largest amount paid for duty at any one time at the Custom house here. The manganese mines have been the means of causing an expenditure of over half a million dollars, and no doubt large sums will yet be spent in the development of these valuable mines which have been of the greatest to Sussex as well as an excellent feeder of the I.C.R. and other

S.J. Daily Sun - Aug. 17, 1889 Sussex. - Major Markham paid the largest amount ever paid at one time for customs duties in Sussex yesterday. It was for a drill and appliances."

Weekly Record - Fri., Dec. 13, 1889 The Pope Manganese Company, who own the extensive works at Markhamville, and who recently put in some expensive machinery, and under the direction of Major Markham, have made some valuable discoveries with their boring machine, which will necessitate their employing more hands. As an evidence of the cost of some of their machinery we might mention that they have already paid duty to the amount of $600."

S.J. Daily Sun Dec. 14, 1889 The Pope Manganese Co. of Markhamville, have imported new machinery on which duty was paid to the amount of $600."

Moncton Daily Transcript - Dec. 14, 1889 The Pope Manganese Company, of Markhamville, Kings Co , have made some valuable discoveries with their boring machine, which will necessitate their employing more hands."

S.J. Daily Sun - Feb. 2, 1889 Sussex. - Major Markham is shipping a large quantity of manganese from the I.C.R. station

S.J. Daily Sun - Feb. 15, 1889 Major Markham leaves this evening for New York to attend a meeting of the mining engineers to be held next week."

Saint John Evening Gazette - Feb. 26, 1889 Major Markham has returned from New York where he has been attending a meeting of Mining Engineers. He is at the Royal."

Saint John Evening Gazette - Feb. 28, 1889 Manager J.W. Cram of the N.B.R. and Major Markham will witness the inauguration of President Harrison next Monday."

Saint John Evening Gazette - Jan. 12, 1889 Major Markham is making shipments of manganese from the Markhamville mines to various ports of the United States."

S.J. Daily Sun - Jan. 31, 1889 Sending Manganese to Bessemer. - Major Markham is shipping a cargo of blast furnace manganese to Carnegie Bros. & Co. of Bessemer, Penn., for use in their steel furnaces. It will go by the Ella Maud to Jersey City. Major Markham expects to work up a big trade with this famous firm."

Moncton Daily Transcript - Jun. 15, 1889 A shipment of manganese from the Markhamville, Kings Co., mines is now being made to Jersey City for blast furnace uses."

URN: 0691 /   IDX_Names: Markhamville Manganese;

Weekly Record - Fri., Mar. 8, 1889 Major Markham has been to Washington taking in the festivities in connection with the inaugural ceremonies of President Harrison by special invitation."

S.J. Daily Sun - Nov. 7, 1889 and Weekly Record - Fri., Nov. 15, 1889 Alfred Markham, of Markhamville, although professionally a miner, does quite a stroke farming and stock raising. This year he has produced upwards of 3,000 bushels of oats, and a large quantity of buckwheat, barley, potatoes, turnips and carrots. He has also eleven working and driving horses; a promising yearling after thoroughbred Sir Peter, and two fine colts. Mr. M. has probably the finest Shetland pony stallion on the continent. - [Maritime Agriculturalist."

S.J. Evening Gazette - Nov. 21, 1889 Notice is given of application for the incorporation of a company for mining manganese, &c., to be known as the Pope Manganese Co. The office will be at Markhamville, and the capital stock of the company $75,000, in 750 shares. The applicants are Chas. H. Converse, Newton, Mass., William Pope, Alexander Pope and William C. Pope and Francis Ware, Boston, Mass."

Daily Telegraph - Nov. 22, 1889 Notice is given of application for the incorporation of a company for mining manganese, etc., to be known as the Pope Manganese Co. The office will be at Markhamville, and the capital stock of the company $75,000, in 750 shares. The applicants are Chas. H. Converse, Newton, Mass. William Pope, Alex Pope and William C. Pope and Francis Ware, Boston, Mass."

Fredericton Capital - Nov. 23, 1889 The Pope Manganese Company is to have its headquarters at Markhamville, Kings, and is to deal in manganese and other ores and minerals. The capital is $75000 in $100 shares. C.H. Converse, of Newton, Mass; William Pope, Alexander Pope, and Francis Ware, of Boston are the promoters."

St. Croix Courier - Nov. 28, 1889 ....Another is for the incorporation of the Pope Manganese company at Markhamville in Kings County..."

S.J. Daily Sun - Sep. 13, 1889 Sussex. - Major Markham shipped a large quantity of manganese to the United States during the present week."

Weekly Record - Fri., Sep. 27, 1889 Sussex and vicinity was lately visited by a Mr. R.A.F. Penrose who was the guest of Major Markham. Mr. Penrose is connected with the geological department of the State of Arkansas, and was looking into the merits ofthe Manganese deposits of Canada. Those of N.B. it seems met with special favor at his hands and particularly the deposits in and around Sussex. We fully believe the result of the visit will do us much good in the future. Capitalists all over the world are being attracted by the valuable mineral deposits in Canada."

S.J. Daily Sun - Apr. 23, 1890 Sussex, April 21. - Major Markham, manager of the Pope Manganese Co., has a gang of men loading fourteen cars with manganese at the I.C. railway freight shed today. The ore will be shipped in your city per schooner Chautauquan to Jersey City, U.S., thence it will be sent to Carnegie Bros., Bessemer, Pa. The major has also resumed work with the diamond drill imported by the company at very great expense during last summer. He speaks hopefully of the probable increased output from the mines, which have been of such value to the county of Kings - indeed to the province of New Brunswick."

Weekly Record - Fri., Apr. 25, 1890 Major Markham, manager of the Pope Manganese Co., has a gang of men loading fourteen cars with manganese at the I.C. railway freight shed. The ore will be shipped in St. John per schooner Chautauquan to Jersey City, U.S.,thence it will be sent to Carnagie Bros., Bessemer, Pa. The Major has also resumed work with the diamond drill imported by the company at a very great expense during last summer. He speaks hopefully of the probable increased output from these mines, which have been of such value to the county of Kings - indeed to the

S.J. Daily Sun - Jan. 30, 1890 Accident at Markhamville.- Robert Gillis, an employee in the Pope manganese mines at Markhamville, was badly hurt by being caught in a belt in the old mill in connection with the mines yesterday. His left hand and arm were badly torn."

Weekly Record - Fri., Jul. 18, 1890 Mr. Pope of Boston, connected with the Markhamville Manganese mines has been in Sussex this week. These well known mines continue to be worked to good advantage."

Weekly Record - Fri., Jul. 25, 1890 Large quantities of manganese ore is being hauled from the mines at Markhamville to the railway station."

URN: 0691 / IDX_Names: Markhamville Manganese;

Daily Telegraph - Jun. 3, 1890 William Robinson, an employee of the Markhamville mines, was buried at Upper corner yesterday under the auspices of the Orange lodge there."

S.J. Daily Sun - Mar. 11, 1890 Manganese shipments. - The schooner Chautauquan expects to commence loading manganese at once for New York. She will take about 140 or 150 tons for the Pope Manganese Co., Markhamville. The mineral is now being loaded on cars at Sussex. It is expected that the Chautauquan will continue in the business for the season, as the company are now turning out about 10 tons per day. In addition to her cargo of manganese, the Chautauquan will take a deckload of oil barrels."

Chignecto Post - Mar. 13, 1890 The Markhamville manganese mines in Kings Co., are turning out ten tons a day. They ship chiefly to New York by schooners from St. John."

Weekly Record - Fri., Mar. 21, 1890 The manganese teams had a struggle to haul the sleds loaded with the ore to station on Tuesday, and at several points in the road it became necessary to double the teams. The sledding is very poor about

S.J. Daily Sun - Mar. 24, 1890 Fire at Markhamville. - The house occupied by Armour Black, a miner employed in the Markhamville mines, was, with most of its contents, destroyed by fire on Thursday afternoon. Major Markham with about thirty of the men employed in the mines had great difficulty in saving two cottages on the other side of the road. These buildings caught fire several times from sparks blown from the burning house. A subscription has been started amongst the miners to aid Mr. Black in furnishing another house."

Moncton Daily Transcript - Mar. 25, 1890 The house occupied by Armour Black, a miner employed in the Markhamville, Kings Co. mines, was, with most of its contents, destroyed by fire on Thursday afternoon."

S.J. Evening Gazette - Mar. 25, 1890 The house occupied by Armour Black, a miner employed in the Markhamville, Kings Co. mines, was, with most of its contents, destroyed by fire on Thursday afternoon. A subscription has been started amongst the miners to aid Mr. Black in furnishing another home."

S.J. Globe - Mar. 26, 1890 Workmen at the Markhamville manganese mines, have collected $50 for miner, Armour Black, whose dwelling and furniture was destroyed a few days ago by fire."

Weekly Record - Fri., Mar. 28, 1890 At Markhamville the house of Armour Black, a miner employed in the Markhamville mines, was totally destroyed by fire on Thursday afternoon. Mr. Black lost most of his household effects. Major Markham with about thirty of the men employed in the mines had great difficulty in saving the two cottages on the other side of the road, occupied by Thos. Williams and Wm. Gillen."

Weekly Record - Fri., Nov. 28, 1890 The manganese mines at Markhamville have recently shipped 153 tons of manganese to New York via St. John by the schooner Avalon."

Weekly Record - Fri., Nov. 28, 1890 Major Markham, manager of the Pope Manganese Co., has had consigned to him a large steam boiler and fixings to place at the manganese mines at Markhamville, an evidence that the output is to be greatly increased during the coming winter, which will cause the employment of additional hands and the expenditure of much more capital."

Weekly Record - Fri., Oct. 10, 1890 and S.J. Daily Sun - Oct. 11, 1890 Sussex. - Major Markham, the manager of the Pope Manganese Co., received from the United States this week a very powerful portable steam engine for the use of the manganese mines. This is to be taken as an indication that the work at these mines is to be greatly increased and the output to be greatly enlarged."

Daily Telegraph - Sep. 5, 1890 Exhibition. - Natural History. - In this department Mr. Alf. Markham, superintendent of the Pope Manganese Co., will make an exhibit of manganese."

S.J. Daily Sun - Sep. 29, 1890 Exhibition. - The manganese exhibit by the Pope Manganese Co. (Markhamville mine), near the entrance to the educational section, contains some very rich specimen of this ore."

URN: 0691 / IDX_Names: Markhamville Manganese;

Weekly Record - Fri., Aug. 14, 1891 Cheering news comes in from the manganese mines. It is said the pushing manager, Mr. Garvey, has discovered a bed of the highest priced manganese twelve feet in depth. It was at one time feared that the ore in this vicinity had been pretty well dug out."

Evening Gazette - Aug. 18, 1891 At Markhamville. - The Gazette's roving correspondent writes from Markhamville, Aug. 17th:- There has been a very rich lead of manganese twenty-one feet deep discovered here today. They have been prospecting for the last eighteen months here looking for manganese, and their search was crowned with success at last. The most of the old hands that used to work here under Major Markham will in all probability return to work again. Many hearts are made glad by today's discovery."

Daily Telegraph - Dec. 30, 1891 The Pope Manganese Co., of Markhamville, have closed their mines owing to the scarcity of ore, it is said. A large number of men were employed in the mines, which have been in operation about 25 years. Mr. Garvey, who has been manager of the mines since Major Markham's removal from the place, has returned to the states."

S.J. Daily Sun - Jan. 3, 1891On Christmas eve, Major Markham called the men together and addressed them as follows: My friends: I say friends because I feel that you are my friends, and it is with much and deep feeling that I now address you. I came here in April, 1866, nearly twenty-five years ago; some of you know this, having been with me almost that length of time. These mines, called the Hammond Vale manganese mines, were not very well known then, but little work having been done and not much ore shipped. Since that time you have helped me extract, prepare and ship 50,000 to 60,000 tons of manganese and erect the many buildings and machines you now have here. The property has passed through some troublous times, having been in the hands of five separate companies and used by some of them for stock jobbing purposes and there have been times when I had to carry the enterprise both mentally and financially, but while the mines have not been a bonanza to any of those companies, I have every confidence in stating that the mines have been profitably operated under my management all these years. The time has come when I must say good bye to you all in my official capacity as superintendent and at parting I wish to say a few words of advice to you as workmen for the company - it is of course your duty towards yourselves and families to obtain the highest wages you can, but having once agreed to accept a certain sum per day as pay for a certain number of hours work, do your duty loyally, cheerfully and faithfully and to the best of your strength and ability. By this means you will secure the esteem and confidence of your employers and so pave the way for promotion. I may say that my relations with the company are perfectly harmonious, and while my engagement expires with the old year, I shall stay for a month longer to assist my successor in every possible way. After that I shall take a rest, which I sorely need. I think all of you will bear testimony that I have never spared myself. I have always been foremost in doing any work that had to be done, and on the spur of the moment I may sometimes have said words to some of you that may have hurt, and I now tender an apology to any and all who have felt aggrieved in that way, and wish you, one and all, a merry Christmas and a happy New Year. On the 1st of January Mr. Garvey will take temporary charge, and I bespeak for him your good wishes and esteem, He has been here some time, and I have found him everything that is desirable."

S.J. Daily Sun - Jan. 3, 1891 and Weekly Record - Fri. Jan. 9, 1891 Markhamville notes: On New Years eve the employees of the mines met in Orange Hall and presented Major Markham with an address enclosed in a nice frame and also with a handsome clock with bronze figure of Crusader and child, on his retiring from the management of the mines. The address and reply are as follows:- Address To Major Alfred Markham, Markhamville, K. Co., N.B.: Sir - The employees of the extensive manganese mines at this place, name after yourself, have learned with regret that your connection with this important industry is about to cease. For nearly a quarter century you have been the general manager of these mines and under your intelligent superintendence the property has grown from comparative obscurity and little value to its present proud position as one of the leading industries of the province, and during this period it has not only given employment to many, but has been remunerative to its owners. As employees we feel you have shown as much practical sympathy and liberality of labor as is consistent with capital, and to this is in a large measure due to the absence of disagreements and strikes, which to your scientific knowledge of mechanical engineering and to your ever watchful care is due the almost entire absence of serious accidents. In Mrs. Markham we have always found one ready to assist us and our families in sickness or other need by generous aid and practical sympathy. We beg of you to accept this mantel piece clock 4 as a reminder of the years you have spent here and of our pleasant relations, and trust that you and Mrs. Markham will have a long and prosperous future. Dated at Markhamville, Kings County, N.B., Jan. 1st, 1891. Thomas Williams, Thomas Crawford, Thomas J. Proctor Committee The clock bore the following inscription on a silver plate: Presented to Major Markham, By the employees of Markhamville Manganese Mines, January 1891 Thos. Crawford acted as chairman of the meeting, and John Markham read the address. In replying Major Markham alluded to the address he had made to the men on Xmas eve, and said he could only repeat what he had then stated with regard to his regret at leaving the men after so long an association with them, but he felt the change would be for his benefit. He thanked the men most heartily for this expression of their good feeling towards himself and Mrs. Markham, and said that in looking at the beautiful clock, as it marked the passing time, he would be reminded of the many happy hours he had spent at Markhamville in association with those present. The president of the company, Mr. Pope, who was at Markhamville and had been invited to be present, and was much pleased to see this expression of good feeling towards Mr. Markham, whom he had known for many years and for whom he had a strong friendship. He said that changes in business relations were constantly taking place and he hoped that Mr. Markham's future would be prosperous and happy. Mr. Pope stated that in choosing Mr. Garvey as Mr. Markham's successor he had appointed a man with whom all the men were acquainted, he having been at the mines some time, and he trusted that everything would go along satisfactorily under Mr. Garvey's supervision. Mr. Garvey then spoke, saying that he trusted that as soon as they got acquainted with each other's way of working they would get along like a band of brothers. The meeting then broke up, and expressions of good feeling toward Major and Mrs. Markham were heard on all

URN: 0691 / IDX_Names: Markhamville Manganese;
Evening Gazette - Jan. 3, 1891 and Chignecto Post - Jan. 8, 1891 Major Markham has severed his connection with the mining business at Markhamville with which he has been identified about 25 years. On New Year's Eve he was presented by his employees with an address and a handsome French clock. He is succeeded by Mr. Garvey."

Weekly Record - Fri. Jan. 9, 1891 In another column will be found the address in connection with a presentation to Major Markham by the employees of the manganese mines at Markhamville and reply to the same. While we presume Major Markham is probably doing for the best in this move the community will at large regret to hear of his severance with this important industry with which he has been so long and familiarly associated. We trust the future course of events may so shape as to have him remain permanently with us. We can ill afford to lose prominent spirited business men like Major Markham in our community."

Weekly Record - Fri., May 8, 1891 The Manganese industry at Markhamville is seemingly in a state of collapse. Out of forty men, who in the time of Major Markham found work at these mines,only four are at work at present. There is no doubt that there is manganese there, but the trouble seems to be to locate it. Major Markham no doubt would, for a consideration, locate a pocket."

Daily Telegraph - May 23, 1891 The continuous boring for manganese at Markhamville so far is proving without success, and much discouragement is felt by large numbers who have great interest in ore being found. Especially is this true of the working men, many of whom have cottages and plots of land in that locality. Should ore not be discovered an industry which has done much good, not only for Sussex, but for the province generally, will be greatly missed."

Weekly Record - Fri., May 29, 1891 Mrs. Garvey, wife of the manager of the manganese mines at Markhamville, arrived in Sussex on Friday and at once proceeded to the mines."

Weekly Record - Fri., May 29, 1891 The continuous boring for manganese at Markhamville so far is proving without success, and much discouragement is felt by large numbers who have great interest in ore being found. Especially is this true of the working men, many of whom have cottages and plots of land in that locality. Should ore not be discovered an industry which has done much good, not only for Sussex but the province generally, will be greatly missed."

Weekly Record - Fri., Nov. 13, 1891 The Markhamville mines which have been worked continuously for the past thirty years, are not showing up very well. It is said by many the ore is exhausted, while others scoff at such an idea. In other sections large bodies of manganese exist and only await the advance of the capitalists and a market demand, which while frequently fluctuating, seems very quiet at present. This mineral also exists in good quantities in Albert County and in some portions of St. John County."

S.J. Daily Sun - Oct. 17, 1891 Sussex. - Manganese Mines Closed Down. - Oct. 16.- The well known manganese mines at Markhamville so long under the profitable management of Major Markham are for the time being closed, for want of sufficient quantities of ore. This is to be regretted, as these mines in the past have been the means of bringing large amounts of money from outside places and have given employment to large numbers of men. The best of boring machines have been worked with bad results."

Daily Telegraph - Oct. 22, 1891 The Manganese Mines. - This morning Surveyor General Tweedie will hold a court at Sussex
to consider an application of Mr. Alfred Markham, of this city, for right to explore the manganese mines at Markhamville, Kings county, for the purpose of securing a lease. The application it is said covers lands owned by the Manganese company, from whose employ Mr. Markham some time ago withdrew his connexion. The application will be resisted by Mr. C.N. Skinner, who appears on behalf of the company. Mr. John R. Armstrong is to look after the interests of the

Weekly Record - Fri., Ap. 8, 1892 ... Nothing as yet being done to reopen the Markhamville mines, which were closed last

S.J. Daily Sun - Aug. 7, 1893 Manganese. - On the second page is an account of a new company who are mining manganese in Hants County, Nova Scotia. Now that the Markhamville mines have suspended operations it would seem that this company is starting out under favorable chances. The demand for high-class manganese is always good."

S.J. Daily Sun - Aug. 25, 1894 Joseph D. Weeks has favored the Sun with a copy of his report on the production of manganese in 1893. This report is made for the department of the interior, United States geological survey. It contains a statement of the production of manganese and manganiferous iron ore in the United States by states, and also that of all other countries separately. The output of Canada for 1893 is shown as 10 tons, value $112, from New Brunswick, and 123 1/2 tons, value $12,409, from Nova Scotia. This is a sad falling off since 1890, when New Brunswick alone produced 1,729 tons, valued at $34,248. Since this time, however, much development in manganese deposits has taken place in Chile, Russia and Japan, and it is from these countries that the world's supply of this mineral is now mostly obtained. The output in the United States has fallen from 13,613 tons in 1892 to 7,718 in 1893."
URN: 0691 / IDX_Names: Markhamville Manganese;
S.J. Daily Sun - Jun. 13, 1894 Manganese. - The department of the interior, United States geological survey, have issued a pamphlet compiled by Joseph D. Weeks, editor of American Manufacturer and Iron World, Pittsburg, Pa., on manganese production. To those interested in this mineral, this pamphlet will be very instructive in showing how the business of mining manganese has gradually closed in the United States and Canada and opened up in Russia, Cuba and Japan. So far as reported, the ores from these latter countries are suitable only for blast furnace uses, and there is still a demand for high class pyrolusite such as was mined at Markhamville in New Brunswick and at Tenny Cape in Nova Scotia. After the legislators at Washington are finished tinkering with their tariff and manufacturers start up their works again the increased demand for high class manganese will be an inducement to push the development of pyrolusite mining in New Brunswick

Moncton Transcript - Nov. 5, 1894 and Woodstock Dispatch - Nov. 7, 1894 Mining Operations. - Mining operations aroundMarkhamville are booming this fall. Messrs Poirier and Weldon, of Shediac, lessees of the Lissonville mine, have been at work for some time boring for ore, and have been very successful. About 30 feet below the surface a vein of pure manganese 11 inches thick was struck and a few feet below this again another seam was found. Work will commence at once, as lumber for buildings is now beinghauled. It is also rumored that the old mine has been leased, but the truth of the latter is not vouched for. - Sussex Record."

Weekly Record - Fri., Nov. 16, 1894 Major A. J. Markham entered a complaint in the Surveyor General's court, St. John, on Saturday, against the Pope Manufacturing Company because they have not operated the mines on his land at Markhamville since 1890. The counsel for the defendants assured the court that the company would operate the mines in February next, or else would vacate their license."

S.J. Daily Sun - Sep. 10, 1894 Bridgeville (N.S.) Mining Co. incorporates -....Thomas Williams, mines manager .... was overseer for about ten years at the Markhamville Manganese mines....."

S.J. Daily Sun - Sep. 27, 1894 C.J. Wetmore, of this city, has been prospecting for manganese in the vicinity of Markhamville, Kings Co. He thinks he has struck another vein of this ore. If the samples which he has, prove to be as rich as he thinks they are, the people of Kings may soon witness a revival in manganese mining."

S.J. Daily Sun - Dec. 5, 1895Sussex News. - Pope Manufacturing Company Property. - Sussex, Dec 4. - Information and complaint was made before the stipendiary today against persons residing at Markhamville, charged with having unlawfully removed property belonging to the Pope Manufacturing Company. Robert Morrison, barrister, has been retained by the company to prosecute."

S.J. Daily Sun - Dec. 5, 1895 Sussex News. - Pope Manufacturing Company Property. - Sussex, Dec 4. - Information and complaint was made before the stipendiary today against persons residing at Markhamville, charged with having unlawfully removed property belonging to the Pope Manufacturing Company. Robert Morrison, barrister, has been retained by the company to prosecute."

Weekly Record - Fri., Sep. 27, 1895 Teachers toured Markhamville mine ...."

Moncton Daily Times - Aug. 15, 1896 Prospecting for Manganese. - The Sussex Record says: Senator Poirier of Shediac, has instituted operations at Markhamville on lands of Mr. Thos, Crawford. The prospects of finding manganese in the locality where operations will be carried on are said to be good and we hope that Mr. White who is in charge of the boring apparatus will strike it rich."

S.J. Daily Sun - Jan. 21, 1896 Sussex. - S.H. White & Co. have leased the large shed near the I.C.R. freight depot, formerly used by the Markham manganese mines, and are storing it with all kinds of goods."

Kings County News - Jul. 2, 1896 and S.J. Daily Sun - Jul. 18, 1896 Senator Poirier will, it is said, soon begin operations at the Markhamville manganese mines, feeling greatly encouraged by recent developments there. This will be cheering news to many in that vicinity."

Weekly Record Fri., Dec. 17, 1897 It is reported that the manganese mines at Markhamville will be reopened next spring. A person interested in the work has been for some days looking over the situation."

Weekly Record - Fri., Nov. 27, 1903 Markhamville. - a sale was held here on Sat. 21 inst. when the mining plant, of the Pope Manganese Co., was sold at Sheriff sale. Lieut. Col. Markham, with several notable gentlemen were present."
URN: 0691 / IDX_Names: Markhamville Manganese;
Weekly Record - Fri., Oct. 30, 1903 Col. Markham of the St. John Sun was in Sussex Monday and Tuesday. He was arranging for the closing out of the Markhamville mining property against which he held a judgement. We understand the whole property will be sold by sheriff's sale within a month."

Kings County Record - Sep. 9, 1904 The manganese is now being hauled from the mines at Markhamville. For the last two days there has been a steady string of teams depositing the ore at the lumber wharf. The manganese brought out now, was mined last fall, operations since that time having been suspended. There is quite an amount of mined ore left, which will be immediately shipped."

Kings County Record - Jun. 8, 1906 Markhamville. - Col. Markham will hold a sale here on the 12th. He will sell all his farming implements, etc.: also seventeen cottages and all other buildings formerly used by the Pope Manganese Co."

Kings County Record - Aug. 21, 1925 Colonel A.J. Markham, of Vancouver, B.C., was a visitor in Sussex on Wednesday.

Colonel Markham, who willbe remembered by the older residents as manager of the manganese mines at Markhamville, and later as connected with the newspaper business in St. John, was warmly welcomed. He looks as young as twenty years ago, and is full of life and energy. He predicts a great future for Vancouver, which he states is growing by leaps and

Kings County Record - Mar. 1, 1934 Col. Alfred Markham Reaches 93rd Milestone. - Old friends in New Brunswick extend congratulations to Col. Alfred Markham, of Vancouver, who recently observed the 93rd anniversary of his birth. He has lived in Vancouver since 1906 and therefore is not known to the younger generation in Saint John and Kings County, as he was to those who were in their prime during the years when he was a popular and influential citizen, first in Kings County and later in Saint John. Col. Markham was born in North Lincolnshire, England, on February 26, 1841. He came to this province in 1864, after having been one of those wrecked in the Allan liner Bohemian enroute to this country. He was a mining engineer and was long associated with the manganese mine at Markhamville in Kings county. He took an active part in municipal politics, and was once warden of the county. Col. Markham organized the Sun Printing Company, which published The Daily Sun, and became its managing director. He had a distinguished career in the militia, becoming commander of the 8th Princess Louise's Hussars. He was also president of the Canadian Cavalry Association and in 1895 commanded the Bisley team. During his residence in Saint John he was actively associated with every movement designed to promote the advancement of the city. He had two sons in the Great War, one of whom made the supreme sacrifice. The colonel is himself intensely patriotic and rendered notable service during the war years. Remarkable changes have taken place since Co.. Markham came to Canada. He was here before confederation and has witnessed and gloried in the growth and progress of the Dominion. - Telegraph Journal."

Kings County Record - April 20, 1939 New Company to Operate Rich Manganese Holdings in Markhamville District. - Samples Declared by Engineers to be Richest Yet Seen From Canadian Territory. - Kings County Industry. - Workmen Already Busy Taking Out Sample Ore. - W. Ralph Geldart Principal Promoter. - One of King's County's early industries - the mining of manganese, which came to a close some 44 years ago, has taken on a new lease of life this spring; and from reports from those directly concerned, it would appear that this industry bids fair to reach and even surpass its former importance. The newly opened mines are in Markhamville. A group of younger business men of the town and county, whose names will be revealed at a later date, have been working for some time on the formation of a company. For the past month a score or more of men have been engaged in taking out the manganese ore. Samples Praised. - Last week the principal promoter of the project W. Ralph Geldart, travelled to American and Canadian points, where he met geological engineers by appointment. The samples from the Markhamville mines were shown to them, and were pronounced as being the richest samples seen from Canadian territory. Members of the proposed company told The Record Wednesday that by the end of the present month, there will be a large crew of men working. It is proposed to build a bunkhouse, a blacksmith shop, cookhouse, dining hall, storerooms and also a general store. It is stated that there appears to be an immense quantity of the ore in the district, and the venture promises possibilities. It is understood that the company to be formed will be a stock company. May Aid Business. - The renewal of this manganese industry should be encouraging to the county, as it will obviously add to the ranks of the employed, and will thus materially assist to improve conditions in all lines of trade. It was stated that there will be a meeting of the company next Saturday night, when a number of final matters will be settled with regard to the company. According to government records manganese was discovered in 1862, in Markhamville by G.F. Matthew. From then until 1865 the mine was worked under lease by William Davieson of Saint John. The property was then acquired by the Victoria Manganese Company under the management of Major A. Markham, who passed away in Vancouver about a year ago. Shipped from Sussex. - This company operated until 1889 when the company ceased operations. In 1890 the Pope Manganese Company was formed with Major Markham as manager. Mining by this company ceased in 1895. The ore at this time was hauled in wagons and on sleighs twelve miles to Sussex, where it was shipped to Boston and to England. The output was from 500 to 1500 tons per year, and on one occasion 3,000 tons was taken from one pocket. Three different grades of ore are apparent in the Markhamville area, fibrous ore, metallic ore and iron ore. Records show that 23,000 tons of these various ores were taken from the mines during the various previous mining enterprise."

Kings County Record - Sep. 18, 1941 Hammond River Manganese Company Considering Plans. - Hammond River Manganese Prospecting Syndicate is considering plans for the development of its group of 12 claims in Hammond Parish, Sussex, Kings County, New Brunswick, just west of the old Markhamville mine. The property was examined recently by Dr. F.J. Alcock, of the Department of Mines and Resources at Ottawa. The syndicate is capitalized at 10,000 units, $1 par, and has its executive office at 1103 Central Bldg., Toronto. G.V. Barry is managing director and Arthur Withrow, trustee."

URN: 0691 / IDX_Names: Markhamville Manganese;

Kings County Record - Feb. 3, 1966 Records Of Company Historian Bring Back Many Old Memories. - ... 'The Story of the Sussex Exchange' was written by C.A. Kee, the New Brunswick Telephone Co. historian ... As early as 1885, the Bell Telephone Company of Canada was leasing two telephones to the Pope Manganese Company of Boston, Massachusetts, for a line between their mine at Markhamville and the residence of A. Markham, the manager of the Pope Manganese Company at Markhamville. This lease was taken over by the New Brunswick Telephone Company in 1889. These instruments were small magneto wall sets having no transmitter but two receivers, on of which served as a transmitter and one as a receiver, and instead of the later crank and gear generator a vibrating generator was used for signalling. We are fortunate in having one of these two telephones in our museum. ..."

The Story of Sussex and Vicinity, by Grace Aiton, 1967, p. 141-42 Early in the 1860's the Pope Manufacturing Company of Boston opened the manganese mines at Markhamville, and in 1862 some 225 tons of manganese were brought into Sussex for shipment. In 1864 the mining business was operating as 'The Queens Manganese Company', with 24 year-old Alfred Markham as manager. Mr. Markham, a native of Lincolnshire, had had a perilous journey to America earlier that year, when the liner on which he was a passenger was wrecked near Portland, Me., and 42 persons lost their lives. He reached shore in an open boat but lost all his possessions. For 25 years he was in charge of the mines, of which he had become owner, and the little settlement where they were located honored him by taking his name. During the years of operation the ore was hauled into Sussex for shipment and plans were being made to run a rail line to the settlement, but it was found that the ore was petering out."

The Story of Sussex and Vicinity, by Grace Aiton, 1967, p. 127 Prior to the opening of the first telephone service in Sussex, two telephones had been installed by the Bell Telephone Company of Canada at the manganese mines in Markhamville, connecting the manager's office with his home. This was believed to have been the first telephone service in

The Story of Sussex and Vicinity, by Grace Aiton, 1967, p. 124 William N. Goold, a native of Portland, Me., came to Sussex following the Great Saint John Fire of 1877 with the intention of going to Markhamville to work in the manganese

URN: 0691 / 0007 / IDX_Names: Markhamville Manganese; Lake George Antimony;

S.J. Globe - Apr. 17, 1880 and Daily Telegraph - Apr. 19, 1880 Mining. - Notice is given in the Royal Gazette that William Pope, William C. Pope, C. Wesselhoeft, E.H.Callender, of Boston, Alfred Earnshaw, of Philadelphia, and Alfred Markham, of Markhamville, King's County, have filed a Memorandum of Association for the incorporation of the Queens Manganese Mining Company. The object of the Company is to prospect for, mine, raise, export, sell and dispose of manganese and other mineral substances; and to carry on a general manganese and other mineral mining business in the Province of New Brunswick. Capital five hundred thousand dollars, to be divided into ten thousand shares of fifty dollars each. Office at the manganese mines, in the parish of Sussex, King's county. Notice is also given that Winthrop M.B. Hammond, John P. Lynch, E.P. Adams, of Boston, and C.A. Stockton, of St. John, and John A. McCallum, of Fredericton, have filed a Memorandum of Association for the incorporation of the Lake George Antimony Mining and Smelting Company; theobjects of the company are the purchasing. leasing, selling, developing, holding and working of Mines, Mining Rights, and Minerals. Capital five hundred thousand dollars, to be divided into one hundred thousand shares of five dollars each. Office or principal place of business is to be at Saint John."

Chignecto Post - Apr. 22, 1880 Two mining companies are commencing operations in this province, one for mining Manganese at Sussex, the other for Antimony at Lake George."

S.J. Daily Sun - Jul. 15, 1881 [and similar version in Daily Telegraph - Jul. 15, 1881] Educational Institute. - Addresses by ... Mr. G.F. Matthew ... - Useful Minerals of New Brunswick. - ... Prof. Burwash, of Sackville, was received as an honorary member on the floor of the Institute... New Brunswick's Useful Minerals. - Dr. Rand then introduced G.F. Matthew, Esq., A.M., who delivered an interesting address on Useful Minerals of New Brunswick. Mr. Matthew said the first Europeans who settled in Acadia found themselves in a country abounding with game and fish and almost too well wooded. As the lumber resources were diminished the people were led to turn their attention to the products of the mine. The increase of manufactures in our midst will no doubt causea greater demand for our minerals and greater knowledgeof them will be of value. He would first give a sketch of the useful minerals of New Brunswick. In describing theuseful minerals he did not purpose to confine himself to the simple minerals, but to describe as well the variouscompound and impure substances of mineral origin, orcomposition, which are available for economical purposes.In this connexion various earthy deposits and rocks whichhave an homogenous structure will be noticed. There are anumber of these mineral species, which from theiroccurrence in large masses, or as being more valuable than others, are worthy of a place among the economical minerals; and among these the ores of metals hold a prominent place. Our knowledge of metals has grown up of late years, our ancestors knowing nothing of them. The occurrence of these metals in New Brunswick would be still unknown were it not for the researches which have given to modern chemistry the power to analyze and pick them out from their combinations. Prominent among the metals of vital importance to the community is iron. Ores of this metal are known to exist at several localities in New Brunswick but only those of Woodstock have been largely mined and smelted. The Woodstock ore is chiefly of the hematite species, and extends from Aroostook County in Maine to and across the St. John River into Peel parish of Carleton County. About 40,000 tons are said to be smelted in Woodstock Iron Works. Some of the iron ore beds of this district contain a large percentage of manganese. Similar manganese iron ores are found at Markhamville, King's County, and at West Beach, St. John County. A kind of iron ore which is a secondary product, resulting from the decomposition of other iron ores, is called bog iron. This ore is found in thick beds, especially in the carboniferous districts of York, Queens and Sunbury. Magnetic or black oxide of iron is a third ore of this metal, while a fourth one is thecarbonate. Beds of this latter ore have been found in the coal measures of Queens County and elsewhere. The fifth ore, which occurs in many places but usually in small quantities, is the sulphuret of iron. At Moore's Mills, Charlotte County, it is quite extensively found. The pyrites at this place is intimately mingled with calcite and the deposit extends in an east and west direction for several miles. Another metal occurring in large quantities in New Brunswick is manganese, which is extensively mined at Markhamville, King's County. Manganese ore is found in three other places - at Quaco, Shepody mines, and near Bathurst. The copper ores of New Brunswick are mostly sulphurets, but for some reason this mining industry has not had a healthy or continued growth. Adams and Simpson's Islands and La Tete peninsula in Charlotte Co. and Salmon River in Albert Co. are the most promising places for copper mining. Galena or sulphuret of lead is the only metal of this kind in New Brunswick that is worthy of mention. It is an ore that in this region silver is often associated with. Zinc ore is not common in this Province but has been found in small quantities - at Campobello and La Tete in Charlotte Co. Antimony, a rare metal in most countries, is not uncommon in this. It is known to exist in at least four places among which Lake George in York Co. is best known, where operations have been carried on since 1862. Much of the ore is reduced at the mine and converted into metallic antimony. Among the minerals that occur in largequantities are gypsum and limestone. One of the most extensive quarries of gypsum is at Hillsboro. Some of the rocks are as white as snow. At Petitcodiac there are also large beds of gypsum, where it has a breadth of 40 feet, and is laid bare for a mile. Limestone and marble occur at many places in New Brunswick. Pure white crystalline marble and verd-antique marble are found in Portland, St. John County, and variegated red marble at Gagetown,Queen's Co. Of combustible minerals, four kinds in thisProvince are worthy of notice. Bituminous coal has been discovered at various places, and has been mined at"

S.J. Daily Sun - Jul. 15, 1881 [and similar version in Daily Telegraph - Jul. 15, 1881] Educational Institute. - Addresses by ... Mr. G.F. Matthew ... - Useful Minerals of New Brunswick. - ... Prof. Burwash, of Sackville, was received as an honorary member on the floor of the Institute... New Brunswick's Useful Minerals. - Dr. Rand then introduced G.F. Matthew, Esq., A.M., who delivered an interesting address on Useful Minerals of New Brunswick. Mr. Matthew said the first Europeans who settled in Acadia found themselves in a country abounding with game and fish and almost too well wooded. As the lumber resources were diminished the people were led to turn their attention to the products of the mine. The increase of manufactures in our midst will no doubt causea greater demand for our minerals and greater knowledgeof them will be of value. He would first give a sketch of the useful minerals of New Brunswick. In describing theuseful minerals he did not purpose to confine himself to the simple minerals, but to describe as well the variouscompound and impure substances of mineral origin, orcomposition, which are available for economical purposes.In this connexion various earthy deposits and rocks whichhave an homogenous structure will be noticed. There are anumber of these mineral species, which from theiroccurrence in large masses, or as being more valuable than others, are worthy of a place among the economical minerals; and among these the ores of metals hold a prominent place. Our knowledge of metals has grown up of late years, our ancestors knowing nothing of them. The occurrence of these metals in New Brunswick would be still unknown were it not for the researches which have given to modern chemistry the power to analyze and pick them out from their combinations. Prominent among the metals of vital importance to the community is iron. Ores of this metal are known to exist at several localities in New Brunswick but only those of Woodstock have been largely mined and smelted. The Woodstock ore is chiefly of the hematite species, and extends from Aroostook County in Maine to and across the St. John River into Peel parish of Carleton County. About 40,000 tons are said to be smelted in Woodstock Iron Works. Some of the iron ore beds of this district contain a large percentage of manganese. Similar manganese iron ores are found at Markhamville, King's County, and at West Beach, St. John County. A kind of iron ore which is a secondary product, resulting from the decomposition of other iron ores, is called bog iron. This ore is found in thick beds, especially in the carboniferous districts of York, Queens and Sunbury. Magnetic or black oxide of iron is a third ore of this metal, while a fourth one is thecarbonate. Beds of this latter ore have been found in the coal measures of Queens County and elsewhere. The fifth ore, which occurs in many places but usually in small quantities, is the sulphuret of iron. At Moore's Mills, Charlotte County, it is quite extensively found. The pyrites at this place is intimately mingled with calcite and the deposit extends in an east and west direction for several miles. Another metal occurring in large quantities in New Brunswick is manganese, which is extensively mined at Markhamville, King's County. Manganese ore is found in three other places - at Quaco, Shepody mines, and near Bathurst. The copper ores of New Brunswick are mostly sulphurets, but for some reason this mining industry has not had a healthy or continued growth. Adams and Simpson's Islands and La Tete peninsula in Charlotte Co. and Salmon River in Albert Co. are the most promising places for copper mining. Moncton Daily Times - Jun. 26, 1886 Some sales of manganese ore were lately made by residents of Sussex to an American capitalist. Other new developments are being made. The mine of Messrs. Freeze & McLeod, so often spoken of, bids fair to prove a very remunerative property. The owners, in conjunction with some outside capitalists, have put in a crusher and a large smelter and are now engaged in reducing the ore to mat, which will be shipped to the refining works of New York or New Jersey."

S.J. Daily Sun - Oct. 3, 1883 Exhibition. - Mineral Exhibit. - The Queen Mining Company, of Sussex, managed by Major Markham, furnishes amost interesting exhibit, in a small space, of manganese ores prepared for the use of consumers. The coarser or low grades are used principally in the manufacture of bessemer steel, the market for which is found in Europe; the higher grades are used in the manufacture of glass, varnishes, bleaching agents, etc., and are exported to the United States. Along with the finer ores may be seen the manganese in rocks, in which it occurs in pockets of lower carboniferous limestone, and specimens are also shown of iron ore and dog tooth spars, which sometimes occur with the manganese. Messrs. W.N. Gould and F.W. Stockton show a varied assortment of mineral ores from various districts in the Province. As these are not arranged with any degree of regularity, nor the localities given where they have been found, the display loses some of its value in consequence. Silver galena, copper, manganese and other ores are shown. Mr. Gould also has some specimens of Albertite coal, ground plaster, phosphate of lime, hydraulic limestone, gypsum, lithographic stone, asbestos and verdantique marble. The Natural History Society of New Brunswick display a fine collection of gold-bearing quartz and gold dust from the Waverley mines of Nova Scotia. The different coal companies of Nova Scotia furnish specimens of their products. Those represented at the Exhibition are the Joggins, Minudie, Acadia and Spring Hill mines, and all the different grades and qualities are shown.The different lime and brick kilns about St. Johnhave specimens of their productions on exhibition, andthe N.B. Granite Company make a handsome display both of grey and red granite. The New Brunswick Salt Springs Company showspecimens of fine and coarse salt, manufactured by them at their works, in Upham, King's County. The Lake George Antimony Mines are wellrepresented, not only by specimens of ores, but also by the different processes and materials used in the preparation of metallic antimony. The Lawrence Antimony Mine, of Queen's county, also exhibit specimens. Silver and copper ores are also shown by R.R.Call, Esq., of Newcastle, and copper ores by Dr.Goodfellow of Sussex. Very fine specimens of native copper ore, occurring in trap rock, near North Head, Grand Manan are exhibited. A map of Nova Scotia showing the occurrence of mineral ores in that Province, was sent by Dr. Gilpin of Halifax."

St. Andrews Standard - Jan. 12, 1870 From the Canada Year Book for 1870. NEW BRUNSWICK No mines of gold, silver, lead, tin, or other metals nor here under mentioned, are now being worked in New Brunswick. Iron is being raised and smelted to a limite dextent at Woodstock. There are no other iron mines worked, though available ores occur at other points. Copper - With the exception of a mine at Adam's Island, in Charlotte County, owned and worked by an English Company. ""The Casco Bay Mining Company"" - who still employ about thirty men, all the New Brunswick copper mines have been, for the present, abandoned. Manganese is being profitably worked at the ""Markhamville Manganese Mines"" in Upham, Kings County.Thirty men are employed, and the number is to be increased. In 1867-8, the trade returns show that New Brunswick exported 861 tons, valued at $19,019. Plumbago has been removed from two localities. From the first, at Portland, Saint John, 2,000 barrels, of 308 lbs each, have been taken. From the second at the Falls, Suspension Bridge, St. John, called ""The Split Rock Plumbago Mine"", - Mr. A. Garrit, director, - some twenty-five barrels a day are being taken out. Coal is now being mined in two localities only, the Albert Mine, near Hillsborough; and the mines at Newcastle Creek, Grand Lake. - It is doubtful whether the Albert coal is coal at all. Better to call it Albertine. Salt is being manufactured on a limited scale from brines near Sussex. The product might be much increased by judicious management. Lime is burned to a considerable extent at the narrows of the St. John, at the Green Point Quarries, &c.; on a limited scale at many other points. Plaster is quarried and calcined for exportation at Hillsborough. Almost all the above information has been furnished by Professor W. Bailey, of Fredericton."

Kings County Record - Feb. 10 and 17, 1982 Memories by Donald Smith. - ..... Through courtesy of Cecil B. Jeffries, Sussex Corner, there comes to the Memories Column ' The Markham Family' , as researched and written by Harold Markham... The continental progenitors of the Markham family came to England before the Norman Conquest of 1066-1070 and are thought to have been of Nordic, or Scandinavian, blood, not Anglo-Saxon or Celtic. That the family is not of Celtic origin is certain, as the invading continental tribes drove this native tribe northward and westward. It was in that part of the island occupied by the Nordic tribe that the Markham family had its origin. The family surname is derived from the name of two parishes in the northern extremity of Nottinghamshire, anciently known as Ouest and Est Markham. The place where the Markham progenitors established their abode is not indicated but their little suburban town of Cottam, or Cotham, in Nottinghamshire, which is situated near the Lincolnshire border and about fifteen miles directly east of the important town of Worksop (pronounced Worsup). At the time of the Norman Conquest there lived in Ouest Markham a large land owner known as ' Claron de Ouest Markham' a son of whom, known as ' Roger d'Est Markham' , lived in the tangent parish of Est Markham. In the course of time, descendants of this Nordic family migrated to other parts of Nottinghamshire and into other tangent counties, notably northern Lincolnshire, where was born the one in whose honor the New Brunswick village of Markhamville, N.B., was named. Among the many illustrious descendants of Claron and Roger there were Sir John Markham, lord chief justice of England, who died in 1409; his son, Sir John Markham, another lord chief justice, who held office about the period 1444-1471, and Reverend Dr. William Markham, Archbishop of York, born in 1719 and died in 1807. In Port Greville, Nova Scotia, the writer (Harold Markham) had the pleasure of meeting a direct descendant of the archbishop; this was Rev. Mr. Markham, a rector of the Church of England and a native of Nottinghamshire. In 1810 John Markham, grandfather of the writer, was born somewhere in northern Lincolnshire. The place of his birth is unknown but it is thought to have been Barton-on-Humber, where he spent at least the unmarried portion of his life. His wife was Miss Elizabeth Bailey, of Kelsey, Lincolnshire, and by her he had four sons and six daughters, of whom three, including two sons and one daughter, died in infancy. Three others, Alfred, John and Caroline (Mrs. Francis) and a grandaughter, Mary (or Polly) Watson, migrated to North America and eventually settled in Kings County, N.B. The elder John Markham engaged in Lincolnshire's staple industry of horse breeding, and also conducted farming, express, and ship chandlery businesses. Following the death of her husband at Sussex, N.B., Mrs. Francis and her niece, Mary Watson, returned to England and resided at Cottingham, near Hull, where, as Mrs. Green, Miss Watson died during World War I, and Mrs. Francis in 1926. John Markham and his wife and family lived variously at Kirton and Laceby, in the immediate suburbs of Great Grimsby, at the mouth of the Humber River. Mrs. Markham died in Laceby in 1888 at the age of 72 years, and her husband at the same place in 1903, aged 93 years. In size and strength, Mr. Markham could verily be described as a giant, of massive build and weighing at the time of his death 230 pounds. Colorful Career. - As to Lieutenant-Colonel Alfred Markham, the writer is largely indebted to Colonel Markham himself for data contained in the following account of his active and prosperous life. In his various business adventures, vocations, avocations and hobbies he was remarkably versatile and readily adaptable. Railway service, marine service, military service, mining, journalism, botany, gardening, farming, politics, civic affairs, athletics, etc., it was remarkable variety indeed. He was born at Laceby, near Great Grimsby, Lincolnshire, on Feb. 28, 1841, and died at Elsona, a suburb of Vancouver, B.C., on July 16, 1935, at the rare old age of 94. He was born to a family remarkable for its longevity. His father lived to the age of 93; one of his grandfathers died at 95 and one grandmother at 100; his only brother John, died in his 92st year. One of his sisters was accidentally killed at the age of 78. From 1857 to 1864 he obtained railway experience in the offices of the Manchester, Sheffield and Lincolnshire Railway and Dock Company, and for some time was manager of a deep sea fishing concern (Great Grimsby has long been an important port for North Sea fishing). The Manchester, Sheffield and Lincolnshire Railway and Dock Company was incorporated in 1837, only four years before Markham's birth and 20 years before his employment with it. The world's first steam operated railway, the Stockton and Darlington, had begun operation only 12 years before the M.S. and L. That was the age of embryo steam railway construction in Europe and North America. About the year 1850 a company known as the Grand Trunk was formed in England for the construction of this railway, begun in 1853 and completed to Sarnia, Ont., in 1860, four years before Markham came to America to enter its employ, and only months before the outbreak of the American Civil War. Canadian Confederation came seven years later, in 1867. During the Crimean War, Markham, then only about 13 years of age, performed some military service in his native country, this being the only war service he ever experienced as a soldier during his long life and 20 years' service as an officer in the New Brunswick Militia. In February 1864, while Uncle Sam was trying to beat his rebellious states into submission, Markham left England for that country. His arrival on this side of the Atlantic proved a very damp one. His vessel, the Allan liner Bohemian, was wrecked on the rockstrewn shore at Cape Elizabeth, near Portland, Me., its port of destination. In this marine disaster 42 persons lost their lives. Markham reached shore in an open boat, but lost all his possessions except the clothes he wore. At Portland, the Atlantic terminus of the Grand Trunk Railway, he entered the employ of that transportation company, and later in the same year (1864) that of the International Steamship Company as purser on their vessels plying between Boston, Portland, Eastport and Saint John. Again in that year he found himself permanently settled in Kings County, N.B., as the manager of the mining interests of the Pope Manufacturing Company of Boston. This mining business was known by the name of the Queen's Manganese Company. Without mining knowledge, and only 24 years of age, this was quite a bold venture but it was characteristic of his dauntless and venturesome spirit. If he failed he had the railway service to fall back on, and there was a big demand for experienced railway men in North America. It was the mining company, not he, that failed. He turned the company's failure into a very profitable success for himself and became his own general manager. In other words, he purchased the company's mining business after five or six years of operation. He Was 'The Boss' - The headquarters of the Queen's Manganese Company was established at what was included under the name of Hammondvale, about 10 milessouth of Sussex. Subsequently, other mines were opened upat Waterside and Little Rocher, in Albert County, and St.Martins, in Saint John County. These, however, soon petered out. At the beginning of mining operations at Hammondvale, a new post office was opened up at the mining area, three miles distant from that at Hammondvale, and given the honor of Markhamville, in honor of the gentleman upon whom the villagers bestowed the appellation of ' The Boss' . In common slang use of that word, he surely was well designated, for in his business affairs he was a most rigid disciplinarian and had his father's physical prowess to back it up. He and his arm crippled brother John, could handle any of the most ill-disposed and obstreporous employees. In later years one of the latter said to the writer ' I myself was considered as being exceptionally strong but your one- armed father was too much for me.' After a quarter of a century of mining at Markhamville, during which he located about 70 pockets of ore, he sold his business to an American concern and went into another business he knew nothing about, the printing business. In 1890 he became the general manager and practically the sole owner of the Sun Printing Company, Saint John issuing a very Conservative daily newspaper in a very Conservative constituency. Unfortunately, in 1893 the nation went over to Liberalism, a change that gradually brought about the demise of the brand-new newspaper, the Daily Sun, the publication of which was discontinued in 1899. It was succeeded by another Conservative Daily, the Standard, of which the circulation manager was the colonel's elder son, Alfred J. Markham. Reverting to the year 1881 for a retrospective glimpse of the colonel's life and a brief outline of his service in the New Brunswick militia, we find that this began in the Canadian Hussars, 8th Regiment of Cavalry, when the name of that was changed to 8th Princess Louise's New Brunswick Hussars. Originally this mounted unit was known as the New Brunswick Yeomanry Cavalry, and in the Second World War as the 5th Armored Regiment. In 1881 Lieutenant-Colonel James Domville took command of the regiment, and has Markham as senior major; for 18 years those two officers held their respective ranks, much to the annoyance of Major Markham and other subordinate officers. In politics both Domville and Markham were Conservatives but when the Laurier-led Liberals defeated the Conservative government in 1896, Domville, in order to retain command of the regiment, changed to the Liberal party and successfully contested the federal general election of that year in Kings County for that party. Subsequently it was enacted that regimental commanders could hold their commands for only five years and must, in any case, retire at a definite age. In 1896 Markham was promoted to the rank of lieutenant-colonel in the Canadian militia and later succeeded Domville in the command of the 8th Hussars on the latter's promotion to the rank of Colonel. In 1899 Markham, in accordance with the then new regulation, was retired to the reserve of officers. His older son, Alfred John Markham, succeeded to the command of this regiment in 1918, and his younger son, Ralph Farrar, became lieutenant in it in 1896. The latter was a veteran of the South African and First World War. During his brief tenure of command of the 8th Hussars, Colonel Alfred Markham, sr., went to England in 1896 as commander of the Bisley team of marksmen but was not on hand when the Prince of Wales made a royal visit to greet and welcome the team. County Warden. - Though a keen politician and an eloquent speaker, Colonel Alfred Markham was never a candidate for election in either federal or provincial politics, nor ever occupied any public office save those of county councillor and warden. He was elected warden in 1879, the year in which the governor-general, the Marquis of Lorne, and his lady, Princess Louise, toured Canada. As warden he presented the address to Their Excellencies when they visited Sussex. He was credited with having induced Sir Robert L. Borden to enter politics. Sir Robert was one of Canada's prime ministers. Associated with him in the founding of the Sun Printing were Ward H. Thorne, who later became a senator, and S.D. Scott, who attained considerable prominence in Canadian journalism. The chief editor was George E. Foster, who later became a senator and then was knighted. The Sun tried hard to shine under Liberal administrations at Fredericton and Ottawa but it finally was eclipsed and sold out to a company that published the Standard. (This company became the Journal, which in 1923 amalgamated with the Telegraph to become today's Telegraph-Journal). In 1906 Messrs. Scott and Markham removed to Vancouver, where the former had become editor of the Vancouver Province and the latter the superintendent of the Canadian Pacific Railway lands in British Columbia. Thus the colonel ended his career in Canada as he had begun it in England - in the railway business. He planned and cleared the land for Shaughnessy Heights, Vancouver's fashionable residential section, and supervised the Canadian Pacific's garden at Korrisdale. Later he assumed supervision of Shaughnessy Military Hospital and became the local director for the department of soldier' civil re-establishment. As an experiment, he attempted the transplantation of Atlantic oysters, and for this purpose had a carload shipped from Buctouche to the Pacific ocean. The experiment proved a complete failure. He also lost heavily in a collapse of the New York stock market, as did his son-in-law, John Foote, Toronto, and, to a small extent, his brother, John Markham, of Sussex. Until his retirement he resided at 2210 Arbutus Street, Vancouver, with his wife and daughter, Edith. There Mrs. Markham died on Feb. 21, 1914. When Fire Swept. - On Nov. 19, 1866, Colonel Markham married Miss Naida Turnbull, eldest daughter of John E. and Annie Turnbull. Mrs. Markham's father operated a factory on Main (now Broad Street), Saint John, and resided near it. In the disastrous conflagration of 1877 both residence and factory were completely destroyed. One of the many stories of that great fire is a rather weird one in which the participants were James Turnbull, a brother of Mrs. Markham, and a Mrs. Reed, her mind unhinged by the catastrophe, walked into the burning Turnbull home with her clothing on fire while James Turnbull and others were inside striving to save the building from destruction. Leaving the house to its fate, James attempted to carry Mrs. Reed to safety in the northern end of the city. She died on the way, and he left her body under an upturned boat on Queen Square. Carrying her through scorching flames and air filled with flying embers for about two miles was, even though not crowned with success, extremely heroic. Mrs. Markham was named after the steamer on which she was born on a voyage from England to Saint John; to all who knew her she was called by the shorter name of Ida. Mrs. Markham's father and paternal grandparents were natives of England. The children of Colonel and Mrs. Markham, all of whom were born at Markhamville, were, in order, Alfred John, born in 1867; Edith; Blanch Hobbs (Mrs. Secord); Lillian (Mrs. Foote); Ralph Farrar; Clara; Emily (Mrs. Derrerton, born in 1887. Clara died shortly after birth in 1880, and Ralph was killed in action at Armentieres, France, in 1915. Alfred J. married twice and Ralph died unmarried. The former's first wife was Miss Annie Jeffries, of Jeffries Corner, N.B., and his second was a young widow when he married her. The first wife was a daughter of Mr. Jeffries, a native of Somersetshire, Eng. The Jeffries family migrated in 1816 from England where Mr. Jeffries was born in 1814. Miss Edith Markham died in London, Ont., in 1938. Blanch (Mrs. Secord) lived in Saint John, and Lillian (Mrs. Foote) in Toronto. Regarding the military service of the two sons, both began as troopers in the 8th Hussars, in which Alfred J. rose to the rank of Lieutenant-colonel. Ralph's service was more varied. In World War I, ' Fred' Markham, as Alfred J. was generally known, went to Europe as major and second-in-command of one of the battalions of the Canadian Mounted Rifles, all of whose four battalions served as infantry. ' Fred' had temporary command of his battalion following the cashiering of its lieutenant- colonel. Being very much over the required military age, ' Fred' , at 48 years, was recalled from service at the front, returned to Canada and placed in command of the Saint John area for the rest of the war. A few years later he was put on the reserve of officers. On the outbreak of the South African War, Ralph Markham resigned his captaincy in the 8th Hussars and proceeded to that distant seat of war as a trooper in a cavalry regiment. He returned home as a non-commissioned officer and left again for South Africa as a lieutenant in another cavalry regiment. In his second campaign he was wounded in the action at Hartt's river. At the conclusion of this war he remained in South Africa for a few years in the employ of the Rand Daily News, of Johannesburg, Transvaal. Giving this up, and after touring Great Britain and the Continent, he returned to Canada but not to his native New Brunswick. He went, instead, to Brandon, Man., where he was engaged for a short period on the staff of the Daily Sun. Thence he moved to Vancouver for further newspaper work and to reside with his parents and sister, Edith. The Big Bang. -On his return to Canada from the Boer War he brought with him a decidedly lively souvenir in the form of an unexploded artillery shell. To have carried a loaded shell all that distance without an accident is a testimony to the gentleness of South African and European baggage handlers and also to some of that fraternity in Canada. But eventually Mr. Shell concluded he had travelled far enough; he objected in a very vehement and explosive manner to the rough handling by the Brandon baggagemen, and exploded. Fortunately, nobody was killed. As British Columbia did not have a cavalry regiment, Ralph continued in the military service as an officer in Vancouver's 72nd Seaforth Highlanders, which furnished recruits for the 16th Battalion of the 1st Division of the Canadian Army Corps in World War I. This war broke out in August 1914, six months after the death of Ralph's mother and almost exactly a year before his own. When in October 1914 the First Contingent sailed from Canada to England, Ralph went with it as captain and signalling officer in the 16th Battalion, and his cousin, Harold Markham, as a private in the 12th Battalion. Both met for the last time at the Valcartier Military Camp, near Quebec. Shortly before his death on Aug. 19, 1915, Ralph was promoted to major and second-in-command of the 16th battalion; had he lived a year or two longer he would have succeeded to the command of this battalion when its Lieutenant-Colonel Leckie became a brigade commander. He and another officer met their death while proceeding with others to the front line through a communications trench in the Armentieres sector. His body and that of the young officer who was killed with him were interred with military ceremony in the civil cemetery at Armentieres, five miles from the scene of their death. By Stage Coach. - John Markham, jr., was born at Laceby, near Great Grimsby, Lincolnshire, on April 30, 1854, exactly 32 days after the outbreak of the Crimean War, in which his only brother, Alfred, enlisted for home service. He was educated at the Laceby parish school and then at the Humberstone grammar school. After serving for short periods in a Grimsby mercantile establishment and the Hull dock offices, he sailed in 1871 for Canada, landing at Halifax, whence he proceeded to his destination at Markhamville by way of Digby, Saint John and Sussex. Between Halifax and Digby, trains were then operated three days a week, going in one direction one day and returning the next; on the other three days, horse drawn stage coaches were operated. Young Markham, then 17 years of age, made the journey to Digby by stage coach, and by railway from Saint John to Sussex. For a short time he was in charge of the mining operations at Riverside and Little Rocher, Albert county, and when mining was discontinued there he moved to Markhamville, where he became the postmaster and conducted a mercantile business. Following the closing of the Markhamville mines he moved in 1893 to Sussex Corner, where he continued in the general mercantile business in partnership with King McFarlane, a native of Markhamville. Shortly before moving to Sussex Corner he was urged by Simeon H. White, president of S.H. White and Company, to join Mr. White and his partners in the creation of the Sussex Mercantile Company, of which Mr. White became president. However, he declined this offer. At Markhamville, in November 1879, he married Miss Caroline Albrighton Boyer, eldest child of John and Elizabeth Boyer. His wife was born in Saint John in 1859 and died at Sussex Corner in 198. Of this union one son and three daughters were born, namely, in order, Florence; George Harold (1882); Alice Elizabeth (Mrs. Upham) (1887); and Irene Noble (1899). All except Irene were born at Markhamville. Irene was born at Sussex Corner and for some years lived in the United States. Since 1893 Florence lived at Sussex Corner. Alice married the late H. William Upham, son of the late Charles W.J. Upham, of Sussex. G. Harold entered the Canadian postal service in 1911 and retired on pension in 1946. Irene was a registered nurse. 5 Years Overseas. - G. Harold Markham held the Colonial Auxiliary Forces Long Service Medal and had almost enough service in the Canadian Militia for an additional bar. In World War I he had five years service in Europe with the Canadian Expeditionary Force, and served variously in the infantry, postal corps and artillery. In 1913 he married, at Saint John, Miss Lily Beardley, formerly of Morecombe, Lancashire, Eng. There were two children, J. Raymond and Edith B. (Mrs. Peter D. Freisen.) There were four grandsons and one granddaughter. Mrs. H. William Upham also had two children, Clarence M. Upham and Mrs. Helen L. Townsend, all three of whom made their homes in Moncton. Mrs. Upham's late

Kings County Record - May 4, 1944 John Markham, Sx. Cor, Enters His 91st Year. - Friends of John Markham and his family, Sussex Corner, will be interested to know that he entered the ninth decade of his life on April 30, and will wish him more years of health and happiness. Born at Laceby, Grimsby, Lincolnshire, in 1854, his birth coinciding with the opening of the Crimean War, Mr. Markham left his native land in 1871 to join his onlybrother, Alfred, in the mining operations in Kings, Albert and Saint John counties and has resided near Sussex ever since. His brother Lieutenant-Colonel Alfred Markham, a former well known citizen of Sussex and Saint John, and who was called to the colors at the outbreak of the war with Russia, preceded hi to America in the winter of 1864, during the course of the American Civil War, landing at Portland, Maine, from the wrecked Allan liner 'Bohemian'. This steamer was wrecked off Cape Elizabeth, with a loss of 42 lives. The arrival of the younger brother on this side of the Atlantic was not so eventful as that of the elder. Mr. Markham landed at Halifax and journeyed by stage coach to Digby, thence by steamer to Saint John and railroad to Sussex. He began life in this province incharge of mining operations at Waterside and LittleRocher, Albert County, under the general managership of his brother. About the year 1891 he went into the mercantile business at Sussex and retired at the close of the First World War. His wife, a native of Saint John, died at Sussex sixteen years ago. It is hoped that Mr. Markham's remarkable longevity will at least equal that of his father, who died at the age of 93, and that of his brother, who was 95 at the time of his death. He is now the sole survivor of a family of two sons and five daughters all of whom, with the exception of three, lived beyond 80 years in age. One sister was accidentally killed at the age of 78. One son and three daughters were born to Mr. and Mrs. Markham, all of whom are living; these are Miss Florence Markham, Sussex; G. Harold Markham, Saint John; Mrs. H. William Upham, Moncton; and Miss Irene N. Markham, in Connecticut. He has two grandsons, Clarence M. Upham, with the R.C.A.F. in Europe and J. Raymond Markham, R.C.N. His son served in Europe throughout the whole of the last Great War in the Canadian infantry and artillery."

Miramichi Gleaner - Nov. 23, 1861 Geological Survey. - Last week we penned some remarks on this survey, which we published. We give below some extracts from the Colonial Empire on the same subject, which convey some interesting intelligence respecting the Geological features and the Mineralogical capabilities of the Northern Counties:- ""It may not be generally known, that Sir William Logan extended his researches in Gaspe into this Province, as far as Bathurst, in order to complete his observations upon the limestone rocks of that district. These limestones are of the Silurian formation, and abound in the fossils which characterise it. When Sir Roderick Murchison, about twenty years since, was contending for the establishment of what is known as the 'Silurian System', he went himself to Archangel in Russia, and sent an Agent to this Province (the secretary of the Geological Society of Cornwall), who visited the Restigouche, and found close to Dalhousie, under the cliffs near the Bon Amie rocks, (Charlefort's Hill) in the Silurian limestones there, a variety of fossil remains well developed, which proved beyond a doubt the soundness of Sir Roderick's theory. When taken to England the fossils were found to correspond exactly with the fossils obtained from a similar formation, by Sir Roderick himself, at Archangel; and the soundness of his Silurian theory has not since been disputed. ""To the Southward of the Silurian basin of the County of Restigouche, there is a belt of metamorphic rocks which crosses the Province from Mars Hill to the Nepisiguit; in this formation copper and manganese have been found extensively, and gold was observed more than ten years ago. ""Passing over this belt of rocks, which stretch across the whole breadth of New Brunswick from Southwest to Northeast, and offer a great barrier to the construction of a railway through the entire province, there is found a wide extent of sandstone country,belonging to the coal formation, which extends along the whole eastern coast of New Brunswick, from Baie Vert to the Bay of Chaleur. From its wide base on the Gulf of St. Lawrence, this sandstone country narrows to the eastward, and on the river St. John, is found 30 miles from thesea, beyond the granite quarries at the head of the Long Reach. Between these quarries and the Bay of Fundy, there is another belt of metamorphic rocks, containing beds of altered slate with veins of quartz of the description known elsewhere as producing gold. That gold will be found in the district, there can be very little doubt; but in what quantity, has yet to be determined. A nugget of half an ounce was found several years ago, in the bedof the River Digdeguash, worn quite smooth by attrition, thus affording proof that it had been borne from some spot near the source of that river. ""At this moment, researches are going on at the expense of private parties, in the County of Albert, which bid fair to produce valuable results. In that country, in addition to the wonderful coal, called Albertine, which furnishes such quantities of Paraffine oil, other minerals of value have lately been discovered. Among these are veins of copper ore, which in beauty of colour and crystallization almost rival the Siberian malachite. A nodule of this ore bearing 60 to 70 per cent of copper, nearly egg-shaped, and weighing about three pounds, is now in the City, and is intended to be sent to the Great Exhibition in London next year where there be little doubt it will attract quite as much attention as the gold of Nova Scotia. ""A mine of manganese in King's County has latelybeen opened, and is now being worked. - The ore is nearly black, highly crystallized, and is being carted to the Railway Station at Sussex, for transport to this City, whence it is shipped to England. Last week quantities of it were at the Sussex Station, affording ocular proof of the mineral wealth of New Brunswick. ""All these things point out clearly the absolute necessity of a complete Geological Survey of this Province, by competent persons. There is evidently great mineral wealth within its boundaries, and the structure of its rocks from the St. Croix to the Restigouche, are of a character to indicate that they are worthy of the most careful examination, and will furnish much mineral wealth of various descriptions, Gold included."

Daily Times, Sep. 15, 1890 and Carleton Sentinel - Oct. 4, 1890 New Brunswick's Mineral Wealth. - A correspondent in the Halifax Critic writes:- There are many rumors of mining affairs in New Brunswick, but the boom is slow in coming as it has to you in N.S., nevertheless those who watch the signs of the times carefully see a bright future for the mining industries of N.B. To commence with I may say that the productionand shipment of manganese from the well known Markhamville mines continues regularly. The deposit of manganese recently purchased forthe Crimora manganese Co. of the U.S. in Albert county is expected to turn out a bonanza for the owners. This deposit is in the form of a powder or sand said to contain a percentage of manganese, and work is now going on preparatory to shipping it in large quantities. Drying kilns are being erected and a branch of the Albert railway is being constructed to the deposit. It is said there are hundreds of thousands of tons. In some places the deposit is fully 30 feet thick. Dr. Chandler and some Moncton friends are engaged"

Daily Telegraph - Dec. 10, 1887There has been considerable talk here this last week in reference to mining matters. Gen. Bradley T. Johnson and A.J. Guise, southern capitalists, have been here examining our large manganese deposits, and were very favorably impressed with their value. They visitedthe mines at Markhamville, where they were entertained by its manager, Major Markham. They also visited the Stockton property. They are so favorably impressed with the outlook here, in mining, that they intend returning, with an idea of purchasing some of the many valuable mining properties in this province. Would it not be advisable for our new law commissioners to look into our mining laws, and in their consolidation remove some of the doubts and technicalities with which they are surrounded."

URN: 0691 / 0763 / IDX_Names: Markhamville Manganese; Jordan Mountain Manganese;

S.J. Daily Sun - Apr. 5, 1892 Manganese. - A mining engineer from Chicago was making an examination of the Stockton mine near Sussex station yesterday. Nothing is yet being done to reopen the Markhamville mines, which were closed last

Daily Times - Nov. 21, 1899Work is progressing in mining circles around Sussex. There is a large force of men at the Jordan Mountain mine and the ore is being hauled in extensive quantities to Sussex for shipment. The contract for conveyance from mine to car has been let to Mr. Magee, of Nova Scotia, for $1.25 per ton. Buildings are being erected on the property and everything points to permanent operations. The company are said to be about purchasing the Markhamville manganese mines which have been idle for a number of years. This latter property has been entangled in litigation, but it is to be hoped that the matter is now in a fair way for settlement and that it will soon be operated. - Record."

Kings County Record - Nov. 27, 1914 The chances are that the manganese mine at Jordan Mt., which has been idle some time may soon be reopened and worked. Parties from Toronto, who have had representatives go over the ground, have taken the property up and propose making an exploration of the same. The shortage of this mineral since the war came on has had the tendency to make for a brisk demand for the ore and prices have advanced markedly. The Markhamville areas have been taken in hand by the Dominion Steel and Iron Co., of Sydney, Cape Breton, and both this area and the Jordan Mountain will be vigorously worked, which will be good news to all concerned. We trust that the work will be

Kings County Record - Feb. 15, 1929 Should Stimulate Mining Activity. - Locations of Areas in Kings County Where Prospecting is Now Being Carried Out. - Geological Formation Explained by Mr. H.G. Wildman, of C.N.R. - The following details of the mineral resources of Kings County are culled from an extensive report of New Brunswick mining activity prepared by Mr. H.G. Wildman, mineralogist of the Canadian National Railways. He writes in part as follows: It is a matter of common knowledge that the deposition of minerals is more likely to occur in certain series of rocks than others. It therefore follows that, in dealing with the subject, it is necessary to pay some regard to the simple aspects of the geology of that area under consideration. The province of New Brunswick embraces an area of 27,985 square miles which may be roughly classed in three divisions, as follows:- (a) The northern section, the New Brunswick Highlands, a series of granitic hills, which may be said to commence with Mars Hill, situated near the Maine border, in the county of Carleton, rising 1,650 feet above sea level and forming one of a series of numerous peaks extending to the Baie de Chaleur to the northeast, having an average width of about forty miles. (b) The low-lying region in which is found the coal district of Chipman and Minto. This basin is remarkably uniform in its height above sea level, averaging in the neighborhood of 185 feet. There is, however, a slight rise near Coal Creek of 259 feet. (c) The plateau, surmounted by a range of hills, extending through the counties of Charlotte, Kings, Saint John, to Albert and Westmorland. The highest of these peaks is the Chapel on the road to Sussex Vale, which has an elevation of 1,140 feet above sea level. The whole country has been more or less glaciated, the ice, on its recession, having left a heavy covering of drift and boulder clay which to a large extent conceals the rock formation, this condition, together with the very general dense brush, renders prospecting extremely difficult. An overburden of 20 feet is frequently encountered. The general contour of the country has little changed since the Pre-glacial Period. The larger riversfollow virtually the same course as that along which they flowed prior to the advent of the ice. At the same time, areas are to be noted where changes have occurred in the surface of the country and the filling of the then channels by glacial drift have caused new channels to be cut through the surrounding country. There is abundant evidence of a greater elevation in relation to the sea level in early times, which caused the rivers to cut deeper channels due to the erosive action of swiftly running waters. From the Bay of Fundy, in a northwesterly direction, the topography of the county is characterised by a series of elevation and depression having a general northeasterly direction - a height of land stretching through St. John and Albert counties paralleled by a depression forming the valley of the Kennebecasis. The adjoining highland of Kings County include Jordan and Keirstead Mountains and other similar elevations of the series extending nearly to Moncton, paralleled by other series of highlands and lowlands across the province to the Quebec boundary. Antimony. - In the autumn of 1927 information reached this Department of a discovery of stibnite float over an area of about one mile in the Mountaindale (Marrtown) district. As a result of our investigations Messrs. R.G. Heughan and Company, and other independent parties in Montreal, were led to stake most of this area. Some development was carried on during the past summer on the Heughan and Brown stakings. No stibnite was found in place until September 1928, when a small stringer was discovered on the Heughan property. It is proposed to follow this up in the spring of 1929 as a large mineralized zone is indicated in the district. A reported discovery of stibnite at Stewarton, during well sinking operations was investigated. It was stated that two feet of stibnite was penetrated during the work but this statement could not be confirmed, owing to the well being full of water. There was no apparent surface indication of such an occurrence, but a thorough investigation will be made in the spring of 1929. Arsenic is found at Bellisle, in a very narrow veins in a basic lava. Copper. - Annidale, situated midway between Annidale and Scotch Settlement is the copper property now being developed by the Annidale Copper Mining Company Ltd., as the result of recommendations made to them by this department. Here a number of test pits have been sunk and a few carloads of ore shipped. The main shaft has been located between two outcroppings of mixed chalcopyrite and pyrite, averaging 7 p.c. copper, and has already attained a depth of 108 feet. It is the intention to drift on to both veins and a further program of diamond drilling is to be mapped out. At Irishtown, about five miles east of Annidale there is a nice showing of chalcopyrite, upon which no work has been done. On Jordan Mountain a considerable amount of work has been done disclosing a body of copper carbonate of low grade. Similar exposures of copper carbonate are noted at Goshen, to the southeast, where Consolidated Mining & Smelting Company have been diamond drilling. Gypsum. - At Upham, there is a very large depositof high-grade rock which lies contiguous to the Canadian National Railways line between Hampton and St. Martins, and about 25 miles from the sea. Five hundred tons of gypsum was shipped from this property in 1905 when the shaft was invaded by water from the river. Another very promising deposit is found adjacent to the main highway between Sussex and Apohaqui. It is very white in color and remarkably free from anhydrite. Manganese. - At Markhamville, eight miles southof Sussex, the mineral occurs in a grey limestone and is reported to have been the largest producer of manganese in New Brunswick, having shipped 30,000 tons some years ago. There is a considerable extension of the ore-bearing formation in which other bodies may be found and offers a promising area for the energetic prospector. Two assays of ore from this vicinity gave the metallic content as 44.65 and 42.77%. The property at Jordan Mountain is about six miles north of Sussex and has been worked by a trench 75 feet in length in what appears to have been a pocket of high-grade ore. Several hundred tons have in the past been shipped to the smelter. The property is now owned by J. Starr Tait, attorney, of Saint John, who is endeavoring to interest American capital in its further development. A selected sample from the district assayed 59% manganese. Near Jordan Mountain, shales, similar to those in Albert County, are found again near Sussex are two smallareas. Salt. - The occurrence of salt in the Carboniferous area of southern New Brunswick has long been known, a small operation having been carried on by George Hendricks, east of Sussex, in 1887, which was apparently the first commercial plant for the production of salt in the province. Saline springs occur in several places along the valley of the Kennebecasis and Sussex Vale, notably those at Upham and Anagance, an analysis of the former giving sodium chloride 1293.648 grs. per imperial gallon, that at Anagance having a similar saline content. The potassium content of these springs is low."

Royal Gazette - Jun. 17, 1885 Notice. The subscribers intend to apply to His Honor the Lieutenant Governor in Council, for the incorporation by Letters Patent under the provisions of the New BrunswickJoint Stock Companies Letters Patent Act, of a Company tobe called The Dominion Manganese Mining Company. The object for which such incorporation is sought, is the mining for Manganese and all other Mineral substances, the buying and selling of mineral lands and mining property, and goods and chattels, wares and merchandise, connected with and incidental to a mining business, the making and maintenance of roads, tram-roads, railroads, buildings and works on the Company's property for mining purposes and the carrying on a general mining business, with all manner of business incidental thereto and connected therewith, and to do, build, erect, own and maintain any building, structures, work, machines, machinery and erection necessary therefor, with such other things as are incidental thereto. The place within the Province of New Brunswick in which its Office or chief place of business is to be established, is Sussex, in the County of King's. The amount of the Capital Stock of the said Company is one hundred and twenty five thousand dollars, divided into twelve thousand five hundred shares of ten dollars each. The names of the Provisional Directors of the said Company are as follows:- William Pope, of Boston, in the State of Massachusetts, in the United States of America, Merchant; William Carroll Pope, of Boston, in the State of Massachusetts, in the United States of America, Merchant; And Henry Dorr Dupee, of Boston, in the State of Massachusetts, in the United States of America, Merchant. Dated the 5th day of June, A.D. 1885. William Pope, of Boston, in the State of Massachusetts, in the United States of America. Merchant; William Carroll Pope, of Boston, in the State of Massachusetts, in the United States of America, Merchant; Henry D. Dupee of Boston, in the State of Massachusetts, in the United States of America, Merchant; Lysander F. Babcock of Boston, in the State of Massachusetts, in the United States of America, Merchant; Irving A. Keans (?) of Boston, in the State of Massachusetts, in the United States of America, Banker; Alfred Markham of Markhamville, in the Province of New Brunswick, in the Dominion of Canada, Mining Engineer."

Royal Gazette - Nov. 13, 1889 Notice. Notice is hereby given, that the undersigned intend applying for Letters Patent, pursuant to the provisions of Chapter nine of the Acts of the General Assembly of the Province of New Brunswick, passed in the year of our lord one thousand eight hundred and eighty five, intituled An Act respecting incorporation of Joint Stock Companies by Letters Patent, for the incorporation of a Company for mining Manganese and other Ores, Minerals and Metals, and for the other objects hereafter set forth. 1. The proposed name of the Company is The Pope Manganese Company. 2. The objects for which incorporation of said Company is sought, are the buying, selling, leasing, owning, and managing of Mines and Mining lands, property and machinery, and the mining and selling of Manganese and other Ores, Minerals and Metals, and to do whatever may be necessary thereto. 3. The office and chief place of business of Company isto be established at Markhamville, in the Parish of Sussex, in King's County, in the Province of New Brunswick. 4. The amount of the Capital Stock of said Company actually subscribed is Seventy five thousand dollars. 5. The number of shares of the said capital stock is seven hundred and fifty, and the amount of each share is One hundred dollars. 6. The names, addresses and calling of each of the applicants are as follows:- Charles H. Converse, of Newton, in the State of Massachusetts, in the United States of America, merchant; William Pope, of Boston, in the State of Massachusetts, in the United States of America, merchant; Alexander Pope, of Boston, in the State of Massachusetts, in the United States of America, artist; William C. Pope, of Boston, in the State of Massachusetts, in the United States of America, merchant; Francis Ware, of Boston, in the State of Massachusetts, in the United States of America, merchant. 7. Charles H. Converse, Alexander Pope and William C. Pope, three of the above named applicants are to be the first or Provisional Directors of the said Company. Dated at Markhamville, in King's County, in the Province of New Brunswick, this sixteenth day of November, A.D. 1889. R.C. Skinner, Solicitor for Applicants."

URN: 0691 / LEGI / IDX_Names: Markhamville Manganese; Legislation, etc.;

Daily Telegraph - Oct. 23, 1891 Who Has The Right? - An Interesting Session of the Surveyor General's Court - Major Markham Wants Manganese. - Surveyor General Tweedie held court at Sussex yesterday, for the purpose of hearing evidence on certain applications made for licences to search for mines. One of the applications was from Mr. Alfred Markham, who applied for a licence to search a certain tract of land five miles square in which was included the manganese mines of the Pope Manganese Company and lands owned by John Lisson, Richard Lisson, Thomas Lisson,Thomas Williams and Thomas Crawford. The application was made under section 81 of the General Mining Act, which reads:- The surveyor general may upon application grant licenses to search, to be in force for one year from the date of application therefor, to enter upon any lands in the province not already applied for or under license or lease for mining purposes, and to dig and explore for such minerals other than gold or silver as the crown holds for the benefit of the province, a bond being first given to the surveyor general, with sufficient sureties to his satisfaction, that in the event of entry being made upon private lands, recompense shall be made for damages, in the manner hereinafter provided. The Pope Manganese Company had neglected to procure a license in association with the new law. Mr. C.N. Skinner appeared on behalf of the manganese company to resist the application. Hon. A.S. White and Mr. Geo. W. Fowler represented the other owners. Mr. J.R. Armstrong looked after Mr. Markham's interests. Mr. Skinner protested against Mr. Markham being granted a license to search the lands occupied by the company on the ground that it was now and had been for years used for mining purposes. Mr. Markham there upon withdrew his application in so far as it referred to land occupied by the manganese company, but pressed his claim for a license to search the rest of the tract mentioned in his application. The five owners, named above, were put on oath and testified that at times they had prospected and searched for minerals on their lands, and hoped to develop them themselves. Mr. Armstrong contended that all the exploring done by the witnesses didn't amount to much, and that the mines would never be developed if left to them. Mr. Fowler in reply claimed that the owner had the first right to a license. Section 41, relating to mines of gold and silver, which by section 81 is made to apply to mines other than gold or silver, reads as follows:- No lease nor any prospecting license, or license to search, shall authorize entry upon any buildings, or the curtilage appertaining to any house, store, barn or building reserved for ornament or under cultivation for growing crops or enclosed, except with the consent of the occupier or by license of the governor in council, authorizing such entry to be granted on special application setting forth the circumstances under which the same is applied for and on such terms as the case may require. The surveyor general will make his recommendations to the governor in council as to whether or not the license should be granted. Mr. James Byrne, owner of lands west of Smith's Creek, protested against Mr. F.W. Stockton being granted a license to search the aforesaid lands. This case was adjourned until Nov. 27th, at the Royal Hotel, St. John. Thos. C. Gue and Alban Van Meter applied for license to search certain lands in St. John county on the coast of the bay, the ownership of which was in dispute between Mr. Jas. Domville and Mr. Joshua Prescott. Mr. Prescott was on hand. He testified that he owned the lands, and that he had no objection to the

S.J. Daily Sun - Oct. 23, 1891 and Weekly Record - Fri. Oct. 23, 1891 The surveyor general's court was held Thursday last in the office of White, Allison & King to hear evidence in the matter of protests against the issuing ofmining licenses to Alfred Markham, F.W. Stockton and Theron C. Gue and A.C. Van Meter. Hon. Mr. Loggie was accompanied by T.G. Loggie of the crown land office. The persons protesting against the license to Alfred Markham were T. Crawford, Pope Manganese Co., John Lisson, Thos. Lisson, Richard Lisson, T. Williams and E.L. Price. Against license to F.W. Stockton - Alfred Markham. Against license to Messrs Gue and Van Meter - James Domville and Joshua Vernon. C.N. Skinner, M.P., appeared for the Pope Manganese Co.; J.R. Armstrong for A. Markham, G.W. Fowler for Thomas Crawford, John Lisson, Richard Lisson, Thos. Lisson and Thos. Williams. Mr. Van Meter represented Messrs Gue and Van Meter. The first case taken up was that of A. Markham. After some evidence was taken and much informaldiscussion by the lawyers on the many features of the mining law, Mr. Markham withdrew his claim for license covering lands held by Pope Manganese Co., thus ending this part of the case. The protests of Thos. Lisson, Thos. Crawford, John Lisson, Thos. Lisson and Richard Lisson were taken up. E.L. Price did not appear. J.R. Armstrong addressed the court, sustaining the claim for license to issue and was followed by G.W. Fowler against the claim. The case of Theron C. Gue and A.C. Van Meter was then taken up. The parties protesting were Jas. Domville and Joshua Vernon. The former did not appear. The latter stated that he would withdraw his objections on condition that the license should issue without prejudice to his lumbering rights, and accordingly it was ordered that it be recommended that the license should issue as prayed for, saving Mr. Vernon's fights. F.W. Stockton being temporarily absent from the province it was ordered that the hearing of the protests in this case should stand over until the 27th of November, after which the court adjourned. Much interest was taken in the proceedings these being the first contested cases under the new act which have been heard in Kings."

S.J. Daily Sun - Nov. 12, 1894 Mining Licenses. - Surveyor General Tweedie held court in the equity court room on Saturday to decide on three cases. The first was the complaint of A. Markham against the Pope Manganese Co. Mr. Markham complains that they have not complied with the mining laws, and since 1890 have not operated the manganese mines at Markhamville. Mr. Markham is the owner of the soil. C.N. Skinner appeared for the company. Mr. Markham was present on his own behalf. Mr. Skinner said the company would operate the mines by February next, or else they would vacate the license. Mr. Markham consenting, the surveyor general allowed the matter to stand until then."

URN: 0691 / LIME / IDX_Names: Markhamville Manganese; Lime - General;

Evening Gazette - Mar. 6, 1890 St. John limestone is the only flux used in the manufacture of charcoal iron at Katahdin, to which place it is carried by rail, as is also Sussex manganese. The iron when made is brought by rail to New Brunswick and Nova Scotia, where it is sold at $31 per ton. Now as we have the limestone here, and three or four miles inlength by about fifty yards wide of bog iron on the St. John below and in Fredericton, better than that of Katahdin, plenty of hardwood on the New Brunswick and Northern & Western railways for charcoal making, it seems absurd that we should be buying iron from Maine and paying $31 per ton for it, while we could make as good an article for $17 per ton and perhaps less."

URN: 0691 / X1 / IDX_Names: Markhamville Manganese; Grand Lake Coal;

S.J. Daily Sun - Jul. 25, 1888 (For the Sun). - The Manufacture of Iron at Saint John. - by Edward Jack. - It has been stated in a late paper that it is proposed to establish works at Halifax for the manufacture of iron and steel and that proposal includes the organization of a company to be called the Halifax Iron & Steel Manufacturing Company with a capital of $100,000 in 1,000 shares. Now as iron ore can be brought as cheaply by water to Saint John from the Bay of Fundy shores of Nova Scotia as it can be carried by rail to Halifax and as the harbor of Saint John is fringed with deposits of limestone some of which carry 98 per cent of carbonate of lime, it would seem that Saint John should even be a better place for iron manufacturing than even Halifax. I do not know whether there are deposits of coal anywhere in the vicinity of Grand Lake which arefree enough from sulphur to make coke fit for the reduction of iron from its ores. Only about one half of the sulphur disappears from the coal in the process of coking. Sulphur will be probably the only deleterious substance to contend with in Grand Lake coal as the coke made from it seems to be very firm and compact and capable of bearing the burden of ore. This is one of many other matters relating to our mineral deposits which should have been determined by our provincial governments, which without having reference to any particular persons or parties, have shown a most unaccountable apathy in bringing what mineral wealth New Brunswick has before those interested in such matters, so that those interested in knowing might have a distinct idea of what minerals we possess and their situation and character. The lime rock at the mouth of the St. John and the Grand Lake coal beds are surely worthy the cost and labor entailed in a careful investigation of their chemical constituents, and commercial uses and of the publication of the same in a small descriptive pamphlet to be accompanied by a sketch map. These suggestions are thrown out in the hopes that by arresting the eyes of the readers of the Sun, some future provincial government may be led to cause what is so necessary in this matter to be done. To return to the subject of iron. There is a bed of Brown Hematite situated 1 1/4 miles from the wharf at Old Barns, eight miles from Truro; the bed is seven feet wide; 500 tons have been hauled from it to Londonderry and there manufactured, so that it has been proved this ore can be placed on the surface at $1 per ton. The readers of the Sun can tell what it will cost to place it on the wharf at St. John. This ore is practically free from both phosphorus and sulphur, the former being as low as .021 per cent., the latter .015. The yield of metallic iron from the specimens which I found lying about the mouth of the shaft was 46.850. It is believed that the Brown Hematite ores at present being mined in the Lehigh valley will not average over 40 per cent. of metallic iron. For Tennessee, Georgia, Alabama and North Carolina the average is 43.2 per cent. I have seen more than 30 analyses of Alabama ores and find that none of them are so free of phosphorous as is the ore of this deposit. It is a Bessemer ore and there is abundance of manganese at Markhamville which could be brought cheaply to St. John to be used in the manufacture of Bessemer steel. For mixing with this Old Barns ore, rich specular ores could be brought from Nova Scotia or some of the Spanish ores so highly prized in Great Britain could be conveyed to the furnace in Spanish steamers which carry deals. Coal can also be brought from across the Bay of Fundy. The matter of iron reduction at St. John is one which requires a good deal of investigation and consideration. It seems to me that this investigation should be made at once, and I entertain no doubt but that a full and exhaustive enquiry respecting the adjacent beds of ore, coal and limestone will show that the city of Saint John is well adapted to be the centre of a great iron industry. It might be mentioned that a Swedish chemist and iron maker, a graduate of the famous university of Upsala, one who has had great experience in the manufacture of iron in America, wrote me that he found the Old Barns ore to be very easily reducible and that it was an excellent ore and free from

S.J. Daily Sun - Oct. 19, 1889 The Mines of Canada. - New Brunswick does not take a conspicuous position in Mr. Brumell's returns, but still makes a respectable showing. Here are the items with the values as far as the returns enables the New Brunswick product to be separated from that of the other provinces. Value Grindstones ... 3,793 tons $30,729 Coal ... 5,730 tons 11,650 Graphite ... 150 tons 1,200 Gypsum ... 44,369 tons 48,764 Plaster of Paris ...50,000 bbls 31,000 Manganese (exported) ... 1,181 tons 16,073 Building Stone ... 1,953 yds 19,680 Lime ... 440,225 bush 82,993 Bricks ... 5,064 m 32,294 The statement does not include granite, which for the whole Dominion is valued at $147,305. This may be a fair statement of the value of the rough stone but it is far below that of the polished granite produced in this province alone. The returns of lime produced in the province are evidently incomplete. The New Brunswick lime exports for the year are stated at $97,318, and the value produced was, of course, considerably larger. Adding to the $300,000 credited to New Brunswick by Mr. Brumell the value of granite produced, we find that the mineral product of this province is considerably

Moncton Daily Transcript - Oct. 2, 1888 The mineral possibilities of New Brunswick are greatly underestimated; and the time is not far distant when, as a source of wealth, they will be energetically developed. The statistics of output of minerals last year, are imperfectly collected, and no adequate conception of the output is at hand. The statistics collected by Mr. Eugene Coste, of the geological survey, such as they are we give. He places the mineral output in New Brunswick last year at the following rates: - Quantity ValueGrindstones... 3,582 tons $38,938 Arsenic... 100 pounds 4 Coal... 10,040 tons 23,606 Copper... 2 tons 200 Graphite... 300 tons 2,400 Gypsum, crude... 29,102 tons 29,266 Manganese... 939 1/2 tons 21,260 Granite... 6,289 tons 15,125Building stone (3 returns)... 6,871 cubic yards 52,901Lime... 478,410 103,463Brick, thousand... 6,476 43,454 -- Total value... $330,667 The estimate is altogether too low. The output of grindstones and building stone are absurdly low. The output of granite is placed at $15,125, whereas $100,000 worth is known to have been shipped to the western provinces. The matter is an important one, and the bureau of statistics should make some effort to

Kings County Record - Apr. 6, 1928 Mining Boom In Marrtown. - A correspondent writes the Record as follows. - As soon as the frost goes out of the ground, mining operations will start in Marrtown for silver, gold, and antimony. It is reported that some of the head officials of the mining company have already bought a tenement house near the mining grounds. There was much digging done last fall, to get samples of the ores which are reported to be of good test. Posts have been placed all along for several miles, beginning along the Queens County line and running through Marrtown and through the hollow between Keirstead Mountain and Snider Mountain, which takes in several hundred acres of land. These posts are all numbered and initialed. George Thompson, who has had a large amount of experience in mining in Ontario, was on the grounds and he says it is rich. It has been reported that it has the prospects of the largest mine of its kind in the Dominion. Marrtown may be a town as well as a name for a settlement."

URN: 0692 / IDX_Names: Marrtown;

Kings County Record - Aug. 24, 1928 Marrtown Copper Mines Visited. - Many Tourists Visit Mine Where Native Copper and Silver Ore Are Being Produced. - Property Has Recently Been Bought by Mr. Wildman. - Capt. Larder is Supervisor. - A large number from different parts of Kings and Queens counties, as well as many tourists from other parts of Canada and the United States, daily motor to Marrtown and visit the site of the Marrtown mines, where native copper and silver ore are being produced. The operations at present are being carried out on the farm formerly known as the Edward Long property, where the late Mr. Long many years ago managed a general store business. This property has recently been purchased by Mr. Wildman from Jas. A. Crawford. Many who are eager to visit the Marrtown mining district are not familiar with the roads leading to it, seem to experience much difficulty in finding where present operations are being carried out. Many go by way of Sheba, which lies by side with Marrtown, but is in Queens County, while as many go to Mountain Dale, owing to the name The Mountain Dale Mining Company, but with information from kind friends they finally reach their destination. The Marrtown valley lies about one mile off the trunk road from Keirstead Mountain or about six miles west of the Millstream Valley. A number of men are already employed by the company, under the supervision of Capt. G.S. Larder, of Sussex, who with his family have recently moved to that district. It is anticipated that several other new families are moving there in the near future."

Kings County Record - Jun. 10, 1932 Marrtown. - Four years ago a number of men spent the spring and summer months here prospecting, under the supervision of Capt. S. Larder, on what used to be known as the Edward Long property, where at that time the late Mr. Long conducted a general store business."

Royal Gazette - Jun. 22, 1887 Public Notice. The undersigned, hereby give notice that they intend to apply to the Lieutenant Governor for the issue of Letters Patent, for the incorporation of a Joint Stock company under the provisions of New Brunswick Joint Stock Companies by Letters Patent Act. 1. The proposed name of the Company is the The Belleisle Antimony Company. 2. The objects for which the incorporation of the Company is sought is the mining, reduction, preparation and sale of Antimony and Antimony Ores; the felling of Timber and Lumber, with such other things as are incident thereto. 3. The Office or principal place of business of the said Company is to be at Springfield, in the county of Kings. 4. The amount of Capital Stock of the proposed Company is to be fifty thousand dollars), to be divided into ten thousand shares of five dollars each. 5. The names of the applicants for such incorporation, with the address and calling of each, is as follows:- Name Address Occupation S. Crandall, Moncton, N.B. Gentleman. G.T. Martin, Philadelphia, Pa., Merchant. W.E. Danner, do. do. W.T. Galey, do. Manufacturer. Crawford Spear, do. Gentleman. That said S. Crandall, G.T. Martin, W.E. Danner, W.T. Galey, and Crawford Spear, will be the first or Provisional Directors of the Company. Dated 8th June, 1887. S. Crandall, G.T. Martin, W.E. Danner, W.T. Galey, C. Spear."

S.J. Globe - Jun. 24, 1887 and S.J. Daily Sun - Jun. 25, 1887 Belleisle Antimony Co. - S. Crandall of Moncton and G.T. Martin, W.E. Danner, W.T. Galey and Crawford Spear of Philadelphia, are applying for letters patent for the incorporation of the Belleisle Antimony Company, the object of the company being mining, reduction, preparation and sale of antimony and antimony ore, the felling of timber and lumber, with such other things as are incident thereto. The capital stock is $50,000, to be divided into ten thousand shares of five dollars each."

N.B. Reporter - Aug. 18, 1888 Antimony Mines. - Mr. Edward Jack has recently returned from a visit to Belleisle, Kings Co., where he has been inspecting a vein of antimony, which was discovered and could be traced on the surface for hundreds of feet. Mr. Jack thinks that the section of country between Scotch Corner and Goldings Landing is rich in deposits of this mineral. A number of American capitalists have taken hold of the vein which Mr. Jack inspected, with a

S.J. Daily Sun - Aug. 21, 1888 Philadelphia capitalists are interested in a find of antimony near Belleisle, Kings Co. It is thought the section is rich in antimony ore."

Weekly Record - Fri., Nov. 30, 1888 (quoting the Halifax Critic) Prospecting for antimony, at or near Cromwell Hill, in the county of Queens, N.B., has been suspended for the present. NOTE: Cromwell was the name for Stewarton - from P.O.

(1864-1918) run by George Cromwell."

Royal Gazette - Jul. 6, 1887 Notice of Granting Letters Patent. Public Notice is hereby given, that under The New Brunswick Joint Stock Companies' Letters Patent Act. Letters Patent have been issued under the Great Seal of the Province of New Brunswick, bearing date the sixth dayof July, A.D. 1887, incorporating Steadman Crandall, of Moncton, in the Province of New Brunswick, Gentleman; George T. Martin, Merchant; W.E. Danner, Merchant; W.T. Galey, Manufacturer, and Crawford Spear, Gentleman, all of Philadelphia, in the State of Pennsylvania, in the United States of America, for the purpose of the mining, reduction, preparation and sale of Antimony and Antimony Ore; the felling of timber and lumber, with such other things as are incident thereto, by the name of The Belleisle Antimony Company; with a total Capital of fifty thousand dollars, divided into ten thousand shares of five dollars each. Dated at the Office of the Provincial Secretary, at Fredericton, the 6th day of July, A.D. 1887 David McLellan, Provincial Secretary."

URN: 0697 / IDX_Names: Hampton Uranium;

S.J. Daily News - Jun. 5, 1869 The Norton Coal Mine - Mr. Edwin Frost left a tour office yesterday from the coal mine lately discovered by Mr. H. Baxter's farm, at Norton. It resembles anthracite coal, and although taken from the surface, is quite pure and bright. It is situated on the side of what is known as Norton Mountain, on the Northern side of the Kennebecasis River, and about three miles from Ossekeag Station. The coal was first discovered by a land slide from the side of the hill. There is every appearance of a large deposit of the article; and it also crops out on an adjoining property. We learn that the proprietor has made an arrangement with Mr. Hugh Davidson and others for the working of the mine, and we understand that operations will be commenced quite vigorously at once. The specimens may be seen at this office. -

Carleton Sentinel - June 12, 1869 Important discovery in Kings County. - We are informed by a correspondent that a kind of coal, or bituminous shale, has been found on the farm of Mr. Henry Baxter, of Norton, Kings County. It has been tested and found well adapted for the manufacture of oil. Those who have examined the spot say that there is any quantity there and Mr. Baxter has been offered a thousand dollars for the right of mining. This offer he has refused, and is now negotiating with a Company for a lease for a term of years - GLOBE."

Kings County Record - Oct. 1, 1953 New Areas in Kings County Attract Mineral Explorers As Hampton Sector Covered. - Many Claims Staked Around Hillsdale and Hammondvale in Recent Weeks. - All Parishes Included. - Property Owners Register Own Land To Keep Out Invading Hunters. - A search for metals which began quietly in the hills back of Hampton several months ago and brought a concentration of professional and amateur mining enthusiasts into the area a few weeks back, today has spread like an atomic cloud over almost all parts of Kings County. Everywhere hope is based on the finding of uranium, the base of atomic energy; but as the staking of claims spreads so that every parish in the county now is a possible mining centre, there ia a chance some of the more common metals may be found in commercial quantities. Geiger counters are the main equipment of the prospectors, but in many instances areas are being staked out with nothing more than hope to support the action. Investigation of mining possibilities will come later. Completely Staked. - The western half of Kings County is comparatively quiet now, because almost all land in the Kingston Peninsula and from the Kennebecasis through to the Belleisle has been claimed for mineral rights. Within recent days, the big search has swung to the Hillsdale-Hammondvale area, once the populous section of Kings County but now a quiet countryside where many deserted farms had laid in peace among the hills for years until the mining fraternity's invasion. Before the Hampton search became generally known, mining companies had sent working crews into the Kings- Albert border area to stake claims, but it is believed they were looking for base metals other than uranium. Privacy Wanted. - In some instances, owners of land are staking off their own properties and registering their claims in Fredericton. This has been done not only on farm and wood lots but in residential sections as a means of protecting property. The claim stakers have shown no consideration in planting their stakes, which in some cases have been placed in the front lawns of homes and summer cottages. One report says a Hampton resident has been unable to use the driveway of his home because their is a stake in the middle of it."

Kings County Record - Sep. 24, 1953 Uranium Exploration Company Organized. - New Brunswick's first uranium exploration company, Kingston Uranium, Ltd., with head office in Saint John, has been incorporated, it is announced in the Royal Gazette. Formation of the company follows announcement of discovery of uranium deposits in the Hampton area termed 'encouraging' by a mines department official and classified by an U.N.B. geologist as rating 'a program of exploration and development.' The Gazette announcement puts the capitalization of the new company at $4,000,000. Announcement that 270 claims of 40 acres each had been staked in the Hampton area sparked a rush of prospectors and engineers to the district, where an appreciable indication of radio-activity had been found for the first time in New Brunswick. The deposits are about three miles northeast of Hampton and half a mile from No. 2 highway, near an old shaft sunk 50 years ago in search for anthracite coal. The shaft was never put in full operation. Provisional directors of Kingston Uranium, Ltd., are J.H. Drummie, Q.C., and J.D.P. Lewin, Q.C., Saint John barristers, and Miss Mary A.

URN: 0697 / 0036 / IDX_Names: Hampton Uranium; Goshen Copper;

Kings County Record - Jul. 30, 1953 Metal Search Reported Near County Border. - The search for base metals in New

Brunswick again has been taken up in the Kings County area, it is learned from reliable sources in Sussex, with at least one company active in the Goshen area, along the border between Kings and Albert counties. Information reaching Sussex is to the effect that leases have been obtained on several properties in the area and that lines now are being run. It is understood a crew has been moved from the Bathurst mining development area to carry out this work. Further reports say there has been activity inrecent weeks in the sector behind Passakeag, and that claims have been staked there. No confirmation of either report could be obtained."

URN: 0697 / D7 / IDX_Names: Hampton Uranium; Kings County Coal;

Kings County Record - Jan. 28, 1954 Diamond Drills To Commence Uranium Search Next Week In Hills Of Hampton Area. - Confirmation of Geiger Counter Information to be Sought in Five Holes. - Noranda Active. - Big Company To Send Crew From Bathurst Development to Kings County. - Active exploration of uranium deposits in the Hampton area of Kings county will begin next week, it was announced in Fredericton yesterday. The announcement said further surface exploration and commencement of diamond drilling will take place on the property of Kingston Uranium Limited. Five drill holes will be selected in an area 1,000 by 1,000 feet, by Walter Sharpe, Toronto geophysicist. Noranda, one of the most famous names in Canadian mining, also is sending a crew to the area to do diamond drilling. The men have been working in the Bathurst area. In Old Mine The Hampton sector became the centre of miner's interest late last summer, when news leaked out that an amateur geologist, Roger Huntziker, had foundradioactivity in an abandoned coal mine in the hills behind Hampton. Prospectors from many parts of Canada converged on the area, and before their work was completed almost all the land between the Kennebecasis and Belleisle rivers as far east as Norton had been staked and claimed. Later the search extended to other parts of Kings County, with great emphasis being placed on the hills behind Hammondvale and around Londonderry, as well as in the Goshen section along the border of Kings and Albert counties."

URN: 0697 / E2 / IDX_Names: Hampton Uranium; Oil and Gas - Kings Co.;

Kings County Record - Sep. 3, 1953 Hills Near Hampton Attract Miners' Interest as Stakers Scour Section for Uranium. - Dave Coleman Farm on Ravine Road Centre of Hunt For Wealth. - Shiretown Booms. - Merchants and Restaurant Owners Kept Busy as Movement Shows Increase. - Kings County's rugged hills, focal points in searches for base and precious metals periodically since early in the century, and kicking off places for oil drilling exploration five years ago, today are being overrun with ambitious prospectors who hope to find the magic uranium. In the hills back of Hampton, on the farmland of Dave Coleman, the latest prospecting rush is gaining momentum after weekend announcements that evidence of uranium had been found there. Meanwhile Mr. Coleman is watching developments calmly as those who hope to get rich quickly stake claims on his Ravine Road farm. To him, it means right now that two sons of his are working for claim stakers and are receiving $7.50 a day for their efforts. The fabulous wealth is problematical; the $7.50 per day is factual. Limited Information. - Just what the find between the Kennebecasis and Belleisle rivers will produce in uranium of marketable qualities remains to be seen. Only a small bit of information can be gained by the geiger counter toters patrolling the land now. Some of the prospectors appear to be quite enthusiastic about the possibility of a mining development ensuing. Others are more inclined to caution in their statements. But their numbers are growing daily, and if there is any radio-active mineral in the area it will set someone's ears buzzing as the search extends to surrounding sectors. Some of the prospectors are professionals employed by leading Canadian mining and exploration companies. Others are amateurs who hope they will strike something which will relieve then of the necessity of daily financial worries. ... Reports in the shiretown said a Newcastle Bridge man, Roger Hunziker, first stumbled upon the radioactivity of the area and began quiet investigations. Later the mining fraternity learned of his work and a rush began. In addition to the work being done in the Hampton area, several other sections of Kings and adjoining counties have been staked off in recent weeks for possible mining development. Shell Exploration New Brunswick Limited drilled test holes at Urney and Apohaqui for the Shell Oil Company about five or six years ago and although no announcement of oil finds were made, there have been persistent rumors that the search was not entirely wasted, and there remains the possibility of further exploration work near Sussex and in other parts of southern New Brunswick."

URN: 0705 / IDX_Names: Tantramar Copper;

Chignecto Post - Jul. 13, 1882 Mining Explorations.- Sir:- While the Moncton Times and other papers are howling that Sir Albert Smith never invests his money in industries to help the country, they have not done him the justice to note investments he has made in this settlement. It is only creditable to him to say, notwithstanding the task he undertakes to seeking out and prosecuting the parties who were guilty of bribery and corruption at the late election he found time on Saturday to visit this settlement to search out a gold mine! Sir Albert appears to have had private information as to its existence. It is reported he was disappointed it had not opened on 20th of June, as had been arranged. It is understood the lead extends from Mr. W.H. Cook's, past Mr. Harley Sears', to Mr. Herbert Richardson's. Probably all the machinery used in Jolicure hole will be required to get at the bottom of the pockets. With the modesty of the true discoverer, Sir Albert did not seek public attention by travelling here by the direct main post road through Sackville, but reached the region of the supposed deposits by way of Memramcook, Bonum Gould Settlement, Beech Hill and Aboushagan Road. One hopes his explorations for treasure will not divert him from the object of his highest ambition, viz: to put down bribery and corruption in this country. Yours, Cookville Voter"

URN: 0707 / IDX_Names: Dawson Settlement;

S.J. Daily Sun - Jul. 25, 1887 and Daily Times - Jul. 26, 1887 A Wonderful Deposit. - Albert county, New Brunswick, is one of the richest mining sections in the maritime provinces, and will yet take a front rank among the mineral producing belts on the Atlantic coast. Now that ship building and lumbering no longer make adequate returns for the capital expended, the people are turning their attention to the development of the rich mineral resources which nature has so lavished upon them. Among the most recent is that of a deposit of pulverized manganese, which is estimated to contain at least five hundred thousand tons. The deposit is located in what has hitherto been regarded as a bog, and has evidently been washed from the adjoining hill; the manganese is mixed with decayed vegetable matter, which, it is thought, can be driven off by fire, without any injury to the mineral. Several test have been made, which prove that the deposit contains from forty-one to forty three per cent. of pure manganese, and if this proves correct, the owners of the property, most of whom live in Hillsboro, N.B., must realize a handsome sum from their property. The cost of mining this deposit cannot be great, in fact a pick will seldom require to be used, as the material, which lies loosely on the bed rock, can easily be shovelled into carts and carried away. Tests have been made as to the depth of the deposit, which shows it to vary from 12 to 18 feet, and according to a calculation made by a competent authority, there cannot be less than half a million tons on the property. The owners are not yet certain whether the manganese will have to be separated by the application of acids, or whether it can be secured by destroying the vegetable matter with which it is supposed to be associated. In either case the profits will be large, but if the second method can be employed, the property will prove a veritable bonanza. - Halifax Critic."

Moncton Daily Times - Feb. 28, 1888 Dawson Settlement. - I have heard nothing of the manganese mine for some time, but am of the opinion that if nothing is done the coming spring there is not much in it."

Chignecto Post - Apr. 10, 1890 The manganese mine at Dawson Settlement, Albert Co., has been sold, and the first installment of $5,500 has been paid."

Moncton Daily Transcript - Aug. 15, 1890 The Manganese Mines. - Preparatory Work in aForward State and Actual Operation Near. - Mr. Stephen G. Day, has been in the city for the past few days in connection with the preparatory work for operating the manganese mines at Hillsboro. The mines have been sold to the Crimora Manganese Mining Co., and are to be worked by Messrs. Stephen G. Day and W. Andrews, of New York, who have the contract for getting out and preparing the ore ready for market. The Crimora Mining Co. is not a company gotten up specially to operate the mines near Hillsboro, but have extensive works at Crimora, Virginia, and have simply purchased these mines as they might purchase any other manganese mining property. It is not a speculation, but an actual business enterprise conducted by a firm having its business associations long and well established. Work Done in Moncton. The Record Foundry & Machine Co., have undertaken the work of casting the plates required for the large ovens used in drying the manganese, and the contract embodies some thirty tons of castings. The work is being expeditiously done by the firm and their moulding room presents a busy scene. The Contractor Interviewed. Mr. S.G. Day, who was seen by a Transcript representative last night said; 'Yes, the preparatory work is being rapidly pushed on; and as soon as the spur line is built we will commence operations. The mines which are located about six miles from Hillsboro and within two miles of the Salisbury and Harvey railroad are owned by the Crimora Manganese Mining Co., and the firm of Day & Andrews of which I am a member have the contract for quarrying the manganese and preparing it for market. It is proposed to build a spur line to the mines and as soon as the branch is built we will commence to ship to the United States all the way by rail. In the future we may arrange to ship by water from Gray's Island, but not at present. Our shipments, however, will be made all the year round. 'Three drying kilns have been erected by us. They are double drying ovens, 6 x 50 feet long with a minimum capacity of fifty tons of dried ore per day.' In further conversation Mr. Day said there was no duty imposed on manganese ore when imported into the United States. The capacity of the mines near Hillsboro was large and the ore of fair average quality. Manganese was employed in the manufacture of paints and cements and also in the process of manufacturing steel, and was in good demand when quality was forthcoming."

S.J. Globe - Aug. 16, 1890 Manganese. - The Moncton Transcript gives some details of the work now doing at Hillsboro in regard to operating the manganese mines. The mines have been sold to a New York Company represented by Messrs. Stephen G. Day and W. Andrews, who intend to operate them for the ore, and the Record Foundry, at Moncton, to making the drying fountain and other apparatus. There is no duty on manganese in the United States, and there is quite a demand for it in that country."

Moncton Daily Transcript - Aug. 23, 1890 The Crimora Manganese Mining Company, has obtained for its bake oven near Hillsboro, between forty and fifty tons of castings from the Record Foundry & Machine Co. The contractors sent a shipment around by rail to Hillsboro and another by road. It was found that the charges by rail were so excessive that the old fashioned method of teaming would only cost half as much. As a consequence four or five teams a day are being loaded up at the foundry in Moncton. And this is the age of railways."

URN: 0707 / IDX_Names: Dawson Settlement;

S.J. Daily Sun - Jul. 21, 1890 and Daily Times - Jul. 22, 1890 The Albert Railway and Manganese. - Mr. Harmon, of the

National Improvement Company, came to St. John Saturday evening from Hillsboro. He is in New Brunswick in connection with the Albert railway transfer. Mr. Harmon fully expects that the difficulties which have arisen over the matter will soon be settled and that the road will be taken over at an early day. Preliminary steps have been taken in the location of the branch road to the manganese deposits which the company has acquired. The junction with the branch will be at or near Stony Creek station, between Hillsboro and Salisbury. This manganese is about two miles from the main line. The company propose to begin extensive mining operations, and carry them forward simultaneously with the construction of the branch line. It is believed that Mr. Harmon will be the permanent local agent of the national improvement company. He claims that the manganese is of a very rich quality. It is proposed to erect furnaces and other drying plant to extract the moisture from the ore on the grounds. The travelling company will be pleased to learn that the main line will be speedily put in good

Moncton Daily Times - Mar. 31, 1890 Hillsboro. - Mar. 28. - It is now stated on good authority that the manganese mine at Dawson Settlement, has been sold to an American company and that operations will commence in the spring. The price stated is $11,000."

Moncton Daily Transcript - May 15, 1890 Dawson Manganese Mine.- The American owners of the manganese mine at Dawson, A.C., are preparing to commence work. They will build a branch railway about 1 1/2 miles long to the Albert line and employ about 200 men and quite a number of teams."

S.J. Evening Gazette - May 16, 1890 The purchasers of the manganese mine at Dawson, Albert Co. have decided to commence work at once. The managers of the company are here, and are procuring men and teams and making preparations for active operations. They will employ about 200 men."

S.J. Daily Sun - May 17, 1890 Manganese in Albert County. - A Dawson correspondent writes to the Maple Leaf: The purchasers of the manganese mine have decided to commence work at once. The managers of the company are here, and are procuring men and teams and making preparations for active operations. They are making arrangements for the building of a branch railway about 1 1/2 miles long to connect the mine with the Albert line. When the work gets fairly started the company will probably employ about 200 men and quite a number of teams. This together with the smaller amount of work furnished by the Albert manufacturing company will make times quite lively in the parish of Hillsboro."

Chignecto Post - May 22, 1890 The owners of the Dawson manganese mine are making arrangements for the construction of a line 1 1/2 miles from the mine to the Albert Railway. When in full operation the mine will employ about 200 men."

Moncton Daily Transcript - Sep. 15, 1890 and Daily Times - Sep. 16, 1890 The New Manganese Mines.- Mr. Richard Dawson, of Dawson Settlement, has the contract for building the two- mile spur from the Stoney Creek station of the Albert Railway to the Crimora Company's manganese mines in the parish of Hillsboro. A gang of about thirty men are employed on the work, which was commenced a fortnight ago and expected to be completed within two months. The spur is said to be fairly easy of construction. Mr. D. Dickson, of Moncton, is roofing with sparham the buildings over the kilns at the mines. The parties who have contract for opening up the mines are at present in New York."

S.J. Daily Sun - Sep. 17, 1890 The New Manganese Mines. - Richard Dawson, of Dawson Settlement, A. Co., has the contract for building the two-mile spur from the Stony Creek station of the Albert railway to the Crimora company's manganese mines in the parish of Hillsboro. A gang of thirty men are employed on the work, which was commenced a fortnight ago and expected to be completed within two months. The spur is said to be fairly easy of construction."

Chignecto Post - Sep. 18, 1890 The work on the spur line from the Albert Road to the Crimora Co.'s manganese mine is progressing favorably. About 30 men are at work."

Albert Maple Leaf, Page 3 - Thursday, July 9, 1891 DAWSON DOINGS - The work of the manganese mine is not in a very flourishing state at present. The only man employed is Wm. Osborne, who serves as a watchman."

Moncton Daily Times - Jul. 16, 1891 Dawson, A. Co. - Work in the manganese mine here is for the present suspended. It is supposed, however, that some of the managers will soon be here when operations will be resumed."

Moncton Daily Times - Jun. 4, 1891 Manganese Mine. - Mr. Harmon has returned to Albert Co. and has resumed work in the manganese mine at Dawson. The workmen are not as numerous as they were last year, but it is hoped that ere long he may put on a full force."

URN: 0707 / IDX_Names: Dawson Settlement;

Daily Telegraph - Jun. 8, 1891New Manganese Mine. - The National Improvement Company of New York are developing a manganese mine in Dawson Settlement, Albert county. Six men are at work getting out ore, samples of which have been sent to Chicago and Philadelphia, and been pronounced first class. During the past week seven carloads of the ore have been forwarded to the places named. The company are hopeful that the product of the mine will prove equal to the samples, in which case operations will be carried on extensively, and the daily output will amount to about 50 tons per day. The same company owns the Albert Railway."

Moncton Daily Times - May 21, 1891 The manager of the manganese mines is expected to open operations in connection with the mine at Dawson Settlement."

Moncton Daily Times - Mar. 15, 1892Dawson. - William Osborne is still watchman for the Crimora Manganese Mining Co. Nothing has been done at the mine this winter, but it is quite generally believed that the work will re-open in the spring or early summer."

Daily Times - Nov. 30, 1892 Mr. Vanmeter, of the manganese mine, returned from Moncton yesterday. He will continue to prosecute the"

Daily Times - Oct. 25, 1892 Mining operations in this county are still in a flourishing condition. Mr. Harmon of the Dawson Settlement Manganese Works is expected here in a fortnight to repair the works at Dawson. Mr. Frederick Steeves is busily engaged in the Baltimore Shale Works"

S.J. Daily Sun - Mar. 17, 1893 Albert Co. - Hillsboro, March 14. - ...... It is reported that the Manganese mines on the Dawson Settlement branch of the railway are to be worked this summer."

S.J. Daily Sun - Dec. 31, 1894 A Manganese Case. - The American Manganese company, a Carnegie corporation, has been mulgt to the extent of $13,500 as damages by the circuit court of Albermarle county, Virginia, at the suit of the Virginia Manganese company, whose president is C.H. Harmon, who will be remembered in New Brunswick as the gentleman who came to Albert county, opened up a deposit of bog manganese near Salisbury, and who afterwards bought the Albert Railway. It appears that the Carnegie company leased the Virginia mine for eight years on a royalty of $2 a ton. The lease expired in May, 1882, and statement is made that the Carnegie company realized a profit of $1,200,000, which is an absurd statement. A Sun man visited this mine a few years ago and knows that no such profit, or even half of it, was made by the Carnegie company during their eight years' lease. The verdict secured by the Virginia Co. was for alleged damage to the mine before passing it back to the owners at expiration of the lease. The Carnegie company have appealed to a higher court and the case is expected to come up again."

Moncton Transcript - Mar. 17, 1894 Notice is given in the Royal Gazette that on the petition of Wm. Osborne, a creditor, Judge Landry had ordered the seizure of all the estate of the Crimora Manganese Company, an absconding debtor. The company was incorporated in Virginia and did business at Hillsboro."

N.B. Reporter - Nov. 11, 1896 A syndicate of New Yorkers have had experts and surveyors at work near Hillsborough, and have discovered a vein of manganese 15 feet in thickness and extending over 17 1/2 acres. The syndicate will set to work at an early date."

Weekly Record Fri., Aug. 6, 1897 The Mineral Products Company, composed principally of New York capitalists, are developing the manganese mine located in Albert County, near Hillsboro, on an extensive scale. Work was commenced this season and at present time between 30 and 40 men are employed. The Salisbury-Harvey railway has just completed a branch railway of one and three-quarter miles, in length, to the mine, and the former company are putting up new buildings at the mine, and setting in new machinery. The steel smelting works at Ferrona, N.S., have been leased for one year by the company, and it is expected that the shipment of ore in brick form to Ferrona will be commenced in about a month's time. The shipment of ore and manganese will give considerable business to the S. & H. and I.C.R. railways."

Weekly Record Fri., Jul. 23, 1897 and Dorchester Spectator Jul. 24, 1897. The Mineral Products Co., which is operating in Albert Co. on the extensive bed of manganese at or near Dawson Settlement, A. Co., are preparing for vigorous work. Lately a huge cylinder for drying purposes passed through Sussex for the works. This company propose to manufacture this manganese into bricks and utilize them in connection with the Badgerville Charcoal Iron Works in N.S., which they have recently purchased or leased. The manager of the company, a Mr. Hoyt, of New York, is evidently a hustler and the working of these two products will cause the circulation of considerable money in both places."

URN: 0707 / IDX_Names: Dawson Settlement;

Daily Times - Jul. 29, 1897 Manganese Mining at Hillsboro. - The Salisbury & Harvey railway management has just completed a new branch railway to the manganese mine near Hillsboro, a distance of one and three-quarters miles. The Mineral Products Company are putting up new buildings at the mine, and getting new machinery in order and expect to be ready to ship ore in brick form in about a month's time. The company has leased the steel smelting works at Farrona, N.S., for one year, where the ore is to be shipped and smelted and made ready for shipment. The shipment of the ore and manganese means considerable business for both the Salisbury & Harvey railway and the I.C.R. The traffic on the S. & H. railway will probably be almost doubled as a result of the operation of the Hillsborough manganese works. The Mineral Products Co., who started operations this spring, now employ between 30 and 40 men. Messrs. R.P. Hoyt and M. Langdon, of New York, are general manager and superintendent respectively of the works."

Gazette - Jul. 29, 1897 Manganese. - The Pictou Charcoal Iron Company have given a lease with option to purchase their blast furnace and plant at Bridgeville to the Mineral Products Company, whose manager, Mr. Hoyt, intends operating the deposit of bog manganese near Hillsboro, Albert co."

Moncton Daily Times - Nov. 30, 1897 Dawson Settlement. - The Mineral Products Co. of New York have about finished their building for the drying of manganese and will start drying about the first of December. J.W. Steeves had his hand badly mangled by getting it caught in an elevator at the Manganese works here. Mr. Steeves will be unable to work for

Moncton Daily Times - Aug. 2, 1898 and Daily Telegraph - Aug. 3, 1898 The Mineral Products Co. of Hillsboro shipped four more carloads of manganese to the smelting works at Bridgewater, N.S., last week."

Weekly Record Fri., Jan. 21, 1898 A shipment of the briquettes put up by the Mineral Products Company of Albert Co. is being made to Great Britain via the Steamer Lake Winnipeg. These bricquettes are the product of the bog or powdered Manganese deposits that are so extensive in Albert Co. and bids fair to develop into a very large and profitable business."

S.J. Daily Sun - Feb. 24, 1898 Hopewell Hill - Russell P. Hoyt, manager of the manganese mine at Dawson Settlement, has taken out twelve new mining leases in different sections of the county."

Daily Sun - Jan. 19, 1898Hopewell. - At the Saw Mill Creek manganese mine, a night or two ago, a mass of conglomerate rock and earth weighing several tons fell from the roof of the main tunnel into the perpendicular shaft the workmen have recently begun to sink. Had the fall occurred during working hours the men would have been buried alive.Recent reports from Dawson settlement state that operations at the bog manganese mines are being materially curtailed this winter. It is also said that the apparatus used in compressing the material into bulk is not giving as satisfactory results as were

Moncton Daily Times - Jul. 18, 1898 and N.B. Reporter - Jul. 20, 1898 Hillsboro Manganese Works. - The first shipment of manganese from the Hillsboro manganese mine this season was made last week to Bridgewater, N.S. Four carloads of the raw material were shipped to the company's smelting works at Bridgewater."

Moncton Daily Times - Jul. 26, 1898 Manganese Shipments. - The Mineral Products Co. shipped three carloads of manganese brickettes from their mine near Hillsboro yesterday to the company's smelting works at Bridgewater, N.S. The mill at the mine is running night and day at the present time."

Daily Telegraph - Jul. 27, 1898 The Mineral Products Company, of Hillsboro, shipped three more carloads of manganese brickettes from the Hillsboro mine to Bridgewater, N.S. where their smelting works are located. The mill at the mine is now running night and day."

Moncton Daily Times - Jun. 20, 1898 Hillsboro Manganese Works. - Mr. John P. Weir has returned from Hillsboro where he has been engaged the last two weeks in making repairs to the machinery at the manganese mine. The works, which are partially closed down on account of the accident to the press, have been started up again. The repairs required skilled workmanship, and Mr. Weir has done the work to the entire satisfaction of the management."

Moncton Daily Times - Jun. 29, 1898 Dawson. - Things are not going very smoothly at the manganese works here. Operations are again suspended on account of another break in the press and also some damage to the dryer. The building was seriously threatened with fire during one of the recent windy days. Sparks from the smoke-stack of the engine set fire to a large pile of wood near the building. An alarm was raised and plenty of help was soon on the ground but it was several hours before the fire was completely extinguished."

N.B. Reporter - May 4, 1898 The Hillsboro News says Mr. Hoyt intends beginning operations at Dawson early in May. If the war goes on between Spain and the United Sates, the demand for manganese will be greatly increased."

URN: 0707 / IDX_Names: Dawson Settlement;

Moncton Daily Times - May 18, 1898 Dawson Settlement. - Mr. Hoyt begins mining operations at the manganese mine this week. He will employ twenty-five or thirty men, and if he decides to work at night the force will be doubled."

Moncton Daily Times - May 21, 1898 Hillsboro Manganese mine. - On account of an accident to some machinery the manganese mine at Hillsboro will be closed down for a week for repairs. The repairs are being made at J. Weir & Sons machine shop."

Moncton Daily Times - Nov. 7, 1898 Dawson. - The Mineral Products Co. are running their manganese factory here regularly day and night. They have just added a building 30x100 for storing ore for winter use. An elevated road connects this building with the ore deposit so that the material is dumped from the car without further handling. It is to go through the drying and pressing process. The place of operation presents quite a busy appearance at present."

Moncton Daily Times - Nov. 14, 1898 Manganese Test. - A test of the manganese mined by the Mineral Products Co., at Hillsboro will be made at the R.F. & M. Co.'s works this morning. Mr. M.P. Hoyt, manager of the company, and Mr. Wm. Mollins, Hillsboro, are at the Brunswick and will witness the test which will be the first made on a large scale."

Moncton Daily Times - Nov. 16, 1898 Manganese Test. - Mr. Hoyt, manager of the Hillsboro manganese mine, is very much pleased with the results of the test of ore being made at the R.F. and M. Co. foundry, which have been satisfactory in every respect. About two tons were melted yesterday and a further test will be made today."

Weekly Record Fri., Nov. 25, 1898 Mr. Hoyt, manager of the Hillsboro manganese mines is very much pleased with the results of ore being made at the R.F. and M. Co. foundry, which have been satisfactory in every respect. About two tons

Moncton Daily Times - Sep. 1, 1898 Dawson. - John Forsyth, who got his right hand badly injured in the press at the Manganese works three or four weeks ago, is now quite recovered from the accident with the exception of some soreness of the hand which was badly mangled. He lost the fore finger only."

Moncton Daily Times - Sep. 21, 1898 Hillsboro Manganese Mine. - Mr. Wm. Mollison of the Mineral Products CO., Hillsboro, who is at the Brunswick, informs the Times that the manganese works at Hillsboro are now running night and day. Last Friday and yesterday 100 tons of ore were shipped to the smelting works in Nova Scotia."

Moncton Daily Times - Aug. 25, 1899 Hillsboro. - Dr. Ward, of New York, is spending a portion of his vacation in Hillsboro, the guest of R.P. Hoyt. Dr. Ward, is one of the stockholders of the Mineral Products Company."

Daily Times - Aug. 29, 1899 Sale of Ferro Manganese. - It is reported that the Mineral Products Co. of Hillsboro on Saturday made a sale of all the manufactured manganese at the Bridgeville, N.S., smelting works, the amount realized being $50,000. At present a test of several tons of the raw manganese as it comes from the mine, is being made at J. Weir & Son's foundry here, the object of the test being to do away with the cost of making the mineral into brickettes for shipment to the smelting works. Mr. Hoyt, manager of the works, Dr. Ward, secretay of the company, and Mr. Fritz Glem, superintendent of the smelting works at Bridgeville, have been watching the test, which it is believed will be satisfactory."

Semi-Weekly Telegraph - Aug. 30, 1899 A Big Manganese Order. - Moncton, Aug. 28. - Are presentative of the Mineral Products Company operating the manganese mine at Hillsboro informs your correspondent that the company on Saturday closed an offer of $50,000 for ferro manganese on hand at the company's smelting works at Bridgeville, N.S. The company at present is testing several tons of the raw product at G. Weir & Sons machine shop here with a view to doing away with making it into brickettes for shipment to the smelting works."

Gazette - Aug. 30, 1899 The Mineral Products Co. of Hillsboro has disposed of all the manganese on hand at the smelting works at Bridgeville, N.S., the transaction reaching about $50,000. Experiments are now being carried on here to test the practicability of doing away with the making of the manganese into briquettes for smelting, in connection with which considerable difficulty has been experienced."

Moncton Daily Times - Dec. 1, 1899 Mr. Russell P. Hoyt, manager of the Hillsboro Products Co., left on the C.P.R. yesterday for New York, to be absent about ten days."

S.J. Daily Sun - Jul. 1, 1899 David Dickson of the Mineral Products Company of Hillsboro is in the city. The concern is getting out from 90 to 100 tons of wad manganese per week, which is being sent to Bridgeville, N.S., where it is converted into ferro manganese. The stuff is then shipped to the United States and Great Britain for use in the manufacture of steel."

URN: 0707 / IDX_Names: Dawson Settlement;

Moncton Daily Times - Jul. 22, 1899 Manganese Mining. - Manganese property appears to be commanding a good deal of attention just now among mining capitalists. It is understood the Mineral Products Co., of Hillsboro, has a man inspecting some new properties in this vicinity. Manganese has increased in value of late."

Daily Sun - May 6, 1899 The Mineral Products Co. of New York, now operating the manganese mines at Hillsboro, N.B., have for several months past given employment to about 50 men. The mine turns out ore equal to about ten tons of the pressed briquettes every twenty four hours. The ore is first taken from the mines, passes through the drier and is then pressed into hard briquettes. In this state it is shipped by rail to their blast furnaces at Bridgeville, N.S."

Moncton Daily Times - Oct. 26, 1899 Hillsboro. - Mr. R.P. Hoyt, manager of the Mineral Products, has moved his office to Moncton. We regret having Mr. Hoyt leave us, but having purchased mining property in other sections of the province, Moncton is a more suitable location for his central office."

Moncton Daily Times - Oct. 27, 1899 Removed to Moncton. - Mr. Russell P. Hoyt, the popular and well known manager of the Mineral Products Co., of Hillsboro, has removed his office to Moncton and will make this his headquarters in future. A splendid suite of offices have been fixed up on the Brunswick Hotel premises for the winter and Mr. Hoyt and his staff will be found here in future. The offices consist of ageneral office and manager's private office and have been beautifully furnished and provided with all the modern conveniences requisite for comfort."

Daily Times - Sep. 21, 1899 Manganese Exhibit at St. John. - An interesting exhibit at the St. John exhibition is the display of manganese made by Mr. Russell P. Hoyt, manager of the Mineral Products Co., of Hillsboro, A. Co., which was awarded first prize as being the best exhibit of manganese ores. The Sun, speaking of the exhibit says: Among the economic minerals and ores of Canada is a comprehensive showing by the Mineral Products Co. of Bridgeville, N.S., showing wad manganese in its natural condition, dried, made into briquettes, the manufactured spiegal and ferro-manganese. The company has its furnaces at Bridgeville, N.S., but the wad manganese deposit is at Hillsboro, Albert Co., N.B. A very large amount of money has been invested by this company, which is conducting its operations on the latest scientific lines, with the most flattering prospects of scientific financial results. Two photos, showing the Bridgeville works and the Hillsboro deposit, are exhibited with the samples of products."

Daily Times - Apr. 25, 1900 Mineral Products Co. - A paragraph in last Friday's Times, alleging non payment of bills by the Mineral Products Co., at Sussex, seems to have been considerably misleading. The item was taken from the Sussex Record and was a little premature to say the least, as it is understood cheques have been issued by the Mineral Products Company to liquidate all their liabilities at Sussex and operations will be continued at that point. The company, it is said, has an order for forty tons of ore a day from the Sussex property, but this amount cannot be mined with the present

URN: 0707 / IDX_Names: Dawson Settlement;

Daily Sun - Dec. 10, 1900 The Ferro-manganese Works And Tax Exemption. - The subject of the concessions to be offered by the city to the proposed ferro-manganese industry may be discussed as an abstract proposition, or as a practical question of business. It is urged, in a plausible way that this industry should not be treated better than any other now established among us. This argument supposes that the ferro industry is either here or compelled to come here, and that the city has only to choose whether to collect ground rents, civic taxes and water rates, or to grant the exemptions. When we say that the Mineral Products company, or any other company, preparing to establish a new industry among us, has no more right to exemption than a factory on Union street, or a warehouse on Water street or a shop on King street, we may be stating a profound truth. But it is an equally profound truth that the persons who wish to establish the proposed industry have a right not to come to St. John. They are free to make such terms as they can in another place, or to refrain from establishing their works at any point. Acting within their rights they may offer to come here on certain terms. Acting within its rights the city can either accept these terms, or try to make better ones, or allow the promoters to go elsewhere. The company does not propose to come here for the benefit of the city, but for the benefit of the stockholders, who are not St. John men. on the other hand, if the city council makes certain concessions, it will not do so because it wants to make the stockholders rich, but because the city hopes to reap an advantage not otherwise to be got. There is on either side any question of benevolence. It is purely a business proposition all round. As to the land. Can the city lease it at a substantial rental to this company, or any other which will establish an equally important industry? If so, the land should not be given away. If not, there is the question whether the land should be left vacant or whether a quarter of a million dollars shall be spent on it, and 250 tax paying families be added to our population. As to ordinary tax exemption. The question is whether we shall select a certain new industry and offer it this inducement to come here, or whether we shall treat all industries alike and wait for the new ones to come on those terms. It seems certain that no existing taxpayers will have to pay more taxes because a temporary exemption is given to a new enterprise such as does not exist in this country. We do not perceive any great rush of new industries in this direction. The water tax exemption is a somewhat different proposition. If the company uses a large quantity of water and does not pay for it, there will be an additional burden on the other properties. The exemption will, so far as it goes, be a cash bonus, and should be treated as such. The citizens might be willing to pay it for the sake of promoting an enterprise of great importance and value, and one which may be the fore- runner of a group of iron-working industries. It is probable that the citizens would be willing to go a long way in encouraging the erection here of a great shipbuilding plant such as is mentioned in connection with the Sydney works. But there should be a perfect understanding of the question involved and of the nature of the precedent. All taxes may be regarded as payments for general services, but a water tax is directly and unquestionably a payment of services performed directly and personally for the individual who pays. If the company uses salt water for cooling, and city water is only required for steam purposes, the value of the water tax exemption would be less than the other exemptions. It is said that an engine of 500 horsepower is required. The authorities state contemplated. The authorities state that such an engine running day and night would require 42,000 gallons of water every twenty four hours. This is about the quantity used by thirty average families. Supposing the water to be taken 365 days in the year, the quantity used would be 15,330,000 gallons. Manufactories, hotels and other establishments which are supplied by meter pay $10 for the first 100,000 gallons, and one-half cent per 100 gallons for all over that quantity. They also pay $24 a year meter rent. Applying this rate to the quantity required for the 500 horse power engine, we find that the works would pay $795 a year. The tax exemption on a $250,000 plant, to say nothing of the stock of produce and material on hand, would be nearly $4,000. It does not appear that the water rate should stand in the way of the establishment of the enterprise. If other things were made satisfactory by the city the company would be calculating rather closely if this were made a final obstacle."

Daily Sun - Dec. 20, 1900 Letter From M. Lodge. - His Connection With The Mineral Products Enterprise. - Moncton, N.B., Dec. 17th, 1900. - Editor Times: On my arrival home from New York today, I notice in your issue of Dec. 17th a letter signed by 'The Mineral Products Co., Russell P. Hoyt, General Manager,' in which he refers to me and says that I am not in any way connected with his company. I feel that the unwarranted squib of Mr. Hoyt requires some explanation. I may state that I have never claimed to be in any way connected with his company, in fact, I have explained to several parties asking me the question, that I was not. I certainly have been at all times interested in the welfare of Mr. hoyt's company, but only as a citizen of moncton and province of New Brunswick, and when occasion offered have endeavored in my humble way to say a good word for them and help along an industry which, I am convinced, has been and will be of great advantage to this country. I have not seen the newspaper articles to which he referred, but I am told that there was some mention made in a St. John paper to the effect that the committee appointed by his worship Mayor Daniel to confer with Mr. Hoyt's company had stated that they were waiting for my return from New York. i think it necessary to explain my connection with the paragraphs referred to. To do so I will go back a little in the matter. Last summer, when Dr. Ward and Mr. Sales were here in the interests of their company, i understood that it was there purpose to erect a smelter in some part of the lower provinces, and they thought of going to Pictou or Halifax. The argument advanced was that they could get their coke in either of those places much cheaper than in Moncton or St. John. I called Mayor Sumner's attention to the matter, and with his worship had several interviews with Dr. Ward on the question of establishing their smelter in Moncton, advancing every argument we could in favor of their coming here. Dr. Ward on that occasion informed us that he thought it impossible to locate the smelter at this place. I said to Dr. Ward at that time that this being a New Brunswick product he might take into consideration the port of St. John as a favorable location for the smelter, if Moncton was not suitable. This, I believe, he did to the extent of comparing figures to show whether St. John or Halifax would be the most advantageous spot to locate their works. So far as I know Dr. Ward did not decide as to their exact location at that time. When he returned to New York I accompanied him as far as St. John, and he discussed with me the advisability of stopping over to interview the board of Trade and the mayor and aldermen of the city, but he was pressed for time, business engagements in New york requiring him to go right through. He said to me that he would be very glad if I would talk the matter over with the President of the board of Trade and the mayor of St. John, and see what concessions they would offer. I did not see the president of the Board of Trade, but with the hon. A.T. Dunn I interviewed Mayor Daniel and stated to him that there was a possibility of this company locating their furnaces in their city, and asked him to communicate with Dr. Ward on the subject, which I believe he did, having some correspondence with Dr. Ward. Since that time I have taken no further interest in the matter, but a few days ago when going to New York, Mayor Sumner said to me that it had been proposed by a citizen's committee here that he and Mr. Emmerson should visit New York and interview the company's representatives there and try to induce them to come here. He said he did not want to go unless there was a possibility of the company being in a position to negotiate with them; and his worship asked me if I would speak to Dr. Ward and see if they were prepared to talk business now. When in New York I had a very pleasant interview with Dr. Ward, told him what Mayor Sumner had said, and that Mayor Daniel had told me how very much interested the people of St. John were in having his company locate in the province, and of course that each city was anxious to have the works. It is not necessary to state publicly Dr. Ward's reply to me, but if I understood him correctly I had his permission to state that Mayor Sumner and Mayor Daniel what he said. I think Dr. Ward will confirm every word of the above. In conclusion, I only wish to say to Mr. Hoyt that I have the most kindly feeling towards him and his company, and while I am only a 'Promoter' there are a great many others in the same line; in fact, the whole world are either promoters of their own business or the would-be promoters of that of others. I trust I have not made myself obnoxious to any company at any time. If I have been indiscreet in my great anxiety to see large industries, like the one Mr. Hoyt is promoting, locate in our country, he must pardon wherein I

Moncton Daily Times - Jan. 8, 1900 Dawson. - The work at the manganese factory is entirely suspended and is not expected to reopen until spring. A.J. Robertson and John Crossman are the watchmen."

Moncton Daily Times - May 23, 1900 Hillsboro Manganese Mine. - Mr. J.P. Weir has returned from Hillsboro where he has been engaged for some days overhauling the boiler and fixing up the machinery at the Manganese Works at Dawson Settlement, preparatory to starting work for the season."

URN: 0707 / IDX_Names: Dawson Settlement;

Daily Sun - Nov. 22, 1900 Ferro-Manganese. - Russell P. Hoyt and Fritz G. Gleim Present a Petition to the Mayor and Aldermen, - Explaining Fully Their Scheme for the Erection of a Large Smelting Furnace - Would Involve the Expenditure of Half A Million Yearly. - Russell P. Hoyt and Fritz Gleim, representatives of the Mineral Products Company of New York, which has for its purpose the development of the manganese and other mineral interests of the maritime provinces and which contemplates the erection of a large smelting furnace somewhere in Canada for the manufacture of ferro-manganese, met the mayor and a committee from the common council yesterday afternoon and presented the following petition: The petitioners of the undersigned, known as The Mineral Products Company, of New York, engaged in mining and smelting operations in the provinces of New Brunswick and Nova Scotia, represent that this company is organized under the laws of the state of New York, largely for the purpose of developing the manganese and other mineral deposits of the maritime provinces of Canada, and to manufacture ferro-manganese. In carrying out this purpose, they are expending a large amount of money, already exceeding $200,000, and have in contemplation the erection of a large smelting furnace, either in Canada or the United States, as may be most advantageous. If this were to be erected in Canada, it would mean the employment of 300 or 400 men at the mines and at the furnace, and the expenditure for wages, freight, fuel, etc., of $500,000 or upwards in Canada per annum. We make the following arguments: 1st. This industry is entirely a new one as far as it relates to the manufacture of ferro-manganese from wad or bog ores, and has involved great risks to capital invested. 2nd. It would utilize minerals which for ages have remained idle and useless, and which without the operations of this company may continue so. 3rd. We will expend a large amount of money in Canada. 4th. Manufacture of ferro-manganese is more expensive and involves larger capital than that of iron or steel. The company have secured deposits situated in thecounties of Albert, Kings, Westmorland and Gloucester, of both bog (wad) and hard (rock) ore, sufficient to carry on operations for many years, and are provided with ample capital for this purpose. The petitioners beg to refer to the Bank of Montreal at Moncton and to numerous financial institutions in the United States as to their responsibility and standing. The company will require for their operations the following: A tract of land and some eight or ten acres, in convenient location to railway and water front. The latter being accessible to vessels of large draft, having say 20 feet of water at low tide. We will require, say, 50,000 gallons per hour of water for cooling, condensing and steam purposes, of which supply the water used for steam generation should be drawn from the city water supply. The furnace to be erected will use from four to five hundred tons of coke per month, which will be drawn either from the United States, or, if possible, from Canadian manufacturers; some 5,000 tons of ore from the company's mines in the provinces, and say 1,000 tons of limestone, besides other fuel, etc., supplies. The output of the works will be from two to four thousand tons of metal per month, which will be shipped to the steel markers in Canada and foreign countries. There will be also some 5,000 tons of slag to be disposed of, which may find useful quarters in the making of land, the ballasting of railroads, the improvement of streets or even the manufacture of cement. In all the operation of this plant may involve the handling of some 20,000 tons of raw materials and product per month, or say some 250,000 tons per annum in immediate connection with the operation of this blast furnace. If it should be decided to concentrate our present clinkering operations and future blast furnace operations, a considerable amount of the above materials would have to be handled a second time, involving additional labor. For the consideration of this the council will meet this afternoon in committee of the whole and will appoint a sub-committee to prepare and propose terms for the erection of the smelter in this city. In the meantime Mr. Hoyt, accompanied by Engineer Peters, will inspect the vicinity for a suitable site and be prepared to state their desires to the sub-committee meeting tomorrow. At a meeting of the citizens and city council in Moncton, held on Tuesday last, it was declared that Moncton would be offer this company, if the smelter should be erected there, a free site, free water, exemption from taxation and other inducements in the way of special freight rates."

S.J. Daily Sun - Nov. 23, 1900 Representatives Gleim and Hoyt of the Mineral Products Co. of New York, made a tour of the city yesterday afternoon in company with Engineer Peters and Col. Markham and inspected sites around the shore of Courtenay Bay for a favorable location for the proposed smelter. The city lots at the extremity of the streets crossing the city came in for special inspection. They will present their case before a committee of the city common council this afternoon in City Hall."

Daily Sun - Nov. 24, 1900 The Ferro-Manganese Enterprise. - The recommendations of the special committee of the city council respecting the ferro-manganese works will, no doubt, receive careful consideration from the full board. There will be a general agreement that the city can well afford to allow the wasteland to be used for new and important industries. The principal of exemption from taxation for new industries is not a new one here, and since there is no such establishment in the town as that contemplated, no unfair discrimination is threatened. The city gets no revenue out of the land required, and will get no revenue out of the ferro-works if they are established in some other town. But if they are built here they will add to the number of taxpayers, as all the workmen and all who get business out of the works will be assessed. The question of free water is not quite the same as that of a free site and exemption. Our water supply has to be paid for by somebody, and the gift, whatever it may be, involves so much sacrifice. A grant of free water is practically a cash bonus, though if no more is wanted than enough for steam purposes the grant would not be large. In another case, where the quantity of water required was large, the arrangement was made, on a basis which was supposed to recoup the city the bare cost of procuring the water. For the test it will be necessary to safeguard the arrangement by providing for the establishment of works of a certain capacity and cost, within a specified time, and for their regular operation, with conditions of the termination of the lease if necessary. It may also be necessary to ascertain whether the proposed works are likely to be in any way offensive or unwholesome. If the promoters of this enterprise mean business and are able to carry through the undertaking, they will have the good will of the people of St. John. This cityhas not had the privilege of welcoming many new industries of late. None of the factories and important industrial concerns in this city, and few of these in the province, are new. A revival of industrial enterprise in this part of Canada would be more than welcome."

URN: 0707 / IDX_Names: Dawson Settlement;

Moncton Daily Times - Aug. 9, 1901 Dawson. - The manganese mine at this place has not started yet this summer, and the people think there is not much prospects of it. What the company's thoughts are we do not know."

S.J. Star - Jun. 5, 1902 All the property of the Mineral Products Company, in Albert county will be offered at sheriff's sale at Hopewell on September 11, at the suit of Barton E. Kingman."

URN: 0707 / 0645 / 0001 / 0721 / 0643 / J8 IDX_Names: Dawson Settlement; Waterside Manganese; New Horton Copper; Shepody Mountain Manganese; Gowland Mountain; Albert Mines;

Daily Times - Oct. 11, 1897 Mining in Albert County. - A correspondent of the St. John Sun says: Indications are now that mining operations throughout Albert county are to be carried on in the near future to a greater extent than for many years past. Mr. Hoyt, manager of the company now operating the manganese mines at Dawson settlement, haspurchased the manganese sites at Waterside and Elgin, andwill also operate for this mineral at Chemical Road. At all of these localities the prospects are considered good. At Dawson a very large vein has been struck, and plant has been put in worth over $30,000.At New Horton is a very promising copper mine, to which H.J. Bennett and others are interested, including Sir Charles Tupper. The quartz mined there also shows satisfactory indications of silver. It has also been learned that the company operating at Dawson have incontemplation the purchase of the well known Albert coal mines, which have been closed for several years. Albert county is undoubtedly rich in mineral resources, including gold, copper, coal and manganese, and capital and push are all that is necessary to develop an industry whose beneficial and far reaching efforts would be surprising. Mining development in Albert county was materially retarded some years ago by several operators who took out leases and failed to carry on the work with any system. It is probable now a period of mining activity is near at hand, and this, should it come about, cannot fail to be a boon to the country, especially so as the lumbering business is evidently in its decadence at least for a period."

URN: 0707 / 0763 / IDX_Names: Dawson Settlement; Jordan Mountain Manganese;

Weekly Record - Fri., Nov. 3, 1899 It is understood that Mr. F.W. Stockton has sold his manganese mine near Newtown. The purchasers are believed to be the owners of the Mineral Products Co., who are operating in Albert Co. Mr. Hoyt, their representative, has been in Sussex several times recentlyand has prospected the property pretty thoroughly. Several men are now at work and it is said 100 tons of ore will be mined and shipped at once. A gentleman who is in a position to get correct information tells the RECORD that work will be kept up all winter and that 30 men and about a dozen teams will be employed in mining and hauling the ore to Sussex for shipment."

URN: 0707 / 0763 / IDX_Names: Dawson Settlement; Jordan Mountain Manganese;

Weekly Record - Fri., Nov. 10, 1899 The Jordan Mountain Mine. - The Mineral Products Co., which name the people operating the Stockton mine, at Jordan Mountain are known as, are the strongest mining company in the province. The capital invested is all from United States sources, the company being composed of five wealthy New Yorkers, with Mr. J. Hoyt, as general manager. Besides the Jordan Mountain mine, they haveproperty at six other places throughout the province, the principal of which is at Hillsboro, where they are mining what is known as bog manganese. This ore is found in a liquid or muddy state and there is a vast deposit of it covering about 17 acres and with an average depth of 15 feet. It is taken and thoroughly dried, after which it is subjected to an immense pressure, 300 tons to the square inch, and made into bricklets, which are shipped to Bridgeville, N.S., where refining furnaces are located. After passing through this process it is ready for the market as pure manganese. This plant is the only one of its kind in the world. The ore from the Stockton property will be mined in the ordinary manner and is being hauled to Sussex for shipment to Bridgeville. About 40 men are now at work and more are to be engaged. Upwards of 40 tons have been shipped already and indications point to the development of extensive operations. An immense bed of ore is said to have been located, and the amount of money being expended would indicate that the company means business. At considerable expense they have improved the road leading to their property, and it is very probable that in the near future they will erect buildings and weighing apparatus."

Weekly Record - Fri., Oct. 27, 1899 Russell P. Hoyt has completed the purchases of the Jordan Mountain manganese property, located in Kings County near Sussex, and the Hillsboro Mineral Products Co., expect to be operating in a few days. It will be worked on a larger scale. - Moncton Transcript."

Daily Times - Apr. 21, 1900 Manganese. - The Sussex Record says: Work in the Stockton manganese mine near Newtown, which is being worked by the Mineral Products Co., is suspended awaiting settlement of divers claims against the operators. This company is carrying on operations at Hillsboro, N.B., and at Bridgeville, N.S., a smelter having been leased at the latter place. They have been working the Newtown property since November last and it is understood owe considerable money for supplies, labor, horse hire and for buildings erected. The creditors of the company are getting anxious about their pay and it is said contemplate taking steps to bring about a settlement."

Weekly Record - Fri., Nov. 23, 1900 The Mineral Products Co., with mines at Hillsboro and near Sussex intend, so their manager states, to erecta smelter some place in the province before spring. It will give study employment to about 250 men and will cover nearly six acres of ground making an important addition to our provincial industries. St. John and Moncton are falling over themselves to offer free land, free water, tax exemption and other privileges in the hope of getting the company to locate in those respective towns. Sussex which should stand a good show, being the nearest railway point to the bulk of the ore, remain in a state of 'masterly inactivity'."

URN: 0707 / 2019 / IDX_Names: Dawson Settlement; Point de Bute Manganese;
S.J. Daily Sun - Dec. 25, 1897 Mining in Albert. - The Minerals Products Company of New York. - Have There the Only Plant for Treating Manganese Bog Ore in the World. - Very Expensive Works- Description of the Process - The Point de Bute Deposit - the Scientific Theory. - In the beds of wad or bog manganese which are known to exist in large quantity in two places, and may no doubt be found in others, New Brunswick has a mineral product not found in any other country in any quantity. The hard manganese ore that is got by mining and found in pockets in the rock formation, is of course quite familiar, though an uncertain quantity, but to find the material in a bed varying from five to thirty feet thick, immediately under the turf or first layer of soil, and so soft that it can be simply shovelled up without the aid of a pick, is quite a novel occurrence in manganese mining experience. If this fine, flour-like deposit of the mineral could be treated as simply as the hard ore from the mines, it would of course be of great value. But that is not possible, and up to the present time there appears to be only one process for treating it with any success at all. To be available for commercial purposes this pyrolusite or manganese dioxide must be converted into what is technically termed ferro-manganese. That must be done through the agency of a blast furnace. Now hard manganese ore can be treated simply enough, but this bog ore or wad, after the fifty per cent. or thereabouts of water has been dried out of it, becomes a fine dry powder. Put it into a blast furnace and it would simply blow away. The great aim of all experiments has been, therefore, to discover some otherwise suitable substance to mix with the powder to bind it together in such a form that it would stand the furnace and enable the operators to produce ferro-manganese, which, as everybody knows, is used in the manufacture of steel. The reading public will remember that Edison, in his famous iron works in the New Jersey mountains, first separates the iron from the sand in the ore and then takes this iron, which is also in the form of a fine sand, and by employing a 'binder' is able to convert the iron sand into iron bricks, which will stand the operations of the blast furnace. Such a process of treating the manganese bog ore has been discovered and has stood the test, and is now to be applied by The Mineral Products Co. of New York at the great bed of ore found at Dawson Settlement, half a dozen miles from Hillsboro, in Albert County. An American company tried once before to utilize the ore, but was not successful. The present owners are satisfied that they can succeed, and have indeed proved it by actual test. It may be added that theirs is the only process known which has proved effectual. It involves a large expenditure and a complicated plant, and their works in Albert County are the only ones of the kind in the world. The Mineral Products Co. is incorporated under the laws of New York. Hon. F.C. Sayles of Pawtucket, R.I., is president, F.C. Sayles, jr., of Providence, R.I., treasurer; Dr. Edwin F. Ward of New York, secretary; Russell P. Hoyt of New York, general manager; N.M. Longdon of New York, superintendent of works. The company began operations in Dawson Settlement six months ago, and have spent about $50,000 in purchase of land, clearing it up and erecting their plant. They have had about forty men employed until lately, when they were laid off to await the beginning of operations in the works themselves, which will start now in a very short time, and be run night and day, employing thirty hands or more, and treating probably a hundred tons of ore a day. The company own four hundred acres of land, on seventeen of which the ore is found under a thin coating of soil or vegetable matter, and extending to a depth of five to thirty feet of the ore, which can be got out by merely shovelling it into the cars. A member of the Sun staff, being in Hillsboro on Tuesday, paid a visit to the place. He was fortunate enough to find Mr. Hoyt, the general manager, and that gentleman went out with him. The deposit lies on a hillside, with a slightly higher elevation behind it and a deep gully running along its base. The place was covered with a thick growth of woods. Seventeen acres of this has been cleared and stumps taken out and drains dug. The ore lies in a bed of varying thickness all over it. The Sun man walked over the place, and a man with a pick went along, and, on the sides of the drains and the holes dug all over the place, sunk the pick in through the coating of frost, and everywhere the ore was disclosed. A singular fact is that there are quite a number of living springs on the property. There are two close together on the highest point of the deposit. The scientific theory of the deposit appears to be that in the hills back of the bed there is manganese in place or in formation. If the former, as is thought probable, there must be a very large deposit of the ore, and streams of water passing over these large beds have

in past ages carried the ore in solution to the place where it is now deposited, and perhaps is still being deposited, as wad or bog ore. This bog ore in its natural state contains about fifty per cent. of water, and this of course must be got out. When that is done the result is, as stated a powder, black in color and about as fine as flour. The company have erected their plant at the foot of the hill that forms the ore bed, the lower side of the structure being on a level with the bed of the gully, where a branch railway comes right up to the back door. The building is 52x72 feet, with 30 foot posts on the upper side and extending 16 feet lower on the side next the railway, being thus erected on the shoulder of the hill. The building is equipped with heavy machinery, specially made for the work. There is an 80 horse power engine and 50 horse power boiler. The 'drier' is a brick chamber 10x44 feet and 30 feet high, in which there is a revolving cylinder of half inch iron, five feet in diameter and 28 feet long. The process through which the ore must pass is a very interesting one. It goes in as rough ore, looking to the unpractised eye not very unlike any other blackish colored fine earth, and it come out in the form of a hard, black, cylindrical brick, three inches in diameter and two and a half inches long. The process is not easy to understand without being seen, and even then of course the secret of the process by which the dried powder is cemented together remains a mystery, known only to the company who control it. The ore is brought in little tram cars from the ore bed, a distance of only 600 to 1,000 feet, and, running into the building, is dumped on a platform on a level with the feed hopper of the revolving drier already spoken of. It is shovelled into this hopper, and the revolving drier, which is kept heated by wood or coal fires, carries it to the back end of the brick chamber, where it drops into a spiral conveyor, which carries it out to the boot of a bucket elevator, by which it is elevated to the top of the building, some thirty- odd feet, where it passes through a revolving screen. The fine ore sifts through the screen into what is called the dry ore bin. The coarser part, which will not sift through, goes on and out of the farther end of the revolving screen, and is carried from thence down into a grinder, which grinds it up fine, and it is then carried back again to the boot of the elevator, and up again to the revolving screen, through which this time it sifts without difficulty into the dry ore bin. But this is not all. Above the brick drier is a dust chamber with a V-shaped bottom, provided with a spiral conveyor. Any fine ore passing off from the drier along with the steam or gases, settles in the bottom of the dust chamber, and is carried out by the spiral conveyor and passes to the boot of the elevator and up to the revolving screen and into the dry ore bin. Thus every bit of the ore is saved. The steam and gases pass out and away though two smoke stacks rising from the dust chamber above the drier. The ore from the dry ore bin is drawn into a mixer, where it is mixed with a suitable 'binder', the purpose of which is to cement the powder together. The mixed material is then carried up to a sufficient height to pass in at the top of the briquetting machine, a very complicated piece of mechanism, from the bottom of which the ore comes out in the hard cylindrical bricks or briquettes already described. These briquettes are carried to a pocket on the level of the railway, with capacity to store 250 tons, and from here the ore is shipped on cars to be taken to the company's blast furnace at Bridgeville, N.S. The company would have erected a blast furnace at Hillsboro, but there was some difficulty in getting a site, and they purchased the furnaces at Bridgeville, N.S., which along with a fine belt of hardwood happened to be on the market. The briquettes will be taken by rail to Bridgeville, converted into ferro-manganese, and from there can be shipped to steel works in any part of the world. The company have had the property examined and reported on by seven of the best experts in the United States and Canada, and the ore analyzed by ten of the principal steel makers and prominent chemists of the United States; and the result shows that the ore deposit is a valuable one. The analysis is as follows: Per cent. Metallic manganese 48.24 Metallic iron 5.70 Sulphur 0.096 Phosphorous traces Silica 1.88 This analysis was made on the dried mineral at 212 deg. Fahr. The value of the ore is shown by the very slight proportion of phosphorous and sulphur. No process has yet been discovered that will eliminate phosphorous. When an ore contains more than 0.10 per cent. of phosphorous or more than 12 per cent. of silica, the price is scaled down in proportion to every unit above these figures. The Albert county ore is thus a very valuable one if it can be successfully prepared for the blast furnace. The ore is covered by a few inches of vegetable matter. A cubic yard of the ore in its natural state weighs 1,200 lbs. Besides erecting their plant the company have built a branch line of railway from the works one and a half miles to Stony Creek on the S. and H. railway. The latter connects with the I.C.R. at Salisbury, eleven miles away over which the ore is taken to Bridgeville, and which connects the works with the Grand Trunk system and practically with the railway systems of the continent. It is only five and a half miles from the works to Hillsboro, where at a wharf which the company propose to construct, vessels of a thousand tons can lie, and thus they will have direct water communication with Boston, New York, Philadelphia and other American ports, and also with Europe by vessels which come there to load lumber. The vessel rate of freight to U.S. ports is $1.50, and to British ports about the same. When the works are in full operation, running night and day, they will employ about thirty men, and expect to ship about 50 tons of briquettes per day to the blast furnaces. Mr. Longdon, the superintendent of works, has had long experience in manganese working in New York State, and his inventive skill has been utilized in adapting the briquette machine to its present purpose. There has been some difficulty in getting this new machinery properly adjusted and the binder effectively mixed with the ore, but they were making hard briquettes when the Sun man was there, and were confident that in a very short time the plant would be in full operation day and night. Machinery practically does it all, from the time the ore goes into the hopper of the revolving drier until the briquettes come out. The building is equipped with an elevator connecting the floor where the briquetting machine stands with the storage room beside the railway. The market value of ferro-manganese today is $46.50 per ton. Two tons of the bog ore will make one ton of ferro-manganese, which is the only material that will successfully purify steel. It is imported by steel works from South Africa, Spain, Cuba, Mexico and Japan, and is not therefore found in quantity in any country, the bog ore so far as known only in New Brunswick. In Canada the returns show that only twelve tons were produced in this country in 1896. Reference has already been made to a deposit of wad at Point De Bute. This has been secured by the Mineral Products Co. There is a bed, said to cover a hundred acres to a depth of five to fifteen feet. Gov. McClelan told the Sun man about a deposit on the property of a Mr. Reid, near Harvey, but Mr. Hoyt thinks it is not the same and not large enough to be of value. There may be deposits in other parts of the province, and possibly in Nova Scotia. If so, they are, however, of no value unless the fine ore can be fitted for the blast furnace, and the only process for doing this that has been discovered is known only to this company, who have it patented. The process is the result of several years effort and hundreds of experiments. The company have taken up some twenty areas where hard manganese ore is found in the province. They expect to develop an important industry, and have made a large investment. Russell P. Hoyt, the general manager, has spent six months in Hillsboro, flitting back and forth between there and Bridgeville, or making excursions to points where manganese areas are found, and has wont the hearty good will of the people wherever he has gone. His company embarked in an enterprise surrounded by uncertainty, and have proved their faith by their works."

Daily Times - Aug. 1, 1899 Mining Notes. - Mr. C.S. Smith, of New York, a member of the Mineral Products Co., of Hillsboro, is down this way on a business and pleasure trip, and has beeninspecting the company's works at Hillsboro. The manganese works there are being operated night and day with a gang of about forty men and Mr. Smith is well pleased with the outlook. The company has about 1000 tons of manganese at Bridgeville, N.S., being smelted. Mr. Hoyt, the manager of the company, has been engaged of late with Mr. Wm. Mollins, in examining a property in thevicinity of Moncton for manganese, and Mr. Mollins goes to Scadouc in a few days to look over a property there. Major Catlin, who a short time ago inspected with other Americans, the shale, iron and copper properties in Albert county and Nova Scotia, under lease to Mr. M. Lodge, has been in the city for the past few days and is stopping at the Brunswick."

URN: 0707 / GEOL / IDX_Names: Dawson Settlement; Geology - General;
Daily Sun - May 17, 1892 The Geological Survey. - Robert Chalmers' Report on His Investigation in New Brunswick. - Superficial Deposits in Westmorland, Kent, Albert and Northumberland. - [From the Geological Survey Report] - Robert Chalmers left Ottawa on th 8th of June for New Brunswick withinstructions to continue the detailed survey and mapping of the superficial deposits in the counties of Westmorland, Kent, Albert and Northumberland, and the investigation of the glacial phenomena connected with these deposits. The following is his report on the progress of this work: The maritime parts of this area have now been pretty thoroughly studied. But the district drained by the southwest Miramichi river requires further exploration, especially that portion lying to the west of the main river, and another season's work will be necessary to complete the whole. A great part of the area examined is level or slightly undulating, but in Albert county it is hilly and broken. Around the head of the Bay of Fundy the surface is diversified by ridges which attain a height of from 200 to 400 feet. Between these, tongues of salt marsh extend up the valleys. These marshes are a characteristic feature of the scenery. The surface geology of this part of New Brunswick is of profound interest; and the glaciation of the isthmus of Chignecto, in its relation to that of the mainland of New Brunswick and Nova Scotia, is of special importance. The facts when studied in detail will, in my judgement, show the action of floating as well as of land ice. On the site of the marine railway, now under construction across the isthmus, and along the New Brunswick and P.E. Island railway, the exposed ledges exhibit striae varying from S. to S. 50ø W. (true meridian). These have been produced by ice moving across the isthmus from the northeast. And as no high land exists in that direction nearer than Labrador or Newfoundland, the hypothesis of there having been caused by floating ice during the Pleistocene subsidence of the land here seems a reasonable one. This view is supported by the facts respecting the glaciation of the higher grounds on both sides of the isthmus. In eastern Albert and Westmorland and Kent counties, N.B., the striae indicate ice movements directly towards the Bay of Fundy and Strait of Northumberland, while in Cumberland county, N.S., the ice-land appears to have moved down the slopes westwardly towards the Bay of Fundy, or Pleistocene sea, then forming a strait between New Brunswick and Nova Scotia. On the whole, the district is one offering special advantages for the study of the relative movements of land and floating ice. An increased interest was given to the study of glacial phenomena and pleistocene changes of level by the visit in October of Baron G. de Geer, a member of the geological survey of Sweden, who is actively engaged in similar investigations for that survey. He made special investigations in New Brunswick respecting the height of the pleistocene shore line, or, as he terms it in Scandinavia, the 'marine limit', and by independent measurements made at St. John, Moncton, Bathurst and Dalhousie Junction he found that this limit of the marine beds, as laid down by me, is approximately correct. The hypothesis that the Pleistocene upheaval was greater in New Brunswick than in Nova Scotia was sustained by observations made by Mr. Wilson and myself later on. East of Nappan River, N.S., we discovered a well-defined shoreline 135 feet above tide level and traced it upwards of four miles. The importance of this pleistocene 'marine limit' lies in the fact that when the land was at this level (viz., 225 feet at Moncton, N.B., and 135 feet at Nappan, N.S., lower than it is at the present day), the Bay of Fundy would be connected with the Straits of Northumberland, and,

consequently those parts of the isthmus of Chignecto on which the striae are found would be submerged to a depth sufficient to allow floating ice to pass over them. A discovery of some importance made by Mr. Wilson was that of marine fossils in the boulder clay at Negrotown Point, St. John harbor. The deposit was also examined by Baron de Geer and myself. The recent and stratified deposits of Westmorland and Albert counties are varied and interesting, and those of tidal origin, viz., the salt marshes, are unique. These marshes comprise, in Westmorland and Albert counties alone, an area of 35,000 acres, and have long been noted for their fertility. Of late years, however, they have deteriorated. This remark applies more especially to those portions which have been dyked and cropped continuously for a century or more, without the application of any fertilizing material to the soil, which has, in consequence, become deficient in plant food. Lime and wood ashes have been recommended; but improving them in this way is slow and expensive. A scheme inaugurated by the more intelligent farmers of Sackville would, if systematically carried out, be more effective, viz., the cutting away of portions of the dykes and aboideaux and flooding the marshes with the tidal waters of the Tantramar and other rivers, which flow through them. The tides, which rise high enough to overflow these marshes, if the dykes were broken, carry in red mud and deposit it on their surface. This is an admirable fertilizer, its efficiency having been abundantly proved by the experience of the Sackville farmers. This system of improving them will probably be adopted by all the owners of exhausted marsh lands around the Bay of Fundy. It seems the natural method of restoring them, partially at least, to their original fertility. The depth of the marsh mud is variable, but increases seaward. Immediately underlying it is a layer of fossiliferous blue clay, which rests on a peat or forest bed. At Aulac, Intercolonial railway, the latter attains a thickness of 20 feet, and is overlain by 80 feet of marsh mud. These marsh and peat beds indicate, therefore, a subsidence of the land here within the recent period, of about 80 feet. Intelligent observers inform me that the peat or forest bed is continuous or nearly so, throughout, underlying the salt marshes everywhere. In reference to the soil on the higher grounds, it may be stated that the eastern part of Westmorland county comprises some of the best agricultural lands in the province. Along the Peticodiac river there are also fine farming tracts. On the Millstone grit area, however, the soils are deficient in lime and would be much benefited by frequent applications of it. In Westmorland county the forest growth is recent, except in a few limited areas. The ore extensively wooded portions of Albert and Kent counties are, however, covered by the original forest, which still contains large spruce, hemlock and hardwood trees. In the last mentioned county, forest fires are rapidly destroying the timber tracts. The materials of economic importance found in the surface deposits of the district examined may now be briefly referred to. Bog manganese occurs in Albert county, near theDawson Settlement. On a branch of Weldon Creek an extensive bed of it has been opened up, and a branch of the Albert railway constructed to it. Kilns for drying the material have also been erected. This deposit covers about 25 acres of ground, and appears to be quite thick - in one opening the thickness being 26 feet. The ore is a loose, amorphous mass, which can readily be shovelled up, and contains, in layers and patches, a considerable percentage of bogiron ore, or red ochre. Indeed, very little of the material appears to be wholly free from iron, though large portions have merely a trace of it. The deposit lies at the foot of the hill, and its accumulation there appears to be due to springs. these are still running down the hillside, and, doubtless the process of producing bog manganese is still going on. Operations have temporarily ceased at the mine. Indications of other and similar beds of bog manganese have been met with at the base of this hill further west. Bog iron ore was found on the

Daily Times - Aug. 23, 1890 Osman letter - (unreadable) ...... re National Improvement Co. and Tompkins......"

Daily Times - Aug. 27, 1890 The Albert Manganese Property. - Editor Times. - In your valued paper of the 20th inst., which I have unfortunately only just seen, there is an article by A.D.J., in reference to the manganese mines at Dawson Settlement and the Salisbury and Harvey Railway. A.D.J. has been somewhat misinformed, and the article in point to be regretted as tending to create illfeeling between the parties concerned. The manganese mines are owned by the Crimora Manganese Co., not by the National Improvement Company, although the proprietors are in the two instances nearly the same. Of course the legal proceedings commenced by Mr.Osman must be settled, and the ownership of the railroad determined before the contemplated extensive improvement at the mines can be fully completed. Messrs. Tompkins and Osman have both reportedly offered their advice and services in the kindest manner in connection with our own work in Albert Co., and I am desirous, if possible, that the existing legal proceedings shall not be used to disturb or prevent friendly relations, or to unfairly present these gentlemen to the public. The manganese property will be worked irrespective of the ownership of the railroad, and I trust you will find space to give this correction insertion. Hastily and truly yours, C.H. Harman, President of the National Improvement Co."

Moncton Daily Transcript - Jul. 31, 1890 Albert County Minerals. - Developing Manganese Property, Another Discovery of Albertite Coal. - Hillsboro, July 31, - [Special]. - On Saturday there are expected at Hillsboro, via Salisbury, four gentlemen from New York, three from Philadelphia and two from London, Eng., who are coming to the county to inspect mineral properties. The steamer Arbutus has been hired to take them on Saturday evening from the Hillsboro wharf to the ship railway, which they will visit. The Manganese Mining Company have commenced to build their kilns, five in number. S.D. Day, a mining engineer from Virginia, who is to be mechanical superintendent, has arrived and has charge of the works. The Company expect to make their first shipment in about a month's time. Last Thursday, at the plaster quarry, they struck a new vein of very fine plaster, of the quality superior to any yet produced. About a week ago, the farm of Ralph

Daily Times - May 16, 1890 and Daily Telegraph - May 17, 1890 Manganese Mining in Albert County. - Says the Maple

Leaf's Dawson correspondent: The purchasers of the manganese mine have decided to commence work at once. The managers of the company are here, and are procuring men and teams and making preparations for active operations. They are making arrangements for the building of a branch railway about 1 « miles long to connect the mine with the Albert line. When the work gets fairly started the company will probably employ about 200 men and quite a number of teams. This, together with the smaller amount of work furnished by the Albert Manufacturing Co., will make times quite lively in the

Daily Times - Sep. 2, 1890 An Albert County Matter. - Letters in Reply to Mr. C.J. Osman - The National Improvement Company and the Albert Railway. - ...."

S.J. Daily Sun - Nov. 5, 1891 Albert County. - ...The Hillsboro plaster industry is one of the great feeders of the road, and if satisfactory through rates for rock plaster, which is now exported to Newark by water, could only be secured from connecting roads, the freight business of the Salisbury and Harvey line would be the gainer by something like one hundred tons per day for every working day in the year. ...The manganese mines of the National Improvement Co. of New York, C.H. Harmon president, which are situated about eight miles from Hillsboro, have unfortunately been closed down for some months, owing to a legal squabble over the ownership of the property. But seven carloads of the crude material have been shipped this season. The New York company have spent a great deal of money there for plant, buildings, etc., and have built a railway one and a quarter miles long to connect the mines with the main line, and are confident that when the legal battle is ended they can make a handsome revenue out of their investment. At present the works are in charge of a watchman, who has resided there all summer. If the mines are developed to any considerable extent they will form an important feeder to the Salisbury and Harvey railway. ... Hay sells in Hillsboro now for $10 per ton.... The horses employed in connection with the plaster works absorb considerable of the Hillsboro cut."

Daily Sun - Nov. 24, 1900 The Blast Furnace. - Committee of the Common Council Meet The Representatives of the Mineral Products Company. - Will Recommend That the Council Grant a Site for the Erection of a Blast Furnace With Exemption from Taxation and Water Rates. - Russell P. Hoyt, general manager, and Fritz Gleim, superintendent of the Mineral Products Co. of New York, met a committee of the Common Council yesterday afternoon relative to the construction of their proposed plant in this city. After the reading of their petition by the mayor, Mr. Gleim, being called upon, stated that for the past three years his company had been engaged in the development of manganese properties in the maritime provinces, particularly of the wad ore deposits of Albert county. He told of the condition in which the deposits were found and of the methods used in extracting and smelting the ore. Only lately had a method been discovered whereby this could be profitably done, and upon this method was based the present enterprise. There were many thousand acres of these bog ores in the province, and it was the purpose of the company to develop them all. They now wished to locate a blast furnace plant in a suitable place, and wished to know what the city of St. John would offer. He said that in company with Engineer Peters he had inspected the various properties available and found only one that was suitable. That was the lot east of Pitt on Courtenay Bay, between Sheffield and St. James streets. Plans of these lots were shown and the position discussed. That, said Mr. Gleim, was the only area that furnished sufficient width for buildings, tracks, etc. and could be extended farther out into the stream when necessary. After the works were in operation their next work would be to expend the shore and build docks and dredge channels for the accommodation of the necessaryshipping. A blast furnace in operation produced three times as much slag as regular product, and this could be used for filling in the hollows and extending the shore above and below the works. The enterprise would in time result in the extension of the entire shore. The furnace needed 50,000 gallons of water per hour for cooling purposes, but this they proposed to supply by their own pumping machinery. But they would ask the city to supply them with water for purposes of steam generation, and would like to have access to a larger supply in case of their own machinery breaking down temporarily. They proposed to make great expenditures, and the industry would in many ways be a benefit to the shipping. They would need 100 tons of limestone per day, and this would open another industry in the vicinity. They expected to produce daily about 75 tons of ferro manganese. This would also mean the production of from 150 to 200 tons of slag a day, which was an excellent street material and was used also in the manufacture of cement, etc. In answer to a question from Ald. Mcrae, he said they would employ from 125 to 200 men in St. John, and that the initial cost of the plant would be from $250,000 to $300,000. After they had used the slag for filling in their own property, the city could use it for street building, etc. Ald. Maxwell stated that the shore would have to be wharfed before slag could be dumped there, otherwise the tide would carry it out into the channel. Ald. McGoddrick asked uf Mr. Gleim had inspected the lot on which the exhibition buildings stand. Mr. Gleim said the railroad level was not so favorable there, and they could get no access to the water on account of the Sun Oil Co.'s works. In answer to a question from the mayor, he said it would take fully a year after construction had commenced before the works could be in running order. Ald. Mcrae asked him if he would accept a lease conditioned by such terms as continuous operation, time of construction, etc., and Mr. Gleim said such a proposition was only fair, but he had no authority to give a decisive answer. Mr. Hoyt mentioned the excessive and prohibitive freight rates demanded by the I.C.R. such as $1.35 per ton for ore hauled from Sussex to St. John. They had thousands of tons at their mines ready for shipment as soon as their furnace plant was erected. They owned about 15 mines in different parts of New Brunswick, but only two in Albert and Kings counties were at present being actively worked. The mayor said that the city had no control over the I.C.R., but if arrangements were completed they would use what influence they had to have the rates reduced. Messrs. Hoyt and Gleim here retired, and after considerable discussion, Ald. Mcrae said that the hope of the city was in the establishment of manufactures here. He was not in favor of the principle of exemption, but in view of the fact that this company would certainly locate where the best advantages were offered them, he moved: 'That this committee recommend to the council that the company be granted a renewable lease for 21 years at a nominal rate of $1 per year, and that for the original term they be granted exemption from all taxes and be supplied free of charge with water for steam generation, this to be conditioned by the establishment and continued operation of a blast furnace plant for the production of ferro-manganese, and the said lease to contain agreements as to the initial cost of establishing the plant, as to the time of commencing the construction and operations of the same, and as to the use and disposal of the slag and other refuse. Carried. The lease to be granted is of the following property: All the lots owned by the city and not leased to tenants, lying between the Barrack line, so called, and St. James street, to the eastward of Pitt street and westward of the railway tracks; also the tract of 10 acres eastward of the railway track and adjacent to the above mentioned lots."

URN: 0721 / IDX_Names: Shepody Mountain Manganese;

Miramichi Gleaner - Aug. 9, 1856 Hopewell Chemical Manufacturing Company. - We beg to direct the attention of our readers to the Prospectus of this Company published. Without pretending to a personal knowledge of this business, we believe from reliable information which we have received, that this is likely to be one of the best paying speculations in the country, and that too at a trifling outlay, indeed this seems perfectly reasonable. The raw material can be had for the trouble of digging it. The cost of manufacture is less than in the United States or Great Britain. The short distance of conveyance and consequently the almost nominal rate of freight to the American market are circumstances which any one may understand to be decidedly in favour of this enterprise. It cannot therefore admit of a doubt that to those who feel disposed to make a small investment the return will be both speedy and satisfactory. - The Westmorland Times."

Daily Telegraph - Sep. 22, 1874 Albert County. - The Hopewell Manganese Mine. - Some three miles up the Chemical

Works road running in a northerly direction, through a fine valley which terminates in a high hill, is the Manganese Mine, situated about two-thirds up the ascent. This mine was opened about 23 years ago by Mr. John Steadman, its discoverer, who belongs to Moncton. We found this Nestor of the mine still working away with some four or five men driving a new level some six hundred feet long into the hill, for the purpose of draining the mine some 60 feet below the present wotkings; and to him we are indebted for the following history of this undertaking. The mine, as we have said, was opened by Mr. Steadman about 23 years ago, he having made the discovery from specimens he found on the surface. He persevered at the work for several years and it paid, as several hundred tons of the mineral were taken out and shipped. A company was then formed, principally of Americans, for the manufacture of chemicals from accumulated materials on the spot, consisting of manganese, alum-clay and lime; the articles to be made being bleaching powders, alum, soda-ash, sulphuric, muriatic and nitric acids, etc. The American and Provincial Company lasted till the American War broke out, when that prime element of slaughter, salt petre, went up 200 per cent and chemicals went down 100 per cent, which virtually closed the American market, and broke up the company, which had lasted ten years, during which they had erected an extensive factory some 300 feet by 80 feet and a number of the houses for their work people, and expended about $60,000. A portion of the factory and a number of the houses still remain, and vestiges of the apparatus and debris of the building litter the ground. Five years ago the establishment was leased to an English Company for manufacturing purposes, but they were also affected by the war, and after one year's experience they retired from the field. Nothing was done at the mine from then until now. We may add that after the failure of the American and Provincial Company, Mr. Steadman put up an engine and sunk a slope 150 feet deep in a southeasterly direction into the overhanging hill which the road passes on the left at a point some hundreds of yards higher up than the old factory. In conjunction with others, he has now arranged to work the mine again, and, as we have already stated, is driving a six hundred foot level to drain it, an operation which will cost $2,000 or $3,000. The geological formation of this locality is stated to be the Devonian, but the manganese is found in the chloratic state of the Upper Silurian. The manganese lies in isolated pockets, generally connected by veins, which pockets seem to have a magic facility for producing a vacuum in the pockets of people who start in search of them. The specimens we saw, to our unpracticed eyes, resembled clinkers, and the material is worth here about $40 a ton, and in England sells for $50 per ton. The manganese found here is said to be of excellent quality. Mr. Steadman has devoted a large portion of his life to developing this mine, and sunk, with others, a considerable amount of money in the enterprise, and it is to be hoped that the present attempt to work it will be successful."

Chignecto Post - Sep. 23, 1880 The manganese found by Mr. Judson M. Peck on his farm at Hopewell Hill promises well. The lead as far as examined is about three feet broad and eight inches thick. The quality is pronounced very good. It is understood that Mr. Peck has had offers to purchase."

S.J. Daily Telegraph - Aug. 9, 1881 Albert. - Manganese. - The tunnel of the Hill Manganese mine has been abandoned, and the men have now commenced work on top where the lead crops out. The best part of a ton of this mineral has been taken out since last week."

S.J. Globe - Aug. 18, 1881 The manganese mine at the Hill has been closed. A good vein was struck just before the men stopped work. There is some talk of the company selling this mine. - Maple Leaf"

Chignecto Post - Jul. 14, 1881 Albert.- A tunnel, 65 feet deep, has been sunk at the Hill manganese mine."

S.J. Daily Sun - Jun. 10, 1881 Albert (Maple Leaf).- The Hill Mining Company commenced work Wednesday. Messrs. Byers and E.B. Ketchum were at the Hill Tuesday."

Chignecto Post - Jun. 23, 1881 Albert.- More manganese has been discovered near Lower Cape, on the lands of Mr. Merill Robinson. It is said that a mine will be opened by Mr. R.K. Snow, of the Curryville quarries."

Chignecto Post - Jun. 30, 1881 Operations have commenced at the new Manganese mine in Hopewell Hill, and it is hoped that a very rich and valuable deposit will be struck, so that a permanent business will be carried on to the advantage of the stock-holders as well as the people in the vicinity."

S.J. Daily News - Oct. 7, 1882 The copper and manganese at Chemical Settlement, Albert Co., are to be at once revived."

URN: 0721 / IDX_Names: Shepody Mountain Manganese;

Moncton Daily News - Dec. 31, 1883 Manganese. - M.R.S. Woodworth, of Hopewell Hill, Albert County, has left at this office a sample of manganese taken from a mine on his premises and near to the well known property owned by Mr. John Murphy and others and so long worked by the late Mr. John Steadman. It is proposed to form a company to develop the new mine and as the prospects seem good there is every reason to expect favorable results."

Moncton Daily Times - Mar. 9, 1888 Albert County. - We hope that there is more than rumor in the report that the manganese mine, on the Chemical Road, has been bought by a company and that the pit is being cleared out preparatory

Moncton Transcript - Aug. 3, 1892 Albert. - Susie Prescott, Wilbur, sailed from here Thursday laden with laths and manganese for New York. The manganese was mined from the Hopewell Hill mine over which Mr. Vanmeter is manager. The ore is said to be of excellent quality."

S.J. Daily Sun - Dec. 19, 1892 Hopewell Hill, Dec. 17. - Joseph Robinson is making preparations for resuming work at his manganese mine at Chemical road."

S.J. Globe - Feb. 17, 1892 and Daily Telegraph - Feb. 27, 1892 Looking For Manganese. - An American company has a number of men engaged in prospecting for manganese at Woodworth Settlement, Albert Co. They have tunneled about 1,100 feet into the side of Shepody Mountain, but as yet no large quantity of the mineral has been found. A small deposit has been discovered, however, and it has proved very valuable."

Moncton Daily Times - Feb. 18, 1892 and Moncton Daily Times - Feb. 26, 1892 Looking for Manganese. - An American company has a number of men engaged in prospecting for manganese at Woodworth Settlement, Albert Co. They have tunnelled about 1,100 feet into the side of Shepody Mountain, but as yet no large quantity of the mineral has been found. A small deposit has been discovered, however, and it has proved very valuable."

S.J. Daily Sun - Feb. 20, 1892 Hopewell Hill. - Mr. VanMeter has ten men at workat the manganese mine at Chemical Road. They are now following a lead eight inches in width."

Chignecto Post - Feb. 25, 1892 An American company has a number of men engaged in prospecting for manganese at Woodworth Settlement, Albert Co. They have tunnelled about 1,100 feet into the side of Shepody Mountain, but as yet no large quantity of the mineral has been found. A small deposit has been discovered, however, and it has proved very

S.J. Daily Sun - Jul. 13, 1892 Hopewell Hill. - The managers of the manganese mine at the old Steadman site have got out ten or twelve tons of the mineral and are thinking of abandoning there for the present. Mr. VanMeter is preparing to operate quite extensively on the premises of Judson Peck, where he considers the prospects excellent."

S.J. Daily Sun - Jul. 23, 1892 Hopewell Hill. - Mr VanMeter is shipping his manganese in the schr. Susie Prescott. It is said to bring $120 a ton in New York."

S.J. Daily Sun - Jun. 3, 1892 Albert. - Ezra Woodworth of Chemical road is prospecting quite extensively for manganese on his property. He proposes sinking a shaft 60 feet deep, and has already reached quite a depth."

S.J. Daily Sun - May 12, 1892 Hopewell Hill, May 10. - James Russell, land surveyor, has been preparing plans of the property of Joseph Robinson of Chemical Road. Mr. Robinson, we understand, has taken out a mining lease preparatory to operating a manganese mine for which there are good prospects on his land. This section of the county is rich in manganese, plaster, freestone, etc., and only needs a little enterprise and capital."

Moncton Daily Times - Nov. 19, 1892 Albert Co. - Mr. Van Meter of the manganese mine is timbering, tunnelling and generally getting ready for conducting operations throughout the winter."

S.J. Daily Sun - Nov. 28, 1892 Hopewell Hill, Nov. 22. - Mr. VanMeter, of the manganese mine, returned from Moncton yesterday. He will continue to prosecute the work for the present, but says it is not certain whether they will continue during the winter months, as they have not penetrated sufficiently far to be out of reach of the snow. The ore at present obtained has been tested and is found to be of superior quality, the prices ranging considerably higher than for"

URN: 0721 / IDX_Names: Shepody Mountain Manganese;

S.J. Daily Sun - Sep. 29, 1892 Hopewell Hill, Sept. 27. - Mr. VanMeter has increased his force of men at the manganese

Moncton Daily Times - Apr. 25, 1894 Crimora Manganese Co. - On application of C.A. Peck, Q.C., on behalf of the Crimora Manganese Co. of Albert County, Judge Landry on Monday granted summons to set aside proceedings of Osborne, petitioning creditor, under the absent debtor's act."

S.J. Daily Sun - Oct. 25, 1897 Hopewell Hill. - There is prospect of immediate work being begun at the manganese mine on Jos. Robinson's property at Chemical Road."

S.J. Daily Sun - Feb. 9, 1898 Hopewell Hill - Operations at the manganese mines at Chemical Road have closed for the present."

S.J. Daily Sun - May 2, 1901 Hopewell Hill, April 30. - Benjamin Fales and Peter Milburn, local miners, went to work this week cleaning out the old tunnel of the Steadman manganese mine at Chemical Road, preparatory to the opening of operations by a Halifax Co., who have leased the property, and purpose, it is said, to work it extensively."

Kings County Record - Aug. 4, 1905 Albert. - Work has been resumed at the New England Adamant Co.'s plaster quarry at Chemical Road, and it is reported that the management intends getting out 4,000 tons for shipment this season in addition to the amount now on the company's wharf here."

URN: 0721 / 0002 / IDX_Names: Shepody Mountain Manganese; Quaco Manganese;

Moncton Daily Times - Dec. 17, 1880 Manganese in Albert County. - (Maple Leaf). - Of the many mines, worked and unworked, in the County of Albert, none, perhaps, are of as much importance or worth as our Manganese Mines. This mineral is used for many purposes, and, being found only in small quantities, is very valuable. As there are several places in the County where manganese is to be found, in sufficient quantities to pay for working, we wish to draw the attention of capitalists and induce them to open up these mines, feeling confident that, while it will be a benefit to us, it will be a paying speculation for them. For this reason we have spent some time gleaning all the particularswhere this mineral is to be found. There is a mine at Rothea, which was worked some 9 or 10 years ago, by Mr. Alfred Markham, who took hundreds of tons from it. Why it is now unworked we are unable to learn; but it is stated that there is plenty of it there yet.The manganese found this year on the farm of Mr. Judson N. Peck, Hopewell Hill, is the best yet found; yielding 93 per cent. on assay. We have visited this mine and believe that there is sufficient to keep work going on for a number of years. Samples of it may be seen at this office. The Albert Mining Co. have leased the property and intend commencing operations early in the spring. The Hill is distant three miles from this place. The Manganese Mine, on the property of Mr. B. Newcomb, about a mile from this place, on the Germantown road, is said to be a good one and well worth working. It is an old mine which in 1853 was worked by one DanielBrown, who leased it and worked it a short time, taking from it over 60 tons. Brown leased two thirds of it to a Messrs. Cutler & Layton, of St. John, who did nothing with it. Some years after, Mr. Newcomb started work, having purchased the lease from Brown, but found that Messrs. Cutler & Layton had a claim against it, which he purchased, for some œ50. He then took from the mine 15 or 20 tons. In 1879, he leased it to Mr. Eskilson of Boston, for 12 months; that gentleman has also done nothing. A few months ago, a gentleman from Fredericton came down and examined the mine, and stated that he believed it would pay to work it, and wished to purchase. When he found that it was leased, he wished to take shares and was referred to Mr. Eskilson. The mine was cleaned out, last fall by, Mr. H. Woodworth. There is a seam openedabout 8 feet long, varying in thickness from 3 to 8 inches. What the manganese in this mine will assay, we are unable to state; but placing it beside a sample we have, of Quaco manganese, we believe it to be equally as good. Mr. Newcomb, who seems to have been humbugged considerably, has lost all interest in it, but states that all that has yet been taken from it, has only been the outcrop. Manganese has been found on the propertyadjoining Mr. Newcomb, in large lumps on the surface. It has also been ploughed up, on farms 3 miles above this mine, some pieces of which weighed 700 pounds."

URN: 0721 / 0030 / IDX_Names: Shepody Mountain Manganese; Teahan Mine;

S.J. Daily Sun - Oct. 25, 1881 Albert County Sketches. - Mines and Mining Fever. - The mining and quarrying fever rages pretty generally throughout the County, and many there be who are stricken with it. At Hopewell Hill, on the Peck estate, one's attention is arrested by excavations in a spot wild and secluded enough to have been chosen as respectable of Captain Kidd's treasures. It is on the side of a rugged hill, with its feet in the marsh, like a rude giant with velvet slippers on, that the treasures appeared which led to the excavation being made. Manganese ore, very rich, was found on the surface. Some specimens were shown at the last Provincial Exhibition, and the deposit was thought to be very valuable. It was purchased by some of the Albert mines proprietors, who drove a level in from near the foot of the hill to a point below the surface indications, without finding any vein of the mineral, and then abandoned the work. Many are firmly persuaded that the manganese must be there, and blame the proprietors for having become too easily discouraged. There are several mining properties in the County, whose holders regard as Big Bonanzas in the raw,and some of them will no doubt prove valuable. There can be no doubt of the value of the lead which Dr. Goodfellow and Sheriff Freeze are developing in Mineral Vale, New Ireland. It is a massive quartz lead, rich in silver, lead and copper, and contains considerable gold. It is on Barratt's brook, in the wilderness, at the head waters of the Salmon River. The course of the brook was deflected against the side of a very steep hill, by its natural channel becoming choked with boughs, bark and wood, and soon wore away the earth until the rock was bare. The logs often jammed at this point, and the stream-drivers knocked pieces off the rock with their peevies. One of these fragments was carried to Salmon River, and was seen by one whose experience as a miner led him to suspect its value. He procured some specimens and took them to Dr. Goodfellow, who immediately took up the land under the Labour Act, built a hut, placed a family in it, and had sufficient land cleared and cropped to entitle him to a grant. Other properties, across which the lead is supposed to run, were secured by mining leases. Three or four men have been at work, clearing the earth and debris off the top and getting out ore. A considerable quantity has been taken out, and it will be hauled to Elgin this winter, there being no practicable summer road, for shipment to some place where it may be crushed. Some $500 has been expended in the work of development, and the ore that has been got out is known to be worth enough, besides the cost of transportation, to pay a good profit. The owners will, doubtless, either put in a quartz mill and the necessary apparatus for securing and separating the useful and precious metals from the rock, or sell out to richer and more speculative parties. The vein is thick, its upper edge is very near surface, and its depth is presumed to be very great. Everybody who visits it is repaid for his tramp over the hills and corduroy roads with a pocket full of specimens rich in copper and silver. Talking of specimens brings up a vision of the mine and quarry hunters of Albert. One meets them everywhere. Speak of minerals in such a way as to lead a listener to suppose you know something about them, and you are conscious at once of being an object of the most absorbing interest, and are soon made aware of the fact that several anxious looking men who have been devouring you with wide-open eyes are desirous of speaking to you in private immediately. You go out with them - that is, with one of them - and he takes you to a private room, or a secluded nook in the garden, or the hayloft, and looks anxiously around to see if he is watched. Then you notice something that looks like a handle of a weapon sticking out of an inner pocket, and you feel for your penknife, resolved to prepare for the worst. He puts his hand in his pocket, and, seeing no chance of running away, you prepare to close with the man of mystery in a struggle for life. There is an anxious moment of suspense, and then the agony is over - the man pulls out a handful of specimens and the hammer with which he knocked them off the rock. Is this gold? or What do you think of this? or Isn't this good for sore eyes? is asked, and you look wise, examine the specimens with the air of a member of the St. John Art Club trying to determine whether the picture before him is a gift chromo or a fifty-guinea Art Union prize, and ask, Where did you get it? But the man refuses to tell. He is not green enough to give himself away so readily. His find is the result of weeks of prospecting, and he will keep the locality a secret until he ascertains the value of his specimens. These prospectors are everywhere. The woods are full of them. They dive into the deep gorges among the hills, wade the mountain streams, dig into the banks of the torrents, climb precipitous ledges to get at some shining particle away up on their face, and shovel earth to test the character of the rock beneath. The grocer and the farmer, the lawyer and the clergyman, the schoolma'am and the milkmaid, have mineral specimens to show, and either know where there is a valuable mine or quarry or have a friend who knows and won't tell! Specimens are used for paper weights and mantel ornaments. Specimens are in the parlor, the hall and the bedroom. Specimens are everywhere."

URN: 0721 / 0707 / IDX_Names: Shepody Mountain Manganese; Dawson Settlement;

Fredericton Daily Gleaner - Jul. 14, 1890 and Chignecto Post - Jul. 17, 1890 and Weekly Record - Fri., Jul. 25, 1890 Manganese property appears to be looking up.- Recently a mine near Hillsboro' was sold at a goodfigure, and the old mine back of Hopewell Hill, where extensive works were carried on thirty years ago, has been bonded by the owner, Mr. John Murphy, with good prospects of a sale being effected at an early day. The manganese from this mine has the reputation of being of the very best quality, and has always commanded the highest price on the market when it was offered. An expert mining engineer, Mr. Williams, representing an American Company, recently made a thorough examination of the property and was well pleased with it. - Moncton Times."

URN: 0721 / 0707 / IDX_Names: Shepody Mountain Manganese; Dawson Settlement;

Daily Sun - Sep. 27, 1897 The company who are operating the manganese mine at Dawson Settlement are pushing the work with considerable energy. There have been some forty-five men employed through the summer, and when they get all their machinery up the firm expect to put on over a hundred. There is also a prospect of some manganese mining being done soon near the old works at Chemical Road. Thos Giles, the veteran miner, visited the locality last week in the interests of an American company, and will do some more prospecting at an early date."

URN: 0721 / 0763 / IDX_Names: Shepody Mountain Manganese; Jordan Mountain Manganese;

Kings County Record - Dec. 17, 1942 Manganese Mines Resume Operations At Jordan Mountain. - During the summer and fall of 1941, considerable was heard of the Sussex Manganese Mining Company, which was rehabilitating the old Jordan Mountain property. Unfortunately, due to financial difficulties, the operation ceased at the close of the year, and with only a watchman on the property it lay idle until about three months ago when C.N. Thompson, mining engineer and superintendent of operations during 1941, arrived back from Toronto and resumed work on the property. The mine is now owned by the British ManganeseMines Limited, of Toronto, and this company also owns the old Shepody Mountain mine three miles from Hopewell Hill, where more extensive work will be started as soon as the Jordan Mountain property gets into production. At the latter, they have installed a large diesel engine of the latest type, also a large compressor, and pumping is now under way to dewater the mine after which shaft sinking and mining will be proceeded with. They have brought in a heavy duty diesel engine for the mill operation as well, and work is being speeded to the utmost to get this unit in working order as soon as possible. Additional equipment tending to improve the means of ore recovery, is also being added. There are at present seventeen employees at the mine and this number will shortly be increased when operations expand. The principal officers of British Manganese Mines are: W.C. Knight, a business man of Detroit, Michigan; Samuel Ciglen, B.A., of Toronto, is the secretary treasurer; the balance of the Board of Directors embrace men of high standing in the financial and business world. Unlike most mining companies, the Board of Directors of this company do not dictate the course of mining operations, this being left entirely in the hands of the Mining Research Corporation of Toronto, a group of mining executives with a lifetime of technical and practical experience. H. Thomson Leslie, B.Sc., E.M., is President and General Manager of the Corporation, and C.N. Thompson, E.M., is resident engineer in charge of operations. During the coming year it is their intention to investigate several other manganese occurrences with a view to expanding the industry. No other province in the Dominion is comparable to New Brunswick in the number of known deposits and out of close to 200 deposits in Canada, most of them are in the Maritime provinces. Manganese is probably the most essential mineral required in steel production and we of this province may look forward to increased activity during the next few years."

Daily Telegraph - Sep. 6, 1866 Mining Matters in Albert County. - To the Editor of the Telegraph:- I have much pleasure in informing you that at present the Agricultural prospects of this section are magnificent, and that the development of our Mineral resources is being pushed forward...The Albert Coal Mine Company have shipped some 10,000 tons; have 1300 tons on the wharf awaiting shipment; and are raising, probably, 100 tons per day. The Alexandria Coal Mining Company, - under the direction of Mr. Blight - operating a short distance to the westward of the Albert Mines, have sunk one shaft 160 feet; and are now engaged in another, which they have sunk to about the same depth; and are putting up a powerful steam engine to facilitate operations. The East Albert Coal Mining Company are operating to the eastward of the Albert Mines, about half a mile from the Petitcodiac River, where they have discovered several small veins of a very superior quality of Albert coal. They have sunk several trial pits on the vein, and are now engaged in sinking a permanent shaft near the great road, and have got down 160 feet. They are also going to put on this mine a large Steam Engine immediately to enable them to go down more rapidly. The Prince of Wales Company have sunk to the depth of 462 feet North East of the Albert Mines. At the present a temporary suspension has taken place with this Company; but I was informed by the agent that they would resume operations immediately. The Victoria Company, located near Stoney Creek on the Petitcodiac, after going to a depth of 400 feet, have for the time being closed, on account of the recent high rates of gold. C.D. Archibald, Esq., of England, hasexpended a large amount of money on roads and bridges to aid the development of the Albert shale; has erected lodging house, machine shop, saw mill, and partially opened several of the rich mines; and is now in a position to commence manufacturing to any extent, as soon as circumstances will permit. Mr. Dunlop, in Elgin, has had several men since early in the season engaged in developing the Shales on Coverdale River and Prosser Brook, the result of which, I think, has not yet been proved, but I believe he is very sanguine of success. He also has in course of erection, and nearly completed, a large Steam Factory, (near the Petitcodiac Station) for the manufactory of spools and 13other articles. He met with considerable loss lately in lumber, by the freshet, which may retard progress somewhat. Messrs. Vernon and Kinney have had some hands employed for quite a length of time, in opening theirCopper Mines in Alma. The Manganese Mining Company at Hopewell, - where a superior quality of that article has for a number of years been obtained to a considerable extent - has been mostly engaged of late in making new openings and preparing for future operations. This very brief (but accurate) account of what is actually transpiring must not be supposed to exhaust the resources of this County, for as yet they are scarcely touched. ALBERT"

N.B. Courier - Nov. 1, 1856 ADVERTISEMENT: Prospectus of the Hopewell Chemical Manufacturing . - The Hopewell Chemical Works were erected in the vicinity of an extensive bed of manganese ore found on the north side of ""Shepody Mountain"", situated in Hopewell, Albert County, in the Province of New Brunswick, at a very large 9 outlay of Capital by the present proprietors, and are in such a state of forwardness as to require a very small additional outlay for their completion. The land attached to this establishment comprises 360 acres covering, in addition to the Manganese, a large and valuable deposit of Alumina Clay, for the manufacture of Alum. The Works are distant from the place of shipment, and on a good level road, affording easy access to the Shepody River, where vessels of 500 tons can enter for cargo. The present proprietors finding inability to complete the Works within themselves, are forced to seek for increased capital, and to effect their object have procured an Act of Incorporation, for the formation of a Joint Stock company, to be styled ""The Hopewell Chemical Manufacturing Company,"" the capital of which is £25,000, and propose to dispose at the present time of a sufficient amount in £25 shares to enable them to complete the Works, and pay off any outstanding debts. They offer the present Works in a state of completion, according to the original design, for the Manufacturing of Acids, Alum, Chloride of Lime, Soda Ash, &c., at the cost to themselves, viz.: £12,000, to grant Stock Certificates therefor to the amount of £20,000; of which the sum of £2,000 is to be held by the Company as security for the completion of the Works, by the present proprietors, and to revert to them when the Works are finished. The remainder of the Stock, say, £5,000, to be vested in the Company for disposal only if further capital should hereafter be required for the extension of the present Works. In the vicinity of the Works are deposits of Sulphate of Iron, which maybe made available hereafter as a substitute for Sulphur at present obtained from abroad, and Limestone required for Manufacturing purposes may be very cheaply removed. The result of such investments in Britain and the United States, has been in all cases most remunerative, and so generally known as to render any estimate of profits in this Province unnecessary. The question is simple - If Work of this description in Britain, where they pay £8 stg. Per ton, and in the United States $40 for ore from this mine, affords a handsome profit to the Capitalist, can an establishment so favorably situated in every respect as the Works of this Company, fail to compete with them; - more especially with a market within 400 miles of them, that cannot be good, and which is importing largely at the present time from Britain in addition to the products of their own manufactories. The Works can be completed and the establishment in thorough working order within a period of two months, and at an expense of £3000, and it is determined to 10 proceed there with as soon as the small sum of £3000 is subscribed, as that sum will enable the present proprietors to finish the Works and pay off all liabilities now existing against the property. Officers of the Company: James Steadman, President S.D. Berton } W.H. Harrison } J.A. Morrison } Directors L.W.M. Irish } Thos. Main } Jas. Rogers } William S. Berton, Secretary July 21, 1856 (an20tw)"

Moncton Daily Times - Oct. 6, 1882 Professor Gould after working, with two men, on the property of Mr. D. McRae, Curryville, was able to secure a lot of excellent samples of silver which he sent away for test. He has since leased the property, havinglearned that the samples gave a very large percentage:- We hear that a company of moneyed men, on the recommendation of Prof. Gould, are about to purchase the copper and manganese mines of the Robinson farm, Chemical Settlement. While Mr. T.C. Weston, mineralogist and one of the oldest members of the staff of the Dominion Geological Survey of Ottawa was searching specimens at Curryville, last week, assisted by Mr. Thos. McHenry, he found some excellent samples of jasper and marble. Bothappear to give evidence of heavy deposits, and are said to be of superior quality. Here is a chance to pen up a fine marble quarry."

URN: 0721 / O3 / HILL / J8 / IDX_Names: Shepody Mountain Manganese; Hopewell Gypsum; Grey Brook Gypsum; Albert Mines;

Daily Telegraph - Feb. 22, 1878 Albert Sketches. - .... Riverside .... Gypsum and manganese are found in its neighborhood, althoughthey have not been worked yet to any advantage. Good building stone (sandstone) is met with in abundance behind the village. .... The chief business going on at Hopewell Hill justnow, is the work at the gypsum mine. This mine is situated about two miles from the village, on the bank of a small lake called Silver Lake, from which the gypsum takes its name, being called in the United States markets, Silver Lake plaster. It is of the best quality, being almost perfectly pure and free from lime, with which it is often found associated elsewhere. At present there are about forty men employed in digging it out and hauling it. It is first blasted into lumps which one man can handle readily, it is then hauled some three miles and a half to a landing on the Shepody River, where it lies till spring. It will then be shipped to the States. From twenty-five to thirty teams are at work every day hauling it. It will cost, when put aboard ship from 90c. To $1.00 per ton, freight to Boston from $1.50 to $1.75 per ton. The owner of the mine intends to get out 4000 or 5000 tons in the winter months that it can be worked advantageously. There is also a manganese mine in theneighborhood of Hopewell Hill, which was worked some years ago, but has since been abandoned, although the quality of the mineral is aid to be excellent. Hillsboro ...... The chief business carried on here is the preparation of of gypsum by the Albert Manufacturing Company. Their works are closed in the winter. The mine from which the gypsum is obtained is about 2 miles behind the village.The Albert Coal Mines, situated about 5 miles from Hillsboro, are also the means of circulating a considerable amount of money here. ...."

Moncton Daily Transcript - Feb. 16, 1892 Albert County notes.- Am American company has a number of men engaged in prospecting for manganese at Woodworth Settlement. They have tunnelled about 110 feet into the side of Shepody Mountain, but as yet no large quantity of mineral has been found. Small deposits have been discovered, however, and it has proved very valuable. Mr. Van Metre is managing the operations for the company.The Albert Mfg. Co., are quarrying plaster at Woodworth Settlement to be shipped to the States."

URN: 0721 / Z2 / IDX_Names: Shepody Mountain Manganese; Sandstone, Building Stone, Monument Stone, etc.;

Morning News - Feb. 6, 1861 Albert County. - ... Mr. Duval was then introduced. His subject was ""Albert County - its Mountains, Mines, Minerals, Manufactures, Marshes and Mud."" ... Messrs. Steadman's Chemical Works at Hopewell were spoken of; these had not proved a paying speculation; the manufacture of Manganese was still continued, and he believes with profit. The Grindstone Manufactory of the same gentleman now in successful operation below the Bend, was noticed. Grindstones were made at various other places, and it was a beautiful sight to see the way these were manufactured."

URN: 0721 / Z3 / IDX_Names: Shepody Mountain Manganese; Guano;

S.J. Daily Sun - Nov. 10, 1891 Albert County. - A Visit to the Shepody Mountain Manganese Mine. - (Staff Correspondence of the Sun.) - Hopewell, Nov. 7 - .... Country lawyer .... C.A. Peck ... splendid farm ..... M.P.P. ..... From the hill, your correspondent was driven out by Mr. Peck to Mineral settlement, where a visit was paid to the manganese mine now being operated by Mr. Van Meter, amid the ruins of the long ago abandoned Steadman mine and chemical works. Mr. Van Meter's operations are being carried on in a ravine at the base of Shepody Mountain. A tunnel has been driven 800 feet into the hillside, 500 feet before ore was reached. A tram way with wooden rails, connects the tunnel with a dump a short distance from its mouth, whence the excavated earth is carried in a car hauled by a horse. Timber for the walls and roof of the excavation is obtained about a mile up on the hillside. Mr. Van Meter was up when the scribe visited the mine, but the workmen engaged there said he was pushing things along with a vigorous hand. Shepody Mountain in entire height is about one thousand feet and slopes to the bay gradually. According to Dr. Gesner the mountain is the highest land in this portion of the province. It is about ten miles in circumference at its base, is triangular in shape and is somewhat varied in the character of its component parts. Prof. Bailey, who visited the deserted Steadman mines in 1864, thus describes the geological formation of the mountain: According to information given me at Hopewell, the southwestern half of the mountain is composed of chloritic and talcose slates, the southeastern side at the same level is sandstone, while capping both and rising to the summit of the mountain, are coarse red conglomerates. One side of the ravine, where the adits are (the right hand looking down towards Hopewell) is composed, as I myself saw, of chloritic and talcose slates, with a little steatite, dipping about southeast. The bottom of the ravine is the point of junction between these rocks and those in the immediate vicinity of the adits. These rocks between the slates and the manganese are limestones (resembling mountain limestone) and are about three or four feet thick, forming a sort of foot wall, and with them is associated a little clay. The manganese occurs in veins and beds, some of the latter being from one to five feet in thickness. The course of the ravine and also of the lode is about N.E. and S.W., with a dip to the southeast. Prof. Bailey says that about 400 tons had then been removed and shipped to England and the United States, where it sold for about œ10 per ton. The ore is a compact black oxide, but apparently less pure, he thinks, than those of Bathurst and Upham. There were at one time extensive chemical works in operation at this place, in the immediate vicinity of and in connection with the manganese mines. The products of these works were alum, soda ash and chloride of lime. The alum was not made as is commonly the case, from decomposing pyritous shales, there being none of these in the vicinity, but from the clay beds found associated with the manganese. The distance from market, with the cost of transportation of the chemicals to and from the works was one fruitful cause of their failure. Some of the ladies of Hopewell still remember alum baskets presented to them by Mr. Steadman as samples of one of the products of his works. Some persons with whom the Sun correspondent talked on the subject, believe that it will be necessary to go down pretty deep in the earth to find valuable minerals in Albert in paying quantities. ...."

URN: 0723 / IDX_Names: Memramcook Gold;

Daily Telegraph - Aug. 16, 1877 From the Times. - Blasting Accident. - Two men, named O'Brien and White, were very badly injured by the premature explosion of a blast at Crowsan's Ballast Pit, near Memramcook, yesterday. It is said that O'Brien has lost his eyesight."

Moncton Times - Aug. 16, 1877 Memramcook. - Two men named White and Brown were badly injured at the Cormea Ballast pit by attempting to pick out an old drill hole which had missed fire and the sparks from the steel exploded the charge. White is badly singed about the face and Brown was so badly injured that it is doubtful if he lives. Should he survive he will in all probability lose the sight of both eyes besides being badly bruised otherwise. The work at this pit has been of good service to the labourers of the vicinity, upwards of 100 men being employed. The foreman in the pits is Mr. Pollet Cormea, Mr. John McGowan being in charge of the lifting and ballasting. Mr. James Hamilton has the Time keeper's duties in charge, while Mr. Abraham Sherwood acts as train despatcher. The portion of the road so far completed is being ballasted in the most perfect manner and reflects great credit on the watchfulness and direction of track master Trites."

Daily Telegraph - Aug. 18, 1877 Blasting accident at Memramcook. - Two men named White and Brown were badly injured at the Cormea ballast pit by attempting to pick out an old drill hole which had missed fire and the sparks from the steel exploded the charge. White is badly singed about the face and Brown was so badly injured that it is doubtful if he lives. Should he survive he will in all probability lose the sight of both eyes besides being badly bruised otherwise. - Times."

Chignecto Post - Jan. 1, 1891 Gold has been found in the lower carboniferous rocks in the county of Westmorland, in small quantities, and a mining license has been taken out within a day or so to work it.- St. John Gazette."

Moncton Daily Transcript - Jun. 8, 1891 A number of Halifax and Truro men have leased aballast pit and over 300 acres of land near Memramcook for gold mining purposes. The gravel in the ballast pit has been tested, showing at median 12 pennyweight to the ton and maximum 22 per ton. Traces of gold have been found all along the Memramcook River."

URN: 0723 / IDX_Names: Memramcook Gold;

Chignecto Post - Jun. 15, 1891 The excitement and jubilation mentioned by a TRANSCRIPT correspondent as existing in

Dorchester on account of the supposed discovery of gold at the Belliveau gravel pit, has not been noticed by your correspondent. Dorchester people have had too many mining booms and wild cat enterprises of that sort to be much affected by such reports now."

Moncton Daily Transcript - Jun. 23, 1891 and S.J. Globe - Jun. 24, 1891 Gold in Dorchester. - The Comeau ballast pit which was leased last winter for glass manufactory purposes has turned out to be a very rich gold mine. The lease owners will be here in about a week to begin operations in finding the lead, which if a good one, the mine will be worked. A large force of men will be put on at once and all are jubilant that Dorchester has a gold mine."

Moncton Daily Transcript - Jun. 29, 1891 Upper Dorchester notes.- The Dorchester correspondent to the Sackville Post of last week ridiculed the idea of a gold mine at Dorchester as a wild cat scheme. This gold mine is not at Dorchester Corner, but at the Cormier ballast pit here where the company which owns the lease are soon to open the mine for gold and also for the manufacture of glass ware."

Moncton Daily Transcript - Nov. 4, 1891 and S.J. Daily Sun - Nov. 4, 1891 The Memramcook Gold.- Mention has previously been made (MISSED!!!) in the SUN of the discovery of gold in the old ballast pit at Memramcook. An American Syndicate has taken hold of it and a 50 stamp mill will be put up at once."

N.B. Reporter - Apr. ?, 1893 A strong company with a capital of $400,000 has been formed for the working of gold mines near Memramcook, N.B."

L'Evangeline - Apr. 6, 1893 Memramcook. - La Compagnie qui vient de se former pour explorer la mine d'or de Memramcook doit installer ses machines cette semaine afin de commencer ses operations immediatement."

Moncton Transcript - Apr. 29, 1893 J.B. Neily, one of the directors of the Memramcook Gold Mining Co. was here today on business in connection with the company."

Chignecto Post - Aug. 24, 1893 The gold mine at Breau's Ballast Pit, (Memramcook Gold Co.) has had poor success, principally for want of water. They have been obliged to use salt water with poor results. They have now laid pipes to a brook back in the hills and with some other changes hope to have better luck."

Chignecto Post - Aug. 31, 1893 and S.J. Daily Sun - Sep. 1, 1893 and Moncton Transcript - Sep. 1, 1893 Gold - Our reporter was shown a small fist full of gold yesterday, the result of the clean up of 25 tons of ore at the Memramcook mine. The results were pronounced highly satisfactory by the parties in charge of the mine."

Moncton Transcript - Dec. 20, 1893 Memramcook Gold Mines.- Mr. J.B. Neily, of the Memramcook Gold Mines, was in town Saturday evening. He says that the new 50 stamp mill will be in operation between Xmas and New Years, and will be the first of that size to be built and put in operation in the province of Nova Scotia. - Amherst Press. Perhaps our contemporary will state when Nova Scotia annexed Memramcook. By our latest advices it was still in New Brunswick."

Moncton Daily Times - Dec. 20, 1893 Memramcook Gold Mines. - Mr. J.B. Neily, of the Memramcook Gold Mines, was in Amherst on Saturday evening. He says the new 50 stamp mill will be in operation between Xmas and New Year's, and will be the first of that size to be built and put in operation in the province of Nova Scotia. - Press."

Moncton Daily Times - Dec. 22, 1893 The meeting of the shareholders of the Memramcook Gold Mining Co. will be held on Thursday, Jan. 4th., for the purpose of considering whether the new stamp mill is properly erected."

Moncton Daily Transcript - Dec. 23, 1893 and Moncton Daily Times - Dec. 23, 1893 Good News to Gold Miners. - Testing the New Process for Extracting Gold by Electricity.- Windsor, Dec. 23. - The new process for extracting gold by electricity, now being tested at Windsor by the Dominion Reduction company, of Boston, is daily proving its value over all other methods. A severe test has been applied to it in testing the tailings of ore from the Central Rawdon Mining Company's works, which were looked upon as valueless, and ordinarily would have been so. Two tests have been made, the first with a small quantity and the second with six tons. The latter was completed yesterday, the tailings realized $10.78 per ton of clear gold and sulphates about $34 per ton. The first test had about the same results. This is most satisfactory and will be good news to miners everywhere. The gentlemen of the company who came here a few days ago from Boston to witness the result of the operations of the new mill returned home yesterday. They have made quite a number of warm friends
URN: 0723 / IDX_Names: Memramcook Gold;

Moncton Daily Times - Dec. 27, 1893 A gentleman, who visited the Memramcook gold mine yesterday, informs the Times that it is proposed to commence crushing on Monday. The new building being erected is about completed and is spacious and substantial. The operations in the building line, he says, certainly have a businesslike look."

Moncton Transcript - Dec. 28, 1893 Rich Yield of Gold.- It is reported that aquantity of the quartz taken from the Memramcook gold mine has been cleaned up by the new electrical process which is creating quite a stir in gold mining circles, and that it yielded over $4 to the ton, or more than double the quantity obtained by the ordinary process. If matters are not grossly misrepresented, the owners in this country have a rich thing in prospect."

S.J. Daily Sun - Jul. 14, 1893 Memramcook Gold Mine. - J.B. Neilly of Halifax, who is pushing the Memramcook gold mining enterprise was in this city yesterday. He says that the stamp mill now on the grounds was started up yesterday. It is proposed to crush about 500 tons of material as a test in order to ascertain whether the purchase of a 50 stamp mill is justifiable. Mr. Neilly has little doubt that the mine is a valuable property."

Moncton Daily Transcript - Jun. 21, 1893 A Surprising Assay. - Are the Memramcook Gold Mines to Take a Front Rank? - Mr. J.B. Neilly, of the Memramcook Gold Mine Co., has received from Prof. Arthur B. Brown, of Boston, analyst, a report on the result of crushing five barrels of ore sent from the mine at Memramcook. In the course of his report dated June 12th he says:- I have made a careful mill test of the five barrels of ore sent me and now desire to report as follows: The ore was crushed to 40 mesh and carefully sampled. Average of triplicate assay $4.96 per ton, saving on plates $3.72 per ton. Another portion of the ore was milled to 60 mesh which showed a saving of $4.18 per ton. He presents the following deductions:- The gold is fine and evenly distributed, and although fine the gold is heavy and will be caught by properly arranged plates. Aside from the foregoing there seems to be no difficulty in saving a fair value and I believe that good mill work will yield gratifying results. If this proves but a sample yield which the mine owners believe it merely is, the Memramcook mine will take a front rank in the mines of this continent. It is so easily worked compared with other mines."

Moncton Daily Times - Jun. 22, 1893 Gold Mining. - Some 20 or 30 of our citizens met in the council chamber last evening to discuss mining affairs at Memramcook. Jas. Flanagan was appointed to the chair and H.H. Ayer, secretary. The meeting was enthusiastic over the prospects. About fifteen stockholders with proxies, go down to Memramcook this morning with the intention of organizing a company and electing a board of directors."

Moncton Transcript - Jun. 22, 1893 Memramcook Gold Mining Co. - a meeting of the stockholders of the Memramcook Gold Mining Company Limited is being held today in Dorchester for the purpose of organization and appointment of a working staff of directors and officers, a number of our citizens interested are in attendance. Quite an interest has been excited in this enterprise owing to the favorable reports of the assayers; men and machinery will soon tell their own story and prove quite a relief in this our time of general stagnation."

Moncton Transcript - Jun. 22, 1893 The Moncton stockholders of the Memramcook Gold Mining Co. will meet this evening in the Council Chamber at 7.30 o'clock."

S.J. Daily Sun - Jun. 23, 1893 Memramcook Gold Mine. - Work on this property is being now pushed ahead rapidly; a ten-stamp mill with all necessary attachments is in position and is only awaiting the arrival of belting to begin crushing the ore, a large quantity of which has been got out in immediate vicinity of the mill. The property covers about 360 acres. On Saturday the directors received from Boston the analysis of five barrels of ore which they has sent to a leading assayist of that city. The analysis is very satisfactory to the promoters of the mine, in that it not only shows the ore to be rich, but of a character that can be worked without blankets, settlers, pans, puddlers and the like, the gold, although fine, being heavy, and therefore easily caught by properly arranged plates. On account of the gold being fine and easily distributed throughout the mass, pulverizing to some sixty meshes is imperative in order to liberate the metal from the rock. Good mill work will yield gratifying results is the conclusion arrived at by the Boston expert after having subjected the ore to a triple analysis. The samples showed a gold value of $4.96 per ton. The engineer in charge of the Memramcook stamp mill told the Sun reporter that 50 cents per ton would cover the cost of mining and crushing."

Moncton Daily Times - Jun. 23, 1893 Memramcook Gold Mining Co. - Dorchester, June 22. - The stockholders of the Memramcook Gold Mining Co. held their first meeting here today. About forty of the stockholders were present. Moved, seconded and carried that J.B. Neilly be chairman and W.S. Covert secretary protem. A copy of the act of incorporation was read by the secretary and after a lengthy discussion it was decided, upon motion to employ Mr. Powell to attend the meeting and explain the position in which they stood as to the agreement with Mr. Neilly. His explanation being satisfactory the stockbook was largely signed. The question of byelaws was then taken up and after discussion was voted favorably upon. The following directors were elected:- J.B. Neilly, Halifax; A.C. VanMeter, Moncton; J.E. Masters, Moncton; J.W.Y. Smith, Dorchester; W. Fowler, Sackville; J.M. Campbell, Amherst; F.P. Prince, Truro; W.S. Covert, Halifax; A.N.

URN: 0723 / IDX_Names: Memramcook Gold;

Moncton Daily Transcript - Jun. 23, 1893 Memramcook Gold Mining Co. - A meeting of the Memramcook Gold Mining stock holders was held yesterday at Dorchester with large attendance. On motion J.B. Neilly and W.S. Covert were appointed chairman and secretary pro tem. After some minor business was transacted the following directors were elected: J.B. Neilly, Halifax; A.C. VanMeter, J.E. Masters, Moncton; J.W.Y. Smith, Dorchester; W. Fowler, Sackville; I.M. Campbell, Amherst; F. Prince, Truro; W.S. Covert, A.N. Whitman, Halifax, Hon. Pascal Poirier and H.H. Ayer were appointed auditors. The head office of the company is to be at the mines. The directors-elect then held a meeting and appointed J.B. Neilly, president; J.W.Y. Smith, vice- president; W.S. Covert, secretary; Fred W. Summer, treasurer."

S.J. Daily Sun - Jun. 23, 1893 Memramcook Gold Mine. - The First Meeting of the Company at Dorchester Yesterday - Directors and Officers Elected. - (Special to the Sun). - Dorchester, June 22. - The Memramcook Gold Mining Co. (Ltd.) stockholders held their first meeting here today. About forty of the stockholders were present. It was moved, seconded and carried that J.B. Neilly be chairman and W.S. Covert, secretary pro tem. A copy of the act of Incorporation was read by the secretary. After a lengthy discussion it was decided, upon motion, to employ Mr. Powell to attend the meeting and explain for the benefit of those present the position in which they stood as to the agreement with Mr. Neilly. His explanation being satisfactory, the stock book was largely signed. The question of by-laws was then taken up and after discussion was voted favorably upon. The following directors were elected: J.B. Neilly, Halifax; A.C. VanMeter, Moncton; J.E. Masters, Moncton; J.W.Y. Smith, Dorchester; W. Fowler, Sackville; I.M. Campbell, Amherst; F. Prince, Truro; W.S. Covert, Halifax; A.N. Whitman, Halifax. Hon. Pascal Poirier and H.H. Ayer were appointed auditors. The head office of the company is to be at the mines. The directors-elect then held a meeting and appointed J.B. Neilly, president; W.S. Covert, secretary; Fred W. Sumner, treasurer. The directors were chosen without a dissenting voice, and the meeting was very satisfactory in every way, and adjourned until a report could be furnished from the working of the mill."

Moncton Transcript - Mar. 16, 1893 Memramcook Gold Mine. - A Joint Stock Company Formed with a Capital of $400,000. - The Truro News says:- Mr. L.B. Crowe has handed us the prospects of the Memramcook Gold Mining Company Ltd., a joint stock company now being formed with a capital of $400,000 in shares of one dollar each for the development of a valuable gold mining property discovered at Memramcook, N.B. The property which is situated on the I.C.R. 22 miles from Moncton and 29 from Amherst, covers 360 acres and it is believed that underlying it throughout is a deposit of gold-bearing conglomerate estimated at about 25 million tons. Tests that have been made of the conglomerate show a result of from 9 to 14 1/2 pennyweights to the ton. Some of the advantages set forth in the prospectus are, its nearness to the Cumberland coal region, the ease with which the material can be worked, it being on a side hill and no shafts or hoisting necessary, and the small expense of mining and milling which is estimated at only 65 cents a ton, including a royalty of 15 cents. It is estimated that from 100 to 150 tons can be crushed per day with a fifty stamp mill and a profit of $1 a ton. The provisional directors are J.C. MacKintosh, Hon. A.G. Jones, J.B. Neilly, W.H. Covert and Miner T. Foster, Halifax; F.B. Prince, Truro; N.A. Rhodes, Amherst, A.C. VanMeter, Moncton. We are informed that the available stock in the above property is nearly all disposed of in Halifax and elsewhere. Any parties wishing stock should apply before Friday, the 17th, to L.B. Crowe, as no stock will be sold after that date. Price of stock 17 1/2 cents on the dollar, 7 1/2 cents to be paid in on application of stock and the balance not to be called except by vote of shareholders, when machinery is purchased."

Evening Gazette - Mar. 17, 1893 A New Mining Company. - Quantities of gold have been found in the vicinity of Memramcook, about one mile from the I.C.R. A company, known as the Memramcook Gold Mining Company, has been organized for the purpose of carrying on the mining operations. This company has a capital stock of $400,000 consisting of 400,000 shares of $1 per share, and so far is mostly all made up of Nova Scotia capitalists. Mr. H.S. Bell, of Moncton, has taken $500 shares. As the result of test it produced from 9 to 14 penny weights per ton."

Moncton Transcript - Mar. 18, 1893 and S.J. Daily Sun - Mar. 18, 1893 Memramcook Gold Co. - J.B. Neily, the promoter of the Memramcook gold mining company, is in town and states that 225,000 shares of the capital stock of the company has been disposed of. In the advertising columns will be found the prospectus of this company. J.F. Fraser is the agent for the company in St. John. The fact of this property carrying gold has been known for several years, but it was held by people who were not in a position to operate it. Mr. Neily has recently acquired the property and organized the company.- St. John

URN: 0723 / IDX_Names: Memramcook Gold;

S.J. Daily Sun - Mar. 18, 1893 ADVERTISEMENT: The Memramcook Gold Mining Company, Limited. Incorporated Under a Act of the New Brunswick Legislature. Capital Stock ... $400,000, Divided into 400,000 Shares of One Dollar Each. The Object of the Company. - A most valuable gold mining property having been discovered at Memramcook, in the County of Westmorland, in the Province of New Brunswick, a Joint Stock Company, under the above named is being founded for its exclusive development. Situation. - The property is situated on the Intercolonial Railway, near Memramcook, about 22 miles from Moncton, and 29 miles from Amherst. The Property. - The property covers three hundred and seventy acres of ground, and it is believed that underlying it, nearly throughout its whole extent, is a deposit of gold- bearing conglomerate. The lease is held direct from the Crown, under the mining laws of New Brunswick, and is to run for twenty five years from the 3rd of January, A.D. 1891, with the right to renew. The property has been opened to a depth of 36 feet, and to an extent of about 500 feet. Conglomerate is easily worked, and it is estimated by competent mining authorities that there is at least twenty-five million tons of this conglomerate on this property. Indications. - Various tests have been made of this conglomerate, and results show from 9 to 14 1/2 pennyweights to the ton. An assay from one barrel of conglomerate taken from different places on the property produce gold at the rate of 14 pennyweights to the ton. Another smaller test show at the rate of 14 1/2 pennyweights to the ton. Seventeen tons of the conglomerate are taken out during January, 1893, in a frozen state, wherever it could be got, was crushed in Mr. J.E. Hardman's mill at Oldham, with no extra precaution taken to save fine gold, and produced $1.65 to the ton. Taking this last test, which does not at all represent the richness of the property at an advantage, there is a large profit for the following reasons:- 1. - It is near the coal region of Cumberland County, and fine coal can be delivered on the property at $1.25 per ton. 2. - The conglomerate is found in a rise of slope about 36 feet in height, and will be worked into from the side of the slope. No shafts or hoisting is necessary. The base of the mill will be on a level with the bed rock, and for 20 cents per ton the conglomerate can be delivered at the mill. 3. - With a modern fifty stamp mill, which will include a rock-breaker and feeder, the conglomerate can be crushed for less than thirty cents per ton. 4. - To these sums add 15 cents for royalty and depreciation of and repairs to machinery, and we have a total of 65 cents per ton for all expenses of mining and milling. We have thus a profit of $1.00 per ton. It is estimated that from 100 to 150 tons per day can be crushed in a fifty stamp mill. The stock is now offered at 17 1.2 p.c. par value. The Provincial Directors of the Company are:- J.C. MacKintosh, Banker, Halifax Hon. A.G. Jones, Merchant, Halifax J.B. Neilly, Merchant, Halifax W.H. Covert, Barrister, Halifax Miner T. Foster, Merchant, Halifax Frederick Prince, Merchant, Truro N.A. Rhodes, Contractor, Amherst A.C. Van Meter, Mining Engineer, Moncton Application for stock will be received, and all information given by J.F. Fraser, Room 6, Imperial Building, Prince William street."

Evening Gazette - Mar. 18, 1893 The Nova Scotia Glass Works. - It is currently reported that the N.S. Glass factory is to be put in operation about the month of August."

Moncton Transcript - Mar. 25, 1893 Mr. J.B. Neilly, of the Memramcook Gold Mining Co., who was in town promoting his interest, has already succeeded in getting $25,000 worth of stock taken, and with good prospects for more."

Moncton Transcript - Mar. 30, 1893 It is understood that the Memramcook Gold Mining Co. have given a contract for the erection of buildings at their mine."

S.J. Daily Sun - May 4, 1893 and Moncton Daily Times - May 5, 1893 St. Joseph's College. - Some of the men connected with the Memramcook Gold Mine have arrived, and a part of the machinery is also on the spot."

Moncton Transcript - May 15, 1893 Memramcook Gold Mines.- Memramcook, May 15 [Special] - Next to the creamery, everybody here is talking gold. The works are located about three miles and a half from here in what is known as Cormier's gravel pit. Crushing is not commenced at the mines yet, but the putting in of machinery is in such an advanced state that they expect to be at work either at the end of this week or the beginning of next."

Moncton Transcript - May 17, 1893 Mining Fever.- A serious attack of mining fever struck Springhill last week. Representatives of the Memramcook gold mine were there canvassing for shares and succeeded in getting about $15,000 worth subscribed. Dr. Byers and R.B. Murray went to Memramcook to survey the promised land, and returned evidently with a good report concerning the prospective gold which might be found. Then there is an active local company, which numbers among its members Dr. Cove, Messrs. McCarthy, Murray and Weatherbee, who have a very promising coal area at Maccan, which will very soon be worked."

S.J. Daily Sun - May 17, 1893 Springhill, May 15. - A serious attack of mining fever struck the community last week. Representatives of the Memramcook gold mine were in town canvassing for shares and succeeded in getting about $15,000 worth subscribed. Dr. Byers and R.B. Murray went to Memramcook to survey the promised land, and returned evidently with a good report concerning the prospective gold which might be found there."

S.J. Daily Sun - Oct. 24, 1893 Gold Mines. - The machinery of the great crusher at Gay's River, N.S., is now being removed to the Memramcook Gold Mines. A good sized building is under course of construction at the Memramcook mine. Rhodes & Curry, of Amherst, are contractors."

Chignecto Post - Oct. 26, 1893 and Moncton Transcript - Oct. 27, 1893 Foundations for the batteries are being laid at Memramcook Mine under the superintendance of Mr. Benson Gladwin. The mill was built in 1890 for a gold mine at Gay's River, N.S., which proved a failure. The mill is a modern one, cost $50,000 originally, and not over 10 of the 50 stamps have been used. The company expect to have it ready for work in December. The stockholders are paying up a second call of 5%. Kent of Amherst is boring for water."

S.J. Daily Sun - Oct. 27, 1893 St. Joseph's College. - A force of men from Rhodes, Curry & Co.'s shops in Amherst are at present occupied in erecting a fifty-stamp mill at the gold mine. J.B. Neilly was here yesterday looking after the work."

Moncton Daily Transcript - Sep. 4, 1893 A meeting of the Memramcook Gold Mining Co. is called for Thursday, the 14th inst., to receive reports of operations so far and to consider the advisability of erecting a fifty stamp mill on the property."

Chignecto Post - Sep. 7, 1893 Gold Mining.- A meeting of the shareholders of the Memramcook Gold Mining Co. will be held at Dorchester on Thursday the 14th. Inst. The business will be the testing of the Company's property at Memramcook, and the consideration of the advisability of starting a fifty stamp mill."

Daily Transcript - Sept. 13, 1893 Memramcook Gold Mine. - Very Encouraging Resultsof a Test Case Held Saturday. - Editor Transcript. - Oneof the most interesting events probably to all people interested in the welfare of our county and province at large took place at College Bridge on Saturday, 9th inst. Quite a number of the stockholders of the Memramcook Gold Mining Company were present to witness the cleaning up of the fourth test, also the moulding into a brick of the gold accumulated from the four tests which have been made. Separating the gold from the silver occupied about two hours. The quicksilver and gold were put through a process of washing and handling, then placed in a piece of chamois. By pressure the silver is driven out leaving nearly pure gold. By morning the quicksilver evaporates, the gold remaining in the shape of a ball. Four lumps of nearly equal size, the result of four tests, were put into a large mortar, melted and poured into a mould the shape of a brick. One hundred tons of the conglomerate have been crushed, yielding nearly ten ounces of gold. The average yield per ton was about one dollar and ninety cents. The four tests of 25 tons each were taken from different portions of the gravel pit, showing the gold to be evenly distributed through the whole. The general estimate for mining and crushing is about sixty cents per ton. This at an average yield of one dollar and eighty cents per ton, means a handsome profit. Presuming the tests to be correct, the mine is a profitable investment. By its success the hitherto silent and unassuming little shiretown would enter into a new era of existence, real estate would boom, Dorchester would soon become a mining town and compare very favorably with our neighboring city, Moncton. The same bed of conglomerate extends through Dorchester, and follows the shore to Rockport. The shareholders are to meet om the 14th September to discuss the result of the four tests, also the advisability of erecting a fifty-stamp mill or of forfeiting their stock and chances. The agreement entered with by the company with Mr. J.B. Neilly is to this effect:- 1st. A call of seven and a half cents was made on the dollar, two hundred thousand shares were sold, representing about $15,000, which money he has used to make the lists, the result of which we are to discuss on the 14th. 2nd. If tests prove satisfactory to the Company, a call of 100 per cent. is to be made, divided into two calls of 50 per cent. which on two hundred thousand shares, amounts to $20,000, with that amount together with (as I understand it) the balance left (if any balance) after the first test, to place a fifty stamp mill, where the ten stamp one now stands, with all the necessary water power connected with a steam crusher, on completion to hand it over to the company in thorough running condition, which condition is to be approved of by a reliable man appointed as inspector by the company. Now apparently only one difficulty presents itself, the acquiring of sufficient water power for the running of the fifty stamp mill. There is a stream about three quarters of a mile from the mill large enough to supply the water needed, but a large outlay would be required to get it to the mill. According to agreements already quoted the responsibility of bringing the water rests on Mr. Neilly's shoulders not the company's. If the expenditure is heavier than the contracted price it is Mr. Neilly's loss and not the company's, therefore I cannot see why the water question should in anyway interfere with the erection of the fifty stamp mill. I trust at our meeting the venture will be discussed from every standpoint and the stock holders will decide to continue the work. It is only justice to Mr. Neilly to say that in selling the stock, he estimated the average yield of gold per ton to be one dollar and sixty cents. The first proper and regular test gave nearly that amount, all the others were within a few cents of two dollars, so it cannot be said Mr. Neilly overestimated the value. The brick of gold is valued at one hundred and ninety-five dollars probably the first ever moulded in New Brunswick. The wanted prosperity in Westmorland County may be at hand by this discovery, for our successful enterprise has a tendency to create confidence and increase business. .... Stockholder.

S.J. Daily Sun - Sep. 15, 1893 and Moncton Daily Times - Sep. 15, 1893 and Moncton Daily Transcript - Sep. 15, 1893 Memramcook Gold Mine. - The Company Decide to Putin a Fifty Stamp Mill. - The Fourth Test Proves Highly Satisfactory to all Concerned. - (Special to the Dun). - Dorchester, Sept. 14. - The Memramcook Gold Mining Co. held a special meeting here this afternoon in the Weldon House. About fifty of the prominent stockholders were present. J.B. Neilly was appointed chairman. The chief subject for which the meeting was called was whether they should instruct the contractor to put in a fifty stamp mill. When this question was brought yp for consideration a good deal of dissension arose. Many of the stockholders took exception to the building of a fifty stamp mill. The erection of a fifty stamp mill was strongly advocated by J.W.Y. Smith, M.P.P., J.B. Neily, W.H. Covert, Fred Prince, M.F. Foster and others; was strongly opposed by Dr. Gaudet, J.H. Wright, J.M. Wallace, W.B. Deacon, E.C. Cole, Dr. Doherty, T.N. Campbell and others. J.H. Wright took up the opposition and argued very strongly as regards the mill. He quoted many articles on mining gold in California and claimed that the Huntington Mill was the favorite in California. Mr. Wright also thought that the tests were not as many as they should have been. Mr. Neilly, the contractor, was called on to give the company some facts and good qualities of the stamp mills. Mr. Neilly responded and W.B. Deacon took the chair. Mr. Neilly also said that the stamp mills had proved superior in every respect to any other mill used. He said it was his object to supply the company with the best possible mill. Mr. Neily also said that in Nova Scotia the stamp mill was the favorite at all odds. Mr. Neily strongly advised the company to erect a fifty-stamp mill, and said if they did not accept it that the mining interests in Westmorland county would be damned forever. The opposition then moved that the meeting adjourn for one month. This motion was carried. It was found out shortly after the motion had been carried that all proceedings had been illegal since Mr. Neily left the chair. The question then brought up was whether the proxies could vote for an adjournment or not. W.H. Covert, the general legal adviser of the company was of the opinion that proxies were allowed a voice in the vote. M.G. Teed, the New Brunswick legal adviser, was not present. An Adjournment then took place, to meet again at 9 o'clock. At the meeting in the evening the vote for a fifty stamp mill was carried unanimously."

Moncton Daily Times - Sep. 19, 1893 and Moncton Daily Transcript - Sep. 23, 1893 Memramcook Gold. - Full Report of the Test Crushing. - The Initial Difficulties to be Overcome. - A Yield so Promising That a Fifty Stamp Mill is Ordered. - Dorchester, N.B., Sept. 18. - [Spcl.] - The following is the report of J.B. Neilly, handed in to the meeting of the Memramcook Gold Mining Co. Thursday. A large number of the stockholders were present. The question of land damages was fully entered into with Mr. Cormier, and after considerable discussion the directors and Mr. Cormier entered into an amiable agreement. All the questions in any way relating to the mine were fully discussed during the afternoon and the meeting adjourned till 8 p.m. At the evening meeting it was resolved that Mr. Neilly be authorized to erect a fifty stamp mill as soon as possible, fully equipped in every way and the mill to be erected under the supervision of a practical mining engineer to be employed by the directors and to be paid by J.B. Neilly. The motion was carried by 260 to 100 votes and declared unanimous:- I beg to submit the following report of the work done and the result of the tests at the Memramcook Gold Mining Co. Limited, College Bridge, N.B. June 21st, started the mill. June 22nd, crushed only about three hours owing to not having sufficient water. June 23rd, crushed only about two hours owing to same cause. When we put up the mill we were under the impression from what parties told us who live in the vicinity of the mines, that we would be able to get sufficient water to enable us to make the tests, but owing to the extreme dry weather the spring dried up, and we were forced to look elsewhere for water. Two of the directors visited the mine with me on the 23rd June and in consultation with the manager, Mr. H.E. Taylor, we decided that sufficient water could be obtained from near the tank on the I.C. Railway, almost directly opposite the mill, and as Mr. A.C. VanMeter was going to Moncton, N.B., the same day, he agreed to see Mr. Pottinger, and obtain if possible, permission to take the water from the I.C.R. Mr. Pottinger promised to send a man down to report upon the advisability of letting us take the water, which he did on the 27th of June, and in the meantime we kept the crusher going all the time we could by letting the tank fill up at night, and filling some eight of ten puncheons with water. On the 27th we stopped crushing, and decided to extend the pipe to the railroad some 823 feet, and to enable us to take the water from the railroad, we had to obtain a boiler and a Cameron pump to force the water up to the mill. July 12th we began crushing and crushed about a ton and cleaned up so as to be ready to begin the test under the supervision of Mr. Gladwin, who was sent up to the mines as a representative of the Halifax shareholders. July 13th. Began crushing, Mr. Herbert J. McDonald was amalgamater, and crushed 50 tons, cleaning up on the 26th, and he was unable to save the gold, owing to the bad salt and oily water taken from the marsh. Not knowing then what was the trouble, and I, being at the mines, we decided to change our amalgamater, and employed Mr. George Anderson until I could ascertain whether the water had any effect upon saving the gold. Began crushing on the 27th July, and on the 28th. I have been positively informed that we could not save the gold with such water, I telegraphed to the foreman to stop work until we could obtain better water, but owing to the amalgam showing so well on the plates, Mr. Taylor decided to continue crushing, but just then the engine blew the ring off the cylinder head, and they were obliged to shut down until Messrs. Robb Engineering Co. could make the repairs, which was not completed till the 4th of August, when they began crushing again and continued crushing until the 8th of August, when Messrs. Taylor and Gladwin tested the amalgam, and found on retorting it there was only a black ash. The foreman telegraphed for me at once and I went up, and after considering the matter fully we decided to extend the pipe over the hill, to the springs, and get fresh and clean water. I then obtained 1880 feet more of pipe, and we extended the pipe from the mill 2687 feet. Having completed arrangements, we began crushing on the 15th Aug. and before doing so requested Mr. Anderson to clean the splash plate. On the 17th. I returned to the mines, and Messrs. Taylor and Gladwin and I had a consultation, and we decided not to say anything to Anderson what we intended to do, but after stopping crushing at 6 o'clock we went to the mill and Mr. Gladwin said he would show us what the amalgam was made out of, and why we could not catch gold. He put some quicksilver on a copper plate, and then put some sodium on it and it formed a greasy amalgam at once, which showed that we would not save gold. I then asked them to stop crushing till we could get a suitable amalgamater and arranged for Mr. T.R. Prince to be there on the 17th, but he being disappointed with some of his men, could not leave his own work, and I then wrote to Mr. Peter O'Shaughnessy, who is supposed to be the best amalgamater in the Province of Nova Scotia, and pled with him to go. He replied at once by telegram that he could not go, but that his son, L.J. O'Shaughnessy would go for three weeks, and that he was recommended by Mr. J.E. Hardman. I replied accepting his services, and asked him to go to the mines at once. He arrived there August 22nd, and examined the mill. His keen knowledge was at once shown by him in ordering the drop changes, and another plate put in the mortar. We then found we had obtained the right kind of man, and felt confident he would do his best to save the gold. On the 24th, the mill having been put in order they decided in making four tests, crushing twenty-five tons at each, from different parts of the property, and began crushing and cleaned up on the 29th of August, result in retort: 2 oz. 1 dwt. 1 grain. Began the second test on the 29th August, and cleaned up on the 2nd Sept. result in retort: 2 oz. 10 dwt, 17 grains. Began the third test on the 2nd. Sept., and cleaned up on the 6th, result in retort: 2 oz. 10 dwt, 8 grains. Began the fourth test on the 6th September, and cleaned up on the 9th, result in retort: 2 oz. 18 dwt, 18 grains, total in retort for 100 tons, 10 oz. 1 dwt. 20 grains, smelted, 9 oz. 18 dwt. 12 grains. This at $20.50 per oz. will give $1.98 1/2c. per ton, at $19.50 per oz. will give $1.93 1/2 c. or at $19.00 will give $1.88 1/2c. per ton and you will perceive that my prospectus was based on $1.65 per ton and allowing 65c. for mining and milling and other expenses would leave $1.00 per ton profit, but taking this result as a basis there would be at least $1.25 per ton profit, which would give for each day's crushing with a fifty stamp mill, say 100 tons $125.00 profit or a profit in 300 days of $37,500 which will pay a dividend of 53 4/7 c. per cent. and should the company decide to issue 50,000 shares of par stock and increase the mill to 150 stamps, it would give a profit of 143 per cent. and to further increase the mill to 250 stamps (which would be 10 stamps more than the great Treadwell mill) the company would require to issue 50,000 shares of par value and then in same proportion you would have a profit of 214 per cent. and you will observe that I have not taken into consideration the item of expenses in running a 250 stamp mill in proportion to a stamp 50 stamp mill, as they would be much less proportionally. [Signed] J.B. Neilly. Dorchester,

L'Evangeline - Apr. 5, 1894 Memramcook. - Le Quartz, extrait de la mine d'or de Memramcook, traite dernierement par le nouveau procede electrique a Windsor, a rapporte dit on plus de trois piastres la tonne. Il doit y avoir reunion prochaine de la compagnie pour considerer s'il serait profitable de travailler ces mines au moyen de ce nouveau procede."

URN: 0723 / IDX_Names: Memramcook Gold;

Chignecto Post - Apr. 12, 1894 Memramcook Gold Mining Co., has arranged with its president, Mr. Neily, for him to put in machinery for reduction by the new electrical process and receive his pay from the excess of profits above those yielded by the old system, until they shall amount to the cost of the plant (not to exceed $5000) at which time it shall become the company's property. The shareholders are much pleased with present indications."

Chignecto Post - Aug. 2, 1894 Mr. Neily's Letter.- Mr. J.B. Neily has published in last week's Halifax papers a long letter reciting the various tests made re gold at Memramcook, to demonstrate there is gold there, contrary to the opinion of Messrs. Gladwin, O'Shaugnessy and Vanhorn. When Mr. Neily was promoting the alleged mine and selling stock he represented that a payment of 7 1/2% of stock subscribed would pay for putting up a ten stamp mill and making the tests. If the tests proved satisfactory and gold was found in the quantity as shown by the tests already made then 10% more would be called for and a larger mill erected for permanently operating it. Mr. Neily was then so confident as to the value of the property and his ability to work it out, that he estimated the dividends at 10% per month! The subscribers paid the 7 1/2%; Mr. Neily put up his ten stamp mill and operated it in his own way; he made such reports as induced the stockholders to pay up the 10 per cent additional and Mr. Neily put up a fifty stamp mill. This latter mill after being operated under Mr. Neily's management for some weeks not only produces no dividends and no gold, but a net liability of over $2,000 is created. It is now proposed to make more tests to find out if there really is any gold there at all. It seems from this that the stockholders were rather premature in yielding to Mr. Neily's proposition to go in and put up an expensive mill before it was well ascertained that gold exists there. We do not presume to offer any opinion as to whether the absence of gold or the absence of sound business methods has made the realization so far short of the anticipations raised by Mr. Neily in the minds of the stockholders, but there can be no question on one point; the net result of these various operations are: Mr. Neily has the money and the stockholders the experience."

Chignecto Post - Aug. 23, 1894 Memramcook Gold Mining Co.- The annual (adjourned) meeting on Tuesday was further adjourned for two weeks, without doing any business. The bye laws did not permit business without a majority of stock being represented. Mr. J.B. Neily the President represented enough stock for the purpose but he was conspicuously absent. A meeting of all the shareholders present was afterwards organised at which preliminary steps were taken to obtain a legal meeting hereafter. A good deal of indignation at Mr. Neily's absence and his management was expressed, but as the meeting was an informal one, no decided action was taken. The shareholders propose to make an independent test of

Chignecto Post - Aug. 30, 1894 Memramcook Gold Mine.- A special meeting of the shareholders of the Memramcook Gold Mining Co. is to be held at Dorchester on September 3rd for the purpose of authorizing the directors to borrow money on bill of sale or mortgages on the company's property at College Bridge to pay the indebtedness of the company."

Chignecto Post - Feb. 22, 1894 Memramcook Mine.- J.B. Neily and other directors of the Memramcook gold mine are at Windsor watching the conglomerates from Memramcook being put through the new mill. The result is not yet known."

Chignecto Post - Jan. 11, 1894 Memramcook Gold Mining Co. - Owing to tests and reports as to the mill and property of the Memramcook Gold Mining Co. not being complete the meeting of the shareholders on the 4th of January to vote on to the completion of the mill was adjourned without transacting any business to the 15th inst."

Moncton Daily Times - Jan. 17, 1894 and Moncton Transcript - Jan. 17, 1894 At the meeting of the Memramcook Gold Mining Co. at Dorchester on Monday the stockholders took over the fifty stamp mill recently erected at the works. Operations at the mine have been suspended till spring."

URN: 0723 / IDX_Names: Memramcook Gold;

S.J. Daily Sun - Jan. 23, 1894 Memramcook Gold. - Fifty Stamps are Now at Work Crushing the Conglomerate. - A Description of the Mill and its Fittings as Given by a Recent Visitor to the Spot. - A correspondent of the Halifax Critic gives in the issue of the 19th inst. an interesting account of a visit to the gold mine at Memramcook. We quote his general description of the mill: It will be remembered that a few months ago the fifty stamp mill put on the ill-fated Coldstream company's property at Gay's River was purchased by the Memramcook Gold Mining Co. through its energetic president, J.B. Neily. The main building is admirably adapted for its purpose, and is 88 ft. long by 48 ft. wide, with an elevator tower in the front centre 42 ft. high. The engine room is in the eastern end, the rest of the buildings being occupied by the stamp batteries, ore bin, self feeders, elevator tower, etc., etc. It is well constructed throughout, is all shingled and provided with skylights, one above each group of batteries and two or three above the ore bin, giving abundant light where it is most needed. The boiler house adjoins the engine room and is 32 x 30 feet, while behind it and quite detached is a neat and commodious office. Ore Breaker. - To show how well the mill is designed to save labor and to do its work at the minimum of cost, we will trace the ore from the time of its arrival at the mill until it emerges as tailings, giving a brief description of the construction of the machinery employed in its production. A tramway leads from the cliff of conglomerate which rises to a height of over sixty feet in front of the mill to the base of the elevator tower, in which is placed a Blake rock breaker with a capacity of 13 tons per hour. The breaker is in an ore pit, the feed being level with the surface, and as fast as the ore is crushed in the breaker it is caught on an endless rubber belt with buckets attached, and elevated to the top of the tower where it is dumped into the ore bin, which has a capacity of 600 tons. At each revolution the belt could carry up a ton, so no matter how fast the ore may be fed to the breaker it can never tax the capacity of the elevator. We saw breaker and elevator in operation, and they worked like a charm. The ore is discharged in the centre of the ore bin, and is automatically distributed both ways, passing through openings down the chutes to the self-feeders. The ore bin is constructed of massive timbers, the sills of which rest on foundations built from the bed rock. It is heavily planked, bolted and braced throughout, and well may it be, as it has to support an enormous weight. Each battery of five stamps is supplied with a self-feeder of the Truro Foundry and Machine Co.'s manufacture, there being ten of these ingenious machines in all, supplied by branch chutes from the five main chutes that lead direct from the ore bin. Batteries. - The batteries, ten in number, of five stamps each, are arranged in groups of two, with passages between each group. The foundations for the mortars are built up from the battery frames, so that there is not a particle of jar from the running of the machinery. Nine of the ten batteries were manufactured by the Truro Foundry and Machine Co., the tenth, the one at the east end, is a Nisen battery, manufactured by the Windsor Foundry and Machine Co., and there will now be a good opportunity to test its merits in direct contact with other styles. The plate tables are the same ones put up by the Truro foundry at Coldstream, and the crushed ore after passing the screens is washed over splash plates down three large copper plates into a mercury trap and then by sluices out of the mill. The battery frames are the same as at Coldstream, but altered to suit Mr. Nissen's plans, being braced by heavy cross timbers to upright framing in front of the batteries, this framing also supporting the one long line of shafting that supplies the power by cross belts and pulleys to each of the batteries. By this system the belting is all overhead out of the way. A pulley at the end of this shafting also drives the elevator and rock- breaker. Rhodes, Curry & Co. did the timbering, which is a guarantee of its superior quality. A partition separates the engine room from the battery room, and here the splendid one hundred and fifty horse power engine with its immense flywheel runs smoothly and noiselessly. It is on a foundation of blocks of sandstone built up from the bed rock, and all the foundations in the building are of the same material. Boiler Room. - The boiler room contains the two one hundred horse power boilers we have before referred to, and the steam capacity is in excess of all possible demands. In belting alone there are some 761 feet in the mill, and, although the intense cold had iced up about everything when the engine was started the machinery worked smoothly without a jar. One great obstacle has been heroically overcome, and that is the want of a natural water supply. To meet this two artesian wells have been bored, one to a depth of 437 feet and the other has now been put down 185 feet. President Neilly informed us that he now has an assured supply of all the water necessary to feed the batteries and run the mill. The work is automatic from the time the ore is fed to the rock breaker, and very few men are required to run it. Ten stamps of the fifty had been set up and had treated a quantity of the ore before the present mill was put up, and these remain in their original position. The company now have a mill that will treat the ore at the minimum of cost, they have millions of tons of conglomerate, just above it, that may be quarried and landed at the rock breaker for say thirty cents a ton, and if - that big if, that yet remains to be proved - the conglomerate will average $2.00 per ton they have a bonanza. It will revolutionize gold mining in this part of the world, and the miles of conglomerates in Nova Scotia and New Brunswick will be given a value hard to estimate. The proof of the pudding must be in the eating of it. President Neilly is a hustler. He is anywhere and everywhere, and if energy and pluck can command success he will succeed. Mr. Nissen's experience in stamp mill building has had full scope in the construction of the mill, and it is an assured success. Others who have had connection with the work are B. Gladwin, the well known gold miner of Halifax, who has had direct charge of the workmen; also Mr. Taylor, whom we had previously met in the employ of Mr. Woodhouse of Montagu. The amalgamator is young Mr. O'Shaughnessey of Oldham, a most experienced man, who has

URN: 0723 / IDX_Names: Memramcook Gold;

St. Croix Courier - Jul. 9, 1894 The Memramcook Mine.- When two very plausible gentlemen came to St. Stephen a month or two ago with a list of the shareholders in the Memramcook gold mine and a lump of gold, which was alleged to have been taken from the mine, they fortunately were not able to sell to St. Stephen parties much of the stock they were endeavoring to dispose of. Carried away by the prospects of an investment which was alleged to be gilt edged in every particular way, a few were induced to purchase. These have now cause to mourn, for recent developments show that the Memramcook mine is not every thing its promoters alleged it to be, in fact, is no good. The story of the mine is that when the Intercolonial railway was being built, the Memramcook ballast pit was a favorite place for securing ballast for the road. One day a miner happened along and came for where a party of men were loading cars with the 'golden sand'. He was startled to find that there was such a waste going on and at once showed the onlookers the pure metal that had for ages been lying unnoticed beneath the fertile ground of Dorchester. The news spread like wildfire, the farms were deserted, and around every fireside on the stormy evenings that winter might be observed one or more pseudo spectators with microscope and a bucket of 'specimens' searching out the glittering gold from the rubbish. Afterwards speculators secured control, a stamp mill was procured and the stock was hawked around the country so effectively that many business men in the maritime provinces became holders. Lately, however, the work of separating the gold was begun in earnest and it is stated that only two and a half cents from each ton of the material used were realized. As the stockholders were expecting $317 per ton, the difference between the expectation and the realization is somewhat marked. If the experience of the Memramcook shareholders will but teach the men who have had to do with it the uselessness and foolishness of listening to every plausible faker who comes along with a scheme for rapidly becoming wealthy, the lesson taught by it may not prove a too expensive one."

Daily Times - Jul. 14, 1894 The Memramcook Gold Mine. - A Clean Up Yields Only About Two Cents Instead of the Expected Two Dollars a Ton. - Considerable excitement was created about town yesterday by reports in circulation in regard to the gold mine at Memramcook. It was known that a clean-up as the result of the labors of the past few weeks had been made and while one report gave the result as three dollars per ton, which would pay handsomely, another report placed it at less than three cents. According to the best information available last night, three cents a ton is nearer the correct figure, 1100 tons of quartz, costing to mine and wash perhaps a thousand dollars, yielding a little lump of gold worth about $20. It is needless to say that the stock holders in Moncton are very much disappointed and a determination was expressed by many last night to have satisfaction out of somebody. The Memramcook gold mine, J.B. Neilly, of Halifax, who organized the company, retaining a large block of the stock for his services in promoting the affair, and also furnished the necessary stamp mill, taking in pay the receipts from the sale of the stock, something like thirty thousand dollars. Samples of the quartz taken out of the mine were sent to Nova Scotia and yielded, so it was alleged, over three dollars a ton, and the stockholders would like to know why it is that the same quartz by the same process now gives in actual results less than three cents a ton. This is one of the curiosities of gold mining which some person may be required to reveal in the courts. Recently machinery for extracting the gold by the electrical process was placed in the mine. It was purchased from a Mr. VanHorne, an American miner, who has been for some time in Nova Scotia, and who appears to have had so much faith in the Memramcook gravel pit that he took half the pay for his mill in stock, Neilly paying the other half on the understanding that he was to be reimbursed from the extra yield which the electrical plant would give. In the meantime Neilly is reported to have been actively engaged selling his own stock in various parts of the province, being assisted in the work by well known people in the various localities."

Moncton Daily Transcript - Jul. 14, 1894 Memramcook Gold . - The Gold Mine Closed Down! -Is There a Collapse.- A Dorchester Despatch to the Record, dated yesterday, says: - The Memramcook Gold Mine has closed down. A.T. Van Horne, the manager of the Electric milling process is in town today. He says the output of 1,200 tons milled has realized at the rate of 2 1/2 cents or one grain of gold per ton. The original tests showed $3.17 per ton and both Van Horne and O'Shaugnessy the amalgamator, are positive in the assertion that the mine was salted and that there is no gold there. The original stock was 400,000 shares of $1 each and 17 1/2 cents have been paid per share by the stock holders. Speculators around here lose heavily as besides what they had invested in the mine they had bought up all the available mining areas in Dorchester Parish. From the opening of the mine there has been considerable doubt as to whether it contained gold, as the nature of the ground and the location of the find were against it. Experts who have visited the place refused to put money in it on this account, its location outraging all the laws of nature and the doctrines of mineralogy. The gold was found in a gravel pit not on the bed rock as invariably occurs in washings, but all through the mass. The story is told that when the Intercolonial railway was being built this Memramcook gravel pit was a favorite place for securing ballast for the road. One day a miner happened along and came to where a party were loading cars with the golden sand . He was startled to find that there was such a waste going on and at once showed the onlookers the pure metal that had for ages been lying unnoticed beneath the fertile areas of Dorchester. The news spread like wildfire, the farms were deserted and around every fireside in the stormy evenings that winter might be observed one or more pseudo spectators with microscope and a bucket of specimens searching out the glittering gold from rubbish. Some Local Views.- The Transcript on enquiring among local people interested by reason of their investment in the mine, finds an admission that the statements given above are generally correct. A letter received last night from Dorchester by one of the largest of the local investors says:- Too bad about gold mine! Van Horne says only about two and a quarter oz. per ton. He says that the mine was salted. Everything closed down. Other information received is even of a much more angry character and using terms not quite as guarded. Another local investor says that he himself placed some of the conglomerate in barrels, sent it away to Boston to be analyzed and it showed good results, and he has also on several occasions - even as late as May 24 - gone to the mines and panned the conglomerate, showing a large number of sights of gold. It is, however, generally admitted that there is gold there; and that gold has been panned all about that section of the country through different beds of conglomerate on both sides of the river. The strange feature, however, is that the very plates set now show only trifling results. It is to be hoped for the immediate future of the mining industry in this section of the country, that the fears expressed and the despondency now felt will be removed upon a renewed test. The investors have put too much money into the mine to now allow it to be abandoned without another test, which will not cost much comparatively. It may be possible that the yield can be made remunerative though not so profitable as at first represented."

URN: 0723 / IDX_Names: Memramcook Gold;

S.J. Gazette - Jul. 14, 1894 Not Much Gold. - The published report of the present difficulties of the Memramcook Gold Mining Co. furnished a topic of conversation on the streets today as quite a large number of gentlemen in this city are interested financially in the matter, and the news they received was not the most encouraging. It appears that in the cleanup made this week a ton of quartz was found to yield but two cents. The amount invested in a stamp mill alone was

S.J. Daily Sun - Jul. 14, 1894 Memramcook Gold Mine. - It Proves a Failure, and of Course the Stockholders are Disappointed. - (Special to the Sun) - Moncton, July 13. - There is considerable excitement around today about the reports in regard to the Memramcook gold mine. A clean-up was made this week. One report said the result was three dollars per ton; another report three cents. The latter proved correct, about 1,000 tons of quartz yielding about twenty dollars, or less than two cents per ton. To say that the stockholders are disappointed is putting it mildly. About thirty thousand dollars has been invested in the stamp mill, and sample tested were alleged to have yielded as high as three dollars and seventeen cents per ton. It is likely a meeting of the directors will be summoned at once to consider the situation. It is reported that Mr. Neilly of Halifax, promoter of the mine, has within the last few days been selling the stock all over the provinces. Daniel Murray, travelling agent for VanMeter, Butcher & Co., agricultural implements, was arrested today on a charge of embezzling money of the concern. It is alleged he has collected moneys, of which he has made no returns. [There is quite a large amount of the Memramcook gold mine stock owned in this city]."

Moncton Transcript - Jul. 16, 1894 and Daily Times - Jul. 17, 1894 The Memramcook Gold Mine.- The Halifax Chronicle today says:- The Memramcook gold mine affair is causing much interest among mining men and speculators. To a Chronicle reporter a practical gold miner expressed his unbelief in the story of the mine being salted. The pay streak, he says, runs in the centre of the conglomerate. It was this that was first tested. The last conglomerate crushed was taken from both sides of the pay streak, hence the failure to find gold."

S.J. Daily Sun - Jul. 16, 1894 A Westmorland gentleman who has no interest in the Memramcook company, but has invested money in the development of other properties in the neighborhood, was seen by the Sun since the report of the failure of the Memramcook test was announced. He says that the tests of material from his property gave about the same results as those which led to the floating of the Memramcook mine. His assays were made by a first class man in Boston. His own interest was not to get a favorable return from the analyst, but an honest return, as he wished to develop the property himself if it was good. This gentleman could not understand the failure to find gold in the conglomerate crushed. He was not yet disposed to accept this result as final, and to take for granted that there is no gold at Memramcook. If it should prove to be the truth it would be a bad thing, for a great many people had spent all the little money they had in the purchase and development of gold mines in Westmorland. It would he thought be well for stockholders not to get into a panic and throw away all they had. Possibly the case might not be as bad as was stated. In any case people might as well

S.J. Daily Sun - Jul. 16, 1894 The Memramcook Gold Mine. - It required strong evidence to convince the public that gold in paying quantities could be found at Memramcook, but the evidence was forthcoming in a return from several apparently fair tests on large quantities of material. The actual operation of mines, the purchase of milling machinery and all the signs of serious business had the effect of impressing the public with a measure of confidence. At present some of the persons who made the early tests appear to be mystified over the fact that whereas gold in paying quantities was found in the material crushed and milled by them, no gold is found in the large quantity last put through the mill. Some of the shareholders appear to be still disposed to question the correctness of the late announcement, and express the opinion that the report is an attempt to bear the stock. The advice given by a Westmorland man is for the people who have no Memramcook stock to leave it alone, and for those who have some not to get into a panic and throw it away. This counsel has the merit of safety. A great many people had come to believe in the Memramcook gold field. During last year some $600 was paid to the government for licenses to search or to mine in Westmorland county. These included thousands of acres and were the result of some twenty applications. But the report of the crown lands department for 1893 contains an article on the mining industries of New Brunswick by Professor Bailey in which no very enthusiastic view is taken of these gold fields. This geologist after speaking of the vain search for gold in Charlotte, where according to all signs it might be found, says: During the past year, however, a new departure has been taken in the search for this metal, in consequence of its discovery in the conglomerates of the coal formation in the southern counties. Its existence in similar conglomerates in Nova Scotia was first pointed out many years ago by the late Prof. C.F. Hartt, and more recently works for the crushing of the rock and the separation of the gold contents were erected at Gay's River in that province. The undertaking, however, terminated disastrously. It is impossible, therefore, to contemplate without some misgiving the similar attempts to be made at College Bridge, near Dorchester, in Westmorland. According to the statements furnished us by Mr. A.C. Van Meter of Moncton, a great many practical tests have been made of the rock, and in every case the results have been satisfactory, showing from $2 to $5 per ton. A test of 100 tons was also made on a ten-stamp mill, giving a result of $2 per ton, whereupon the company decided to erect a 50-stamp mill and to proceed with the work in a systematic manner. Professor Bailey then proceeds to show how cheaply the rock can be mined and milled. If the material which has been milled is the same kind of ore as that previously tested the first lots were no doubt salted by some one having an interest in the sale of the stock. There remain such other possibilities as that the testa were all genuine, but that the material is of varying richness or poverty; or that the parties making this last test are not capable or honest. The obvious duty is the investigation of the whole matter in the interest of the general public, and of the mining industry of the province."

URN: 0723 / IDX_Names: Memramcook Gold;

S.J. Daily Sun - Jul. 16, 1894 and Moncton Transcript - Jul. 16, 1894 and Daily Times - Jul. 17, 1894 Who Salted It? - Memramcook Gold Mine a Fiasco! - Suspension of Work - What the Officers Say Concerning the Collapse. - (Special to the Sun.) - Dorchester, July 14. - On Thursday night last Mr. Gladwin, manager of the Memramcook gold mine, suspended work and discharged the hands. He had commenced to clean up after crushing 1,200 tons of ore and to his amazement and that of Messrs. O'Shaughnessy and Vanhorne, the amalgamators, found that there was no appreciable gold. They had expected as the result of the crushing about $2,000 in the shining metal; in place of that there was not $20.00. The news of this result was quickly heralded and the stockholders in Sackville, Dorchester and Amherst were deeply chagrined at the result and a great deal of comment of an unfavorable character has arisen as to the conduct of the promoters of the mine. It appears that the property was first leased or held by Messrs. Vanmeter of Moncton, Prince of Truro and Ahearn of Halifax. J.B. Neilly contracted with them to organize a company and raise capital to work it. The company was organized with a capital of $400,000, the original owners retaining $100,000, Mr. Neilly $87,000 and $213,000 being set apart for sale on which to raise capital. This stock was issued to the public at 17 1/2 per cent., paid up. It was arranged that 7 1/2 should be paid at once for the purpose of putting up a mill and testing the property, and if it proved satisfactory the 10 per cent. should be afterwards paid. Mr. Neilly put up a ten-stamp mill. Tests were made as follows: No. 1, 100 tons, no gold. No. 2, 100 tons, no gold. No. 3, 100 tons, $1.86 per ton. No. 4, 12 tons, $3 per ton. No. 5, 31 tons $3.17 per ton. No. 6, 6 tons, $2.78 per ton. On these tests the 10 per cent was paid up and a large mill erected. The results of the first crushing are: No. 7, 1,200 tons, no gold. It is understood that Messrs. Van Horne and O'Shaughnessey, the amalgamators, who made tests 3,4,5,6 and 7 express themselves very freely that there has been some crooked work somewhere. Mr. Gladwin, the manager, who three weeks ago expressed himself very confidently in the presence of a general meeting as to the results, expresses himself very strongly that he has been misled and deceived. No doubt an investigation will be held, and it will be seen who has benefitted by the operations of the company."

Daily Times - Jul. 17, 1894 (Halifax Herald, 16th inst) Despatches published in Saturday's Herald, referring to the Memramcook gold mine, have caused somewhat of a sensation in Halifax, owing to a large number here being interested. Some of those who invested are J.A. Chipman, J.P. Cox, Hon. A.G. Jones, G.A. Pyke, J.C. MacKintosh, A.N. Whitman, William Lithgow, W.H. Covert, Thomas Spry, R. Rosborough, Hessian & Devine,John Peters, George E. Boak, J.W. Crichton. Thomas Spry was interviewed by a Mail reporter to-day. Without hesitating for an instant he denounced the whole thing as a fraud from beginning to end. He had invested his money, and he realized now that it was lost, or, to use his own words, stolen from him. One of the directors was also interviewed. He stated that he signed for many shares after he saw Hon. A.G. Jones and J.C. MacKintosh's names on the list. The proposition at first was to sell 100,000 shares at 7 1/2 cents and erect a ten stamp mill. This would cost $7,500. This was done and 100 tons of gold crushed, yielding $200 worth of gold. A meeting was subsequently held in J.P. Cox's office, at which were present J.A. Chipman, J.P. Cox, G.E. Pyke, Arthur N. Whitman, William Lithgow, J.B. Neily, W.A. Covert, Thomas Spry, J. Devine, John Peters and J.W. Crichton. It was proposed that a 50-stamp mill be purchased. According to the director interviewed by the Mail, Messrs. Foster, Pyke, Cox and Chipman opposed the proposition and advocated that a further test of 300 tons be made with the 10-stamp mill. Some of the Halifax shareholders advocated the sending of Mr. Gladwin to the grounds to make an investigation and report. The meeting, however, decided to purchase the 50-stamp mill, with the result as shown in the despatches referred to. The director also stated to the Mail that the crushing of the 100 tons of quartz with the 10-stamp mill, which yielded $200 worth of gold, was virtually no test. Letter from Mr. Neily: To the Editor Halifax Herald.- Sir,- I have just seen the telegraph reports in the Morning Herald of crushing conglomerate from the Memramcook Gold Mining Co.'s property at College Bridge, which to say the least, is unfair to me. One report says I have sold most all my stock. Such is not the case. I hold now nearly 60,000 shares, 30,000 shares of which I have purchased this year, and on the recommendation of Mr. Vanhorne, who figures in the reports, I purchased and erected at my own expense a five thousand dollar electric process mill. In addition to this, I have spent fully two thousand dollars on the property this year; and to enable me to do so I disposed of some stock for payment of these amounts. I have not seen the manager, therefore cannot say anything further re property; but as yet, judging from the many tests we have, I cannot believe the property is as represented, and to show my faith in the property I am willing to take it from the company and arrange payments at least 50 per cent. on their investment. J.B. Neily."

Daily Times - Jul. 17, 1894The Memramcook Mine. - The letter of Mr. J.B. Neilly to the Halifax Herald, which we publish elsewhere, will have a melancholy interest for the holders of shares in the Memramcook gold mine - those of them at least who put money into it. Several thousand dollars of Moncton capital is invested in this mine, and some effort should be made to ascertain the exact facts in regard to the property. Mr. Neilly's offer to take the property from the company and pay at least fifty per cent on the investment is not a consoling one. The machinery if sold should be worth something while the offer is likely to create in the minds of many shareholders the impression that the property may be of some value after all and that the poor showing in the recent cleanup was the result of dishonest work somwhere. The theory advanced by a Halifax gold miner in regard to a pay streak may be dismissed as worthless. Either the mine was salted for the first tests or the work done recently has been for the purpose of discouraging the stockholders. Doubtless some facts will be forthcoming at the meeting of directors to be held shortly. If the explanations are not satisfactory, a most searching investigation of the operations of the various promoters of the company should be held with a view to the punishment of the parties guilty of fraud if any is found to exist, and if possible the recovery of the money of the shareholders."

Moncton Daily Transcript - Jul. 17, 1894 The Memramcook Gold Mine. - Some of the Halifax Men Who are Interested. - The Halifax Chronicle says: The announcement through the despatch in the Chronicle Saturday to the effect that the Memramcook gold mine had shut down, as gold was not found in paying quantities caused quite a commotion in this city, where a great deal of stock is held. Among the Halifax people interested in the mine are J.B. Neilly, W.H. Covert, J.C. McIntosh, Hon. A.G. Jones, J.A. Chipman, John Burgoyne, M.T. Foster, J.P. Cox, G.A. Pyke, A.N. Whitman, William Lithgow, G.E. Boak, R. Rosborough, Thomas Spry, J.F. Devine, John Peters, J. Crichton and others. A shareholder who was seen Saturday said that at the start $100,000 worth of stock was placed, with the understanding that 7 1/2 cents should be paid up and a ten-stamp mill be erected. This was done and the first test - about 100 tons - showed about $200 worth of gold, and the 7 1/2 cents paid up looked like a good investment. It was understood that should the conditions warrant it another payment of 10 cents, making in all 17 1/2 cents, should be made to put in a 50-stamp mill. A meeting of Halifax shareholders was held to consider the question as to whether it was advisable that the mill should be erected. At this meeting Mr. Foster, Mr. Pyke and others advocated waiting until 200 or 300 tons more had been crushed, so that it could be ascertained if the yield of the first crushing was a fair average, or whether it was a low average. It was decided to have Mr. Gladwin, a practical mining man, go over the ground and report if he thought gold could be found in paying quantities, and M.T. Foster was asked to take a place on the managing board, as he understood considerable about mining. He was also requested to withdraw his opposition to the erection of the 50 stamp mill as other shareholders thought it would be a paying investment, which he did. Mr. Gladwin went over the mine and found gold in pannings."

S.J. Daily Sun - Jul. 18, 1894 and Daily Times - Jul. 18, 1894 To the Editor of the Halifax Herald. - Sir.- Inotice in your issue of the 16th inst., a letter signed by J.B. Neilly, in re Memramcook Gold Mining Co., Ltd. Amongst other statements made in that letter, I notice that he makes an offer to the stock holders of at least 50 per cent. of the amount paid respectively for the stock of the said company. I have sent Mr. Neilly a letter, stating that I will accept his offer for myself and Ingram B. Shaffner, who desires me to include his stock as well. I will give you this notice so that you will be good enough to put Mr. Neilly's letter on file, that reference may be had thereto at future date, should it be requisite. Trusting that this will be satisfactory to you. J.A. Chipman Halifax, July 16th, 1894"

S.J. Daily Sun - Jul. 18, 1894 (Special to the Sun).- Moncton. - July 17. - Referring to Mr. Neilly's offer inthe Halifax Herald to purchase the Memramcook gold mine shares at fifty cents on the dollar, your correspondent is authorized by several Moncton shareholders to say that they will be glad to do business with Mr. Neilly on that basis, and he will have no difficulty in securing stock."

URN: 0723 / IDX_Names: Memramcook Gold;

Chignecto Post - Jul. 19, 1894 Memramcook Gold Mines.- Work Stopped.- What theManager Says.- Offer of Mr. Neily.- Opinions of Halifax Stockholders.- investigations Called for.- (SUN 16th inst).- The report of the crown lands department for 1893 contains an article on the mining industries of New Brunswick by Professor Bailey in which no very enthusiastic view is taken of these gold fields. The geologist after speaking of the vain search for gold in Charlotte, where according to all signs it might be found, says: During the past year, however, a new departure has been taken in the search for this metal, in consequence of its discovery in the conglomerates of the coal formation in the southern counties. One report says I have sold most all my stock. Such is not the case. I hold now nearly 60,000 shares, 30,000 shares of which I have purchased this year, and on the recommendation of Mr. Vanhorne, who figures in the reports, I purchased and erected at my own expense a five thousand dollar electric process mill. In addition to this, I have spent fully two thousand dollars on the property this year; and to enable me to do so I disposed of some stock for payment of these amounts. I have not seen the manager, therefore cannot say anything further re property; but as yet, judging from the many tests we have, I cannot believe the property is as represented, and to show my faith in the property I am willing to take it from the company and arrange payments at

St. Andrews Beacon - Jul. 19, 1894 The Memramcook gold mine has become an utterfailure, and it is freely stated that the property was salted so as to give a few a chance to make a haul."

URN: 0723 / IDX_Names: Memramcook Gold;

Moncton Daily Transcript - Jul. 20, 1894 and Daily Times - Jul. 20, 1894 Memramcook Gold Mine. - Meeting of the Directors Thursday Afternoon. - The Managers Submit Their Report on the Mine. - What Mr. Shaugnessy Thinks of the Matter. - A meeting of the directors of Memramcook Gold Mining company was held at College Bridge yesterday. There were present Mr. Creighton, representing Mr. Whiteman of Halifax; Prince of Truro; Campbell and Fowler of Sackville; J.W.Y. Smith of Moncton; Logan of Amherst and President Neilly. After a free and general talk, it was decided to hear the report of the manager M.D. Gladwin of Halifax. He reported verbally that he had commenced to crush on the 6th of June, and worked on an average 15 stamps per day of the fifty in the mill, there not being sufficient belt power or water to run to full capacity. He stopped crushing on the 12th of July, making 36 days work. He crushed on an average 31 tons per day or a total of 960 tons. About eight days after the mill had commenced crushing J. O'Shaughnessy showed him the plates and said they looked very well. He was asked the same thing at different times and said they looked even better than last summer. Mr. Gladwin, in reply to Mayor Sumner of Moncton, said he did not see anything wrong with the mill. As far as general working was concerned he thought it a good mill. He thought they had as good an amalgamator as could be got, and there was no chance of gold being removed from plates except by the knowledge of the chief amalgamator. He was convinced that the gold was not in the material crushed of late. This was practical working, not a test. He thought there was gold in the quartz tested last year. He further said he was at the mine last year in the interest of the Halifax shareholders. Mr. O'Shaughnessy was the amalgamator last year when the tests were made. The material used in the recent crushing was being taken from the same place, or nearly, as that crushed last year. He did not think there was gold in paying quantities in the mine. When he found that the gold was not panning out he stopped the work and told parties outside to that effect, as he considered it right to do so. Last year the gold came out of the mine in paying quantities. Under the same conditions this year the gold did not appear. He believed the tests were tampered with, but it was beyond his knowledge how the gold was secured in the tests made at Boston, Oldham and Windsor. He did not know where the ore tested came from. It was alleged to have been taken from the Memramcook mine but he did not think the gold shown in these tests could have been secured from the ore from the Memramcook mine. Being asked if he would make further tests, he said he would have nothing more to do with it, as he had no confidence in it. Mr. Van Horne, who is the builder of the electric mill erected this spring, in an answer to questions put by Mr. Neilly, stated that he had received a carload of conglomerates about October 1st, 1893, at Windsor. It lay there until about 15th February. A Mr. Wiswell made several tests from five to and ten pound lots, getting about three dollars per ton, but in the opinion these tests were reliable. He made a test about 15th February of about twelve tons and secured $3.17 per ton. Mr. O'Shaugnessy made a test about this time and secured about $2 a ton. Afterwards Mr. Neilly sent on about three tons more to make a further test, and without Mr. Gladwin they ran it through the mill and secured about $3 per ton. Mr. Neilly here asked Mr. Van Horne how he thought the gold came to be in his lot and not in the ore recently crushed. Mr. Van Horne said he could not understand that. He felt confident, however, that if there was gold at Memramcook now, this mill would have found it. He had crushed 112 tons in the electric mill during recent crushing and made 3 pennyweights and 1 grain. He was satisfied this is all there was in it. He made no test at the mine. After crushing this 112 tons, he crushed seven tons more very slowly and carefully, but got nothing. Then another lot of ten tons with not a result. He said it looked as though the test had been salted . He used the same process at the mine as in the tests. He did not think any material from the mine would give the same result as the test. He thought the bank had been thoroughly tested. Mr. O'Shaugnessy, the chief amalgamator, said that from the test made last summer he secured gold. During the recent crushing at the mine he did not. If the gold had been in the material at the mine he was sure he would have got it. The gold got from the tests last summer was fine milling gold. In reply to a question Mr. Shaughnessy said that the mine could, easily be salted . He did not think there was gold in paying quantities in the mine. He was sure if it was there it would have been secured. After further talk the directors proceeded to get an account of the expenses of the recent operations, amounting in all to about $2,406.55, for which there had been no provisions made, as it was expected to pay the expenses from crushings. Mr. Neilly wanted the directors to make a note for this amount, but after some discussion Messrs. Smith, Fowler and Sumner were appointed a committee to see if the amount could be raised on the mill. Mr. Neilly said he still had faith in the mine, and thinks further tests should be made, but the

Carleton Sentinel - Jul. 21, 1894 The Memramcook Gold Mine, about which there has been much sensation, and a stamp mill in which $30,000 were recently invested, turns out a failure."

URN: 0723 / IDX_Names: Memramcook Gold;

Progress - Jul. 21, 1894 The Gold Was Not In It. - The mine at Memramcookproves a failure.- The only money in it is what the stockholders put in - The Amalgamator says the Test was salted . A serious charge that calls for an explanation. When Progress printed an expose of the gold mining fever, in Westmorland county a few weeks ago with particular reference to the mine discovered and placed before the public by that astute promoter J.B. Neilly, there was considerable indignation not only among those interested in the venture, but, those who had been approached and considered the project in a favorable light, disliked to have such a promising investment as this appeared to be criticized in this plain and damaging state. But the result has proved that Progress is right as usual and that the Memramcook gold mine, so called, in which there are more provincialists than one cares to contemplate, has been a fake . The promoter, Mr. J.B. Neilly, has been successful in placing upon the market a bank of earth and stone in which there is hardly the shadow of a trace of gold. Perhaps it is remarkable that a man of this sort, not of polished manners but possessing a persuasive persistence that is hard to resist, could come into a city like St. John and induce so many level headed men who have made their money by their astuteness and caution to put their hard earned dollars into this hole in the ground. That he succeeded in doing so is beyond question and it would be surprising if the list of people who were persuaded was made public. After Mr. Neilly had done those people with whom he was acquainted, and was looking about for more to whom he could present this promising investment, he hit upon a young man who is fairly well known in this city and province. Mr. McQueen, it is hardly necessary to say, was once an M.P.P. He represented the noble country of Westmorland in the local house. Whether the secret of his success in this by-election was the result of his promising appearance, his youth, or his easy and gentle manners it is hardly worth while considering now, but it is certain that the hard headed promoter Mr. Neilly saw something in him that was likely to aid him in his enterprise. So Mr. McQueen became Mr. Neilly's companion. He was his guide, as it were, to the monied men of the province. These things are done easier sometimes by two than one. Mr. McQueen posing as the introducer of the talker and persuader - a disinterested one, of course! - could well afford to utter a word of corroboration and commendation at times when the argument of his companion seemed to need support. This mine was situated in his native county and he knew all about it and other mines in that vicinity. He laughed at criticism of Progress when it was pointed out, and thought it a good joke, though it might prove a damaging one, and he spoke of one of the backers in another enterprise of a similar character who was inclined to go slower after he had read it. But that was fixed all right and the money came again. But the bomb shell has burst - burst before all of the stock was sold - too soon perhaps for the promoter, but too late for the tempted shareholders who imagined that they had a bargain in this mine in the east, who placed all the faith in the world in the report of the tests that were placed before them, but who did not stop to imagine whether the ore the tests were made from came from Memramcook or Colorado. The fact that the tests were there, that So and So and So and So attached their names to a document saying that there was so much gold in so much ore seems to have been all the assurance that these gentlemen needed to become members of the company. The one curious part about the business however was the low figure at which the stock was floated. There was enough of it no doubt to enable it to be sold at a much less figure; but seventeen and a half cents is not much to ask for stock in a gold mine. One gentleman in this city who had been persuaded to take 1000 shares and paid $117.00 for them talked with Progress a few days ago. At that time he hoped for a better report and did not think that the people who had taken stock should get in a panic about it. Still it was quite evident that he was talking against his own conviction and making the best of it. Even he expressed surprise that a stranger was able to come to this city and interest people in such a uncertain ventures, get their names and their cash, while a citizen with any industrial project needing a dollar behind it found it well nigh impossible to form a company. But to return to Neilly's gold mine. Since the report went forth that there was no gold in the quartz, Mr. Neilly has been heard from. He was in Halifax and he at once dropped into a newspaper office and offered to take any one's stock at 50 cents on the dollar which would mean eight and three quarter cents on the dollar - half of what was paid. He must have been surprised to see how promptly several of the stockholders were to take him at his word, but there is no record that the stock has been transferred. There is a record, however, of a director's meeting which was held at Memramcook. President Neilly was there. So was Mr. J.W.Y. Smith and Mayor Sumner and a Mr. Fowler, of Sackville, and Mr. Creighton and Mr. Logan. Besides these, two gentlemen with well known names, Van Horne and O'Shaughnessy - no relation to the C.P.R. gentlemen - were also on hand, and it may be said that their contributions to the history of this mine furnish plenty of food for the thoughts of people who are ever asked to invest in a similar venture. Mr. Van Horne did not hesitate to express his opinion that the previous tests - those upon which the stock was canvassed and taken - were salted . This word in mining parlance means much. There are so many ways to salt a mine that it would take columns to explain how easily the thing is done. This time however the test appears, in the opinion of Mr. Van Horne, to have been tampered with. The question of who would tamper with it and in whose interests it was tampered with must be left to the stock holders. They will find ample room to investigate. Manager Gladwin was of the same opinion. There might be gold in the quartz at Memramcook but it wasn't there in such quantities as they had been led to believe. There was something pathetic in the way he told his story; how careful they had been and after crushing nearly 1000 tons of ore the disappointment they had met with. Then Mr. Van Horne spoke of crushing 112 tons and only finding three pennyweights and one grain of the precious metal. In spite of all these reports President Neilly pretended to have faith in the ill starred venture. He wanted the directors to make a note to cover the deficit - some $2400, but these gentlemen kept firm hold of their caution and instead of doing this appointed a committee to try and sell the new stamp mill and thus liquidate the liability. For the benefit of those who failed to profit by the advice extended to them in a jocular and yet earnest view in these columns some weeks ago a portion of it is reprinted. It gives an idea of how the mines were discovered and the local feeling over the matter which is, after all, the truest indicator: Returning to Dorchester, the people here occupy the most of their time discovering mines. It is considered a dull day when a mine is not discovered. I came nearly being a mine owner myself last fall. A local company were taking up a property and offered to let me in on the ground floor as they called it for $700. Being out of funds I had to let it slip me. How true the words There is a tide in the affairs of men, etc., etc. A number of years ago Albertite coal cropped out at Beliveau Village, Dorchester, and a strong company was formed and spent a lot of money to procure a few pounds of it. Later copper cropped up in the vicinity of Dorchester and an American company and a local syndicate vied with each other for its possession. They went chasing each other around with special trains and finally the American company got the copper properties, thus securing another of what should be a Canadian heritage. The Americans built some fine buildings, put up a mill and took four kerosene casks of ore away with them. The latest developments are, as you of course know, the gold mines of Memramcook, Gouldville and other points in this parish: the discovery that gold existed here was made by a medical gentleman an adept in the manipulation of the hazel rod. He had been prodding around Nova Scotia and other parts of New Brunswick with indifferent success, and finally he ran against this conglomerate . It is stated the pay dirt was formerly used for ballast on the I.C.R. and that the electricity generated on the wheels and friction took up the precious metal and adhered it to the wheels and that a wheel scraper in the car shop at Moncton had been secretly scraping it off and growing rich. The beauty about these mines is, that the gold runs all alike through the conglomerate, thereby assuring one of a steady output and none of that uncertainty experienced in placer mining and nugget out- crop. Mr. J.B. Neilly of Halifax is the chief promoter of the property at Memramcook and is now making a tour of New Brunswick accompanied by an ex-M.P.P. who is an interesting talker but at present out of a political job. They are disposing of shares, it being their idea that when you have a good thing you should pass it around for the general good. Joe Gould, an Acadian resident of Gouldville, called on me the other day and after getting the loan of a dime wherewith to buy Havelock water , intimated that on his next visit to town he was going to put me on to a gold mine. He had had a dream, he only wanted have another dream at it before telling me about it. If any of your readers want to go into the gold business come to Dorchester. It is enjoyable, refreshing and exhilarating employment. Joe Gould says the Gouldville party last year had a perfect round of picnics and that the vicinity of the mine where they had the old Frenchman digging, is strewn with the exterior covering of Buchanan enough he says to patch a sheol a mile. Joe uses the

Progress - Jul. 21, 1894 Some Halifax Men Bitter. - Persuasive Mr. NeilyGot Some Stock Taken There. - Halifax, July 19. - The Memramcook gold mine has furnished a prominent topic of conversation this week. The methods of the promoters and the result of the recent test are both remarkable. The names of two prominent business men which were held out as sanguine investors in the stock had the effect of inducing a large number of people of smaller means to take hold of the enterprise. The story of how Hon. A.G. Jones was drawn into Memramcook would furnish interesting reading, and almost equally so would be the narration of how J.C. Mackintosh became a heavy shareholder. The stock is scattered round quite promiscuously in Halifax. There is not a good chance that shareholders will ever realize much out of their one, and two, or ten thousand shares, which they paid for at 17 1/2 cents. But after all people here have often lost much and far more in other enterprises than such gold mining. Original holders of stock in some sugar refineries, cotton factories and fire assurance companies are not much better off. It is a fact that there has, since gold was discovered in Nova Scotia, been ten times as much lost in prospecting and bad management as has since then been made from lucky finds. The history of gold mining in these parts has been that where one man made anything ten men have lost. The business is deceptive. A gold mine owned largely by Truro people and which puffs in the newspapers would have led the reader and investor to think meant hundreds of thousands to the investors, sold not long ago for a paltry $1,600. Memramcook is not so very bad in comparison, even though, as stated, it turns out 2 cents instead of $2 a ton. A word of caution just here may prove not inopportune. A syndicate of New Brunswick men is being interested in gold mine properties in Nova Scotia and a meeting was recently held at Amherst. It would be a good idea for those people, as also for all others, to investigate very carefully the history of mines offered them before investing their spare dollars."

Daily Times - Jul. 25, 1894A Halifax Man's Opinion of the Memramcook Gold Mine: Mr. Crichton Interviewed. - (Halifax Herald). - James W. Crichton, of this city, had some shares in the Memramcook Gold Mine. He attended the meeting of the directors there the other day. Mr. Crichton says the meeting was unanimous in deciding to raise $2,000. Twenty-four hundred is required to pay off outstanding indebtedness and $400 is to be expended on one more thorough test of the ore. Mr. Crichton lost some money in the venture. He takes the loss with the philosophy of a speculator. Sometimes he expects to draw a blank. Mr. Crichton can see many circumstances in connection with the Memramcook gold mine that go to show that there was no fraud in the thing. He knew that conglomerate was not favorably regarded in this country, but at the same time believed that a conglomerate mine in Alaska is fabulously rich. On the other hand Mr. Crichton says it is a poor explanation of the worthless character of the quartz, to say they were salted. He himself thought it was incredible for one man to follow through a dozen different tests, and at different localities, and successfully salt it without the aid of a confederate. Some quartz was crushed at Oldham, some at Windsor, and there were many private assays made on the property. Mr. Crichton thinks according to J.B. Neilly's information, that Mr. Neilly made some money out of the business. Mr. Neilly admits he is in pocket. In the first place he gave the original owners of the property $7,000 one dollar shares, and retained 313,000 shares himself. If he sold 250,600 of these at 17« cents a piece, by that he obtained $43,750. Mr. Crichton does not know the amount of Mr. Neilly's expenditure. Mr. Crichton talked at length about the difficulty salting the different car load tests that were made, taking into consideration the many shifts of the ore in transportation from the mine to the mills at Oldham and Windsor. It could only be accomplished by the aid of a confederate following the ore, and he might peach at any time. Gold dust would not do to scatter on a pile of ore if one man was working alone, because it would be lost on the transportation of ore from one place to another. When the test of ore was made at Oldham the stuff turned out $1.90 a ton. The quartz were brought from Memramcook and handled two or three times. Sights would have to be driven into crevices of the quartz in Mr. Crichton's way of thinking. Another thing that operated in Mr. Crichton's mind as against the salting idea was the fact that Mr. Neilly had made a large expenditure of from $5,000 to $6,000 last spring, that his contract did not call for. But above all, in Mr. Crichton's estimation stands the fact that Mr. Gladwin, manager at the mine, who represented the Halifax shareholders during the tests that were made at the mine last fall, made several private mortars of the material at that time for his own satisfaction, which he told the shareholders at a subsequent meeting gave as good if not better results than the mill tests. To sum up Mr. Crichton's views on the matter, he looks on the Memramcook fizzle as a complete mystery. His conversation had an undoubted tendency toward exonerating the promoter."

URN: 0723 / IDX_Names: Memramcook Gold;

Richibucto Review - Jul. 26, 1894 Mining Frauds. - The collapse of the Memramcook Gold Mining Company, and the conviction entertained by many of the unfortunate stockholders, that the mine was salted for the preliminary tests, seem to call for a searching enquiry into the facts and if the result justifies it, prompt prosecution and punishment of the guilty parties. It is not the first time in the history of the Province that people who have by industry and economy saved a little money, have been induced, by smooth tongued and adroit speculators, and the use of the names of prominent public men, who have perhaps unwittingly lent themselves to the schemes, to invest their small savings in similar ventures, only to find that they have lost every dollar. This may not be the result in the Memramcook mine, but at present it looks very much like it. The capital was $50,000, and stock sold at 17 1/2 cents on the dollar. Some $20,000 was spent on the mill and machinery, and now the cleanup of some 1200 tons of quartz has yielded only two cents per ton. Mr. J.B. Neilly of Halifax, the promoter of the company has recently been touring it through the Province, accompanied by Mr. J.A. McQueen, ex-M.P.P., and disposing of a considerable quantity of stock on very liberal terms, taking in exchange, where money could not be had, carriages, merchandize, etc. These gentlemen may have supposed they were engaged in a legitimate business, but the unfortunate stockholders do not, if reports are true, entertain that opinion. They may themselves have been the victims of misplaced confidence. If so they owe it to themselves and the innocent persons whose money they obtained, to promote a searching enquiry into the whole business."

L'Evangeline - Jul. 26, 1894 Il regne beaucoup d'excitation a Memramcook, par suite de certaines nouvelles qui circulent au sujet de la mine d'or. On a faite le nettoyage du minerai et d'apres certains rapports on n'aurait retire que 3 cents d'or par tonne de quartz. Les actionnaires sont desappointes et il est probable que les directeurs de la compagnie auront prochainement une assemblee pour examiner la situation."

Chignecto Post - Jul. 26, 1894 Halifax Herald says: J. B. Neily says the published reports of the meeting of the Memramcook mine directors were not complete, and were partially inaccurate. He is preparing for publication a full report of the results of all the tests since he's had anything to do with the mine. This statement will be looked forward to with much interest, and will appear in the Herald about Wednesday."

Moncton Daily Times - Jul. 26, 1894 Memramcook. - Mr. Neilly is having his tools taken away from the gold mine to Halifax. He has many admirers (?) here."

St. Andrews Beacon - Jul. 26, 1894 The Memramcook gold mining company, whose mineral suddenly took to itself wings, has decided to pay up bills, and at another meeting will determine whether it is advisable to make any further tests or not."

URN: 0723 / IDX_Names: Memramcook Gold;

Halifax Herald - Jul. 27, 1894 and Daily Times - Jul. 27-28, 1894 J.B. Neily's Explanation.- On what Bright Anticipations were Based.- The reports of the Boston Assayist and Mr. Gladwin and others.- To The Editor of the Halifax Herald: SIR-- My attention has been called to some articles published in a number of newspapers here, and in different places re Memramcook mines, and although I am not anxious at any time to enter upon discussions publicly, yet in this instance as promoter, and president of the Memramcook Gold Mining Co. Ltd., I feel it my duty to place before the public full reports of the working of the mines in as plain, truthful and practical a manner as is demanded by the public. I will therefore endeavour under the circumstances to be concise and give as full an account as the situation demands, from the time I became connected with the enterprise. I regret that I shall be compelled to mention a number of names of prominent persons, who have had some connection with the property, its crushing and assay tests, etc., etc., and if in any way I do not represent them fairly I will be pleased to make corrections, but in regard to my transactions I shall be very positive in stating the exact facts, whether they are detrimental to me or in my favor. About the first of November, 1892, I met one of the original owners of the Memramcook property and he informed me about it, stating that there had been a large number of mortar tests of the conglomerate, and that they tested as high as $14 to the ton. Among the parties named who made the mortar tests were Colonel Taylor, of New York, and A.C. VanMeter, of Moncton, also James Thompson, of South Uniacke, who had made the tests, as I was informed, for Messrs. H.H. Bell, and Andrew Jack, of Halifax. The tests made by Mr. Thompson, I was informed, were so far satisfactory that negotiations for an agreement were entered into by the original owners and Messrs. Bell and Jack, to put up a 50-stamp mill on the property, but owing to Messrs. Bell and Jack requiring 51-100 of the property, one of the original owners refused to sign the agreement. Messrs. Bell and Jack inform me that these conditions were that further tests were to be made in Mr. Thompson's mill at South Uniacke, in any quantity they might desire. Should these tests prove satisfactory they and their associates were to erect a five stamp mill on the property. If the deposit paid to work with this mill additional stamps were to be put up as the results justified. After considering the matter for a time, I offered to carry out nearly a similar agreement to Messrs. Bell and Jack's, providing the property would warrant it. The principal condition was that one or two car loads of the conglomerate should be obtained and forwarded to J.E. Hardman, and crushed in his mill at Oldham. My reason for having sent it to Mr. Hardman was that he is considered to be the highest authority in gold-mining in the province of Nova Scotia. About the last of December, 1892, I sent H.E. Taylor to the property, and he took out about thirty tons from the lowest streaks, and loaded 17 1/4 tons on a car, and sent it about 135 miles to J.E. Hardman, Enfield Station, with whom I had made arrangements to crush it. Mr. Hardman had it hauled to his mill, some four miles distant from the station, and crushed. The result was 1 oz. and 9 dwts. of gold. After receiving a report of the result, I wrote to Mr. Hardman under date of January 28th, 1893, and asked him the following questions: Knowing that you can advise me in re conglomerate better than any person else, I would like to ask you a few questions. Do you think if it was crushed in the summer time when the water is warm, we would get a better yield? Answer - Re conglomerate, I do not think that the yield would have been any greater had it been crushed in summer, as the water is heated, before going into the batteries. Question - Do you think if the mill was run slower owing to the fineness of the gold that we would have received more? Answer - If the mill had been run slower, the yield would certainly not have been increased; it would, if anything, been a little less. Question - Do you think if a concentrator was used we would have received more? Answer - If the concentrator had been used you would not have got any more free gold, but have gotten some concentrates, that would have been profitable. This point, however, can only be determined by trial. Question - Taking the three things together, how much more gold could be saved? Answer - I do not think any more free gold could have been obtained by stamping than was gotten out. Question - Some say that we may possibly have received more gold off the plates, than there was in the conglomerate, if you will kindly give me this information, I will consider it a favor. Answer - The gold that was given you was all from your rock. You received no gold from the plates, which were scraped and prepared by myself, before crushing your lot. Since Mr. Hardman crushed this lot of conglomerate, I have seen him several times, and he said to me that he did not give me all the gold that was in the conglomerate. He gave me all there was in the battery and on the V plate, but did not scrape the aprons or large plates. The reason he assigned was that if a new mill was erected on the property, we would not likely be able to save more gold than he allowed me. This lot above referred to I think was crushed between the 16th and 20th January, 1893, and I became connected with the property, about the end of February, 1893, and on the 3rd of March, I entered into an agreement with parties offering to take stock as per agreement. AGREEMENT IN FULL This agreement, made and entered into this 3rd day of March, 1893, A.D. between Joel B. Neily, of the city of Halifax, in the county of Halifax, merchant, of the first part, and all such other parties who shall become parties thereto, of the second part. Whereas said Joel B. Neily as secured by assignment to him a valuable mining right and lease or license for twenty five years from the government of New Brunswick, to mine gold in a certain property, comprising three hundred and seventy acres of land at Memramcook, in Westmorland County, province aforesaid, and has agreed with the parties who have transferred the same to him, to secure an act from the New Brunswick legislature to incorporate a company, to be called the Memramcook Gold Mining Company Limited, and erect at his own expense a ten stamp mill on said property, for the purpose of further thoroughly testing said property; and has provided therein, that, the said ten stamp mill and improvements placed by him thereon, shall be, until the success of the venture is assured, and a fifty stamp mill is directed by the said company, to be erected on said property, held for the benefit of those who buy stock from him, the said Joel B. Neily,- Now this agreement witnesseth, That the said Joel B. Neily, agrees to sell to the several parties who shall execute this agreement, and they and each of them for themselves, their heirs, executors and administrators, agree to buy from the said Joel B. Neily the number of shares of one dollar each, set opposite their respective names, to be issued by the said The Memramcook Gold Mining Company, Limited, for the price or sum of seventeen and one half cents for each share of one dollar to be paid to said Joel B. Neily, his executors, administrators, or assigns, by said purchasers as follows: Seven and one half cents on the execution of this agreement, an additional sum of five cents, per share, when the company shall deem it advisable to order the erection of a modern fifty stamp mill on said property, and the balance of five cents, per share, when the said modern fifty stamp mill is completed and erected on said property to the satisfaction of said company. And the said Joel B. Neily, for himself, his executors and administrators, hereby undertakes and agrees to transfer duly issued shares to the persons who execute this agreement as soon after the organization of said company as possible. But it is hereby agreed and fully understood that the said Joel B. Neily shall not call for any further or additional payment for or on account of said shares beyond seven and one half cents per share paid herewith, unless said company shall deem it advisable to order the erection on said property of said fifty stamp mill. And it is hereby further agreed, That said Joel B. Neily shall, in the event of this venture proving unprofitable, stand possessed of the proceeds of the sale of said ten stamp mill to pay the same to the purchasers of said shares in proportion to the amounts they pay therefor. About the 13th of March, I obtained the name of Hippolite Cormier, the owner of the land where the mill now stands, and wrote him to put up 5 bbls. of the conglomerate, the same as sent to Mr. Hardman, and forward it to Prof. Arthur Benjamin Browne, of Boston, which he did, and I might say, that I never saw a pound of this lot, or the lot sent to Mr. Hardman. Through some error of the freight agent of the steamer at Boston, Prof. Browne did not receive the ore for about three months afterwards, when he had it crushed, and sent the following report, dated June 12th, 1893, Mr. J.B. Neily, Sir,- I have made a careful mill test of the five barrels of ore sent me, and now desire to report as follows:- The ore was crushed to 40 mesh and carefully sampled. Average of triplicate assay 9.24 oz, $4.96 per ton. Saving on plates $3.72 per ton, showing a loss in the tailings of $1.24 per ton, or 25 per cent. Another portion of the ore was milled to 60 mesh, which showed a saving of $4.18 per ton or a trifle more than 84 per cent. Careful triplicate assay of the tailings taken from the end of the plates every five minutes during the run showed a loss of 41 cents. The tailings from both the above tests were passed through a settler and assays of the settlings carefully made, showing a value of $1.92 per ton at 40 mesh, and $1.24 per ton at 60 mesh. The amounts saved by the amalgam in the mill, were small, the greater being in the treatment at 60 mesh, when a value of 35 cents, per ton was saved, or less than 10 per cent, while over 90 per cent of all gold saved was held by the amalgam on the 5 by 2 and a half feet of plate surface inclined inch to the linear foot. From the foregoing I deduct the following:- 1st - The gold is fine and evenly distributed through the mass so that pulverizing to not less than 60 mesh is imperative in order to liberate the metal from the rock, while a still finer degree of communition would be advantageous, provided it was consistent with economy. 2nd - That blankets, settlers, pans, buddles, and the like are not needed in the treatment of this ore, inasmuch as, although fine, the gold is heavy and will be caught by properly arranged plates. 3rd - The amount of amalgamated plate crushed must be great in proportion to the ore crushed, as a test at a greater rate of speed than the foregoing failed to save a fair proportion of the gold. I would recommend that for the treatment of one ton per hour, at least 100 square feet of plate surface be employed, as I believe it absolutely essential that the ore travel in a thin film over the amalgamated surface. Aside from the foregoing there seems to be no difficulty in saving a fair value, and I believe that good mill work will yield gratifying results. Respectfully submitted, (Sgd.) Arthur Benj. Browne On the 3rd of March an agreement having been entered into to form a company to consist of 400,000 shares of $1 each, and a prospectus printed based entirely on the result obtained from the 17 1/4 crushed by Mr. Hardman. I began selling stock at 17 1/2c a share fully paid up and non-assessable, and continued selling until some time in July, when I discontinued selling the stock, having then disposed of about 22,000 shares. 7 1/2c per share as you will see, was to be applied for the ten-stamp mill, making the tests and the organization of the company, and the ten cents per share for the erecting of the fifty stamp mill. I built a ten stamp mill on the property, and made a number of tests as you will see by Messrs. Gladwin and O'Shaughnessy' reports. MR. B. GLADWINS' REPORT. Gentlemen.- I beg to submit to you this report of test of conglomerate made in Memramcook by undersigned. Commenced crushing July 13th, 1893, Herbert McDonald, amalgamator crushed 50 tons, cleaned up on 26th July. Gold in this lot all lost. This was on account of bad water, containing both vegetable and other decayed matter. It was impossible to save gold with such water. Lost nearly all the mercury used in this lot, which flowered and floated away in greasy water. This lot taken 100 feet north of mill. Commenced crushing second lot July 26th, George Anderson, amalgamator, crushing 43 tons before cleaning up. Gold none. The reason of this can easily be explained, the amalgamator not understanding his business, and using chemicals which he knew nothing about. This lot obtained 200 feet south of mill. Commenced crushing third lot, August 24th, L.J. O'Shaugnessy amalgamator; run through 25 tons; obtained 150 feet north of mill, from bank between Nos. 1 and 2 lots. Gold from this test 2 ozs. 2 dwt. 1 gr. Test No. 4, taken 100 feet north of mill, same place as No. 1 was taken from. Gold from this lot - 2 oz. 10 dwt. 17 gr. retorted. Test No. 5 taken 220 feet north of mill. Gold from this lot - 2 oz. 10 dwt. 8 gr. retorted. Test No. 6 taken from 260 feet north of mill. Gold from this lot - 2 oz. 18 dwt. 18gr. retorted. These last four tests come from 25 tons each, giving returns as above, come from using clean water, clean silver and common sense. Total weight of gold from last 100 tons, smelted gold 9 oz. 18 dwt. 12 gr., at $19 per oz, $188.58, or $1.88 1/2 per ton. MR. L.J. O'SHAUGNESSY'S REPORT I arrived at College Bridge, p.m. August 22nd. Examined the mill. Found she required a few alterations in order to do what I considered good work. Completed alterations at noon, August 24th. Commenced crushing - Test No. 1 taken from a spot about 140 feet south of northern end of trench or cutting, and about sixteen feet below the grassroots and cleaned up twenty-five ton test, August 29th. Result: Weight of amalgam 5 oz. 4 dwts 15 grs; retorted gold 2 oz. 2 dwts, 1 gr. Started test No. 2 at once. Taken from a spot eighty feet south of that from which No. 1 had been taken, and about the same distance from surface. Result: 5 oz. 8 dwts. 19 grs. Amalgam: 2 ozs. 10 dwts. and 2 gr., retort gold. No tons, 25, cleaned up September 2nd. Started test No. 3, taken from a spot eighty feet north of that from which No. 1 had been taken, and about the same distance from the surface. Weight of quartz, 25 tons. Result: Amalgam, 5 oz. 12 dwts. and 2 grs. Retort gold: 2 oz. 12 dwts. 8 grs. Date of clean up September 6th. Started test No. 4, 25 tons, taken from northern end of cutting about five feet from surface. Result: Amalgam 8 oz. 4 grs. Retort gold: 2 oz. 18 dwts. and 18 grs. September 9th, 1893. Total weight of amalgam from four tests - 100 tons in all, equal to 24 ozs, 5 dwts. and 6 grs. Total weight of retort gold, 10 oz. 1 dwt. and 20 grs. Total weight of smelted gold, 9 oz. 18 dwts. and 12 grs. I ran my stamp at a speed of eighty-seven drops per minute, and by feeding very carefully could crush five tons in ten hours, with five stamps. I found it impossible to obtain the desired speed of 100 drops per minute, and feel confident, that with a speed of 100, five stamps can crush with ease 6 tons per ten hours. It will be noticed that test No. 1 is poorest, and result from test No. 4 is the richest of the four. This apparent difference in the value of the ore is explained by the fact, that I considered it necessary to have some gold from No. 1 on my V plate, and splash plates, and test No. 4 being a final clean up this gold was removed, and the clean up made very thoroughly in all particulars. This increasing yield from No. 4 I consider the gold uniformly distributed through the whole four tested. I discovered that cement and quartz pebbles carried gold. I called the shareholders together on the 15th of September to receive the report of the crushing of the mill on the company's property, and to decide upon the advisability of erecting a fifty stamp mill. After receiving the reports, above mentioned, the company advised me to build the fifty stamp mill, and authorized payment of 5c. per share. The mill was to be built under the supervision of a competent architect at my expense, and Mr. G.H. Nissen was selected to prepare the plans, and I commenced to build the mill, with Mr. B. Gladwin as manager, about the 1st of October, 1893, and completed it about the 10th of January, 1894, when I spent about $500 in trying to crush 400 tons of the conglomerate, but owing to the very cold weather at that time, and the mill being so full of frost, I was obliged to abandon it, and called the company together on the 15th January, 1894, when they took over the mill, and advised payment of the remaining 5c. per share. Now, having sold 221,000 shares at 17 1/2c. per share would make $38,675. Deduct from that at least 20 per cent. for commissions, discounts and expenses and you have a balance of $30,940 for expenses organizing the company, building the ten stamp mill, making the tests, boring two wells, and building the 50 stamp mill; and I do not believe that any person can do what I have done for anything near the amount. In October when we were getting ready to build the fifty stamp mill, I instructed Mr. Gladwin to send a car of the conglomerate to Windsor to the Dominion reduction company's new mill, to be crushed by them in their new mill being built by them, which he did, and in February when the mill was ready to crush the conglomerate, I got Messrs. Gladwin and O'Shaughnessy to go up and see it crushed. I think it was on the 21st February that Mr. O'Shaugnessy handed me a button of gold, supposed to be about $2 per ton, and the following day Mr. VanHorn came to Halifax and handed me another button supposed to be $1 per ton, which he found lodged in a hollow place in one of the pipes between the amalgamating pans. Mr. VanHorn pled with me to send him 30 tons more of the conglomerate, as he said there had not been a fair test, offering to crush the 30 tons free of charge. I consented, and Mr. Gladwin having left mined about 75 tons of the conglomerate, when he was at the mines, I wrote to J.B. Tingley, to load two cars and forward it to Windsor, which he did and Mr. Gladwin went up and saw it crushed about the 6th March. The result of which was 5 1/2 ozs. MR. A.T. VAN HORN'S REPORT. College Bridge, N.B., June 1st. Mr. J.B. Neily, Halifax: Dear Sir,- In response to your request for a report of the work done at Windsor on the conglomerate ore you sent me from the Memramcook mines, I enclose the same herein as follows: On February 20th, 1894, I run 12 tons of the ore and recovered 31 1/2 dwts. of gold, which, at 95c., would yield $3.99 per ton. On March 6th, 1894, I run 30 tons of the ore and recovered 5 ozs. of gold, which at $19, would yield $3.17 per ton. On April 9th, 1894, I run 5 tons of the ore, and recovered gold to the amount af $13.90, which would yield $2.78 per ton. This last test was some ore which had been out all winter in the rain and snow, which, of course, washed it of some gold, and this run was made with only one amalgamating pan, the other pan undergoing repairs. Under the same conditions as the previous tests this five tons would have yielded the same as the average. I consider the ore and property of excellent value and hope to see you succeed which I have no doubt you will. Yours very truly, (Signed) A.T. Van Horn. After ascertaining the result of the two crushings in the Dominion reduction company's mill, I found that the result was so much greater than by the stamp mill, that I called the company together about the 22nd of March, and made a proposition to put up one of the Dominion reduction company's mills free of cost to the company, they allow me the excess profits of this mill over the stamp mill until I had sufficient money to pay for the mill, amount not to exceed five thousand dollars. The company accepted my proposition, and I have since completed the building of the mill at the company's works. There has been considerable comment about me selling out my stock in the company. At the meeting in September, 1893, I held 82,000 shares. At the present time I hold 58,600 shares. I have therefore at the present time 23,400 shares less than I had in September, 1893. I did not offer for sale a share from August, 1893 to April, 1894, and then I was in hopes to dispose of some other stock I had, and hold the Memramcook stock, and went away to the United States for that purpose, but not succeeding in making up the sale, I was compelled to dispose of more of the Memramcook stock. It was my intention to sell down to 50,000 shares. No person could have purchased my entire interest in the property for $50,000. The total net sale of the 23,400 shares sold, deducting commissions, discounts and expenses was $3,062. Add to this, add for pipe, boiler, 2 pumps, steam gauge and check valve, returned, namely $678.24 which makes a total of $3,740.24, received from stock and goods returned, to pay $7,420.83, which I have paid out for machinery, piping, boiler, pumps, wages, etc., since we commenced work in the spring. My object in mentioning this is to show exactly how I stand with the company. No man, unless he was a fool, would have gone to this expense if he thought the mines would have been a failure. It is not my intention to refer to any of the newspaper reports that have been published. My letter and reports will be an answer to them. I will ask the public to kindly compare my report of the meeting of the directors held at College Bridge on the 19th inst., with the report of those published in Halifax Herald, Moncton Daily Times and St. John Daily Sun, as I shall endeavor to give a correct report of the meeting, but owing to taking up so much space, I shall only make corrections and add parts to the reports which have never been published. The manager, Mr. B. Gladwin, was asked to give a verbal report of what had been done at the mines, since the last directors meeting, and the result of the crushing. He reported that very little gold was obtained from the crushing and intimated his belief that the tests had been tampered with. When asked why he thought they were tampered with, he replied: Because we did not get the gold. How do you know that the gold was not in the conglomerate? Because we did not save it in the mill. Did you make any tests of the tailings? I did not. Well then how do you know that the gold has not escaped, it being so fine. I do not know. Was any test of the tailings made of the 1 100 tons crushed? None. Mr. Gladwin did not say he did not know where the ore came from that we crushed at Windsor, as one car was loaded under his supervision, and the other two car loads were mined by him. The ore for the Oldham and Boston tests were taken from the mines before Mr. Gladwin was employed. When asked if he made any tests last year, he replied that he did. Were they satisfactory? Yes. What do you think they would average per ton? I do not know, as I had no means of weighing it. I then asked him- Did you not tell me that you thought it was as good as 1/2 oz. to the ton? Reply - I may have said so, but do not remember. Do you think it possible that the tests you made could have been in any way tampered with? I am positive they were not? Well then, if you obtained the gold when making the mortar tests, what right have you for saying that the mill tests were tampered with? I have none. It's only my opinion. Mt. A.T. Van Horn was then called, and as I knew the circumstances in re tests made by him at Windsor, I asked him a number of questions, in which he replied as follows: Received about October 1st, 1893, carload of conglomerate, at Windsor from the Memramcook mine.

I had it hauled to my mill. A mortar test was made which yielded $4.25 per ton. I crushed on February, 1894, 12 tons in presence of Messrs. Gladwin and O'Shaughnessy, and in cleaning up received gold supposed to be worth $2 per ton of ore crushed. The following day in cleaning out one of the pipes, discovered that some amalgam had lodged in it equal to about $1 per ton. Took it to Halifax and gave it to Mr. Neily. Requested him to send me 30 tons more of the conglomerate, which he did and I received it about the 1st March, and crushed it in the presence of of Mr. Gladwin - results 5 or 5 1/2 ozs. which counting the gold to be worth $19 per oz., would yield for 5 ozs. $3.17 per ton. Did you make any other tests? Yes, I crushed 5 tons that was left, being the balance of the three cars. Result $2.78 per ton. No person was there to see it crushed. Mr. Neily was in Boston at the time and the first he knew of the result was when I told him at the Tremont Hotel, Boston. My business is a cutter of ladies coats and jackets. I know nothing about mining. I have no knowledge of the character of rocks, and no practical knowledge of where gold should be found. Mr. O'Shaughnessy was then called, and said: I told a number of people from time to time that the plates were looking well, during the crushing of the ore and thought they looked better than they did last year. I was so positive, judging from the way the plates looked, that I told a friend only a day or two before cleaning up to purchase stock if it was obtainable. I only saved a small quantity of gold. I made no tests of the tailings, therefore do not know whether the gold escaped or not. My opinion is that it did not. Re Mr. Van Horn, I have no doubt but what the greater part of the reports, which have been circulated, have emanated from unguarded remarks of Mr. Van Horn's; yet it is my intention if I cannot do a person any good, I will not do them any harm; but, under the circumstances, I feel it my duty to publish his letter. MR. VAN HORN'S LETTER. College Bridge, N.B., July 20, 1894. J.B. Neily, president Memramcook Gold Mining Co. Ltd. Dear Sir, - Having seen several articles in the papers regarding the Memramcook mine, containing statements which have been said to come from me, I would say I have not used such terms, for I never said the mine was salted, and such reports are inaccurate. Yours respectfully, (Signed) A.T. Van Horn In referring to the assay, mortar and mill tests, I am convinced that there has been no salting or tampering with the tests. I suppose there have been two hundred tests made, but I know that gold was not obtained from every test. I can name a large number of responsible persons other than named in this letter who have obtained satisfactory results. You will observe that the Oldham and Boston tests came from the lower streaks. Tests last year by Mr. O'Shaughnessy below 16 feet from the surface. The Windsor tests come principally from the lower streaks, whereas the last crushing was all from the surface down, and two mill tests made of the last crushing was taken within 10 feet of surface, and no gold was obtained, and none of the last crushing was taken from where the tests were made last year. Most of the mortar tests have been taken from the lower streaks. I was at the mill twice when the four mill tests were being made last year, and I know where the ore was quarried. Referring to the reports published in the papers, relative to myself this letter will be a sufficient answer. In regard to the Progress - the article published in the Progress purporting to come from Halifax, is very largely incorrect, and the part in reference to the Truro mine is entirely incorrect, and I am surprised that as the Halifax

Progress - Jul. 28, 1894 Gold Mine Stock Does Not Boom. - Halifax, July 26. - The group of merchants on Water Street, located near Central and Pickford and Black's wharves, are the possessors of moderate amounts of Memramcook gold stock, ranging in value from $350 down. Mr. J.A. Chipman has a little more than he started with and he got it the day before the report was published showing the wretched results of the tests. A slice was offered at auction by R.D. Clarke, which Mr. Chipman jumped at for 8 1/2 cents per share. He went home that night happy with his newly gained wealth only to wake up in the morning, read his newspaper, and find his little pile had melted into thin air. The pleasure of getting stock at less than half of what he paid his former holding does not console Mr. Chipman when he remembers that after all he can't sell any of it to Mr. Neilly at 50 per cent., or to anyone else for anything. That offer, like the mine, did not pan out . The whole thing may as well be put down in the profit and loss account now as at any other time. It is bound to go there at

Moncton Transcript - Jun. 21, 1894 Memramcook Gold Mine.- The Memramcook Gold Mining Co., held its annual meeting at Dorchester Tuesday. But little business was transacted and the meeting was adjourned for two months. The shareholders in attendance were driven to the Mine and had a look at the magnificent new 50 stamp mill which is said to be the best in Canada. If there is any gold there this company is well fitted up to get it out. J.C. McIntosh, the Halifax banker, who holds 7000 shares in the company was present at the meeting."

Chignecto Post - Jun. 21, 1894 Memramcook Gold Mining Co.- The annual meeting took place on Tuesday at Dorchester. There was a large attendance of stockholders. The president and manager, Mr. Gladwin, made informal reports, when the meeting adjourned for eight weeks, by which time the results of crushing ore in the new mill will be known. The company now owns a splendid mill costing about $25,000. The officers reporting expressed the utmost confidence in the success of the enterprise."

Moncton Daily Times - Mar. 10, 1894 Gold. - The result of a test of 30 tons mines at Memramcook Gold Mine and crushed and treated by the new electric process at Windsor, N.S., last week gave the result of $3.17 per ton. The company are to have a meeting on the 17th of next month to decide about putting in a plant of the new process. The result mentioned above is said by experts to be something wonderful, giving about $1.25 more per ton than by the old stamp mill process."

S.J. Daily Sun - Mar. 20, 1894 and Moncton Transcript - Mar. 20, 1894 Quartz from Memramcook gold mine, crushed and treated by the new electrical process at Windsor recently, is said to have yielded over three dollars per ton. A meeting of the company is to be held shortly to consider the advisability of putting in a plant for working the mines by the new

S.J. Gazette - Mar. 20, 1894 Quartz from Memramcook gold mine, crushed and treated by the new electrical process at Windsor recently, is said to have yielded over three dollars per ton."

Daily Times - Mar. 26, 1894 Gold At Memramcook. - Electrical Extraction of Gold at Windsor, N.S. - (From the Hants Journal). - A full electrical chlorination plant has been in operation on the property of the Windsor Foundry for the past few weeks, and the results obtained from this process exceed anything hitherto presented to the Nova Scotian gold mining communities. Two lots of ore from the Memramcook Gold Mining Co - one 12 tons and the other 30 tons - have been treated, with aggregate net results of $333 per ton, or nearly one hundred per cent. over the highest yield of 100 tons of ore treated by the Memramcook stamps. So that no question could be raised of the impartial nature of the tests, Mr. Gladwin - the superintendent of the Memramcook mine - was invited to personally superintend the treatment and under such circumstances, the result should appeal to the gold miners of Nova Scotia as a first rate example of what can be done with our own rock under scientific treatment. Another test was made with ore sent in from the Cochrane Hill Gold Mining property, with such satisfactory results that the latter company are said to have contracted for a mill for their own exclusive use. The simplicity of the operation, the easy and practical manner in which the mill can be worked, are features not possessed by any other mill. It should be stated, in this connection, that electricity, in connection with certain solutions which are kept in contact with the ore while the crushing is in progress, is one of the prime factors in producing these remarkable results. The capacity of the mill is about equal to that of a 15 stamp mill, and, in the process, combines chlorination with amalgamation, which is the secret of the new method. This has never before been accomplished. By it, only a small percentage of the gold is lost, while the saving is claimed to average from 96 to 98 per cent. of the first assay. Written concisely, the process of extraction is as follows:- The mercury is first combined with salt by the action of electricity, forming a mercurial hydrate of sodium. This is combined with acids, reducing it to a solution of such strength that eight ounces of it will impregnate 400 gallons of water. This water is kept in a tank, and fed to the mill as the ore is being ground. The ore is ground in this solution, and the instant a particle of rock is parted and the gold relieved, the precious metal instantly comes in contact with this solution, and the iron rollers which relieve the gold by crushing the rock, preciptate the chlorides in the solution, setting the mercury and chlorine free right at that point where the gold is liberated, causing instantaneous amalgamation. These particles of gold, which are covered with this thin film of mercury, are forced through a large body of metallic mercury, and are there arrested as amalgam. After this the gold is treated in the ordinary manner. The dimensions of the mill are 35x60 (two stories). The plant comprises one rotary crusher, (into which the rough ore is first placed), with 11,000 square inches of crushing surface per minute, under a pressure of 6« tons. The ore passes from the crusher into a rotary amalgamating pan, where the chlorides are precipitated by the action of the solution on a bright iron surface. In this pan fresh water is added. It proceeds from this pan to one of similar construction, and in its passage passes through a mercury trap, where every particle of the pulp comes in contact with metallic mercury. From this trap it passes into the third pan, where it is reduced to a fineness of 90 mesh. It then comes in contact with another body of metallic mercury, and flows into the concentrator, where the sulphates are saved. The sulphates are then roasted and treated by the same process as that of the ore. Obviously the impression made by this system of electrical extraction of gold is already attracting favorable attention, as orders for 6 mills have been already received, and it is said to be only a matter of time before the process obtains wide spread preference over the older and less profitable appliances now in

Moncton Transcript - Mar. 28, 1894 and Moncton Daily Times - Mar. 28, 1894 Memramcook Gold Mining Co. - A meeting of the Memramcook Gold Mining Co. was held at Dorchester yesterday. The principal business transacted was the passing of a resolution authorizing he president, Mr. Neilly, to put in machinery for the new electrical process at the works, he to take his pay for the same from the increased profits as a result. If the new mill is not a success he is to remove it."

Moncton Transcript - May 19, 1894 Booming Memramcook.- The advantages of an investment in the stock of the Memramcook gold mine were eloquently set forth by Mr. J.B. Neily, of Halifax, and Mr. J.A. McQueen, ex M.P.P. of Westmorland, to St. Stephen citizens, on Monday and Tuesday. The mine is a bonanza, and according to Mr. Neily, who is the largest individual shareholder bids fair to rival in productiveness the famous Treadwell mine in Alaska."

St. Andrews Beacon - Nov. 1, 1894 The Memramcook Gold Mining Company has gone out of business. Cause - no gold."

St. Croix Courier - Nov. 1, 1894 A Gold Mine Without Gold.- After a somewhat prolonged journey from the summit of the mountain of hope in the direction of the valley of despair, the investors of the Memramcook gold mining fake have at length reached the lowest depths of the valley. The experiments made to test the genuineness of the alleged deposit have established the fact that there is no gold in the Memramcook gold mine, except what is equal to the $50,000 in currency which has been sunk in the effort to prove this. Thus passes the glory of the world and thus go the hard earned dollars. And the worst of the whole business is that in the course of a month many of those swindled in Memramcook will be, ready to take to their bosoms some other plausible scheme, while the manipulator is allowed to get his hand deep into their

Chignecto Post - Nov. 1, 1894 No gold in the mine.- The Memramcook Gold Mining Co. (Ltd.) held a special meeting at Dorchester Friday afternoon to announce the result of the recent test at the mine. Among those present were J.B. Neily, the organizer of the company, A.C. Van Meter, W.P. Cunningham, H.J. Logan, C.E. Freeman and J.W.Y. Smith. The result of the recent test showed that there was not enough gold in the mine to make it a paying business. The company has decided to close the thing up at once and sell the machinery, etc. This is what the majority of the people anticipated before the result was announced."

URN: 0723 / IDX_Names: Memramcook Gold;

Weekly Record - Fri., Nov. 2, 1894 It took about $5,000 to discover that there was no gold at Memramcook, and now that the company is satisfied on that point, they are going to close down the works and sell the machinery."

S. J. Gazette - Nov. 9, 1894 Opposite the Memramcook gold mine, last night's freight going west struck a broken rail, and 14 cars left the tracks...."

S.J. Gazette - Oct. 4, 1894 The Memramcook Gold Mining company commenced making a test yesterday. A practical man from New York has been secured, a man who has a reputation to lose. Treasurer Freeman is on the ground paying off the indebtedness of the company."

Moncton Daily Times - Oct. 5, 1894 The Memramcook Mine. - A further test of the gold mine at Memramcook is being made by a New York expert under the personal supervision of the president, Mr. Smith, and treasurer Freeman. It is said none but the necessary workmen will be admitted to the works during the progress of the test."

Moncton Transcript - Oct. 8, 1894 Memramcook Gold Mine.- A Dorchester, N.B., despatch, Saturday says: The Memramcook Gold Mining Company commenced making a test today. A practical man from New York has been secured, a man who has a reputation to lose. Treasurer Freeman is on the ground paying off the indebtedness of the company. This test will prove conclusively as to whether the mine is a fake or genuine. No one outside of those employed is allowed to enter upon the property. President J.W.Y. Smith and Treasurer Freeman, as well as the New York expert, are staking their reputations on the test being made."

St. Croix Courier - Oct. 11, 1894 Says a Dorchester N.B., despatch: The Memramcook Gold Mining Company commenced a test Thursday. A practical man from New York has been secured, a man who has a reputation to lose. Treasurer Freeman is on the ground paying off the indebtedness of the company. This test will prove more conclusively as to whether the mine is a fake or genuine."

Moncton Transcript - Oct. 12, 1894 ADVERTISEMENT: Memramcook Gold Mining Co. Notice is hereby given that a special meeting of the shareholders of the Memramcook Gold Mining Company, limited, will be held in the Dorchester Hotel, in the Town of Dorchester, in the Province of New Brunswick, on FRIDAY, THE TWENTY-SIXTH DAY OF OCTOBER, instant, at 2 o'clock in the afternoon (standard time), for the purpose of receiving the report of the result made under the supervision of the Board of Directors of the said company and to consider the advisability of future operations. Dated the 11th day of October, A.D. 1894. By order of the President, H.J. Logan, Secretary"

S.J. Daily Sun - Oct. 27, 1894 and Richibucto Review - Nov. 1, 1894 At the Dorchester Hotel this afternoon the Memramcook Gold Mining Co. (Ltd.) held a special meeting to announce the result of the recent test at the mine. Among those present were J.B. Neilly, the organizer of the company; A.C. Vanmeter, W.P. Cunningham, H.J. Logan, C.E. Freeman and J.W.Y. Smith. The result of the recent test showed that there was not enough gold in the mine to make it a paying business. The company has decided to close the thing up at once and sell the machinery, etc. This is what the majority of the people anticipated before the result was announced. Some held that it was unnecessary to make the test. However, there was a large amount of money put into it and it is very difficult to say who has got it."

URN: 0723 / IDX_Names: Memramcook Gold;

Moncton Daily Transcript - Oct. 27, 1894 Memramcook Gold Mine. - Meeting of the Stockholders at Dorchester. - The Directors Present Their Report to the Company. - The Test Made by the Experts not at all Encouraging. - A meeting of the shareholders of the Memramcook Gold Mining Co., was held at the Dorchester Hotel Friday. Mr. J.W.Y. Smith presided in the chair. About 320,000 shares were represented at the meeting. Mr. Neilly representing about 120,000 shares. After a few introductory remarks by the chairman Mr. J.J. Wallace read the following report:- THE AMALGAMATOR'S REPORT. C.E. Freeman, of Amherst, managing secretary- treasurer then read the report of LeDoux & Co., from whom a man was obtained to make the test. The report is as follows: J.W.Y. Smith, President Memramcook Gold Mining Co., College Bridge, N.B. Dear Sir: Our representative, Mr. Owen, who left here on Sept. 28, returned on Oct. 12th, and has reported to us as follows: That he arrived at the mine on October 1st. And immediately commenced making a mortar test of a sample taken from all parts of the mine, and failing to find any free gold by this method he then commenced to prepare the mill for a mill test which could be made on large quantities. After completing the alterations and repairs of the mill he first ran through five tons taken from the top of the bank, but failed to find any amalgam, or anything resembling gold, on the plates. He obtained assays of the tailings from the plates, finding them to contain gold to the extent of $3.07 per ton. The ore run through had contained $2.69 per ton. Mr. Owen further reports that he took another five-ton lot from the bank, which he considered to be a fair sample of the whole exposure, and then milled it, running it over copper plates as before, and that the sample which he submits to us marked tailings is a fair representation of the tailings from this run. This sample, which he brought with him, was assayed by us and found to contain a trace only of gold. He made a clean up of the plates of this run, obtaining a small quantity of amalgam, which he also submitted to us, and which we have reported finding it to contain about 3 1/2 grains of gold, which is only 12 cents, and of course no yield at all on a five ton run. Mr. Owen further reports that he then made a third run of a lot of five tons from five one ton lots taken from different parts of the mine. This lot he ran over plates and blankets for the purpose of catching any sulphurets or other material capable of concentration by this method. The ore which he employed for his test was not apparently included among the samples submitted to us, but the concentrates upon being assayed show gold to the extent of $26 per ton. Mr. Owen, then as explained to us, took eight samples from eight different points separated three feet distant from each other across the face of your working. These samples he submitted to us, and, while, they all contain traces of gold not one of them yielded sufficient to enable us to report a weighable quantity, or name the value of the material in gold. Mr. Owen also brought with him for our inspection four samples, which he numbered respectively 9, 10, 11 and 12, said to have been taken by one of your officers, Mr. Freeman, while he was there. They all contain traces only of gold, excepting no. 9, and in this way we are able to weigh the material, finding gold present to the extent of 20 cents per ton of 2000 lbs. Mr. Owen reports that he inspected the workings, that the ore is a conglomerate showing in a bank some 30 feet high extending for a mile or more in direction of strike and at least a half a mile wide. He explains further that the water which you are now using is obtained from a driven well 450 feet deep, and is only adequate for the supply of ten stamps; that at a point showed to him about 1 1/4 miles from the mill, plenty of water may be had by means of a dam, and that a dam but 12 feet high would give you sufficient elevation to pipe this water to your mill. This mill is of 40 stamps, but according to Mr. Owen's ideas, not well constructed. He believes that it would require an expenditure of some $2000 to place it in order to do good work. The important question, however, is whether it would pay you to make these alterations or whether the enterprise should be abandoned in its present state. After carefully considering all the data which we have, giving weight to Mr. Owen's suggestions, and to the reports of Prof. Brown, of Boston, and others we have seen, our conclusions are as follows: Gold unquestionably exists in the conglomerate. The presence of black sand in the conglomerate indicates to us that the original deposit was perhaps alluvial, and occurred both in the free state and in the form of sulphurets; that the sulphurets predominated through the mass, but that all gold in both forms occurs in a very pockety way, one sample yielding none to assay, while another taken from a portion of the ore immediately adjoining showed considerable. It is likely that all the gold near the surface of the deposit is free-milling, but that in the interior, beyond the immediate action of the atmospheric agencies, it is largely associated with sulphurets, or at any rate, it is not free-milling. The facts that concentration yields a material of high assay, that little or nothing was extracted from most of the amalgamation tests made by Mr. Owen, and an examination of the concentrates, demonstrates conclusively to us that if this property will pay to work at future it must be by concentration. That it will pay is very doubtful from the 'pockety', uncertain and uneven nature of the deposits; but since you already have a mill erected capable of crushing your ore, we would suggest that you add some suitable concentrating machine, like the Frue Vauner, and that you make a regular run of this material at the mill, on, say 100 tons, saving all the concentrates, sampling very carefully the tailings from the plates, the tailings from the concentration, and weighing and sampling carefully the concentrates themselves. The result of such a run should prove conclusively whether the yield in concentrates will be sufficient to pay you the expense of making the run and something more. We would doubtless find for you a man familiar with concentration who could supervise the experiment if you desire. We should not advise you to go even to this expense with such an uncertain and irregular property, but for the comparatively high results of assay of the blanket concentrates obtained by Mr. Owen. In conclusion we may say that it is more likely that the disappointing results which you have obtained in the past are entirely due to this irregularity in the distribution of gold in the ore, rather than to any incompetency or dishonesty on the part of your experts or employees.

URN: 0723 / IDX_Names: Memramcook Gold;

Daily Times - Oct. 27, 1894 The Memramcook Gold Mine Bubble. - Neilly Has The Money And The Other Shareholders The Experience. - Is the Way a Director Puts it; A Full Report of the Meeting at Dorchester Yesterday; The Directors Instructed to Wind Up the Affairs of the Company. - A meeting of the shareholders of the Memramcook Gold Mining Company, Limited, was held in the Dorchester hotel at Dorchester yesterday afternoon for the purpose of hearing the result of the recent test which the president of the company was instructed to have made. Among those present were J.W.Y. Smith, president; J.M. Wallace, vice-president; C.E. Freeman, A.C. VanMeter and Dr. Gaudet, directors; W.C. Milner, Sackville; N. Curry, Amherst; J.F. Fraser, St. John; J.B. Neilly, Halifax; T.D. Wilson, Belmont; S. Crandall, D. Hogan, W.O. Schwartz and F. Givan, Moncton; J.F. Gilroy, Springhill; Alex. Ford, Sackville; M.G. Teed, Dorchester, E. and P. Sonier, Walter Cormier and P. Legere, College Bridge; Hon. D. McLellan, St. John and about five or six others. Something like 320,000 shares were represented at the meeting by proxy and otherwise, Neilly representing something like 120,000. The president, Mr. Smith, opened the meeting by explaining the object which had called them together and said the instructions of the annual meeting in regard to another test had been carried out. The test was made by Mr. Owen of D.L. LeDoux & Co., New York, a most reliable firm. He thought the shareholders by basing their opinions on this report would be able to decide as to the value of the mine. J.M. Wallace read the report of the directors on the report of the recent test. The directors had effected a loan of $3,200 for the purpose of paying off the existing indebtedness of the company and making a further test as directed. The Amalgamator's Reporty. - (see Moncton Transcript of Oct. 27, 1894) SECRETARY-TREASURER'S REPORT - (see Moncton Transcript of Oct. 27, 1894) THE DIRECTORS REPORT. - (see Moncton Transcript of Oct. 27, 1894) Neilly Handled Without Gloves. - Mr. Milner, chairman of the committee appointed to consider J.B. Neilly's report, stated that the committe needed further information before they would be able to report. A general discussion followed in which LeDoux & Co.'s report, J.B. Neilly and various matters pertaining to the mine came in for an overhauling. J.F. Fraser, of St. John, managing director of the Country Harbor mine in Guysboro Co., N.S., said the concentrates did not amount to anything in the face of the report of the test. His advice was to wind up the affairs of the company as soon as possible. Mr. Milner remarked that a vote of thanks should be passed to the directors for so much information contained in the reports and also Mr. Neilly for giving the shareholders so much experience in mining matters. He asked for Mr. Neilly's opinion on the report. Mr. Neilly - Do you want a sarcastic opinion, Mr. Milner? Mr. Milner - We want a truthful opinion, if possible. Mr. Neilly - I don't think I have anything to say, Mr. President. Mr. Hogan - You have said all you want to, I suppose. Mr. Freeman said Mr. Owen had expressed himself more freely to him regarding the mine than the report indicated. He said Mr. Owen stated he could have made the test much cheaper if the mill had been in proper shape. Mr. Neilly asked if there was any fault found with the mill, to which Mr. Freeman replied that Mr. Owen complained it was badly constructed. Mr. Neilly defied anybody to find much fault with the mill. In answer to the president as to his position in regard to the water for the mill, Mr. Neilly claimed that it was not his fault that the water was not obtained from the place mentioned in the report. Several other faults in connection the erection of the mill were laid at Mr. Neilly's door by different persons, but that gentleman shifted the responsibility on to somebody else's shoulders. Mr. Milner said Mr. Neilly had acted in a double capacity. He was president of the company and also contractor. The president found it very convenient to take work off the contractor's hands as finished. The result would be satisfactory to Mr. Neilly as president and contractor. He was disappointed that Mr. Neilly did not take the responsibility of any of the things spoken of. Everybody was responsible except Neilly. In order to bring the important question before the meeting he moved that the directors be authorized to wind up the affairs of the company. Mr. Hogan caused a ripple of merriment to pervade the gloom by remarking that the big junks of gold which adorned the table at previous meetings appeared to be missing this time. Mr. Freeman - We haven't got the same president now. The President - This appears to be a very solemn looking gathering, gentlemen; what are you going to do about it? Mr. Givan wanted to know how there happened to be such a wide difference between the reports at the different meetings. He would like Mr. Neilly to explain how he obtained the good results from the tests he made. The President - I suppose the gold was got from the bank, but what bank it was I am not prepared to say. Mr. Freeman - From the Bank of Montreal, most likely. Mr. Givan thought the same process by which Mr. Neilly obtained gold should still be available. A Voice - It's too expensive. Mr. Freeman - That's the trouble; he will not give us the process. Mr. Neilly made some explanation in regard to the working of some particular mine in Nova Scotia where the ore, he said, was piled up to dry, this being known as the salting process. This led Mr. Freeman to remark that a good many appeared to think that the stuff in the Memramcook mine was salted before it was piled up to dry. Mr. Wallace said they at all events had considerable experience, and the experience had been profitable to one man at least. If it had been profitable to Mr. Neilly he could congratulate himself. The shareholders had received an experience in mining for which they had paid dearly. They expected Mr. Neilly had been paid for his experience. From the report submitted he considered it would be very nonsensical to go any further. Mr. Neilly would not like to see the affairs of the company closed up just yet. He would like to leave the matter in the hands of the directors for three or four months without running the mill. There might be something turn up in the meantime. As to the shareholders losing their money, he said already some of them had been guaranteed their full amounts. He could say that at least half of the rest, perhaps, would be used the same. The reports he considered exonerated him. Mr. Milner - No, no. Mr. Neilly - Well, I mean as far as the reports are concerned. A short wordy combat here took place between Messrs. Milner and Neilly. Mr. Neilly accused Mr. Milner of charging him in the press with having salted the mine. To this Mr. Milner retorted, that he (Neilly) was blamed for enough rascality in connection with the mine without being charged with salting it. During the discussion some talk occurred in regard to insuring the mill and it was stated that no company would insure it. Mr. Neilly stated that he could get it insured and then Dr. Gaudet took him to task for not having it insured when he was president of the company and in a position to act. To this Mr. Neilly answered that the directors instructed him not to have the building insured. After a few more random shots had been fired in Mr. Neilly's direction, Mr. Milner amended his motion authorizing the directors to wind up the affairs of the company and to exercise their own discretion in the interest of the stockholders. This was seconded by S. Crandall and carried without a dissenting vote. The shareholders present at the meeting appeared to be unanimously satisfied with the reports of the directors and managing secretary-treasurer. The statement in the report that the mill was only 40 stamps was explained by Mr. Freeman to be an error. The meeting adjourned sine die. At a meeting of the directors held at the close of the shareholders' meeting it was decided to put the mill up to tender."

URN: 0723 / IDX_Names: Memramcook Gold;

Moncton Daily Transcript - Oct. 27, 1894 THE DIRECTORS REPORT. In reference to this report the directors said: We would say while it corresponds very fairly with late tests made by L.J. O'Shaughnessy, amalgamator, it seems a little strange that a test made of tailings by Arthur B. Brown of Boston, a noted mining expert, as shown by LeDoux & Co., should present so much better result viz, $2.07 per ton. It would appear, however, that if gold does exist in paying quantities in the conglomerate that the stamp mill now at the mine is not the kind or class of mill best calculated to extract it, and it would appear from LeDoux & Co.'s report, that if the company should conclude to work further a very much improved method must be devised in order to reach any satisfactory conclusion. And it is clearly shown that the fifty stamp mill erected on the Co.'s property at College bridge is not in first class running order and in present condition cannot be run more than ten stamps, positively not more than fifteen, and then only ten or twelve hours per day. The general construction of the mill is regarded by the amalgamator as altogether incomplete and we most certainly believe, has never been what the contractor Mr. Neilly, guaranteed to make it as shown by minutes of stockholders' meeting held on January 15, 1894, and also on March 27, 1894. Second, while proceeding with test we looked into accounts and endeavored to ascertain just what the indebtedness was up to date of recent tests which we find as follows: Benson Gladwin, manager $376.80 Miscellaneous $67.81 H. Cormier and others, land damages $223.60 Cash advanced by J.W.Y. Smith $297.00 Discount note $6.00 --- $3,172 03 And paying on account there of $2,602.22 leaving a balance unpaid, a part of which is land damages claimed, as heretofore mentioned $325.60; this amount being held over pending future operations, a large part, however, being for damages accruing from J.B. Neilly trenching for water pipes to supply electric mill, and not chargeable to Co.; also an amount for wages for men digging trenches and building dam for said mill and not chargeable to Co. will be found in making up balance. (The report here contained an abstract from Mr. Freeman's report) In conclusion the report said: And to meet all present liabilities we have been obliged to raise $800 more than full amount authorized by Co. with which we expect to be able to clear off indebtedness; and in conclusion we would say with yourselves, we are somewhat disappointed but rest satisfied now that all has been done that can be with the means at our hand and gracefully bow to the result. In submitting the above we are yours faithfully, J.W.Y. Smith, President J.M. Wallace, Vice do. C.E. Freeman, Sec'y.-Treas. A.C. VanMeter."

Moncton Daily Transcript - Oct. 27, 1894 SECRETARY-TREASURER'S REPORT Mr. C.E. Freeman, managing secretary-treasurer, then read his report. The report gave as the liabilities of the company on the 24th of September the same as given in directors' report, viz. $3172.03. The items were identical also with those mentioned in directors' report. The following sums have been paid on account: Benson Gladwin $374.20 L.J. O'Shaugnessy $204.16 Other wages $875.59 H.J. Logan $318.67 M.G. Teed $34.50 Wages, supplies, etc. $1373.59 Cash paid to men, etc, previous to 18th Sept, $297.00 – $2602 22 Unpaid land damages, etc., $569.81, Mr. Freeman also submitted a report showing the expenses of the late test as follows: D.E. Owen $438.90 C.E. Freeman $145.59 Men's wages up to 26th inst. $103.95 J.H. Hewson, coal $54.00 Chas White $4.00 M.G. Teed $40.25 Miscellaneous $30.95, $548.23 were paid on above. On motion of W.C, Milner, seconded by S. Candall, the reports were adopted. A short discussion ensued, during which Mr. Neilly and Mr. Milner had a prolonged tilt, and finally on motion of Mr. Milner authorizing the directors to wind up the affairs of the company and to exercise their own discretion in the interest of the stockholders. This was seconded by S. Crandall and carried without a dissenting voice. The meeting adjourned sine die. At a meeting of the directors held at the close of the shareholder's meeting it was decided to put the mill up to tender."

S.J. Daily Sun - Sep. 4, 1894 Memramcook Gold. - Stockholders who Want to Open the Mine Again on a New Scale.- (Special to the Sun) Dorchester, N.B., Sept. 3. - The Memramcook Gold Mining Co. held a meeting here today. Mr. Neily, president, occupied the chair. This meeting was adjourned until 18th Sept. Some thirty stockholders held a separate meeting in which they decided to elect new managers and run the mill again on a new scale. During the latter meeting Mr. Neily and the stockholders had some very hot arguments. The next meeting takes place Sept. 18th."

Chignecto Post - Sep. 9, 1894 Dorchester.- The meeting of the Memramcook Gold Mining Co. which was to be held here on Monday has been postponed for two weeks, there not being enough shareholders present to hold a meeting."

Progress - Sep. 15, 1894 Neilly's Ungrateful Disciples. - The Gold Mine Philanthropist Meets Angry Shareholders. - Readers of Progress will remember the mission of that virtuous philanthropist, Mr. J.B. Neilly, who showered the manna of Memramcook gold mine stock on the just and unjust, and with the piety that comes from an advocate of the universal brotherhood of man, showed both good and bad how to lay up for themselves treasures on earth. His generosity in giving all a chance in this grand arcanum of benefits, without regard to age, sex, rank or previous condition of servitude, as long as they could pay for their shares, has been fittingly commemorated. His further generosity in giving all - no matter how poor a chance at those Eldorado, taking horses, groceries - in exchange for stock, has been written of in words more enduring then brass or the salt of a mine that has lost its savor. The remorse of the good men, when the reports prematurely spread that 900 tons of quartz had been crushed, with the result of $6 in gold being found leaving $50,000 of the ten per cent. per month dividend stock in his hands, has already been recorded. A meeting of Mr. J.B. Neilly and his disciples took place at Dorchester on Monday, 3rd inst. There was variance and strife among the children of fortune. Mr. Neilly was unsupported except by Mr. VanMeter of Moncton and Halifax and Truro proxies, which were numerous enough to control the meeting. The resident shareholders fearing that Mr. Neilly might possibly vote himself the mill as moderate compensation for the stock he did not sell, retired from the meeting, which had then to be adjourned! Afterwards they met and discussed the situation. Mr. Neilly was charged with not completing the mill according to contract; with commencing to dismantle it without anything; with putting up a 50 stamp mill, before the property had been tested by the 10 stamp mill already on hand, and when the resident shareholders opposed him on this, using Halifax proxies to enforce his views. The language used was unpleasant and would have been painful to the ears of a less goodly man intent on conferring blessings on his earthly brethren."

URN: 0723 / IDX_Names: Memramcook Gold;

Moncton Transcript - Sep. 18, 1894 The adjourned meeting of the Memramcook Gold Mining Co., is being held at Dorchester today. Several Moncton stock holders are present."

S.J. Daily Sun - Sep. 19, 1894 Memramcook Gold Mine. - The Annual Meeting of the Company - Further Tests of the Property to be Made. - (Special to the Sun). - Dorchester, N.B., Sept. 18. - The annual meeting of the Memramcook Gold Mining Company (Ltd.) took place here today in the parlors of the Dorchester Hotel. A new set of officers were elected as follows: J.W.Y. Smith, Moncton, vice-president; H.J. Logan, Amherst, secretary, (re-elected); C.E. Freeman, Amherst, treasurer; and A. C. VanMeter, Moncton, and E.T. Gaudet, M.D., St. Joseph's, directors; M.G. Teed, solicitor. By the above it will be seen that Mr. Neilly retires from the management altogether. This evening the new board of directors held a special meeting. They have decided to make further tests of the property. Arrangements are also being made to pay all

S.J. Gazette - Sep. 19, 1894 The Memramcook Gold Mining Co. held its annual meeting at Dorchester yesterday when officers were elected for the year. Mr. Neilly retires from the management. Further tests of the property will be made."

Moncton Transcript - Sep. 19, 1894 and Chignecto Post - Sep. 20, 1894 and Daily Times - Sep. 19, 1894 and Richibucto Review - Sep. 27, 1894 Memramcook Gold Mining Co. - The adjourned meeting of the Memramcook Gold Mining Co. was held at Dorchester yesterday. About 265,000 shares were represented. J.B. Neilly was among the shareholders present. Some changes were made in the bye-laws. The section relating to directors was altered making the number of directors five instead of nine. The section relating to the number of shareholders required at a meeting to constitute a quorum was also changed. In future a meeting will be competent to transact business on 20 per cent. of the stock being represented and ten shareholders being present. The directors elected for the ensuing year were Messrs. E.C. Cole, Moncton; Dr. Gaudet, Memramcook; C.E. Freeman, Amherst; A.C. VanMeter and J.W.Y. Smith. The latter two represent the Halifax shareholders. A resolution was passed authorizing the directors to raise funds by mortgage or otherwise to pay off the present indebtedness and make another test of the mine. At a meeting of the directors held at the close of the shareholders meeting J.W.Y. Smith was chosen president and E.C. Cole vice president."

S.J. Daily Sun - Sep. 22, 1894 Memramcook despatches sent out the day of the gold mine meeting did not make clear the fact that the old board of nine directors has been reduced to five. The board comprises J.W.Y. Smith, A.C. VanMeter, E.C. Cole, C.E. Freeman and Dr. Gaudet. The Secretary and the solicitor are not directors."

S.J. Gazette - Sep. 25, 1894 The Directors of the Memramcook gold mine met at the mine yesterday afternoon, and all matters pertaining to the pay of the employees are settled. The treasurer, Mr. Freeman, will be at the mine early next week and pay off the men. The other bills will be paid this week as soon as the treasurer receives the vouchers. Work will commence about October 1st, under the management and supervision of an expert in mining, one whose character cannot

Chignecto Post - Sep. 27, 1894 Memramcook Gold Mining.- The directors of the Memramcook Gold mine met at the mine Monday afternoon, and all matters pertaining to the pay of the employees were settled. The treasurer, Mr. Freeman, will be at the mine early next week to pay off the men. The other bills will paid this week as soon as the treasurer receives the vouchers. Work will commence about October 1st, under the management and supervision of an expert in mining, one whose character cannot be impeached. This is as it should be, and will give confidence to those engaged in mining, not only at this locality but those who are willing to invest in opening up the mineral resources of the province."

Weekly Record Fri., Sep. 28, 1894 The Memramcook Gold mine is soon to be in operation again. A meeting of the directors of the company was held at the mine on Monday afternoon and all matters pertaining to the payment of the employees were settled. Work will commence about Oct. 1st under the supervision of an expert in mining."

Moncton Transcript - Jan. 11, 1895 Mr. C.E. Freeman, of Amherst, manager of the Memramcook Gold Mining Co., is in the city. The stockholders of the Company who reside in Moncton are requested to meet the Directors at 8 o'clock this (Friday) evening in the Council Chamber. Business of importance to be transacted."

Moncton Transcript - Jan. 12, 1895 An informal meeting of the local shareholders of the Memramcook Gold Mining Co. was held in the council chambers last night. No business of importance was transacted."

S.J. Gazette - Jul. 30, 1895 No Dividends. - Mr. J.B. Neilly, of the Memramcook Gold Mine, at present defunct, was in Amherst Friday afternoon. He told some of his once interested friends that he had purchased the plant from the company at a fair valuation. When asked about a dividend for the shareholders he was sorry to intimate that there was no immediate prospect of one. - Amherst Press."

URN: 0723 / IDX_Names: Memramcook Gold;

Chignecto Post - Feb. 27, 1896 Memramcook Mine and Mr. Logan.- Mr. Editor: Mr. Hance E. Logan went to the Joggins and solicited a job from the miners in their trouble with the company. They refused to give him any authority to represent them and he returned to Amherst defeated in his attempt to work up a little legal or political snap for himself. This ought to have settled any man not possessing inordinate cheek, but not Mr. Logan, he is not that kind of man. He advertises himself over his own name in an Amherst paper in a communication characterized only by its impudence and ignorance. I would advise Mr. Logan to leave severely alone things he knows nothing about, and in which his help is not asked for by either side, and tell us something about a matter in which he is pretty thoroughly versed. He was Mr. J.B. Neily's man of all work, when the latter engineered that extremely honest and high minded deal at Memramcook, whereby the public were done out of about forty thousand dollars. Give us some information on that subject. How much did Neily pocket? How much did Logan pocket? yours Enquirer Amherst, N.S."

Chignecto Post - Mar. 5, 1896 Mr. Logan's Answer to Enquirer.- Editor of the Post, Sir:- I must ask space to reply to a communication in your last issue, signed Enquirer , charging me among other things, with being a party to a transaction whereby your correspondent asserts the public were done out of about forty thousand dollars. Allow me to say that in good faith I purchased a thousand shares of the capital stock of the Memramcook Gold Mining Co. and after holding these shares for about one year, I sold out in advance of five dollars, making less than 3% interest on the investment. I afterwards purchased another thousand shares, which I would like to dispose of to Enquirer at about five cents on the dollar. I was for a time secretary for the Company, at the very munificent salary of twenty dollars per month. The Company are still indebted to me to the sum of Thirty three dollars, which asset I am also willing to assign to Enquirer at a large discount rate for cash. This is the history of my connection with the celebrated Memramcook Gold Mining Co. I do not know and have not any means of ascertaining whether Mr. Neily, the promoter, made one dollar or ten thousand dollars in the transaction, but as far as I am concerned, I am out of pocket. In reference to the Joggins trouble.......... Yours, H.J. Logan Amherst, N.S., Mar 3rd, 1896."

Chignecto Post - Mar. 12, 1896 Mr. Logan and the Memramcook Mine.- To the Editor of the Post.- Sir.- Mr. Hance J. Logan in his reply in your issue of the 5th, inst., effects a good deal more ignorance as to his and Neily's operations than seem warranted by the fact that Neily was President and Logan Secretary of the Company, and as Secretary kept the funds of the Company and issued the stock as Neily and he sold it, to a too trusting circle of investors. Mr. Logan will hardly deny that Neily had made him Secretary, that he in return introduced Neily around and helped him palm off his worthless stock, and perhaps described Neily as a prominent member of the Y.M.C.A., and Sunday School worker. That celebrated fakir, Jabez Balfour, recently convicted in England for wholesale swindling whereby thousands of people were ruined and a number of persons so driven to despair by their losses, that they actually committed suicide - was also an active Evangelist and Sunday School worker, up to the day he absconded to South America. Mr. Neilly's sanctified life seems to have been a potent factor in the sale of his stock elsewhere than at Amherst and it would be interesting to learn from Mr. Logan if it were sold there without such an advertisement. If Mr. Logan is left with stock in his hands, it does not prove that he and Neily did not understand each other pretty well; it only shows that Neily did not help him out from under in time to save himself. This was ungrateful in Neily's part, for when the shareholders met at Dorchester to investigate Neily's proceedings, resolutions were passed diverting the Secretary (Mr. H.J. Logan) to issue a printed circular to the shareholders - many of whom were not present - informing them in effect of the condition of the business and requesting co- operation in dismissing Neily. Did Mr. H.J. Logan, loyally, faithfully and honestly as a paid officer of the company carry out these directions, or did he balk the shareholders and betray their interests to Neily by suppressing the circular? Let him answer. Mr. Logan complains he was only paid the munificent sum of $20 per month salary. If it was too small he was free to resign, no one compelled him to hold on to so small an office and he need not have waited to be kicked out. In consequence of Mr. Logan's incompetency or something else, I am told that the company today has possession of only a portion of its books and records - that the company has not even a full or authentic list of parties to whom stock has been sold. Under such a system of doing business, Tantramar marsh could have been plastered over with stock certificates sold to a confiding public, without check or hinderance. If this is not the case let Mr. H.J. Logan answer. Yours, Enquirer. Amherst, March 11"

URN: 0723 / 2013 / IDX_Names: Memramcook Gold; Point de Bute Gold;

S.J. Daily Sun - Dec. 27, 1893 Gold Mines. - The citizens of Point de Bute are of the opinion that they have discovered a genuine gold mine in their vicinity. The lots have been surveyed and last fall excavations were made in the most favorable place, which was on the farm of Howard Trueman. Persons who have had some experience in such matters say that the deposit is rich in gold and not unlike that found in the Memramcook mine. Some time ago they sent about twenty tons of the conglomerate to a crusher in Nova Scotia, their object being to get it thoroughly tested before proceeding further. It now turns out that it will be impossible to get it tested until spring, therefore it is not probable that anything further will be done till then. So confident do the people feel that the mine is a rich one, that stock has been taken to quite a considerable extent. If the thing pans out it will be a fine thing for the place. The Memramcook mine seems to be panning out well.A crusher was put in last spring and a paying business was carried on during the summer. The firm is now erecting a much larger building and will equip it with more modern machinery."

URN: 0723 / 2013 / IDX_Names: Memramcook Gold; Point de Bute Gold;

Moncton Daily Times - Oct. 28, 1893 Mining Matters. - Work commenced at the Point de Bute mine on Monday. Mr. J. Herbert Wright, who is the owner is stocking it at $500,000, a small portion of which is being sold to carry on preliminary expenses and prospecting. He has sold some shares for that purpose. He proposes to send the ore to Oldham Mines, Halifax, for crushing. The work will commence in the conglomerate at Mr. Albert Carter's place. Mr. Wright has secured 302 acres, extending from T.E. Oulton's to the Ebenezer Bowser farm. The formation seems to be identical with that at Memramcook and the quantity is unlimited.Foundations for the batteries are being laid at Memramcook Mine under the superintendance of Mr. Benson Gladwin. The mill was built in 1890 for a gold mine at Gay's River, N.S., which proved a failure. The mill is a modern one, cost $50,000 originally and not over 10 of the 50 stamps have been used. The company expect to have it ready for work in December. The stockholders are paying up a second call of 5 per cent. Kent of

Moncton Transcript - Mar. 28, 1893 A bill proposing to incorporate the Memramcook Gold Mining Co., will be probably withdrawn as the company has been incorporated by letters patent. The growing attention to the coal ares of the province finds an index in a bill introduced by Mr. Ferris, incorporating The New Brunswick Coal Company with a capital of $300,000 and head offices in Queens County. The bill empowers the company to erect buildings and wharves along or on Grand Lake; to construct a railroad (4 ft. 8 1/2 inches) from a point at Grand Lake, Queens County to Little River, Sunbury County and may operate such railroad by either steam or electricity."

S.J. Standard - May 23, 1910 Valuable Barytes Mine To Be Opened. - Canada Paint Co. Secures Lease of Property Near Memramcook. - Jos. Bradley, Mining Engineer, in the City. - Joseph Bradley of Three Rivers, Quebec, mining engineer for the Canada Paint Company, of Montreal and Winnipeg, who has been in the province for the past three weeks examining mineral deposits in the interests of his company, left for Montreal last night. Mr. Bradley spent some time at Gouldville near Memramcook, and as a result of his visit the company will re-open and operate the old barytes mine near that place. This mine was originally opened by two Boston men named Daniels and Copeland in 1878. They sank an eighty foot shaft on the property and shipped two schooner loads of barytes to Boston. Nothing further was done, and the mine has been idle ever since. Mr. Bradley has leased the property from the local government for his company and will ship a plant from Montreal at once to commence active operations. In conversation with the Standard, Mr. Bradley said the vein of barytes was of a good width about a mile in length. It is what is known as a true fissure vein and will supply barytes for many years. The mineral, which is used in the manufacture of paint, will all be utilized in the factories of the Canada Paint Company. Speaking of the mineral wealth of the province generally, Mr. Bradley said that the resources in the way of minerals with a commercial value are very great, and expressed his surprise that they were not more largely developed. Barytes is also found on the island of GrandManan, but the deposits at Gouldville are the largest and best in the province and because of their location can be more profitable worked for the Montreal market than those in the province of Nova Scotia, where the mineral also abounds."

St. Croix Courier - Jun. 6, 1901 Mr. Polley, of New York, mining expert, is organizing a company, the capital stock of which will be $1,000,000, with the object of working the coal mines at Carlisle, Kent county, as well as the manganese mine recently found a few miles back of Carlisle. The head office of the company will be at Moncton. It is the intention to build a branch railway to tap the I.C.R. at or near Coal Branch."

Richibucto Review - Jun. 6, 1901 Coal Supply in Kent Co. - Company Formed With $1,000,000 Capital. - Buctouche, June 4. - The people of Kent county are considerably excited over discoveries of mineral wealth recently made. Coal, of an excellent quality, has been found. For some weeks operations have been in progress at Carlyle, where, it was reported there were indications of large coal deposits. Quiterecently a five foot seam of house and steam coal has been discovered and arrangements for active development are being made. Mr. Polley, of New York, mining expert, is organizing a company, the capital stock of which will be $1,000,000 with the object of working the mine as well as the manganese mines recently found a few miles back of Carlyle. The head office of the company will be at Moncton. Those interested in the mine are of the opinion that under favorable circumstances it can be made one of the most valuable properties in the province, and that no difficulty will be experienced in mining 1,000 tons a day after the preparations are fairly under way. It is the intention to build a branch railway to tap the I.C.R. at or near Coal Branch probably between that place and Birch Ridge. A large quantity of the coal will be shipped to St. John and the I.C.R. is also expected to be a good customer, but Montreal, Quebec, and River du Loup are the principle markets which the company hopes to invade. In addition to the coal property, the companywill also work a manganese mine recently discovered. Very little has yet been done on this, but an 18-foot seam has been found, and those interested are jubilant. Borings for coal have also been made in Dundas on the Cocagne river. The prospectors got down 800 feet and found three small coal seams. At that depth they struck a quick sand formation and moved their drill to another locality in the hope of avoiding it. They were successful, however, in getting enough encouragement to warrant them in making further search, and they are of the opinion they have struck a good thing. The seams already reached are thought to be an extension of the coal seams at Newcastle and at Coal Branch."

URN: 0744 / IDX_Names: Coal Creek;

Daily News - Jul. 9, 1878 Chipman, Q.C., June 6. - Gold bearing quartz ledges have been known to exist for some years past on the Coal Creek Stream, in Chipman, Queens County. Parties who prospected two years since actually found particles of gold in the gravel beds of said stream. The matter having been, since that time, much talked of resulted in a company being formed, styled the Coal Creek Gold and Silver Mining company, with the following officers and board of directors, viz: Andrew Brown, president, W.C. King, Sec. Treas., Geo. H. Hetherington, M.D., } Ebenezer Briggs, Jr., } George Wishart, } Directors Robert Ward, Sr., } G.G. King, } The capital stock of the company is fixed at $5,000, and divided into shares of $5 each. A large proportion of the stock has already been taken up, and a percentage paid, the balance will be allotted in a few days. The services of an experienced California gold miner having been secured and it is the intention of the directors to begin the work of prospecting immediately under his direction."

Daily Telegraph - Sep. 5, 1883 Mr. W.S. Murray, a Colorado miner, is in Queen's County prospecting for gold."

Daily Telegraph - Feb. 23, 1889 Messrs. King and Brown, of Chipman, have been prospecting the various ledges of rocks along the banks of Coal Creek stream. Their foreman, Mr. Munroe, a man somewhat skilled in minerals, reports a sufficient amount of silver for profitable working, with also a mixture of gold. The mines, in all probability, will be opened in the

URN: 0744 / G3 / X1 / IDX_Names: Coal Creek; Granite; Grand Lake Coal;

Daily Telegraph - Oct. 28, 1880 Mining Resources. - Queens County, after Albert, is the next important mining county in the Province. Iron ore is found in various localities, but so far it has never been mined, but the coal fields of the country are extensive and have been worked for sixty or seventy years past. The principal mines are situated at Newcastle, near the head of Grand Lake, where many thousand chaldrons are raised annually, finding its market chiefly in St. John. Coal is also found at Salmon River, Coal Creek, and at Clones, in the parish of Petersville. The vein or seamis horizontal, or nearly so, and is rather thin, being only from 18 to 24 inches in thickness. There has been much speculation as to the existence of a lower or thick vein, and efforts to find it have been repeatedly made. A company bored for the lower vein some forty or fifty years ago at Coal Mines, Salmon River, and within the past eight or ten years the Government Diamond Drill was operated at Newcastle and other places, in one case obtaining a depth of about 700 feet, but without making the desired discovery. Whether or not it settles the question of a thick seam of coal in that locality is still a matter of opinion. Some time ago the then Government of the Province gave certain parties leases to raise coal at Newcastle and vicinity, and out of this a good deal of tedious litigation grew. The late Silas McMann, Esq., and Messrs. Berton of St. John (who held one of the leases) to enter upon and disturb the soil of granted lands. This was finally decided in the negative, and eventually the Government bought up the leases again. For some time past there have been rumors of thediscovery of gold at Coal Creek. The percentage of reality in such discoveries is often quite small, but a late number of the Telegraph contains an advertisement, stating that the Annual meeting of the Coal Creek Gold Mining Company will be held on the 26th of October, and it is signed by W.C. King, who is himself a practical gold miner and ought to know what's what. Let us hope that the future historian of Queens may have something good to tell us about the discovery of gold at Coal

Creek. I had almost forgotten to say that there is anexcellent granite quarry near the bank of the St. John river, in the Parish of Hampstead, from which many of our principal buildings have drawn supplies of material. It is quite a descent from gold to granite, but it may be that the latter will prove the more valuable property."

URN: 0755 / IDX_Names: Annidale Mine;
Weekly Freeman - Mar. 18, 1882 It is reported that a deposit of copper has been found at Scotch Settlement, K.C."

Kings County Record - Nov. 6, 1908 Copper on the Central Railway. - G.W. Ganong, ex- M.P. for Charlotte, was in on the Central Railway last week looking over a copper property near Springfield, which he and a couple of associates are developing. The deposit was located some years ago but little was done to ascertain its true value until recently, when Mr. Ganong interested two experts from Colorado in the enterprise. The party has been quietly working all summer and have been well rewarded for their trouble. A seam of copper eight feet wide has been opened up and the analysis of the ore shows that it can be treated at small cost. The find will probably result in calling attention to the district as a copper producer. There are a number of mines about, concerning which well known geologists speak in high terms. The ore is very rich and is easily mined from the heavy veins which carry it. Mr. Ganong and his associates have suspended work until the spring, when further developments will be made."

Evening Times-Star - Jun. 21, 1910 Fred and Edward Dick, brothers, formerly of St.George, but now of Goldfields, Nevada, were in the city yesterday. They investigated a claim near Norton, Kings county, and said last night that they were certain they had found copper ore there."

S.J. Standard - Jun. 21, 1910 Nevada Men Report Rich Copper Find Near Norton. - Thad and Edward Dick, in the city Yesterday, Claim They Have Found What Will Prove a Bonanza in Kings County - They Have Experts at Work and Will Develop it Later. - Thad and Edward Dick, former residents of St. George, who left New Brunswick in the early 80's, and since then have engaged in mining in Colorado, Cobalt and Nevada, where they own several rich claims, recently paid a visit to their old homes, and were in the city yesterday. Besides coming on a pleasure trip the Dick brothers have also another motive in visiting the province. They are of the belief that in Kings County, but 11 miles from Norton, they have discovered two veins of copper ore that, if properly developed, will in time, become one of the richest and most productive copper mines in Canada. That there is copper there in plentiful quantities they say, there cannot be the least doubt, and their opinion is backed up by 25 years of practical mining experience. They have already experienced men engaged to thoroughly investigate and ascertain the real value of the mine. In the meantime they will return to Nevada and should the experts whom they have employed, report favorably, a company will be organized to work and develop the mine. Speaking with a Standard reporter yesterday Mr. Edward Dick, said that before engaging in mining in Colorado in 1885, while prospecting about 11 miles from Norton, he had first discovered copper ore. He then endeavored to induce several wealthy persons to assist in working the mine, but could not then convince them of the wealth of the discovery. While prospecting in Colorado and Nevada he often thought of the hidden wealth near his old home, and three years ago while returning Nevada from Cobalt, he visited New Brunswick and thoroughly investigated the place where he had first discovered the copper ore. His investigations strengthened his belief that the copper vein, if developed, would prove to be one of the richest in Canada. 'We are convinced that we have struck one of the wealthiest veins of copper in Canada, and will back up our claims when we return from Nevada,' was the way the Dick brothers summed up the situation. The two brothers while owning several wealthy claims in Colorado, have also organized a company, and are carrying on extensive mining operations in Goldfield. From the Home of Prize Fights. - Goldfield it will be remembered practically sprang into existence and prominence in 1906, when gold was discovered there in large quantities. It achieved world-wide notoriety, however, in the spring of 1907, when it staged the memorable Gans-Nelson battle. Although practically a mining camp at that time, the place has grown by leaps and bounds since then and Mr. Dick is enthusiastic as to its future. 'Goldfield is undoubtedly one of the richest mining centres in the world,' he said. 'The mining conditions are steadily improving. The Goldfield Consolidated paid almost $2,000,000 in dividends during the past three months, which is a record which the other mining companies of the world can only attempt to follow. 'All over the country investors are turning towards Goldfield, and it is becoming comparatively easy to secure money for the development of a meritorious mineral prospect. A new tide is setting in that will result in a development of the mineral resources of Goldfield such as even the most optimistic in the old days never hoped for.' Both brothers were pleased when told that Reno had been decided upon as the scene of the big fight. 'It is a live town of about 40,000 inhabitants and you can bet can stage the affair in great shape. And every miner in from Nevada to the coast will bet his last pan that that boy Jeff will win,' concluded the Dick brothers."

St. Andrews Beacon - Jun. 23, 1910 Messrs. Thad. And Edward Dick, former residents of St. George, who have engaged in mining in Colorado, Cobalt and Nevada, say that in Kings county, eleven miles from Norton, they have discovered two veins of copper ore that, if properly developed, will in time, become one of the richest and most productive copper mines
URN: 0755 / IDX_Names: Annidale Mine;

Evening Times & Star - Oct. 14, 1910 Copper in Kings County. - The Kings County Record, of Sussex tells in an interesting article, this week, of a visit to a copper mine, at Scotch Settlement, near the line of the Central Railway. The mine is being worked by Thomas Dick, a brother, and three other workmen, and they are reported to be getting out a large quantity of high grade copper ore. Shafts have been sunk and there has been considerable cross cutting of good ore in sight, and piled about the shafts, and Mr. Dick is confident that the mine will be a good paying proposition. The leases for the mines are taken out in the names of Mr. Dick and G.W. Ganong, of St. Stephen."

Oct. 14, 1910 - Copied from: Kings County Record - Oct. 10, 1940 30 Years Ago. - (Oct. 14) - Heavy copper deposits are reported from a mine near Scotch Settlement. The ore is heavily charged with copper of the Chalcopyrite variety. An expert has declared these are rich enough to make it commercially valuable."

Kings County Record - Oct. 31, 1912 Examines Copper Mine Near Norton. - R.T. Cornell, a mining expert from New York, who has been examining the copper deposits at East Scotch Settlement, near Norton, was in St. John Thursday. He said the mine which has been developed slightly by New Brunswick people, was thought to be valuable and an effort was being made to interest outside capital. Several people in the United States prominent in copper mining concerns, were approached with the result that Mr. Cornell was sent here to make an examination. Mr. Cornell said that he could make no statement at present in regard to the copper, but he indicated that he would return again soon in connection with the mine. A gentleman closely connected with the owners of the mining property at Norton, said that the deposit of copper promised to be very valuable and that experts, who had made an examination declared that the nature of the specimens indicated a large amount of the valuable mineral."

St. Andrews Beacon - Jul. 24, 1913 Seeking Copper in Kings County. - Sussex Record:- A few years ago Gilbert W. Ganong of Ganong Bros., St. Stephen, took up mining rights on a square mile of territory near his birthplace, at Scotch Settlement. The claim was prospected and clear indications of rich copper deposit were found. Some work was done at the time, but it was not until several years later that Edward and Thad Dick, Charlotte county residents, became associated with Mr Ganong. The brothers are copper experts and for years have been interested in the rich deposits of Colorado and Nevada. They came east and after an examination of the property pronounced it as one of great future and soon after commenced its further development. For several years the Dick brothers have been spending part of the year locating leads in the mining area, giving the balance of their time to their American holdings. Two or three years ago there was unearthed a quantity of ore that showed wonderful richness, and since then further investigations reveal that the mine is richer in copper than was dreamed of in the early days of its discovery. The ore is a chalcopyrite, carrying other grades of copper in conjunction with traces of gold and silver. It runs all the way from ten to eighteen per cent copper. When it was considered that many mines are being worked today as paying propositions, which give a yield of from two to five per cent it will be seen that the Kings county property is one which bids fair to make its mark in the mining world. The work in connection with the mine has been carried on quietly but a lot of work has been done and during the present summer a number of leads of great size and exceptional richness have been bared. The property is now in such a shape that there is absolutely no doubt as to the wealth it contains. Not only are there enormous deposits of copper, but they are advantageously placed, and can be easily shipped over the Central Railway, now controlled by the C.P.R., to smelting plants. The first shipments, it is understood, will be made to Jersey City in the near future. On the results of these tests will depend the future of the property, but at this stage it looks as if a great industry will shortly be opened up in this county. Disinterested exoerts who have been over the property pronounce it to be a bonanza."

Kings County Record - Mar. 24, 1916 Rich Copper Property Being Developed. - Experts Say That Mine Near Scotch Settlement is Wonderfully Rich in Copper, With Traces of Silver and Gold. - A few years ago Mr. Gilbert W. Ganong of Ganong Brothers, St. Stephen, took up mining rights on a square mile territory near his birth place at Scotch Settlement, Kings County. The claim was prospected and indications of rich copper deposit found. Some time ago there was unearthed a quantity of ore that showed wonderful richness. The ore is chalcopyrite, carrying other grades of copper in conjunction with traces of silver and gold. The mine is so situated that ore can be easily shipped over the Central Railway, and the property is one which bids fair to make a big mark in the mining world. Mr. Ganong has arranged with the LaRose Consolidated Mines Company of Montreal and Cobalt to develop this property. Mr. Ganong has had quite a number of people who were willing to try to make him rich by floating this proposition as a stock affair, but he held out until he finally arranged to have development rather than stock- jobbing. The people now at the property have the Government diamond drill on the ground, and a New York man there named A.E. Hall to superintend the work. Their purpose is to drill three or four holes parallel with the vein that has been developed so as to catch it at three or four hundred feet deep. It dips towards the north. This will not only test the continuity but also determine if the ore values continue. They have from one to two years without paying out any money to determine if they consider it of sufficient value to take over. If this should prove of value it will give a great stimulus to prospecting and mining in New Brunswick. There are about 400 tons of shipping ore ready to send to the smelters as soon as the snow gets off so it can be picked out. This is a very large quantity for the amount of development work so far. Mr. Ganong has always felt a strong personal interest in the development of this property because of its being near his old home. Analysis of the ore made shows it to be marvelously rich in copper, and disinterested experts who have visited the property have pronounced it a bonanza."

Kings County Record - Jan. 19, 1917 Development work at the copper mines near Belleisle Station is now being carried on, about 15 men being employed in the work. J.W. Parks, St. John, is in charge of the drill and a telephone has been installed at the works."

URN: 0755 / IDX_Names: Annidale Mine;

Kings County Record - Dec. 2, 1927 Copper Deposits Will Be Developed. - International Firm Takes Option on Annidale Mine - Ore Has Assayed Higher Percentage of Copper Than Output of Famous Noranda Mine in Rouyn District. - Another important step has been taken in connection with mineral development in New Brunswick and promises extensive operations of copper mines in Kings County, the ore from which has assayed a considerably higher percentage of copper than the output of the famous Noranda mine in the Rouyn District. Preliminary investigation work, carried on at the property, located not far from Norton, has pleased the Canadian International Corporation of Montreal sufficiently for an option to be taken on one square mile which the owners have held for some years. On behalf of the Canadian International Corporation control of adjoining property has also been secured by Brigadier General Chas. A. Smart, C.M.G., of Westmount. The Timmins' interests recently took over another copper mine in New Brunswick. Confirming reports that interests with which he is identified have taken over the Annidale mine, General Smart said that it was the intention to install a concentrating plant on the property. The plant, he said, would be within 400 yards of the New Brunswick Coal and Railway Company's line, which is operated by the Canadian Pacific Railway. It is planned to make shipments largely to Swansea, England, the Canadian National Railways offering favorable facilities for transportation to the port of Saint John form a connection with the New Brunswick Coal and Railway Company line at Norton, 11 miles from Scotch Settlement Station, which is less than a mile from the mine. The process which will be used for concentrating has not yet been determined. Some years ago this copper mine was worked sufficiently for preliminary shipment of carloads of ore to be made by the then owners of the property. Profits which were regarded as very favorable, were made on these shipments, but the active owners died and since then the property has not been operated. The province of New Brunswick's new mining law, which makes it necessary for holders of mining licenses to operate their properties or relinquish their claims, is the direct cause of the present activity in connection with the Annidale mine, which resulted in the commencement of the proving work undertaken by General Smart and his associates. The report of an assay made last week of ore from the mine by Milton Hersey, Ltd., of Montreal, was made public today as follows; Gold, ounces per ton of 2,000 pounds, 0.03, value $.60; silver, ounces per ton of 2,000 pounds, 1.1, value $0.62; arsenic, none; antimony, none; copper, 12.79 per cent; zinc, 1.60 per cent. General Smart says that one of the most encouraging features in connection with the Annidale copper deposit was that it was a precambrian formation, and he said that the ore would average between 9 and 10 per cent copper, but that it was of high quality and tests made by mineralogists had made them feel certain the copper existed in sufficient quantities to make profitable operation of the property on an extensive a scale as possible."

Evening Times Globe - May. 25, 1928 Preparing To Develop Kings Co. Copper Mine. - H.C. Wildman, mineralogist for the Canadian National Railways, who at present is investigating the mineral resources of New Brunswick, reports active steps have been taken in developing the copper fields at Scotch Settlement, in the vicinity of Sussex, by the company recently formed by Brigadier-General C.A. Smart, of Toronto. Workmen are now engaged erecting several small shacks on the property, in preparation for extensive operations to be carried out at this site in the near future, he said. It is expected actual mining operations will be commenced soon, Mr. Wildman added. General Smart, president of the company, recently visited New York for the purpose of consulting with his chief engineer in choosing machinery for the various mining activities to be carried on in New Brunswick by the company."

Kings County Record - Dec. 17, 1936 W. Barry Steers, mining engineer of Ottawa, was in Scotch Settlement recently to examine and restake a claim at the mine known as the 'Dick Property'. He was a guest of Mr. and Mrs. Tuckey and has left for Montreal and Ontario."

Kings County Record - Oct. 11, 1951 Base Metal Hunt in N.B. Extends to County Border. - American Company Probes Findings of Copper in Drilling at Annidale. - The booming base metal expansion in Canada may be extended to another site in New Brunswick with the announcement that American Metals Company Ltd., of New York is setting up drilling equipment at Annidale, Queens County, near the border of Kings County, to explore the existing deposits of copper which are in that area. Some traces of gold also have been discovered on the property. Drills and other mining equipment, brought here from Rouyn, Quebec, were unloaded Wednesday and these were taken by truck to the Queens County site of the copper and gold strike. The property at Annidale had been worked to some extent many years ago but at that time modern mining equipment was not used and the extent of the deposit has never been fully determined. Large Firm. - The American Metals Company is one of the largest organizations of its kind in the United States and has a large smelter in New Jersey. At present it is developing mining properties in various parts of the world. The company has contracted with the Demorest

Drilling Company Ltd., of Noranda to carry out the drilling operations on the property which is expected to take several months. Operations have started, with the first drill hole some 20 yards from the highway which cuts through the property. Edward Kimberley, Noranda, field man for the Demorest Company, supervised the setting up of drilling equipment. Accompanying him are three professional drillers from Rouyn; Gerald Blais and Lorenza and Sylvio Hebert. Local men, including a number of laborers, a camp cook and other help are being engaged to carry on the mining operations. A camp site has been built on the property. Mr. Blais will have charge of the drilling crew. He said he had been over the area and that it looked 'very promising'. He said that drill holes would probably have to be made to a depth of 600 feet. 'there is good quality ore there,' he said, 'but it will take some time before we know the extent of the deposit.'"

Kings County Record - Oct. 25, 1951 Copper Search in Kings County And Not Queens. - Exploratory drilling for copper by the American Metals Company Limited of New York is being done in Kings County and not in Queens County, correspondents of the Record in that area state. Earlier press reports said the search for copper was being made at Annidale, which is in Queens County just across the Kings County border. Mrs. Caleb G. Northrup, our correspondent at Joliff's Brook, says the drilling is being done along the Annidale Road (from Belleisle Creek) about one and one- half miles from the county line. The section is in Springfield parish. Mrs. Thomas Thomson, correspondent at Irish Settlement, says the drilling is being done well inside the Kings County border. Four holes already have been drilled of the 20 planned, writes

URN: 0755 / 0007 / IDX_Names: Annidale Mine; Lake George Antimony;

Kings County Record - Jul. 27, 1928 Mineral Development. - Five separate parties are at present engaged in developing the antimony and copper deposits of New Brunswick. Brig. Gen. G.A. Smart, representing the Canadian International Finance Corporation is one of those most active in this work, and large sums of money have been invested already in sinking shafts. Copper of a very high grade has been discovered at Scotch Settlement, and there are very good indication of this metal at other points. Samples of ore obtained show a high yield and it is expected that the next few weeks will see some very startling announcements in this regard. The antimony deposits at Lake George have proven of immense value and are now being profitably worked. Other antimony deposits have been found, which it is anticipated will place Canada in the forefront as regards the supply of this mineral. These parties were interested in these deposits through the efforts of the Natural Resources Branch of the Canadian National Railways which has had its mineralogist Mr. H.G. Wildman, make a survey of the Province. Mr. Wildman is at present engaged in following up other findings and it is expected additional deposits of copper and antimony will be found. Copper has been uncovered also in the Gaspe Peninsula and this field will be thoroughly gone over. The Canadian National Railways Natural Resources Branch has also had surveys made of Nova Scotia and the field as regards mining in that province looks bright. Gold mining which was carried on for some years, but which of late has been stagnant, shows new signs of life and already modern methods of extracting the ore and refining have produced wonderful results. The Maritime Provinces are on the eve of an extensive development in mining activities and it is predicted that from present indications New Brunswick may be on a par in respect of copper with the Lake Superior region."

Evening Times Globe - May. 3, 1928 Work At Lake George Mine To Begin Soon. - Development to Commence When Equipment Can Be Moved to Location. - Fredericton, May 2 - Plans and specifications for the plant to be installed at Lake George, York county, by the Antimony Smelting and Refining Company, Ltd., the company which has been incorporated under the New Brunswick Companies' Act with an authorized capitalization of $2,000,000, for the development of the antimony mines, have been about completed by New York engineers, and preliminary work will be started at Lake George just as soon as material can be moved over the highways to the property, Brigadier-General Charles A. Smart, C.M.G., of Montreal, announced here this evening. General Smart, president, and J.F. Dalrymple, vice president, of the Canadian International Corporation, Montreal, who acquired the Lake George properties from the North American Antimony and Smelting Co., and H.G. Wildman, mineralogist of the C.N.R., were here today conferring with Hon. Charles D. Richards, Minister of Lands and Mines, and left this evening for Saint John. Ore Assayed. - Mr. Dalrymple, who was formerly vice president of the Canadian National Railways, has been making his first tour of inspection of the companies in the Maritime Provinces controlled by the Corporation in which he is to take an active part in the management. General Smart gave Department of Lands and Mines officials today returns of an assay of 12 « tons of antimony ore which had been shipped to Germany for testing purposes, the return showed 82.82 per cent metal antimony, which General Smart said, was highly gratifying. To Kings County. - On Friday General Smart andMr. Dalrymple expect to visit Annidale, Kings county, to inspect the copper property there which is controlled under option by the Canadian International Corporation. Returns of an assay of 30 tons of copper ore from the Annidale property which had been sent to England, were also given to Department of Lands and Mines officials today, the returns showing 7.30 per cent copper. The ore from which the assay was made had been picked from the dump at the mine at Annidale where it had been for some time. General Smart said that preliminary work would be commenced immediately at Annidale, the first operations being further exploration of the ore body under direction of a geologist after the old workings had been pumped out. The property is held under options until next October."

URN: 0755 / 0041 / IDX_Names: Annidale Mine; Jordan Mountain Copper;

Kings County Record - Oct. 14, 1910 Splendid Kings Copper Deposit. - Record Representative saw Fine Deposit of Ore, Which is Being Developed. - From time to time brief notices have been given in our columns and the St. John papers of a copper mine development in Kings County. We are glad to give herewith mine details of the same, so that those who may have recently seen the statement attributed to Mr. Wilson, of the Geological Survey, 'that there was no copper in New Brunswick rich enough to make it commercially valuable,' can form more correct conclusions on the same. A visit to this mine was made on Tuesday, the 11th, inst. which is reached most easily via the Central Railway from Norton, thence to Scotch Settlement, when a short walk of not over a mile will bring one to the scene of the mining operations. There the writer found Mr. Thos. Dick and brother, and two other workmen, busily engaged in sinking and crosscutting, on one of the main leads, bringing to the surface ore that would do credit to any mine in the world - heavily charged with copper of the Chalcopyrite variety - and giving the most positive evidence of both richness and quantity. Several other veins have been sunk upon, cross cut and trenched, on the property evidences from all being of the most convincing nature. This location, strange to say was first discovered many years ago by Mr. Dick who visited the locality for purposes of examining another outcrop. He afterwards returned and in company with Mr. G.W. Ganong, of St. Stephen, took up leases, and has at various times since then engaged on quietly developing the area. To any one who has heard that a copper mine was being developed near Scotch Settlement, and then going in to see it a revelation is certainly given them. A comfortable cabin has been erected near the post road, and for a couple of acres more or less, a large amount of development work has been done, two main shafts sunk, and crosscutting and trenching in abundance, from all of which ore in goodly quantity has been thrown up. In the vicinity of the two timbered shafts, quite large bodies of high grade ore is piled up, and to any one who looks at it, and is capable of forming a judgment at all, it is simply beyond belief that any intelligent mining man, be he of the Geological Survey staff, or not, could honestly and conscientially say New Brunswick has neither rich ore nor quantity - and the developments here show directly to the contrary. Mr. Dick, who is a thoroughly well posted and intelligent miner, and one capable of giving proof of his knowledge - having been engaged in mining of all classes in the West in Colorado, Nevada and the Cobalt region, is fully satisfied that an immense body of good paying ore is here, only requiring capital to make the full development necessary and not only is he of the belief that the mineral wealth here is not alone, but that in other parts of New Brunswick the same conditions exist. In Charlotte County ore districts well worthy of development, and from what he has heard and seen he has no hesitation in saying that the Jordan Mountain Copper mine is a valuable deposit, and has promised to visit it before he leaves Scotch Settlement, which he proposes doing early in November. The visit to this Scotch Settlement mine was very pleasant and instructive to the writer, and the courtesy and kindness of Mr. Dick and associates will be long remembered. Oct. 12, 1910."

URN: 0755 / 0692 / IDX_Names: Annidale Mine; Marrtown.

Kings County Record - Aug. 17, 1928 Developing Minerals in Kings-Queens. - Showing at Annidale Most Spectacular. - High Grade Vein Carrying Native Copper and Silver Ore Tapped at Marrtown. - Large Developments Expected to Take Place at Mountaindale. - That the mineral occurrences of the mines located at Annidale, Mountaindale and Marrtown, N.B., are going to prove worthwhile was indicated by samples of ore and a report made on Monday by Arthur B. Kelsey, assistant commissioner of the Department of the Natural Resources Branch of the Canadian National Railways, who has just returned after spending considerable time in this mining district. Mr. Kelsey reports that the Annidale operations of the Canadian International Corporation headed by Brig. Gen. C.A. Smart, Montreal, are progressing in a satisfactory manner, with a shaft down 85 feet, at which depth stringers, showing good ore, were encountered. Mr. Kelsey stated that it is intended to continue sinking the shaft to a depth of 125 feet when it is anticipated that the best ore body will be struck. Chalcopyrite, carrying bornite, a form of copper, is being produced from this shaft. Discussing the surface showing of the Annidale shaft, Mr. Kelsey said that it was 'most spectacular' and its results were even more promising than those first shown by the famous 'Noranda' mine in northwestern Quebec. 'If the Annidale property were situated in the Rouyn district it would undoubtedly cause great excitement," Mr. Kelsey said. Douglas Wright, famous Canadian mining engineer, visited the Annidale property last week and expressed himself as being greatly impressed with the possibilities of the mine. Everything points to the establishment of an important camp at Marrtown, twelve miles from Annidale, where a depth of 21 ft. has been reached and a high grade vein of ore, five feet wide with a thickness of three ft., carrying native copper and silver ore, has been encountered. This is thought to be the first time that native copper has been discovered in New Brunswick. A number of men are being employed by the Mountaindale Company headed by J. Aird and R.G. Heughan, of Montreal. Here also a group of claims, owned by C.N. Brown, Montreal, are attracting considerable interest and are expected to resume work in the near future. It is reported that a party of investors from Boston are endeavoring to have a share in the financing of the Mountaindale development. The need for a customs concentrator of 200 ton capacity becomes more and more apparent as mining development in these districts progress, Mr. Kelsey said, in stating that machinery to handle the crushing of the ores was urgently needed. He also stated that various groups of men are interested in the promotion of the concentrator and are in hopes of securing it soon, but a hitch has occurred in the negotiations between the interested parties and the provincial government authorities, Mr. Kelsey said. The interest of the St. John Board of Trade had been aroused in connection with the concentrator, and it was expected that they would make strong representations to the provincial authorities in this regard. A pleasing feature in connection with the mining activities mentioned by Mr. Kelsey was the fact that New Brunswick men, and New Brunswick materials were being utilized as much

URN: 0755 / 2056 / IDX_Names: Annidale Mine; Ganong Mine;

N.B. Reporter - Mar. 26, 1902 G.W. Ganong, M.P. has made application for license to search for mineral on land at Letete, Charlotte county, and at Scotch Settlement in Kings County."

URN: 0756 / IDX_Names: Cobbler Sexton;

Woodstock Despatch - Jun. 26, 1907 An average sample taken from the open cuts of the Cobbler Sexton vein, sent to the Dominion Mining & Smelting Co. at Pictou, N.S., on analysis yielded 17.6% copper, equal to $88.05 per ton at 25 cents per pound. Gold and silver values not given as above was tested for copper only."

Woodstock Despatch - Sep. 25, 1907 Notes on the Cobbler-Sexton Mine. - About the first of the month Cobbler-Sexton will jump to 20 cents a share. The company is more than rushing things, all the men that can be used in the tunnel are employed at the present time. We understand that the company intends putting on a night shift soon. H.V. Dalling has just received the assay of some Cobbler-Sexton ore sent to his brother, W.G. Dalling, in Butte, Montana. The sample showed a copper value of $68 to the ton."

Woodstock Despatch - Jan. 29, 1908 Some fine samples of gold-bearing quartz was brought up from the Cobbler-Sexton mine on Saturday last."

Woodstock Despatch - Mar. 11, 1908 Some very fine specimens of copper ore, probably the richest yet taken from the Cobbler-Sexton mine, were brought up to town Saturday by superintendant Hovey. The ore was taken from the vein at a depth of 65 feet from the surface."

Woodstock Despatch - May 6, 1908 A lot of good looking samples of copper ore was brought up from the Cobbler Sexton mine last week. The quartz is getting richer as they proceed up the cross cut, and the vein is widening out, showing an unlimited supply. This is what the promoters have been looking for."

Woodstock Dispatch - Feb. 3, 1909 The Cobbler-Sexton Mine. - At a meeting of the directors of the Cobbler-Sexton Mining Co. Ltd. held in the office of Dibblee & Augherton, Jan. 11th, 1909, it was decided to put on the market 15,000 shares of treasury stock at 5cts. per share, to raise funds for further development work. Although a tunnel 216 ft in length has been driven, they are 12 or 15 ft from the deposit toward which they are working, and where it is hoped a sufficient quantity of high grade ore will be proven to guarantee putting up a mill to concentrate the ore for shipment to the refineries. Of the 15,000 shares for sale the directors at once subscribed for 4,200 and later subscriptions have brought up the sales to about 10,000 shares, so that there only remains about 5,000 shares of this allotment for sale. Recent prospecting on the Cobbler-Sexton and adjacent properties has proven the existence of a wide spread mineralized area. Not only have samples of high grade copper ore been found but rich samples of free gold and silver have been picked up at various points, which go to show that a considerable quantity must exist in that vicinity. Is it not worth looking for? Will it come to light if it is not searched for? Can it be found without an effort? If found will it not benefit the whole vicinity, the whole country? If it is proven that a sufficient body exists on the Cobbler-Sexton will it not benefit the whole province, for that same mineralized belt extends clear across the province in a northeasterly direction. If the Cobbler-Sexton proves good will it not cause a series of mines to be established across the province? Will it not benefit the whole province? Again, if the Cobbler-Sexton proves the existence of a large body of ore will it not have to pay a royalty of 2 1/2 per cent of the value of its production to the government? Has not the provincial government paid the expenses for the use of the government drill in the development and proving of the Drummond iron deposits in Gloucester county? Have not several of the other counties had the use of the diamond drill free of cost? Has it not been a benefit to the province at large. True it has benefited individuals more, but will not the royalties which are paid into the government benefit the province. Will not the industries thus started, keep our population at home? Are not our own people better than emigrants. Why cannot the Cobbler-Sexton and Carleton county have the free use of the diamond drill as well as other counties? If regulations exist to prevent the diamond drill from being used in that manner, why cannot the regulations be changed? Do not nearly all towns and cities bonus certain industries which benefit individuals more than the community? Do not governments bonus corporations, and does not that bonus aid directly the corporation more than the country at large? Is this not done to keep people at home? Which would be the better investment, the money spent to advertise our country to bring in a lot of foreigners or to develop its resources to keep our people at home? Which is the better class of people, our own or foreigners? Which are the better adapted to our country? How long will it take emigrants to conform to our manners and customs? Why not be a little more American and look after our own people? Some day we shall be sorry that we gave our heritage away to emigrants. Why cannot the diamond drill be used in this country as well as others? Are there not other deposits of ore to be tested beside the Cobbler-Sexton? Are there not excellent iron ore deposits in the country that have not been proven to depth? Are there not excellent possibilities in store for the diamond drill? Then why not use the diamond

URN: 0756 / IDX_Names: Cobbler Sexton;

Woodstock Dispatch - Mar. 17, 1909 The Cobbler-Sexton Mine. - J.C. Hovey with a crew of men has resumed operations at the Cobbler-Sexton mine. Some fine samples of copper ore were brought up to town on Saturday and are on exhibition at H.G. Noble's store. The 15,000 shares that were recently put on the market were all purchased within a week, and persons wishing to purchase stock can now get the same on application at the company's office. C. LeB. Miles, C.E., who is a stockholder in the company, recently sent samples of the ore to his brother in Montana with the following result: Copper 12 1/2 per cent. Gold 80 cents. Silver 2 4/10 op. This is a splendid showing, much better than the ore being mined in the great copper sections of Montana. Mr. Miles recently made a survey of the mine which can be seen at the company's office. One redeeming feature in connection with the Cobbler-Sexton mine, is the faith placed in its ultimate success by the manager, J.C. Hovey. Mr. Hovey is a man who has had years of practical experience in the copper country, and although at times he has met with discouragements, he is confident that by pushing on the work paying ore will be found in sufficient quantities to assure the putting in of a concentrator."

URN: 0757 / IDX_Names: Bull Creek;

Carleton Sentinel Jul. 2, 1853 GOLD DISCOVERIES IN WOODSTOCK. - This is a startling announcement, but it is a fact; we saw a twenty dollar gold piece yesterday, and a story is current that large sums have been lately dug on Bull's Point. We visited the diggings and saw evident marks of labor, but what amount has been taken out we are at present unable to say. As soon as we learn the particulars we will lay them before our readers."

Headquarters - Dec. 5, 1855 Carleton Copper Mines. - We had occasion some few months ago to announce the pleasing fact of the discovery of a rich vein of copper ore in the vicinity of Woodstock - on the properties of Abner and Charles Bull, Esqrs. At that time we could only refer to the discovery, as the opening of the mine had been only partially commenced. The specimens then exhibited were chiefly taken from the surface; and novice, as we are in such matters, we could speculate but little on the probability of a large lode of this valuable mineral being brought to light, such as is now ascertained beyond all uncertainty to be located in that vicinity. The reality of the discovery was very generally doubted. Oh! it is only a visionary affair was the expressed opinion of many; while a few who had some little knowledge of mining operations, believed that the banks of Bull's Creek contained a source of inexhaustible wealth that could not fail to give an impetus to the rapidly increasing interests of this County, and that would at no very distant day, place Carleton in advance of any other county in this Province. It is to Mr. Stevens, who is emphatically a practical man, that we are indebted for this discovery. He has done much - we might say more than any other man - to develope the mineral resources of New Brunswick. Seventeen years ago he commenced exploring the hidden sources of wealth which nature has so lavishly bestowed upon this province. He had much opposition to contend with. The country was young - the settlers but few; and these few chiefly engaged in the lumber trade, and unacquainted with exploring ""the bowels of the earth,"" had strong prejudices against such a calling. Hence it will readily be perceived that difficulties beset him on every hand. We hope, however, - in fact we have no doubt that his untiring energy and unwearied perseverance are about to have a successful and happy termination. Specimens of the Ore were sent to England last fall, where they were assayed, and the result proved highly satisfactory - yielding a large percentage of copper. Mr. Stevens proceeded to England in person during the past summer, from whence he has returned. We have not heard the particulars of his visit, but presume that he has succeeded in his expectations, from the fact that A. Francis, Esq., an English gentleman practically acquainted with mining operations, arrived here some short time ago, and who, after a careful and minute examination of the Ore, has declared that the indications are highly favorable, and that the prospects of finding copper in quantity have far exceeded his expectations. Mr. Francis, we understand, has been sent out by parties in England to examine and report upon the prospects that may present themselves for successful mining operations; and the mere fact of his being selected to discharge such an important trust affords ample proof that he is fully competent to judge of such matters. In his Report, already sent to England, he has expressed himself in accordance with what we have already stated. He has been much gratified with his visit. He has his attention directed to the striking similarity in appearance which the locality at Bull's Creek presents with that of Cornwall; and has no doubt that it will ultimately become the centre of a rich mining district. We have had an opportunity of seeing the report, and must say that we were much gratified with the tenor of its remarks. The following extract which we are permitted to make will show, in some measure, the opinion that Mr. Francis entertains on the subject. ""In concluding this Report I beg to state that Mr. Stevens has given me all the information in his power respecting the property, and that I consider all his representations in London more than fully borne out."" During an interview we had with Mr. F., he remarked that he was better pleased in finding Copper Ore existing in what is termed Copper Pyrites or Yellow Copper (from which two-thirds of the old and new worlds have been supplied for centuries) than if he had found the Copper in its pure state, as is the case in some instances, such as Lake Superior - as he had never found indications, such as are presented at Bull's Creek, fail in producing the Ore in large quantities. The people of Carleton may well feel proud of their County. Its agricultural products cannot be surpassed in the Province; and the mineral wealth in which it abounds will, ere long, be more fully developed, and open up sources of improvement of which people as yet have but little conception. Our limits will not permit our enlarging at present; we shall therefore return to the subject again. - Carleton

Morning News - Feb. 28, 1855 Fredericton, Tuesday, Feb. 27. - A Bill was brought in by Mr. Connell for leasing Copper Mines in the County of Carleton, upon which progress was reported, after some discussion."
URN: 0757 / IDX_Names: Bull Creek;
Carleton Sentinel - Oct. 3, 1857 and St. Andrews Standard - Oct. 14, 1857 THE COPPER MINES. - The New Brunswick

Mining Company are proceeding with their operations at the Copper Mines, under the management of Wm. Stevens, Esq., with vigor, and the result thus far has, we understand, been highly satisfactory. One of the English proprietors, who recently visited the mines, has, we learn, expressed himself decidedly to this effect. We spent a few hours very pleasantly, a short time since, on the Company's grounds, under the attentive direction of Mr. John Stevens, the obliging clerk, examining into and endeavoring to understand, as far as possible, the various operations connected with the mining, raising and preparing of the ore. The mines are about five miles below Woodstock, a short distance from the highway, on Bull's Creek, a stream which offers excellent facilities for propelling the machinery, &c. As yet, the works completed are but preparatory to the achievement of the main object; as, satisfied of the value and extent of the ore, the Company have made all the necessary preparations, in the way of erections, machinery, &c., in the most thorough manner, and have now entered upon their work of mining in good earnest. The shaft in which the excavation was being made at the time we have alluded to had reached the depth of 90 feet beneath the surface. The entrance to this shaft was by a drift, or tunnel, 140 feet in length. (We may here mention that the term shaft is applied to vertical excavations, that of drift, to horizontal ones.) In this instance, a drift following a lode, or metalliferous rock, had been made into the side-hill a distance of 140 feet, where it entered an unproductive formation; here the shaft was sunk, and from this shaft other drifts will be excavated, in order to reach the lode, supposed to be very near the south side of the shaft. The excavations are made by blasting, for which purpose large quantities of gunpowder are used.- The metal, as well as the waste, is raised from the shaft in buckets by means of a horse-whimb. Those visitors who, like ourselves, are curious enough to desire it, may take passage in the said bucket, and pay a visit to the deep rocky profound. The lode, or ore, is taken from the excavations to a suitable place, where it is broken into smaller pieces, after which it passes into the crusher, a curious and most effective piece of machinery, worked by a powerful water-wheel, where it is most thoroughly smashed; thence passing through various sieves, troughs, 7 c., it becomes finally, by the action of water, cleansed from all earthy particles, and assumes a state fit for exportation and the smelting furnace. The manufacture of copper is an interesting and important subject, as it is a metal which has long and extensively entered into the conveniences and necessities of society and the arts. We therefore regard this attempt of the New Brunswick Mining Company as a very interesting feature of the present history of our country; it is one which, if it succeeds to that extent of which the Company now have reasonable hopes, it must conduce very materially to the advancement of this portion of New Brunswick. The copper here found is the sulphuret."

Carleton Sentinel - Feb. 6, 1858 and N.B. Courier - Feb. 13, 1858 NEW BRUNSWICK MINING COMPANY. - Having heard that a lode of copper had been struck at the above named mines, we visited the same on Thursday and we were happy to find the report correct, and that the vein or lode, of a very rich character, had been struck in two places, - in one of these it being four feet wide, the other not sufficiently opened to define the width. We are pleased that this result has followed the tedious operations of the last twelve months - because of the large interests of the enterprising gentlemen in England comprising the company at stake; because the successful working of these mines will involve immediate and extensive benefit to the country at large; as well as on account of Mr. Stevens, the indefatiguable manager, whose indominatable perseverance and untiring industry seems about to be rewarded. We feel in saying what we have, we utter the sentiments

Jun. 7, 1860 - Provided by Gwen Martin (from PANB?): Woodstock 7th June 1860 A Inches Esq Dear Sir, I this morning obtained the within certificate from Mr Bedell the County Recorder. 14 You will perceive there is nothing to prevent the lease issuing to me on Lots 27 & 28. It seems Mr Bedell's brother has some claim on the upper part of Lot 29. Consequently I can only expect the mining lease over the lower or south half of Lot 29 and on which there is nothing to interfere with my title. I shall thank you to get the leases completed as soon as possible. At present my discoveries are wholly confined to the lower half of Lot 29 and the lease not extending over the upper half will not be of much consequence. I remain Dear Sir yours very respectfully William Stevens"

May 26, 1860 - Provided by Gwen Martin (from PANB?): Woodstock May 26th - 60 [1860] A. Inches Esq Dear Sir, Your favor of the 21st came duly to hand. Enclosed is 5$ to pre-pay as requested for mining lease Lot No. 29. I am sorry that the lease has not been sanctioned on the same terms as 27 & 28, but it seems desirous to have the leases before I proceed any further with my operation on the mines. I shall thank you to forward them as soon as possible. As to the representation made by a party in reference to the Griffith property being deeply mortgaged to him before I purchased the right of mining I believe the truth [?] to be as follows. Previous to my purchasing the Right of Mining from the Messrs Griffiths, R. Griffiths Lot No. 28 was mortgaged to the ex-Postmaster General for one hundred pounds, which by some means of other was accumulated to £150 previous to Mr Connell purchasing (about a fortnight since) the said farm for £1,000 which enabled Mr R. Griffiths to relieve his brother's mortgage on Lot No. 27 for £400 leaving a balance to be received by R. Griffiths from C. Connell for about £ 450. The mortgages on both farms are now cancelled which can be proved by certificate from the Registry office if required. I hope to see you at Fredericton on Monday. Believe me, yours very truly, William Stevens [note: Charles Connell - a direct ancestor of Mark Connell, - was the Post-Master General until a scandal drove him from office, after he had his own image engraved on one of the New Brunswick stamps] [note: Stevens liked a lot of underlining.....]"

URN: 0757 / IDX_Names: Bull Creek;

Dec. 3, 1862 - Provided by Gwen Martin (from PANB?): Woodstock Dec 3rd, 1862 Hon. John McMillan Surv. General etc etc Dear Sir, More than three years since I applied for leases to work the mine discovered by me on the farm of Messrs

Robt and Benj Griffiths also on the lower or southern half of Lot 28 adjoining the Messrs Griffiths belonging to Messrs Augustus and Walter Bedell. Previous to the Government complying with my request, I had to send down my deeds from the Messrs Griffiths & Bedell proving my right to the mines. I have rec'd the lease for the Griffiths mines, but not the Bedell property although many times applied for. When I rec'd the lease of the Griffiths mines Mr O'Connors promised to send me my deeds from the Griffiths in a few days. As yet I have not rec'd them altho much wanted. Last week Mr Munro said he was going to write you and would desire you to send them to me they have not come to hand. It will save me the trouble and the expense of another journey to Fredericton if you will please have the kindness to cause them to be sent to

URN: 0757 / 0275 / GEOL / IDX_Names: Bull Creek; Woodstock Fe; Geology - General;
Colonial Farmer. - Jul. 3, 1871 Geological Report. - Continued. IV. non-Calcareous Slate Band Northwest of the Granite. This division comprises the rocks underlying parts of the counties of York and Carleton, extending on the St. John River from Sullivan's Creek to a point alittle above Woodstock, or a breadth of sixteen miles; and on the Miramichi seven miles, measured in a straight line across the strike; from the forks of the north and northwest branches. These rocks present few characters to distinguish them from the band already described as lying on the other side of the granitic belt, and, in the absence of evidence to the contrary may be assigned to the same geological age. It will therefore be unnecessary, on the present description, and I shall proceed to notice a few of the most prominent points of distinction which have come under my observation. On the St. John river, immediately above Sullivan's Creek, extending about five hundred yards upwards, and apparently in contact with or close proximity to the granite, occurs a band of highly ferruginous finely laminated micaschist, traversed longitudinally by large quartz veins, and dipping NW 30-50 deg. - This is succeeded by ordinary clay slate and quartzite, which continues, with many sharp convolutions and folds, but preserving the prevailing northwesterly dip at high angles, to Patchell's Ferry, four and a half miles from Woodstock. Here the rocks begin to assume a more crystalline aspect, and all around Woodstock afford evidence of an abnormal and disturbed condition. Bands of crystalline rocks, resembling granite, syenite, diorite, (occasionally with trappean rocks) and sometimes holdingepidote, iron and copper pyrites, galena and other minerals, are intercalated in the manner of conformable or imbedded masses. Some of these I have represented upon the map, but they are too numerous and too varied in character, and have not long been studied sufficiently in detail to admit of an exact description. I observed isolated patches, generally of no great extent, of an altered slate conglomerate composed of rounded and angular fragments of the surrounding rocks, cemented by a feldspathic paste into a hard rock; these are probably lenticular masses occupying depressions in the older rocks. About half way between Upper and Lower Woodstock, on the right bank of the river, an interesting exposure of green quartzose and epidotic rock, jointed so as to present some appearanceof columnar structure, occurs; near the Iron Works the same kind of rock, but devoid of the peculiar structure referred to, occupies a considerable breadth, and near Lower Woodstock a narrow band of red and green fine grained and very regularly laminated slate, not over thirty feet in thickness, was observed running conformably with the general strike, but dipping SE 40 2 deg. The whole district is exceedingly interesting to the geologist, and especially so in connection with the deposits of iron and copper ore in the vicinity; but would require, in order fully to elucidate its structure, a more careful and detailed examination than I had it in my power to give. In this section, a remarkable exception to the general character and distribution of the rocks, as above described, occurs in the form of an extensive outlier of supposed Lower Carboniferous strata, occupying an area of probably not less than sixty or seventy square miles, chiefly in the parishes of Brighton and Peel, in Carleton County. This outlier has not previously, been specially described, so far as I am aware. On the left bank of the St. John River, opposite Campbell's Island, two miles below the mouth of the Beccaguimic, a band of conglomerate, 500 yards broad, abuts upon the river. It is here of the character described as belonging to the silicious conglomerate band of the main Carboniferous area; or rather partaking of a combination of this with the underlying red calcareous conglomerate of the same series, with which, on tracing it is some distance inland, it becomes completely assimilated. The northwestern outcrop of this outlier, as delineated upon the maps, has been traced by me, at intervals, for a distance of twelve miles; and a partial traverse has been made near the centre to a distance of one and a half mile; where at S.B. Orser's (?) mill, on the north branch of the Beccaguimic, coarse red sandstone and conglomerate appear to dip NW 27 deg. For the further information which has enabled me to trace approximately on the maps the boundaries of the outlier, I am indebted to Mr. Edward Jack, who, in the course of his surveys for timber locations, traversed this region in the fall of last year, and at my request, noted any remarkable geological facts which came under his observation. His remarks in reference to this outlier, which were not communicated to me until after my return to this city, are necessarily somewhat general, although sufficiently explicit to justify me in assigning to it provisionally, the limits laid down on the map; and I consider it unnecessary to give them in detail, as you will probably deem this interesting field worthy of further special research. On the right bank of the St. John River, a little below the band of silicious conglomerate already referred to, a somewhat similar deposit, but entirely resembling the red calcareous conglomerate and sandstone of the Carboniferous series, is displayed to the extent of 1,200 yards in breadth. Where evidence of stratification occurs in this deposit, it appears to dip to the northwest in the same direction as the metamorphic slates by which it is enclosed on both sides, although at a lower angle. The same band is traceable for seven miles on the strike, extending to the rear of the Woodstock Iron Works, where it turns out to a point, and terminates about 100 yards south of the Jacksontown Road. This is probably connected with the conglomerate and sandstone area in Brighton, as already described, but here is either brought into position by a dislocation, or occupies a narrow and shallow wedge shaped cavity in the older rocks. The only distinction I can observe between its condition and that of the lower red calcareous conglomerate of the main Carboniferous area consists in the fact that here the rock appears to be affected by numerous small faults or slips, which, in maintaining their straight course, have cut through pebbles and matrix alike."

URN: 0758 / IDX_Names: Britton Mine;

Carleton Sentinel - Aug. 13, 1881 Lower Wakefield. - August 9, 1881 - Gold and Silver. - Two miles north of the Iron Works lives Mr. A.W. Shaw, on whose place, it is claimed by those who ought to know, that silver is to be found in paying quantities; the writer also found a small quantity of gold. Mr. Shaw has been induced to open the mine and is quite sanguine that it will pay. Shares in one half the mine will be disposed of to those desirous of purchasing. That we have the yellow metal in this and Victoria county, in greater or less quantity, is without doubt; all that is necessary is to make a bold start. Experienced miners say that gold is to be found in paying quantities - what then is the trouble? Mr. Shaw's mine is called the New Brunswick Brookline Silver Mine, and it is to be hoped that it will prove a success. X."

Moncton Daily Transcript - Dec. 17, 1889 and Chignecto Post Dec. 19, 1889 On Friday a drill falling from a bucket in the shaft of the Britton mine, at Upper Woodstock, a distance of 60 feet, struck a workman, Thos. Betridge, across the face, severing his nose, and so seriously injuring him as to render his recovery doubtful."

S.J. Daily Sun - Nov. 1, 1889 Silver in Carleton County. - Fine specimens of quartz containing silver, taken from the mine recently opened by Mr. Shaw on land owned by him four miles above Woodstock, N.B, on the river road, have been left at our office. The mine has already attained a depth of 40 feet. Specimens received by us were secured at a depth of 35 feet. Samples sent to Salt Lake City for analysis yielded at the rate of 100.65. Mr. Shaw's neighbors are getting somewhat excited over his find and are sinking wells in the hopes of striking the same vein that he is working, or another equally valuable, and one man has found specimens at a depth of 10 feet. -[Houlton Pioneer"

St. Andrews Beacon - Nov. 7, 1889 The Woodstock silver mine continues to improve the deeper the shaft is sunk. The last few days, says the PRESS, have given good indications of gold as well as silver. On the west side of the shaft, which is about six by eight feet across, is a clearly marked vein about four feet thick and descending as perpendicular as the side of the shaft. This vein has hardly been broken into yet, and most of the specimens have been taken from the adjacent rock. There is every prospect that this vein is very rich with silver, probably with other metals in smaller quantities. To keep the mine from flooding it has been necessary for the last two weeks to keep day and night crews constantly on. Mr. George Wolhampton, of Upper Woodstock, is proceeding with the erection of a hotel within a few rods of the mine."

Chignecto Post Nov. 7, 1889 A silver mine is being developed by Britain & Shaw, at Upper Woodstock, N.B. The shaft is down 40 feet with good showing."

St. Croix Courier - Nov. 7, 1889 Fine specimens of quartz containing silver, taken from the mine recently opened by Mr. Shaw on land owned by him four miles above Woodstock, N.B. on the river road, have been left at our office. The mine has already attained a depth of forty feet. Specimens received by us were secured at a depth of thirty-five feet. Samples sent to Salt Lake City for analysis yielded at the rate of 100.65. Already a hotel has been erected opposite the mine and the people throughout Carleton county are looking for a big boom. The members of Parliament were expected to visit the mine last week, the government having pledged the owner $2,500 when he reached a depth of fifty feet, providing silver was there found in paying quantities. Mr. Shaw's neighbors are getting somewhat excited over his 'find' and are sinking wells in the hopes of striking the same vein that he is working, or another equally valuable, and one man has found specimens at a depth of ten feet.- Houlton Pioneer."

Carleton Sentinel - Nov. 16, 1889 Mr. and Mrs. McCormac purpose opening the hotel at the Britton mine next week. Mr. Walhaupter has pushed the work of construction on very rapidly so that the house is now about ready for occupation."

Carleton Sentinel - Nov. 23, 1889 Carleton Co.'s Silver Mine. - Work is being pushed forward at the Britton mine with a great deal of energy, and the further it progresses the brighter the prospects for a rich find becomes. If the result of an assay made by a competent gentleman of this town, last week, of rock taken from the mine, be approximately correct, then indeed Mr. Britton has a bonanza. That the proprietor has full confidence that his mine is rich in silver, at least, if not in gold and other minerals, is shown in the large expenditure he is making to develop the same, and it is to be ardently hoped that his highest anticipations may be realized."

St. Andrews Beacon - Nov. 28, 1889 The Woodstock silver mining venture is being pushed forward with a great deal of energy. The Sentinel says the further it progresses the brighter the prospects for a richer find becomes. If the result of an assay made by a competent gentleman of this town, last week, of rock taken from the mine, be approximately correct, then indeed Mr. Britton has a bonanza."

St. Croix Courier - Nov. 28, 1889 The Woodstock Press thinks there is a bonanza in the Shaw-Britain silver mine at that place. Out of thirty assays made last week twenty-six contained silver and gold, and the total 15 ounces produced 17 1/2 grains of silver, with bearings of gold. Only one assay was cut down, and was found to carry $100 of gold to the ton. Some specimens have given the proportion of $600 to the ton. The proprietors intend putting on an increased work force at once and pushing operations more vigorously."

URN: 0758 / IDX_Names: Britton Mine;

Carleton Sentinel - Nov. 30, 1889 The Precious Metals. - A few rods on the west side of the river road about four miles above Woodstock, is the Shaw Britton mine. The mining lot is on a part of the Britton homestead now owned by Mr. Albert Shaw. Mr. R.K. Britton who has a joint claim with Mr. Shaw is the principal promoter of the mining enterprise. A small stream runs through the lot, and along its south side the rock in several places protrudes through the soil. One of these rock exposures showed indications of the precious metals, and here Mr. Britton commenced work about three months ago. A well defined vein, of what proved to be silver bearing ore was found, and the work of sinking a shaft was begun. Shortly after operations has been commenced in good earnest, Mr. Richard Phillips, son of the late David Phillips of Upper Woodstock, came home. He had spent about nine years in the silver mines of Montana, and is therefore practically acquainted with some of the richest mines in the world. What he saw at the new workings surprised him. He was impressed at once with the value of the find. He was given charge of the work, which under his skilful direction, has since been carried on systematically. A shaft about 6x8 has been sunk vertically in the south wall of the vein, and is now about 69 feet deep. The vein is very clearly defined and runs vertically as the plummet. The wall rock comes away from its leaving the cleavage as smooth as a board. It seems to be about five feet in diameter, but enlarging in the descent. The shaft is closely timbered with sawn lumber 6x7 in., laid horizontally like a log house. This prevents fragments of rock falling as the work progresses. The wall rock is of a slatey nature and appears to have a southerly dip. Through this run veins of quartz in which considerable silver and other metals are found. Mr. Britton has had several assays by competent mineralogists all of whom have given most favorable returns. No assays of the vein below 7 feet from the surface have been made. Recently Mr. Herbert Dibblee has made about thirty assays of material from the wall rock, that is from such as is thrown out in the dump. Some of these show surprising and most assuring results. Four of the thirty gave little or no value; twenty five gave from $12.50 to $600 of silver to the ton. One gave an amazing assay, but the result is not published until further tests are made. The tests for gold are not yet completed by Mr. Dibblee; but one of the above in addition to the silver gave $100 gold to the ton. A test was made of some sand collected in the stream at the end of the sluice which carries away the water hauled out of the shaft, and this, too, gave a rich return. From time to time experienced miners, some of them experts, have examined the lead and the surroundings. The consensus of their opinions is that the mine is rich, and cannot fail to bring ample returns. Mr. Phillips, the manager, says that when the vein is tapped 60 or 100 feet from the surface the result will be a surprise to New Brunswick. Our people, he says, will be aroused to the fact, as they never yet have been, that our country is rich in mineral wealth. No doubt it is yet premature to predicate definitely the value of the deposit. The mine is only yet in course of development. Such works must need be carried to considerable depths before ores in sufficient quantities and quality are obtained; but certainly the prospects are most encouraging; the environments and developments so far seem in every way to point to rich returns. Should these predictions be verified, the outcome will be not only fortunate for the proprietors, but most advantageous to the whole community. As soon as the Britton mine is an assured success, mining capitalists will flock in, and very soon millions will be invested in unearthing our mineral wealth, which in all probability lies ready to amply repay its seekers. It is well nigh impossible to over-estimate the boon such an enterprise would be sure to bring to our fair county. Mr. Britton, who has so perseveringly and energetically prosecuted the work thus far, is deserving of much credit. He is but a poor man, and has had many discouragements to encounter; but his fortitude has prevailed, and it is to be hoped his enterprise will be richly rewarded. Mr. Phillips has been seriously ill for a fortnight back; but is now in a fair way of recovery. The work has been going on however according to his plans; and when he is able to take personal supervision the operations will be more vigorously pushed. A level will be commenced soon to tap across the vertical veins, which in turn will be worked out from below, known technically as stoping. At present a house is built over the shaft, and near by is a shop for making and repairing the tools. On the other side of the main road, Mr. G.B. Wolhaupter has built a hotel for the accommodation of the workmen. Fifteen hands are now employed, and as the water comes in quite rapidly the work is carried on day and night continuously."

N.B. Reporter - Nov. 30, 1889 Underground Wealth. - The Woodstock Press says that the operations at the Shaw Brittain Silver Mine at Upper Woodstock have lately been of the most encouraging character, sufficiently satisfactory results having been obtained to leave no longer a doubt that the precious metal exists there in richly paying quantities. Thirty assays were made last week from specimens taken from the dump, and out of the thirty, twenty six contained silver and gold, and the total 15 ounces produced 17 1/2 grams of silver, with bearings of gold. Only one assay was cut down, and was found to carry $100 of gold to the ton. Some specimens have given the proportion of $600 to the ton."

Daily Telegraph - Oct. 15, 1889Carleton County News. - Woodstock, Oct. 14. - The Shaw-Britton mine in Lower Wakefield, about two miles above Upper Woodstock, is now attracting deep interest. A recent assay of the vein, only six feet from the surface, gives over $100 to the ton, chiefly silver. The shaft is now down about 25 feet and the vein gets richer and larger as it descends. The work is carried on under the management of Mr. Richard Phillips, an experienced silver miner. He and other experts pronounce the mine a certain bonanza. It is claimed, on the authority of those who have had long experience in mining, that the owners have struck a rich find, and that it is practically inexhaustible according to the indications. Mr. Phillips is having the work carried on systematically. A house has been built over the shaft and the work is timbered up as they descend. A night shift has been put on so that for the last week or two the work has been going on day and night. This week a shipment of the ore is to be made to the smelting works probably in New Jersey. Mr. Geo. B. Wolhaupter, trader at Upper Woodstock, has bought a piece of land near the mine and intends to build a hotel there. He expects to push on the work as rapidly as possible so it may be completed before the cold weather interferes too seriously with the workmen in their present quarters."

S.J. Evening Gazette - Oct. 21, 1889 and St. Croix Courier - Oct. 24, 1889 Messrs. Britain & Shaw, of Upper Woodstock, are developing what promises to be a very rich mine of silver. They have at present seven men at work under the direction of Richard Philips, formerly of Upper Woodstock but more recently of Colorado. The shaft is now sunk to a depth of over 40 feet and shows increasing richness as it descends."

URN: 0758 / IDX_Names: Britton Mine;

Daily Telegraph - Oct. 29, 1889 A visit to the Shaw-Britton mine now is fraught with interest. Many avail themselves of the chance to view the manner of unearthing the precious metals. Among the visitors are many who have had experience in, or opportunities of observing how such work is carried on. The reports of qualified observers so far, are most flattering. The vein bearing silver, gold and arsenic is large, well defined and, according to the assays, rich. Work is being prosecuted vigorously. The shaft is run down vertically 40 feet, alongside the vein. The work is timbered up as the descent is made. It is proposed to sink down about 100 feet before the work of stoping is commenced. A night shift is now employed and as the water is coming in quite rapidly, a Sunday shift will now be necessary, so that the work will go on continuously. Mr. Richard Phillips who is a thoroughly competent miner, is manager, and is pushing the work vigorously and skilfully. It is expected that the surveyor general will make an examination of the mine soon in reference to royalty and to the grant. The vein is located about two miles above Upper Woodstock, near the main road. On the opposite side of the road Mr. G.B. Wolhaupter, postmaster and trader at Upper Woodstock, is erecting a two story hotel, for the accommodation of the employees."

S.J. Globe - Oct. 31, 1889 Silver in Carleton County. - Fine specimens of quartz containing silver, taken from the mine recently opened by Mr. Shaw on land owned by him four miles above Woodstock, N.B., on the river road, have been left at our office. The mine has already attained a depth of forty feet. Specimens received by us were secured at a depth of thirty five feet. Samples sent to Salt Lake City for analysis yielded at the rate of 100 65. Already a hotel has been erected opposite the mine and the people throughout Carleton county are looking for a big boom. The members of Parliament were expected to visit the mine last week, the government having pledged the owner $2 500 when he reached a depth of fifty feet, providing silver was then found in paying quantities. Mr. Shaw's neighbours are getting somewhat excited over his find and are sinking wells in the hopes of striking the same vein that he is working, or another equally valuable, and one man has found specimens at a depth of ten feet. - Houlton Pioneer."

Moncton Daily Transcript - Sep. 6, 1889 and Fredericton Capital - Sep. 7, 1889 Considerable interest has been aroused over the prospects of a silver mine on Albert Shaw's farm, four miles above Woodstock, on the main road. A shaft has been sunk 25 feet and a lead of ore bearing quartz enlarges with descent. Assays show a lead of silver and gold and it is estimated in good paying quantities. Experienced western miners are sanguine of the ultimate success of the venture, if

Carleton Sentinel - Sep. 14, 1889 It goes without saying that the prospecting for the valuable metals of the Shaw Britton property a short distance above Upper Woodstock, is the all absorbing topic of discussion among business men here. As the shaft goes down the indications of silver, copper, lead and gold, become stronger. Expert miners speak in the most sanguine terms of the ultimate success of the mine. Mr. Richard Phillips, who has spent years in silver mining, and who has himself owned a mining property, gives the most positive assurances that it is one of the best prospects for the depth it is yet sunk, he has ever seen. Under his direction the work will be prosecuted systematically so the lead may be fairly treated. He says all the indications point to a rich find, and the proprietors, Messrs. R.K. Britton and Albert Shaw, may wake up some morning and not only find themselves famous but rich, a consummation to be devoutly wished for. At all events a test will be made of what there is in it, and there certainly seems every reason to believe that riches are stored away in that lead among the hard quartz for some one to unearth."

St. Croix Courier - Sep. 19, 1889 and S.J. Daily Sun - Sep. 16, 1889 There is a silver mining fever abroad at Upper

Carleton Sentenil - Sep. 21, 1889 A handsome specimen of quartz from the Shaw-Britton mines, amy be seen at this office. This mine appears to be developing richer qualities, the further it is opened up."

Daily Gleaner - Aug. 13, 1890 The Britton Mine. - Several buildings, including offices, coal sheds, and an engine and shaft house 24x27 have been erected on this property at Upper Woodstock. The engine and boiler from A. Leonard & Sons have a capacity of 25 and 30 horsepower. The pump, which is to be put in this week will have a 5 1/2 feet stroke. Mr. James Drysdale has put in a set of drums to drive the pump and hoisting machinery. The company are doing well and have great confidence in the enterprise. Operations will be in full blast shortly."

URN: 0758 / IDX_Names: Britton Mine;

Daily Telegraph - Aug. 23, 1890 The Woodstock Silver Mine. - Active Operations Resumed - Description of the Works. - Woodstock, Aug. 21. - Active operations have again been resumed in the shaft of the Britton silver mine. There had to be a cessation of work in the mine for some time while the machinery was being placed. The works are located about two miles above Upper Woodstock, on the great road. The company owns 8 acres adjoining the road on the west side. The shaft house, 24x57, is a well finished building, with steel roof. The engine is 25 horse power, with a boiler of greater capacity. It drives a Cornish pump, 6 « feet stroke, throwing out 32,800 gallons per hour. The machinery is strong and arranged according to the methods now generally used in such mines. The shaft is over 80 feet deep, and is timbered up and closed ceiled vertically, and has a pumpway, bucketway and stairway. The hoisting apparatus is now run by the engine. The intention now is to run the shaft down vertically until a rich ore is found. The assays show that the ore becomes richer as the descent is made. The mining engineers that have examined the works since the shaft has gone below 60 feet agree that the metal bearing rock is in a true fissure vein, and that there can be no doubt, whatever, of the richness of the deposit at from 200 to 500 feet down. A careful assay will be made at the works of the vein at each foot of the descent. The results will be tabulated so the relative richness of the ore may be seen from time to time at a glance. An electrical apparatus is to be used to set off the blasts. When the charge is placed the men below will run into the drifts. The foreman there will sound a gong; this will be the signal for the man at the head of the shaft, who runs the hoisting gear, to touch the electric button, which turns on the current to set off the dynamite. All the arrangements are now thoroughly made to have the work go forward with regularity and alacrity. The powder magazine, which is a well made and commodious underground room, is about 200 yards from the shaft house. The explosive material will here be quite harmless to the main part of the works; near the shaft house is a well finished building containing the office and assay room. The latter room has a furnace for assaying and all the necessary appliances to make fire assays. The tests made of the rock at the depth now attained give gold or silver or both invariably, showing the constant and definite formation of the vein. At a little distance from the works two hotels have been recently built and also two private dwellings, so that the locality presents a very attractive appearance. Mr. R.K. Britton the original owner of the mine is indefatiguable in his efforts to promote the enterprize. The company is composed of good solid men of our own community, and they have every confidence in the ultimate success of the venture. Mr. Richard Phillips, who has had nine years' experience in the Montana mines, is foreman at the shaft; Mr. Richard Baker and Mr. R.K. Britton himself make the furnace assays. The latter has the general supervision of the operations."

Fredericton Daily Gleaner - Aug. 23, 1890 The Britton Mine. - Work is now in full operation at Upper Woodstock. The machinery mentioned in a former issue has now been completed, and is arranged according to the methods generally used in such mines. The intention of the committee is to run a shaft down vertically until a rich ore is reached. There can be no doubt at the richness of the deposits already found. A careful assay will be made of the works of the vein at each foot of the descent. Mr. R.K. Britton, the original owner of the mine, is greatly interested in this enterprise, and associated with that gentleman are Mr. Robert Phillips, who has had nine years experience in Montana, and Mr. Richard Baker, who is general superintendent of the operations. The company has every confidence in the ultimate success of their undertaking."

S.J. Globe - Aug. 26, 1890 The Britton Mine. - Work is again progressing at the Britton mine, that is, work in the shaft. The machinery for pumping, etc., is now completed, and is working splendidly. On Friday the mine being pumped out, blasting was commenced again, and it is the intention of the company to run the shaft down as fast as possible. The stir around the mine now begins to look like business, an assurance than which no better could be given that the company are fully determined to see what there is in it. - Woodstock Press."

S.J. Daily Sun - Aug. 28, 1890 The Britton Mine. - (Woodstock Press) - Work is again progressing at the Britton mine, that is work in the shaft. The machinery for pumping, etc. is now completed and is working splendidly. On Friday the mine being pumped out, blasting was commenced again, and it is the intention of the company to run the shaft down as fast as possible. The stir around the mine now begins to look like business, an assurance than which no better could be given that the company are fully determined to see what there is in it. With the increased activity comes fresh demands for stock, and it is not likely that the company will dispose of much more at the present rate. The government should now come forward with aid to this enterprise. They are authorized by act of assembly to give financial aid to any company to aid them in prospecting for minerals, and this company have shown themselves deserving of such encouragement. They have no doubt of reaching ore rich in silver, but it requires capital to continue the work, and this is the time when government aid is needed and should be given, that the resources of the country may be developed."

Daily Gleaner - Feb. 15, 1890 The Mines In Carleton Co. - Developing Into AVery Valuable Property - Some Interesting Facts in Connection with the Work. - Mr. Wm. Stickney of Woodstock, was in this city yesterday. He reports a boom in the mining business at Upper Woodstock, and says the prospects are very good for great mining operations in Carleton county during the coming spring and summer. It will be remembered that early last fall Mr. R. K. Britton opened up and largely developed a mine at Upper Woodstock. Mr. Britton's efforts and enterprise were rewarded by very rich ore of gold, silver and copper and the work was carried on till a shaft 50 feet deep was sunk, the ore all the time increasing in richness. A great many people were attracted by this mine and the work was at times greatly hindered by the visitors. Mr. Britton expended about $3,000 in the work. A company has now been organized, embracing many of the leading business men and capitalists of Woodstock, and $5,000 in cash has already been paid in. This company was formed January 31st, and they will apply for incorporation at the next session of the legislature. The shaft has now been sunk nearly 100 feet and very rich drift veins have been located, the ore assaying as high as $650 to the ton. The company intend to put in all necessary machinery, including a crusher and smelter as soon as the act of incorporation is passed. The mine is already valued at $250,000 and is gaining in value all the time. There is now very little doubt that this new enterprise will develop into something grand and be the means of placing New Brunswick into a prominent place in regard to the richness of its mines and the large variety of its minerals."

URN: 0758 / IDX_Names: Britton Mine;

Moncton Daily Transcript - Feb. 19, 1890 Mining in Carleton County.- The Britton mine at Upper Woodstock containing gold, silver and copper, is said to be already valued at $250,000. A company has now been organized, embracing many of the leading business men and capitalists of Woodstock, and they will apply for incorporation at the next session of the legislature. The shaft has now been sunk nearly 100 feet and very rich drift veins have been located, the ore assaying as high as $600 to the ton. The company intend to put in all necessary machinery, including a crusher and smelter, as soon as the act of incorporation is passed."

St. Croix Courier - Feb. 20, 1890 Very rich gold, silver and copper ores have been taken from the mines at Upper Woodstock, where a shaft has been sunk to a depth of about a hundred feet."

St. Andrews Beacon - Feb. 20, 1890 A mining boom of considerable magnitude has struck Woodstock. A company has now been organized to operate the Brittain mine. This company embraces many of the leading business men and capitalists of Woodstock, and $5,000 in cash has already been paid in. They will apply for incorporation at the next session of the legislature. The shaft has now been sunk nearly 100 feet and very rich drift veins have been located, the ore assaying as high as $600 to the ton. The company intend to put in all the necessary machinery, including a crusher and smelter as soon as the act of incorporation is passed. The mine is already valued at $250,000 and is gaining in value all the time."

Daily Telegraph - Feb. 24, 1890 Mr. R.A. Gaus, of Upper Woodstock, has recommenced work in the shaft he is sinking to test the value of the mineral deposits in that section. From the assay made in New York of the quality obtained from this location, he is very sanguine of success."

S.J. Daily Sun - Jan. 25, 1890 Silver Prospects. - (Woodstock Press). - Though but little has been said lately about the operations at the silver mine in Lower Wakefield, it must not be inferred that work has ceased or even that energy has materially slackened. While the country has been lathering itself with excitement over election matters, Mr. Brittain has been steadily working into the ground deeper and wider. His work was considerably retarded for a time by the outbreak of la grippe among his men, but this drawback has worked itself out, and now everything is again progressing as briskly as could be expected. He has had serious difficulties to struggle against, but his determined perseverance is as undaunted as ever, and what was begun under the flickering of hope is now steadfastly pursued under the firmest assurance of confidence in evidences of rich ore in which he is working. After running a shaft down fifty feet, with what was evidently a rich vein of ore forming the west wall of the shaft, he started a level into the vein and has now worked in twenty-five feet. He is now working across the line to determine its width; he has worked out a width of six feet without any evidence yet of having approached the limit of the vein. He has made but few assays yet to test the quality of the ore he is now working in, but it is almost beyond doubt very rich in silver. Several assays have been made which have been highly satisfactory. Without any specially careful selection of quartz a quantity of 15 ounces produced 73 1/2 grains of silver. The local government may, by an act passed in 1888, render aid where there is a reasonable probability of discovering valuable mineral deposits, and as Mr. Brittain has already risked a good deal of money in this venture, we think he is in the highest respect deserving of substantial encouragement by our local authorities. But on a higher consideration, the fact that there are evidently here rich mineral ore, we consider that the government should as a way of developing the resources of the country appropriate a reasonable amount in this behalf and in this instance, if satisfied by an appointed assayer that prospects are fair, we believe for them to aid to the fullest extent that the act allows."

St. Andrews Beacon - Jan. 30, 1890 and St. Croix Courier - Feb. 6, 1990 Silver prospects continue good at Woodstock. ThePress says that Mr. Brittain has had serious difficulties to struggle against, but his determined perseverance is as undaunted as ever, and what has begun under the flickering of hope is now steadfastly pursued under the firmest assurance of confidence in evidences of rich ore in which he is working. After running a shaft down fifty feet, with what was evidently a rich vein of ore forming the west wall of the shaft, he started a level into the vein and has now worked in twenty-five feet. He is now working across the line to determine its width; he has worked out a width of six feet without any evidence yet of having approached the limit of the vein. He has made but few assays yet to test the quality of the ore he is now working in, but it is almost beyond doubt very rich in silver. Several assays have been made which have been highly satisfactory. Without any specially careful selection of quartz a quantity of 15 ounces pronounced 73 1/2 grains of

Daily Telegraph - Jul. 18, 1890 The pumping machine for the Britton mine has been taken to the location, and the engine and boiler, which had been in use before, were refitted at Small & Fisher's machine shop, and are said to be just the thing for the work."

URN: 0758 / IDX_Names: Britton Mine;

Carleton Sentinel - Jun. 7, 1890 The Britton Mining Company. - Now that the Company is organized its operations and objects desire respectful consideration from the public. Any one who has read the prospectus of the Company and the figures therein given, as well as the report of the expert engineer who appears to have brought to the examination of the Britton mine its position, its lode, etc., intelligence and experience, must be impressed by the volume of assumed facts, which go to give a most favorable character to the prospects of success and to inspire confidence in a rich result. No one doubts the existence of rich mineral deposits in various sections of the county and the specimens already taken and the assays made, together with the expert testimony received, indicate the section in which the Britton mine is situated to be one of those rich mineral sections. Up to the present, no organized attempt has been made with any degree of thoroughness to test the fact assumed, or tap by scientific process the supposed, hidden, deposits of the richer metals. The ill success which has attended the attempts to develop the copper and iron resources of the county, should not influence people to a want of faith in the possibility of a successful development of the resources in the richer metals. Every ounce as well as every ton of silver, or of gold, has a positive and practical value. The Britton Mining Co. desire to fully and fairly determine the correctness of the indications mentioned above; they have shown their faith, as well as enterprise, by investing largely of their means in making a beginning, they now, we understand, wish to dispose of a limited quantity of stock in order to the more prompt and successful prosecution of their work. If there is wealth to be reached through the operation, the whole public is interested in its prosecution. The success of this enterprise means similar efforts and like success in other sections. How better can those who have a few hundred dollars which they can spare devote that money than by investing in this enterprise, even at the risk of losing, when the prospects - the reasonable prospects - are so encouraging and when, as before suggested, it is so important that ... (last 2 lines unreadable)."

Daily Gleaner - Jun. 17, 1890 The Britton Mining Co. - Says the Woodstock Press: The Britton Mining Company, Woodstock, have purchased an engine and other machinery, which they will have placed in a few days and begin operations again at the mine and push the work along faster than before. The stock recently put on the market is being taken up more rapidly than was generally anticipated."

S.J. Evening Gazette - Jun. 17, 1890 The Britton Mining Company, Woodstock, have purchased an engine and other machinery, which they will have placed in a few days and begin operations again at the mine and push the work along faster than before. The stock recently put on the market is being taken up more rapidly than was generally anticipated."

Moncton Daily Transcript - Mar. 5, 1890 The proprietors of the Britain mine at Upper Woodstock received two assays last week. One gave 103 ozs. silver to the ton with traces of gold; the other gave 110 ozs. silver and a $1.50 worth of gold to

Daily Telegraph - Mar. 8, 1890 Carleton County News. - Woodstock, March 6. - The mining enterprises at Upper Woodstock has received a new petus. While work is being pushed vigorously in the shaft of the Britton mine, two miles above the village, and while A.R. Gaus has made considerable progress in sinking a trial shaft in his place near the village, a find has been made in that section that has thoroughly aroused every person in the community that knows anything about such enterprises. Mr. William McCluskey while cleaning out a water course that crosses his farm, a mile from the village, found some specimens of gold bearing quartz, very rich in the precious metal. A vein of quartz traverses the farms of Messrs. McCluskey, Walter Trecartin and G.R. Ketchum. Mr. McCluskey's find is from this vein and of the specimens obtained some are the richest ever secured in this section. One piece is a veritable nugget, and the most experienced miners here - that is those who have been in the western mines - pronounce this to be one of the richest he ever saw. Messrs. Albert Brewer, Solomon Perley and others, of practical knowledge and goodjudgement in such matters, give their opinion that there can be no doubt but that gold can be found in paying quantities in that section. It has been known for some time that in the brook which crosses the land in question, sand has been obtained from which gold could be got by washing. So far, the quantity obtained was not sufficient to pay working expenses. It is thought now that the source of the rich sand has been found. The result, at all events, will be that the capabilities of this quartz ore will be tested as soon as possible. In the meantime the whole subject is engrossing the attention of the best talent and enterprise in the community."

S.J. Evening Gazette - Mar. 11, 1890 and St. Croix Courier - Mar. 13, 1890 The mining craze has struck Carleton county inearnest, and it would seem that there is good reason for it. Since the discovery of traces of silver and gold in the Brittain Shaw mine near Woodstock, other parties owning lands in the vicinity have commenced digging, it is reported, with more than ordinary encouragement. The ore is said to yield $600 worth of silver and $100 worth of gold to the ton, besides ten per cent. lead."

Chignecto Post - Mar. 13, 1890 The proprietors of the Britain mine at Upper Woodstock received two assays last week.

One gave 103 ozs. silver to ton with traces of gold; the other gave 110 ozs. silver and $1.50 worth of gold to the ton."

St. Andrews Beacon - Mar. 13, 1890 and Daily Gleaner - Mar. 15, 1890 The mining craze has taken firm hold of Carleton County, and there are now several parties digging, and, it is reported, with more than ordinary encouragement. The ore, remarks an exchange, is said to yield $600 worth of silver and $100 worth of gold to the ton, besides ten per cent lead. If this report be true, there is very good reason why Carleton should be excited."

URN: 0758 / IDX_Names: Britton Mine;

Carleton Sentinel - Mar. 22, 1890 The Britton Silver Mine. - Public attention has been recently attracted to the question of the mineral capabilities of the Province by the reported discovery of considerable deposits of silver and other valuable ores in several sections of the Province. Proposals with a view to attracting capital and stimulating enterprise in this direction will be submitted for your appraisal. It is scarcely necessary to say that the above paragraph is from the Governor's address at the recent opening of our Local Legislature. In all probability this section was put in the address because the attention of the Governor was called to the results so far attained in the Britton mine. This fall, a visit was paid to the mine by Hon. James Mitchell, the (then) Surveyor General. What he saw there of the evidences of the precious metals at that time no doubt impressed him forcibly with the importance of having the capabilities of such promising deposits fully tested. Neither is it too much to say that our representative, Mr. G.R. Ketchum, has had something to do in impressing on the Government the necessity and wisdom of the Executive having the authority to aid in developing the mineral resources of the Province, wherever there is good reason to believe such enterprise would be ultimately successful. In view of the unquestioned fact that the whole Province is deeply interested in having its mineral wealth fully and immediately developed, and in view also of the fact that private individuals generally have not the means sufficient to put to the decisive test whether certain ores are poor or rich, it seems clear that the Legislature should empower the Government with authority to give the necessary means to that end. In the meantime the proprietors of the Britton mine are pushing on the work at the shaft with all reasonable vigor. The ledge is bored to the depth of 80 feet vertical. When a depth of 100 feet is reached another level will be commenced. The level 60 feet down is run in about 35 feet. As the descent is made, the shaft is timbered properly and a part of the space reserved for the ladders for the convenience of ascent and descent. The hoisting apparatus is worked by horse power and is capable of elevating about forty casks of water an hour, the full distance, 80 feet. The assays from time to time vary considerably, as naturally would be expected. Sometimes the results show a very rich ore, at others the precious metals, gold and silver, are found in very small quantities. That some of the leads struck are rich there can be no doubt, but as the enterprise is only yet in the trial stage it cannot be definitely determined what the value of the property will be. Those who know most about the works so far are most sanguine of the ultimate success of the venture. The property is now owned by a number of our most enterprising citizens who, we have reason to believe, will manage it judiciously, and with the determination to leave no means untried to get at its real paying capacity."

S.J. Daily Sun - Mar. 24, 1890 The Britton Silver Mine.- (Carleton Sentinel) -The proprietors of the Britton mine are pushing on the work at the shaft with all reasonable vigor. The ledge is bored to the depth of 80 feet vertical. When a depth of 100 feet is reached another level will be commenced. The level 60 feet down is run in about 35 feet. As the descent is made, the shaft is timbered properly and a part of the space reserved for the ladders for the convenience of ascent and descent. The hoisting apparatus is worked by horsepower and is capable of elevating about 40 casks of water an hour, the full distance, 80 feet. The assays from time to time vary considerably, as naturally would be expected. That some of the leads struck are rich there can be no doubt, but as the enterprise is only yet in the trial stage it cannot be definitely determined what the value of the property will be. Those who know most about the works so far are most sanguine of the ultimate success of the venture. The property is now owned by a number of our most enterprising citizens who, we have reason to believe, will manage it judiciously, and with the determination to leave no means untried to get at its real paying capacity."

Evening Gazette - May 3, 1890 The Britton silver mine at Upper Woodstock is still a centre of activity. It was examined recently by Mr. Goold, a capable mining engineer, and his report is quite encouraging."

Daily Telegraph - May 3, 1890 The Britton silver mine is still a centre of activity. It was examined recently by Mr. Gould, a capable mining engineer, and his report is quite encouraging. The company recently incorporated will organize soon, after which it is expected that the necessary machinery will be purchased to carry on the work more vigorously than has yet been practicable."

St. Croix Courier - May 8, 1890 and Chignecto Post - May 8, 1890 The Britton silver mine at Upper Woodstock, is still a centre of activity. It was examined recently by Mr. Gould, a capable mining engineer, and his report is encouraging."

Weekly Record - Fri. May 9, 1890 Mr. W.N. Gould, at the request of some of the owners of the silver mine near

Woodstock, N.B., recently examined the locality and is fairly well pleased with what he saw. He gave them the benefit of his views which will, no doubt, be acted upon. The promoters seem to be men of pluck and means and are determined to give the venture a thorough trial."

Daily Telegraph - May 16, 1890 The Britton Mining Company are now putting in machinery for the furtherance of the work. In the meantime, until the steam pump is in working order, the work in the shaft will be suspended. Mr. G.B. Wolhaupter, who has built two houses for the accommodations of the employees of the company, is having another boarding house

Daily Gleaner - May 19, 1890 The Britton Mining Co. - The Britton Mining Co. has been organized. Messrs. John Fisher, J.T. Garden, R.K. Britton, W.M. Connell, John McLauchlin, Jas. E. Drysdale and Wm. B. Taylor are the Directors. John Fisher was elected president; R.K. Britton, vice president; J.S. Leighton, jr., secretary; and Williamson Fisher, treasurer."

URN: 0758 / IDX_Names: Britton Mine;

Daily Telegraph - May 21, 1890 The Britton Mining Company have organized with the following officers: Directors - John Fisher, J.T. Garden, R.K. Britton, W.M. Connell, John McLauchlan, Jas. E. Drysdale and W.B. Taylor; John Fisher, president; R.K. Britton, vice president; J.S. Leighton, secretary; J.T. Garden, treasurer."

S.J. Evening Gazette - May 21, 1890 The Britton Mining company, Upper Woodstock, have organized with the following officers: Directors - John Fisher, J.T. Garden, R.K. Britton, W.M. Connell, John McLauchlan, Jas. E. Drysdale and W.B. Taylor; John Fisher, president; R.K. Britton, vice president; J.S. Leighton, secretary; J.T. Garden, treasurer."

Daily Gleaner - May 27, 1890 The Britton Mining Company. - The Britton Mining Co. have put three hundred shares of stock on the market, and are meeting with unexpected demands for it. This is all the stock they intend to sell for the present."

Carleton Sentenil - May 31, 1890 The Britton Mining Company has ordered, and daily expect their arrival, a 25 H.P. engine, pump, hoisting gear, and other machinery, which will be at once placed in position at the mine, and the work pushed vigorously. Buildings for the employees, are to be erected at once, on the mining grounds."

Fredericton Daily Gleaner - Nov. 12, 1890 Silver. - Two samples of ore from the Britton mine, Woodstock, were sent to Butte city, Montana, a short time ago to be assayed. The report was that one piece produced at the rate of five ounces of silver to the ton of ore, and the other 11-2 oz. The samples were taken from a 50 foot level, without any careful selection as to richness, and were not tested for anything but silver."

Fredericton Daily Gleaner - Sep. 17, 1890 The Britton Mine. - At Woodstock the stockholders of the above named silver mine are developing their property and are determined to see what the final result will be. A good bit of machinery is in the mine, and it is being energetically and systematically developed."

S.J. Daily Sun - Apr. 8, 1891 and Weekly Record, Fri. Apr. 10, 1891 Britton Mine. - The stockholders of the Britton mine are daily receiving fresh encouragement for their labors. A piece of ore taken out a few days ago was sent to J.E. Hardman, S.B., Halifax, and was pronounced by him to be of good quality and sufficiently promising to secure success. As Mr. Hardman's previous report was not very encouraging, this present evidence is giving new life to the movement. Stockholders are more firmly assured of success than ever before, and the demand for stock has a fresh impulse. The predictions of Mr. Gould in regard to the development of the vein have been fully verified. - [Woodstock Press."

St. Croix Courier - Apr. 9, 1891 The Britton mine at Woodstock is now yielding an ore rich in galena. The prospects are improving as the shaft descends."

Daily Telegraph - Aug. 12, 1891 Woodstock, Aug. 11, 1891 - W.W. Goold, M.E., of Sussex, has been at work at the Britton silver mine for the last few days making a very careful examination of the vein as it is now developed. The work of development has been pushed forward all summer and it is generally thought the prospects for pay ore are quite reassuring. Mr. Goold's report will be anxiously awaited by the stockholders who have now expended a large sum of money

Evening Gazette - Aug. 17, 1891 and Moncton Daily Times - Aug. 21, 1891 A valuable copper discovery has been made near Minudie in which Dr. Cove and L.D. Petrie are interested. Fredericton Daily Gleaner - Aug. 18, 1891The Britton Mine. - W.N. Gould inspected the Britton mine last week. He says the vein develops very rapidly as it descends. He pronounces the ore now at a depth of 150 feet worth $20 a ton and believes that at another 50 feet it will pay well for working."

Carleton Sentenil - Aug. 22, 1891 Prof. Goold, who has recently inspected the Britton Mine, gives a very encouraging report of the same. The deeper the shaft is sunk the richer the vein becomes."

S.J. Daily Sun - Nov. 7, 1891 At Woodstock, in Carleton county, a local company has spent considerable money in developing a galena deposit, which gives evidence of being productive. They have gone down about 150 feet and are diligently continuing operations to prove the value of the mine."

Carleton Sentenil - Nov. 23, 1891 Recent developments at the Britton mine are said to be of the most encouraging character. There is now a steam drill at work which facilitates operations very much. The shaft has now reached a depth of 154 feet with the result of not only, as we are told, of exposing apparently rich ore, but, as well, proving the correctness of Mr. Gould's predictions."

URN: 0758 / IDX_Names: Britton Mine;

Daily Telegraph - Jan. 7, 1892 Work is going on quite vigorously at the Britton silver mine. The energetic and enthusiastic manager, Mr. R.K. Britton, continues to give his undivided attention to the undertaking, and it speaks well for his indomitable pluck that the operations have been continued so long. He has succeeded in having a new steam drill put in, and just recently an electric battery to set off the blasts has been obtained. The engine has recently undergone necessary refitting so that the appliances for pushing on the work are now in first class order. The quality of the ore is seemingly improving as the shaft deepens; the quantity of metalliferous rock is also increasing with the depth. Just now the work is suspended for lack of fuel for the engine. The company have a quantity of wood cut in the woods, but it cannot be hauled for want of snow. A similar reason prevents the customary supplies of fuel coming into town. As a consequence there is quite a fuel famine. Fortunately the weather has been mild and less fuel is needed than is usually required for this season."

Carleton Sentinel - Jun. 18, 1892 Upper Woodstock. - Work in the silver mine is now going forward more advantageously than for some time. The machinery is working properly and the shaft is going down, down. The steam drill and steam pump are found at work admirably when all the parts are in good order. The ore brought up lately is said to be very fine, giving indications of rich returns."

Carleton Sentinel - Mar. 26, 1892 Britton Mining Company. - The Directorate of the Britton Mining Company met at their office, Tuesday evening, and perfected the organization of their body. The following directors were present: W.T. Drysdale, R.K. Britton, J.E. Drysdale, James Carr and G.W. Slipp. W.T. Drysdale was unanimously elected President, and James Hayden a director. The Company have just added to their works a very fine Worthington Duplex Mining Pump, with a capacity of one hundred gallons a minute. Immediately the new pump is placed, operations at the mine will be vigorously

St. Croix Courier - Nov. 23, 1893 Application has been made by James Hayden, Woodstock; Frederick H. Hale, Grafton; James Carr, Woodstock; J. Fraser Richardson, Lower Brighton; Almon I. Teed, St. Stephen; James W. Boyer, Victoria; W. Henry Philips, Pembroke; and Randolph K. Britton, Upper Woodstock, for incorporation of the Eureka Mining Company. The object is to purchase the property of the Britton Mining Company. The capital is $290,000 in $1 shares."

Carleton Sentinel - Nov. 25, 1893 Eureka Mining Company. - Notice of application for incorporation has been given by the Eureka Mining Company, the object being to take over, control and develop the property lately owned by the Britton Mining Co. The office is to be at Woodstock. Capital stock $200,000; 200,000 shares at $1 each; amount of stock actually subscribed $240,000. The names in full, address and calling of each of the applicants, are as follows:- James Hayden, Woodstock, N.B., manufacturer; Frederick H. Hale, Grafton, N.B., Lumber merchant; James Carr, Woodstock, N.B., barkman; J. Fraser Richardson, Lower Brighton, N.B., lumberman; Almon I. Teed, St. Stephen, N.B., merchant; James W. Boyer, Victoria Corner, N.B., farmer; W. Henry Phillips, Pembroke, N.B., farmer; Randolph K. Britton, Upper Woodstock, N.B., miner; The first three named of whom are to be the first or Provisional directors of the said Company. Hartley &

Woodstock Dispatch - Feb. 6, 1895 Notice of Sale. - To the Britton Mining Company of New Brunswick, and all others whom it may concern: TAKE NOTICE that there will be sold at Public Auction in front of the Post Office, in the Town of Woodstock, in the County of Carleton, Province of New Brunswick, on TUESDAY, the FIFTH DAY of MARCH next, at ELEVEN of the clock in the forenoon; the lands and premises hereinafter mentioned, that is to say: All that moeity of one half all the mines and minerals whatsoever in or under the piece of land situate in the Parish of Wakefield, in the said County of Carleton, and described as follows: Commencing on the west side of the Canada Road where crossed by a certain brook at the line between Mrs. Bishop's and one William Britton; thence running southerly along said Canada Road about eight rods to road leading to said William Britton's house, thence along said last mentioned road twelve rods, thence Northerly and parallel to said Canada Road eight rods or to said Brook thence down along said Brook in its centre to the place of beginning . Together with all and singular the buildings, improvements, privileges and appurtenances to the said premises belonging or in anywise appertaining. The above sale will be made under and by virtue of a power of sale contained in a certain Indenture of Mortgage, bearing date the twenty-fourth day of October, A.D. 1890, and made between the said Britton Mining Company of New Brunswick of the one part, and the undersigned of the other part, default having been made in the payment of the moneys secured. Dated at Woodstock, in the county of Carleton, this twenty-ninth day of January, A.D. 1895. Donald Munro Mortgagee"

URN: 0758 / 0039 / 0043 / IDX_Names: Britton Mine; Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

Weekly Record - Fri. Aug. 29, 1890 The discovery of a valuable body of iron pyrites, a short distance from St. Stephen, has caused some little stir among the mining fraternity. This with the explorations near Woodstock on the silver and lead areas look as if the mineral wealth of the province might have a boom. A company has been formed in Woodstock to thoroughly test the locality and we trust their efforts may meet with success."

URN: 0758 / 0275 / IDX_Names: Britton Mine; Woodstock Fe;

Fredericton Daily Gleaner - Sep. 24, 1890 Iron Boom to Prospect. - Says the Carleton Sentinel: Judging from letters that we have seen, there is good prospect for an early resumption of operations at the iron works, Upper Woodstock. Mr. Connell's correspondents, agents of an English company, appearready to close the bargain at once. With the iron works and the Britton mines both panning out gold, or its equivalent, the upper town should have a boom indeed."

URN: 0758 / C1 / IDX_Names: Britton Mine; Tobique/ Giberson Gold;

S.J. Evening Gazette - Nov. 11, 1889 The Mining Fever Up River. - The mining fever has broken out in many places up river. The mine at Upper Woodstock is now well under way, and the ore is said tobe turning out well. On the Tobique and vicinity parties are prospecting and some claim to have discovered mines of marvelous richness."

URN: 0758 / I6 / J8 / IDX_Names: Britton Mine; Silica, Tripoli, Diatomite, Infusorial Earth; Albert Mine

Moncton Daily Transcript - Dec. 1, 1891 Mining in New Brunswick.- An Exchange says: A mining epidemic seems to have seized upon the people of that part of the province extending from Sunbury to BayChaleur. On the Tobique a silver mine has lately been found, the particulars of which are yet kept from thepublic. Woodstock is becoming interested in silver and iron mining. Stanley appears to have gold and large quantities of iron. Manners Sutton and the adjoining partof Sunbury is rich in coal. Southern Carleton County has manganese in quantity and large pockets of yellow ochre. Prospecting is going on quietly in many places and New Brunswick may yet be entirely independent of her lumberindustry. About Bathurst we are told there is much activity over reported gold and silver finds, and the report of further discoveries of the famous Albertite coal in Albert are numerous."

Moncton Daily Transcript - Dec. 2, 1889 New Brunswick's Mineral Wealth.- It is reported that the Clinch coal mine at Musquash is being worked very well. The main shaft is now 140 feet deep. The work of developing the Shaw-Britton mine about four miles above Woodstock is being conducted by Mr. Philips, a Colorado miner, who says that when the vein is tapped 60 or 100 feet from the surface the result will be a surprise to New Brunswick. Assays of twenty specimens recently made gave from $12.50 to $600 of silver to the ton and one specimen gave $100 worth of gold to the ton."

URN: 0762 / 0690 / 0691 / IDX_Names: Windgap Brook; Glebe Manganese; Markhamville Manganese;

S.J. Daily Telegraph - Jun. 28, 1880 Sussex. - Mining Matters. - The manganese mining at Markhamville is unusually active this season. The silver area at Windgap, on Smith's Creek, has been bonded to Mr. Fred. Stockton, of St. John. The Albertite property in Walker Settlement, about nine miles from Sussex and leased by Mr. Charles Crothers to Mr. Geo. H. Cougle of this place, is attracting the attention of some Americans who are in search of Albertite, oil, etc."

URN: 0763 / IDX_Names: Jordan Mountain Manganese;

Daily Telegraph - Apr. 4, 1884 Sussex. - Mr. F.W. Stockton, who has been to NewYork on business connected with his Smith Creek manganese mine, returned home in time to attend to business in the county court now sitting at Hampton."

Daily Telegraph - Apr. 14, 1884 Sussex. - Mr. F.W. Stockton is shipping samples of his manganese to the United States."

S.J. Daily Telegraph - Aug. 26, 1884 Mr. F.W. Stockton has nearly 200 barrels of manganese ready for shipment to London market. These mines give indications of panning out large quantities of superior ore."

URN: 0763 / IDX_Names: Jordan Mountain Manganese;

S.J. Daily Sun - Jul. 22, 1884 Sussex. - F.W. Stockton has commenced hauling manganese from his new mines on Smith's Creek. Ha has orders for very large quantities."

S.J. Daily News - Mar. 24, 1884 Sussex. - It is rumored that the Manganese Mine owned by F.W. Stockton, Esq., out on or near the Jordan Mountain is turning out exceedingly rich. The indications are that Fred has a bonanza and if so it will add much to the business importance of Sussex."

Moncton Daily Times - Mar. 25, 1884 Sussex. - Mr. F.M. Stockton of this place is the owner of what promises to be one of the most extensive and valuable manganese mines in the province. It is situated at or near the Jordan Mountain, about seven miles or so from Sussex, and samples shown from there are exceedingly rich. Mr. Stockton has gone to Boston to place the property if possible. It is to be hoped he will be successful."

S.J. Daily Sun - Mar. 16, 1885 Sussex. - Fred. W. Stockton is hauling large quantities of manganese from his mine to the Sussex railway station. It is to be soon sent to the English market."

S.J. Daily Sun - Dec. 3, 1887 Sussex, Dec.2. - A number of American mining capitalists have been in Sussex during the past few days and it is asserted beyond a doubt that these gentlemen have purchased from Fred W. Stockton his manganese mines situated at Smith's Creek, about seven miles from Sussex station. This settles a matter of dispute which had got into our equity court, Wm. N. Gould being the plaintiff in the case. Gould has it is said received an amount satisfactory to him. It is said about $40,000 has been paid over for this valuable property, and no doubt plant and machinery will be put in without delay. This will add to our business interests very materially."

Moncton Daily Transcript - Dec. 5, 1887 A number of American capitalists have purchased Mr. E.W. Stockton's manganese mines at Smith's Creek, near Sussex, for $40,000."

Weekly Record - Fri., Dec. 23, 1887 G.G. Gilbert, Esq., Q.C., barrister, etc. in St. John, Council for Gould in his contest in re - manganese mines in Smith's Creek was in Sussex yesterday. We hope his visit was for the purpose of reaching amicable settlement and that the valuable mines will soon be rendering good to the country."

S.J. Daily Sun - Jul. 13, 1887 Sussex. - F.W. Stockton is excavating large quantities of manganese from his mines, the quality of which is said to be of an extra quality."

Weekly Record - Fri., Dec. 28, 1888 By the St. John papers of 25th, we notice that a mention was made before the Equity Court to dismiss the bill in Gould vs. Stockton or failing that to dissolve the injunction on the ground of delay in bringing the cause to issue. On explanation and representation by affidavits, etc., by Mr. Geo. Gilbert, solicitor for the plaintiff, it was arranged that the plaintiff (Goold) should proceed in due course to bring the case on for hearing. This is a suit brought by W.N. Gould to recover a one third interest in a Manganese mine on Jordan Mountain from F.W. Stockton and C.A. Stockton which has been pending since 1885. The case will come before a Kings County jury when the issues are prepared."

Daily Times - Feb. 18, 1888 Sussex Notes. - Rumors of an important coal discovery are in Mining circles are considerably exercised over the proposed purchase of the Stockton Manganese mine at White's Mountain. It is confidently expected the property will change hands shortly an the new management will likely work the mine vigorously."

Weekly Record - Fri., Feb. 24, 1888 Mining circles are considerably exercised over the proposed purchase of the Stockton Manganese Mine at White's Mountain. It is confidently expected the property will change hands shortly and the new management will likely work the mine vigorously."

Weekly Record - Fri., Nov. 30, 1888 (quoting the Halifax Critic) The case of Stockton vs Gould in regard to the Jordan Mountain Manganese mine is at least in a fair way of being settled. It is to be hoped that some fair and equitable way will be decided upon and that justice may be done to both parties."

Weekly Record - Fri. Jan. 25, 1889 The case of Gould vs Stockton et al set down for hearing at the Equity Court, at, Hampton, on Tuesday last, stands over, the Court having been adjourned until the 12 November."

Weekly Record - Fri., Jul. 12, 1889 Mr. and Mrs. R.E. Stockton will hold a picnic at the mine on Wednesday, the 17th of July, weather being favorable, if not on the first fine day following - Jordan Mountain notes."

URN: 0763 / IDX_Names: Jordan Mountain Manganese;
Weekly Record - Fri., Jul. 12, 1889 Consul Murray, of St. John, and a Mr. Kelly of New York, in company with C.A. Stockton, F.Q. of St. John visited Sussex on Saturday last, and inspected the manganese mines at Jordan Mountain."

S. J. Daily Sun - Jun. 17, 1889 Keohan. - The manganese mines are being operated this spring under the superintendence of Rolland Stockton, son of F.W. Stockton, barrister, of Sussex."

S. J. Daily Sun - May 27, 1889 Sussex. - C.A. Stockton, of St. John, and Mr.Murray, the American Consul, honored Sussex with their presence. They were on a visit of business and pleasure combined. The business consisted in an examination of the manganese mine of Fred W. Stockton, on Jordan Mountain, presumably in the interests of Walter H. Harrison of Baltimore. The pleasure consisted in catching trout in the pond which was lately made by Mr. Stockton in

Daily Times - Nov. 21, 1889 Sussex Notes. - Rumors are in circulation that the manganese mine known as the Jordan Mountain mine is about to be sold to American capitalists. This property is a valuable one, but by some means it has been on the market for some time. It is said the parties who control the sale of it have been demanding extravagant prices."

S.J. Daily Sun - Oct. 4, 1889 Keohan. - C.A. Stockton, barrister, of St. John, was here this week in the interest of the Stockton manganese mine."

S.J. Daily Sun - Sep. 16, 1889 Keohan. - The Stockton manganese mines in this vicinity are being worked again by R. Stockton of Sussex. He has about 100 tons ready for barrelling."

Daily Sun - Sep. 17, 1889 Sussex. - Fred. W. Stockton, who has been absent about three weeks in the United States, returned home on Saturday night last. While absent Mr. Stockton, at the request of a wealthy New York company, made extensive explorations in the townships of Dorset and Manchester in the county of Bennington, in the state of Virginia, in search of ferro, with what success I have been unable to ascertain. Mr. Stockton says large sums would be invested in mines here but for non-confidence in our laws and the people. Mr. S. says he saw no rain during his absence, but some

Weekly Record - Fri., Sep. 20, 1889 The Stockton Manganese Mines are being worked by Mr. Rolly Stockton. The output has reached about 120 tons which is already for shipment."

Evening Gazette - Aug. 1, 1890 Equity Court. - Considerable speculation is indulged in as to the recent decision in the famous Goold-Stockton Equity suit over a manganese mine at Jordan Mountain, which has dragged through the mazes of the law courts for some years. It is said that an appeal will be made by the plaintiff Goold from the decision of the equity judge and that the end is not yet, but how correct it is I am not prepared to state."

S.J. Globe - Dec. 4, 1890 Equity Court. - In the matter of Goold vs. Stockton, in which the judge in equity gave final judgement for the defendant, some time ago, but withheld the operation of the judgement to give the plaintiff timeto appeal, an application was made to dissolve the injunction to take effect, the plaintiff having made no appeal, although having ample time. His Honor granted an order nisi returnable at the next sitting of the court. Mr. A.A. Stockton acted for

S.J. Globe - Jan. 7, 1890Equity Court. - Goold cs. F.W. Stockton and C.A. Stockton. This was originally a dispute about mining lands. Mr. F.W. Stockton gave notice of motion to dissolve injunction and dismiss suit for want of prosecution. Mr. Gilbert, Q.C., for the plaintiff, asked that the motion be dismissed. His Honor will not decide the matter until hearing cause, which takes place in Hampton on the 16th of January."

S.J. Daily Sun - Jan. 17, 1890 Sussex. - What will be the result of a hearing in the case of Gould vs. Stockton, which is taking place before a jury and Judge Palmer at Hampton, is being freely discussed today. This is a case of long standing, the interests in which are claims of certain mining property in the parish of Studholm, which are said to be of great value, and which are lying useless for want of a decision as to the rights of ownership, etc. A.S. White is appearing for Mr. Stockton and G.G. Gilbert of your city for Mr. Gould. That the case may be settled is the wish of the people here."

URN: 0763 / IDX_Names: Jordan Mountain Manganese;

Daily Telegraph - Jan. 17, 1890 A Mining Suit. - Equity Sitting in Hampton to Settle Dispute About the Partnership of a Mine. - The case of J.N. Gould vs. Fred. W. Stockton and C.A.Stockton came on for the hearing of the issues before Judge Palmer and a jury at Hampton, yesterday. The facts of the case are as follows: In 1881 Mr. Gould, a mining expert, and the Messrs. Stockton, entered into an agreement for the purpose of obtaining mining rights and privileges throughout the province and for prospecting. The basis of the agreement was that Mr. Gould was to do the prospecting, Mr. C.A. Stockton was to attend to the legal part of the business and Mr. F.W. Stockton was to render whatever assistance he could. The cash expenses were to be borne equally by each of the three and the mining rights and properties acquired were to be owned jointly. In 1880, F.W. Stockton purchased from C.A. Stockton a tract of land on Jordan's Mountain, Kings

County, stating that he wanted it for a wood lot, but at the time of purchasing the lot he had found drift manganese. Pending the aforesaid agreement, which was to continue until terminated by a three month's notice from either party, Gould, at the request of F.W. Stockton, visited and prospected this property and another leasehold property which had been acquired by F.W. Stockton in the name of his brother, Douglas A. Stockton, and located the true vein or pocket of manganese, which subsequently developed into a very valuable property. Out of this pocket about 400 tons of manganese have been taken. About 50 or 60 tons of this manganese was taken out in 1884 and shipped to Boston, at a contract price of about $35 per ton. The plaintiff alleges that upon receiving the money for this Mr. F.W. Stockton set up a claim that Gould and C.A. Stockton had no title to these profits inasmuch as he owned the property before it was entered into, and that it was not included under the said agreement. The words of the agreement only extended to properties hereafter acquired, and Mr. F.W. Stockton claims that it was not contemplated that any properties owned by any of the parties at the time of making the agreement should be included under it. The defense also claim that the manganese was discovered on this property before the agreement was entered into between the parties, and that anything done by Mr. Gould in locating the true vein was done in a friendly way and not under the agreement. All of this is denied by the plaintiff and constitutes the issue of facts to be decided by the jury. The plaintiff finished his case yesterday and the defendants have only two more witnesses to be examined. Mr. Geo. G. Gilbert, Q.C., appears for plaintiff, and A.S. White for F.W. Stockton and Mr. C.A. Stockton appears in person."

Weekly Record - Fri., Jan. 24, 1890 A Mining Suit - The case of W.N. Gould vs. Fred. W. Stockton and C.A. Stockton came on for the hearing of the issues of fact before Judge Palmer and a jury at Hampton on Thursday last. The facts of the case are as follows: In 1881 Mr. Gould, a mining expert, and the Messrs. Stockton entered into an agreement for the purpose of obtaining mining rights and privileges throughout the province and for prospecting. The basis of the agreement was that Mr. Gould was to do the prospecting, Mr. C.A. Stockton was to attend to the legal part of the business, and Mr. F.W. Stockton was to render whatever assistance he could. The cash expenses were to be borne equally by each of the three and the mining rights and properties acquired to be jointly owned. In 1880 F.W. Stockton purchased from C.A. Stockton a tract of land on Jordan Mountain stating that he wanted it for a wood lot, but at the time of purchasing the lot he found drift manganese. Pending the aforesaid agreement, Gould, at the request of F.W. Stockton, visited and prospected this property which had been acquired by F.W. Stockton in the name of his brother Douglas A. Stockton, and located the true vein of pocket manganese, which he subsequently developed into a very valuable property. Out of this pocket about 400 tons of manganese have been taken. About 50 or 60 tons of this manganese was taken out in 1884 and shipped to Boston at a contract price of about $35 a ton. The plaintiff alleges that upon receiving the money for this F.W. Stockton set up a claim that Gould and C.A. Stockton had no title to these profits inasmuch as he owned the property before it was entered into, and that it was not included in the said agreement. The words of the agreement only extended to properties hereafter acquired, and F.W. Stockton claims that it was not contemplated that any property owned by any of the parties before making the agreement should be included under it. The defence also claim that the manganese was discovered on this property before the agreement was entered into between the parties. Mr. G.G. Gilbert, Q.C., appears for the plaintiff, and A.S. White for F.W. Stockton and C.A. Stockton appears in person. The above taken from the columns of the Telegraph last week gives a pretty full statement of matters in this case. The case was given to the jury, the Judge submitting a list of six questions, which were deliberated upon and answered as follows: 1st. Did the plaintiff explore for, discover, develop and locate any vein, deposit or bed of manganese on the lot of land described in the 4th paragraph of the plaintiff's bill of complaint. Answer - Yes. 2nd. If so was it done by the consent of F.W. Stockton and in pursuance of and in performance of the agreement set out in the 1st paragraph of the plaintiff's bill of complaint? Answer - No. 3rd. Did the defendant procure from one, Mary Jane Coates, a deed of the lot of land mentioned in the 5th paragraph of the plaintiff's bill of complaint, to Douglas A. Stockton? Answer - Yes. 4th. If so did he do so for the purpose of endeavoring to evade the performance of the agreement set out in the 1st paragraph of the plaintiff's bill? Answer - No. 5th. Did the plaintiff explore, develop, or do any work upon the said lot of land described in the 5th paragraph of the plaintiff's bill of complaint? Answer - Yes. 6th. Was such work done with F.W. Stockton's assent, and in performance of the agreement set out in the 1st paragraph of the plaintiff's bill. Answer - Yes."

Weekly Record - Fri., Jan. 24, 1890 In the Equity Court at St. John, the hearing of the legal questions arising from the finding of the jury in the Gould vs. Stockton case was set down for Saturday 25 th inst."

S.J. Globe - Jan. 25, 1890 Equity Court. - Goold vs. Stockton was adjourned until after the sitting of the Supreme Court at Fredericton."

S.J. Evening Gazette - Jul. 7, 1890 Equity Court. - Re Gould vs Stockton, will be taken up again tomorrow when Mr. C.A. Stockton will be heard. When this case was argued it was understood that Mr. C.A. Stockton, who was ill at the time, would be heard by the court before judgment was delivered, and tomorrow this understanding will be realized."

URN: 0763 / IDX_Names: Jordan Mountain Manganese;

S.J. Globe - Jul. 8, 1890 Equity Court. - In Goold vs. Stockton, Mr. C.A. Stockton was heard this morning, he being unable through illness to present his case to the court before. Judgement reserved."

Evening Gazette - Jul. 8, 1890 The Equity Court. - Mr. C.A. Stockton was heard in re Goold vs Stockton et al before the equity court this morning as agreed. His Honor Mr. Justice Palmer will give judgement in this case at a future date."

Weekly Record - Fri., Jul. 11, 1890 Large quantities of manganese is being hauled to the freight house from the Stockton mine on Smith Creek."

S.J. Globe - Jul. 22, 1890 and S.J. Evening Gazette - Jul. 23, 1890 Equity Court. - Judgement in Goold vs. Stockton, argument in which was heard some time ago, was delivered this morning. The bill was dismissed without costs and the injunction ordered to stand until the parties have time to appeal, but to be dissolved on application if appeal is not made

S.J. Globe - May 3, 1890 Equity Court. - In Goold vs Stockton, in which the issues of fact were decided by jury, the plaintiff's application for a new trial on the ground that evidence had been admitted which should have been excluded, was

Evening Gazette - May 3, 1890 Equity Court. - Goold vs. Stockton was next dealt with. This was an application for a new trial, on several grounds, among others that certain evidence was improperly admitted and that the verdict was against evidence, His Honor held that no such grounds existed and refused a new trial, but reserved the question of costs."

S.J. Evening Gazette - May 8, 1890 Equity Court. - The argument in Gould vs. Stockton is set down for Saturday."

S.J. Evening Gazette - May 9, 1890 Equity Court. - Before Equity Judge Palmer, the matter of Gould vs Stockton was brought on in this court this morning and again postponed until Tuesday morning next, owing to the illness of Mr. C.A. Stockton, one of the defendants."

Weekly Record - Fri., May 9, 1890 The equity suit Gould vs. Stockton, still drags its course along the mazy path of the law. On Saturday last an application for a new trial on behalf of the plaintiff on the ground of the admission of improper evidence at Hampton when tried there recently was refused by Judge Palmer reserving the question of costs. The main points at issue, it is understood, will be decided before long."

S.J. Evening Gazette - May 10, 1890 Equity Court. - In the Equity Court this morning the argument in re Gould vs Stockton was begun and continued and ended about three o'clock this afternoon. His Honor has taken the matter into consideration."

S.J. Globe - May 13, 1890 and S.J. Daily Sun - May 14, 1890 Equity Court. - Goold vs. Stockton was the only case on yesterday. The arguments were concluded about three o'clock. Judgement reserved G.G. Gilbert for plaintiff and A.A. Stockton for the defendant."

S.J. Evening Gazette - Sep. 20, 1890 It is said the well known Stockton manganese mine on Jordan Mountain is in a fair way of being sold at a handsome figure. If it proves to be so, we may expect to see large exports of manganese from this locality at an early date."

Evening Gazette - Jan. 27, 1891 Equity Court. - In Goold vs Stockton et al., Mr. G.G. Gilbert applied for settlement of minutes of degree in order that he might be enabled to appeal, it being his opinion that such a preliminary was necessary. The opposite view was argued by Mr. Fred W. Stockton one ofthe defendants. After some argument as to whose duty it was to proceed with the settling of the minutes incidentally with reference to the expense. His Honor decided that the papers for the appeal be completed by the next term of the court or the case would be dismissed."

Daily Telegraph - Jan. 28, 1891 In Goold vs. Stockton, Mr. F.W. Stockton moved on behalf of himself as a defendant that the injunction order be dissolved. This order was originally granted in the suit and the judgement of Judge Palmer, while in favor of defendant continued the injunction to allow the plaintiff time to appeal. Mr. G.G. Gilbert, Q.C., opposed the motion and claimed that he had been unable to appeal as the decree had not been drawn up, and that the decree not being in his favor it was not incumbent on him to have it drawn up. His honor ordered that the minutes of the decree should be settled and the decree drawn up, dismissing the bill without costs and continuing the injunction order, but that if plaintiff should not enter his appeal in Easter term that the defendant might then apply to dissolve the injunction order."

URN: 0763 / IDX_Names: Jordan Mountain Manganese;
Daily Telegraph - Jun. 12, 1891 N.B. Supreme Court. - Fredericton, June 11 - In the case of Wm. N. Goold, appellant, and

Fred W. Stockton and Chas. A. Stockton, respondents, the supreme court decided against Mr. Stockton's objection to hearing the appeal. The argument of Mr. Gilbert, Q.C., in support of the appeal from the decision and decree of the judge in equity occupied all this morning. In the afternoon F.W. Stockton's argumane against an appeal occupied the time of the court. The court considers."

Weekly Record - Fri., Nov. 6, 1891 A mining engineer from Chicago was making an examination of the Stockton mine near Sussex Station Monday......"

Weekly Record - Fri., Nov. 27, 1891 In the case of Goold vs. Stockton in equity, W.N. Goold has given notice of appeal to the Supreme Court of Canada from judgement of Supreme Court of New Brunswick."

Weekly Record - Fri., Ap. 8, 1892 A mining engineer from Chicago was making an examination of the Stockton mine near Sussex Station Monday..."

S.J. Daily Sun - Apr. 19, 1892 New Brunswick Mining. - (Halifax Critic) - The business men of St. John are shrewd and enterprising, and it is not surprising to find that they are investing to a large extent in the gold mines of this province. There are several syndicates and one construction company formed there with ample capital, and any good mines offered are thoroughly investigated, and if the circumstances warrant, purchased or capital advanced to aid in development. The same is true of coal mines, and some of our largest producers today were started with capital subscribed in St. John. The deep and intelligent interest in our mineral resources evinced by leading merchants and capitalists in St. John is in striking contrast with the apathy displayed by Halifax business men, when they do invest generally lose, as they refuse to recognize native talent, but put their money on the plausible tales of smooth-tongued outsiders who have absolutely no mining experience. There are of course numerous exceptions to this rule, but recent developments prove that it still holds good. Chas. M. Dobson, M.E. and C.E., of Chicago, has lately paid a visit to New Brunswick in the interests ofChicago capitalists, who contemplate the purchase of the Stockton manganese mines near Sussex. Mr. Dobson is a thorough metallurgist as well as mining engineer, and has had charge of some of the largest mines and reduction works in Arkansas and Colorado. He has held prominent positions in all parts of the world, and many large properties have been sold on his favorable reports. In his reports on the treatment of gold ores he always has a good word to say of the pattern of stamp mill manufactured in Nova Scotia, and on one occasion imported into the states a mill manufactured by the Truro Foundry and Machine Co. While in St. John, Mr. Dobson received a large retainer from some gentlemen interested in gold mining at Isaac's Harbor and Country Harbor to visit and report on their property, and spent a short time in that part of the country. He was evidently most favorably impressed with both New Brunswick and Nova Scotia as favorable fields for the investment of capital in mining enterprise, and as he has the best of connections, his visit here may result in important business."

S.J. Daily Sun - Mar. 9, 1894 Harrison Wants $40,000. - A Suit Grows Out of Manganese Mining Property in This Province. - Walter H. Harrison's case against General Bradley T. Johnson for the recovery of $40,000 will, it is expected, be called for trial in the city court this week. This case has been in the courts, in one form or another, for nearly three years. Harrison alleges fraud and deceit, and claims to be a loser of $40,000 through the dishonesty of his attorney, Gen. Johnson. The Jordan Mountain manganese mining company was organized in 1888 with a capital stock of $1,000,000. Several well-known Baltimoreans are named as having been connected with the enterprise. It is alleged that an agreement was entered into between the company and Gen. Johnson, whereby the entire capital stock of the concern, less ten shares, was to be delivered for a perfect and unencumbered title to the manganese mining property, located in New Brunswick, Canada. For the assignment to him of this agreement Harrison claims to have paid Gen. Johnson $5,000. Harrison also alleges that he placed $35,000 in Gen. Johnson's hands to be applied to the purchase of the mining property, with the understanding that the money would be placed in bank subject to their joint order. Harrison charges that Gen. Johnson violated the agreement by converting the money to his personal use, and connived and conspired with certain manganese stockholders to deprive Harrison of his stock. Harrison is now trying to recover $40,000 from Gen. Johnson. - [Baltimore World of March 6th."

Kings County News - Feb. 20, 1896 E.A. Charters sent a lot of samples of manganese quarried from the mines owned by Fred W. Stockton, barrister, in Studholme, to Toronto on Wednesday."

Weekly Record Fri., Apr. 1, 1898 F.W. Stockton has purchased a piece of land near the I.C.R. freight shed from Nelson Arnold, Esq. and is erecting there on a building to be used for storing manganese."

Weekly Record Fri., Aug. 5, 1898 Work of the development on the Jordan Mountain manganese mine has been going on for some time under the direction of Mr. E. Townsend of Toronto. It is not yet known what the developments have shown, but there is in all probability a large body of ore in this vicinity and it is to be hoped that it will lead to permanent work being carried on in the near future."

URN: 0763 / IDX_Names: Jordan Mountain Manganese;
Weekly Record Fri., Jun. 10, 1898 Some gentlemen from Toronto are now engaged in development work on Jordan Mountain manganese mine with a view to making a thorough test of property and purchasing the same."

Gazette - Nov. 10, 1899 About fifty tons of manganese ore has recently been hauled from the Stockton mines to Sussex station for shipment. The new owners are feeling in high spirits at the prospect of a great output, the ore in sight being in large quantities."

Moncton Daily Times - Nov. 18, 1899 The Mineral Products Co. has commenced shipping ore from the Sussex Manganese property, recently acquired, to the Company's smelting works at Bridgeville, N.S."

S.J. Daily Sun - Nov. 21, 1899 Sussex. - Work of mining and shipping ore from the Jordan Mountain manganese mine is progressing vigorously and will give work to quite a few men and teams, and cause considerable money to be put in circulation. The new owners are, it is said, well satisfied with prospects."

Gazette - Oct. 30, 1899 and S.J. Daily Sun - Oct. 30, 1899 Sussex. - Fred. W. Stockton, barrister, has sold his Studholm manganese mine for a handsome figure. Roads to the mine from Smith's Creek road are being made and 100 tons is to be hauled to the Sussex station for shipment at once."

Daily Times - Apr. 30, 1900 Re The Sussex Manganese Mine. - Editor Times: In a paragraph in the Times of 25th inst. is a statement that the remarks copied from the Sussex Record were misleading and practically incorrect, concerning the non payment of bills by the Mineral Products Co. who recently took up the Jordan Mountain Manganese mine here. The facts of the case were correctly stated by the Record. This mine was taken over by the Company early last fall, work started of mining, hauling ore, and erection of building, supplies furnished, etc., for which the wages and money due was not paid until recently and then only partially. The balance it is said is to be paid promptly. It is a matter of regret that the condition of affairs was allowed to drift for months in this unsatisfactory manner, creating a distrust as to the financial strength of the company. However, if the bills be now paid in full and the mine properly managed and worked in future and wages promptly paid it will do much to restore confidence in the Company and they will no doubt open up and develop one of the most important deposit of the kind in N.B. With thanks for space, yours, etc., Fact. Sussex, N.B., April 27, 1900."

Weekly Record - Fri., Aug. 31, 1900 Late reports from the Jordan Mountain manganese mine state that late developments have disclosed an abundance of splendid ore, thus justifying the often expressed idea in the RECORD of this being possibly the largest single deposit of manganese ore in Canada. It will, when in full operation, give considerable employment to men and teams in this locality."

Weekly Record - Fri., Feb. 1, 1901 Work at the Jordan Mountain manganese mine is progressing favorably, large quantities of the mineral being brought to the surface. A shipment of 300 lbs of dynamite for the mine which was taken in from this place some days ago looks as though a large body of ore would be raised in the near future."

Daily Sun - Feb. 6, 1901 Manganese Mining In Kings. - A Mount Hebron correspondent of the Sun writes under date of Feb. 1st: The New York Mineral Products Co. has been operating the manganese mines between here and Smith's Creek since last spring, and has made an estimated output of two thousand tons of crude ore. A wash house has been built on a small steam near the deposits for the purpose of separating the mineral from its friable surroundings. Sixteen hands are employed at present, including day and night shifts. The mine is about 150 feet deep."

Richibucto Review - Feb. 14, 1901 The New York Mineral products Co. has been operating the manganese mines in Kings County between Mount Hebron and Smith's Creek since last spring, and has made an estimated output of two thousand tons of crude ore. A wash house has been built on a small stream near the deposits for the purpose of separating the mineral from its friable surroundings. Sixteen hands are employed at present, including day and night shifts. The mine is

S.J. Daily Sun - Sep. 10, 1901 and N.B. Reporter - Sep. 11, 1901 and Weekly Record - Fri., Sep. 13, 1901 Russell P. Hoyt, manager of the Mineral Products Co., says that all the product of his Sussex manganese mine has been sold up to 50,000 tons and will be delivered as soon as railway transportation is arranged. The sale represents in the vicinity of $1,000,000. - Moncton Times."

Kings County Record - May 23, 1902 The property and effects of the Mineral Products Co. of New York, at Jordan Mountain Manganese Mine, were recently levied on by the Sheriff under a judgement held by an American creditor, and it will probably be sold to satisfy some at an early day. It is thought when the legal difficulties are all closed up, active work of prospecting and developing this property will be commenced."

Kings County Record - May 30, 1902 The personal effects of the Mineral Products Co., were sold at the Stockton mine, Jordan Mountain, on Thursday of last week under an execution issued by the Supreme court. It is generally understood that this company has spent in the vicinity of $200,000 in its various mining ventures at Jordan Mountain, Hillsboro and in Nova Scotia with very little returns to show."

URN: 0763 / IDX_Names: Jordan Mountain Manganese;

Weekly Record - Fri., Apr. 24, 1903 The Manganese mine at Jordan Mountain will no doubt be opened again this summer. Work of prospecting &c., being under way in charge of Mr. A.J. Grant, M.E., who is now on the ground. This mine is part of the combination that recently applied to the Legislature for a charter to mine Manganese and engage in the manufacture of Ferro-manganese, &c. Capital $1,500,000 and is the resumption of the old Mineral Products Company's plan of which a Mr. Hoyt was once manager. Messrs. Sayles and Kinsman, of Providence, R.L., are the monied men in the concern at present. We trust the venture will result in success this time."

Weekly Record - Fri., May 1, 1903 Mr. J. Albert Grant, who is charge of the Manganese Mines on Jordan Mountain, spent Sunday last in Moncton, returning to Sussex on Monday."

Kings County Record - Jul. 16, 1915 No movement has as yet been made by the parties who recently looked up the mining rights on the manganese at Jordan Mountain, that occasions some surprise, as manganese now is at high water mark in price - and the demand for the same very great."

Kings County Record - Jun. 17, 1918 A crew of men are at work clearing up surface ore at Jordan Mountain manganese mine, under the supervision of Robert Nixon of New York, a former resident of St. John, who represents a big American mining syndicate. Later a shaft may be sunk and the property worked."

Kings County Record - May 8, 1941 Manganese Mining Started in Jordan Mountain Area; Mill Will Be Constructed. - Bunkhouse to Hold From 30 to 40 Men Also to be Built There. - Ore Plentiful. - War Needs Makes Kings County Industry a Vital Link in Production Chain. - Within from thirty to sixty days a permanent crushing mill will be set up on the site of the manganese mines at Jordan Mountain, it was stated by Leo N. Gough, director and secretary treasurer of the Sussex Manganese Mining Company Limited, which has been doing preliminary work in the Jordan Mountain district since last October. The location of the present shaft is about eight miles from Sussex, a short distance from the old disused shafts sunk by a company that previously worked there. Mr. Gough declares that there is a great deal of manganese screenings scattered about the property that will be used, as it is all of excellent quality. The secretary treasurer told the Record that there is a great demand for the product, and that all that can possibly be taken out of the ground can be easily disposed of. Norman E. Gough, of Toronto, is president of the company, and the engineer in charge is C.N. Thompson, also of Toronto. The consulting engineer and geologist is E.B.E. de Camps. Already Building. - The office, garage and workshop have already been constructed, and a cookhouse and dining room is in course of building. A bunkhouse for thirty or forty men will be built. Other buildings will follow, the principal of which will be the crusher building. This crusher has already attired, but until it has been set up, the first few cars of ore for shipment will be handpicked. After that the crusher and mill will handle this work. Work really got under way this spring, and the miners are optimistic that good work will be done. Mr. Gough stated that as the war spreads there will be more and more need for Canadian manganese. At present, he said, most of it comes from Russia and from India. This he pointed out, requires the use of ships. The shaft at the Sussex Manganese Mining Company is between seventy and eighty feet deep and the ore is plentiful. What is known as a 'gas driven air compressor and jack hammer drill' is being used to take out the ore. Important Industry. - Over 90 per cent of the world's manganese production, which is more than 3,000,000 tons annually, is consumed in the manufacture of iron and steel. Manganese is also used to form various alloys with other metals. It is also used in the manufacture of dry-cell batteries, paints and dyes. For chemical uses the most important quality of manganese ore is its ability to liberate oxygen easily and therefore, pyrolusite, which of all the manganese minerals has the highest content of available oxygen is the most valuable. Because of the high cost and uncertainty of manganese shipments from Europe, and the constant growing demand on account of the war, the importance of these manganese mines on Canadian lands can be readily seen."

Kings County Record - Nov. 27, 1941 Sussex Manganese Mining Co. Limited Now In Production. - N.E. Gough. president of the Sussex Manganese Mining Co. Ltd., has been paying a visit to the Jordan Mountain plant during the past few days, and while in town he paid a visit to the Record office. Questioned with regard to the progress of the mining, Mr. Gough stated that the company had now reached the productive stage and was turning out four different sizes of the finished product. He stated that the mill has now been completed, and a number of other buildings have been built, including an up-to-date cookery and a bunkhouse. The present power house is being enlarged so as to accommodate a 140 H.P. diesel engine and an air compressor. This plant, it is stated, will deliver over 500 cubic feet of compressed air per minute, which will be used to run the drills, water pumps and the hoist. Later a large electric generator will be attached to develop electricity for other parts of the mining operations. The plant has already been wired for this service. Some additional milling equipment will shortly be installed in order to step up the ore production but already the company has erected buildings and installed machinery and equipment to the extent of approximately $45,000.00. Samples of the concentrates have been sent to different buyers of the material, and several firms have already signified their willingness to purchase large shipments of concentrates. The company is enlarging the capitalization from 50,000 to 100,000 shares in order to enlarge the operations as manganese is a vital strategic mineral that is necessary in the manufacture of all kinds of iron and steel. It is also used in the manufacture of dry cell batteries, fertilizers, painted glass industry. In peace time, Russia produced about one half of the world's supply of manganese. Germany is already in possession of nearly fifty per cent of Russia's manganese resources in the Ukraine. Two of the war's greatest treasures are the oil and manganese hidden south of the line of the Caucasus Mountains - oil to run the engines of war, and manganese to harden the steel of war. Germany wants them both badly. Canada's resources of manganese are undeveloped, so every effort is being made to produce as much of this vital war material as possible."

URN: 0763 / IDX_Names: Jordan Mountain Manganese;

Kings County Record - Oct. 16, 1941 Manganese Mining Seen Progressing at Surprising Rate. - A party from Sussex on Monday visited the Sussex Manganese Mining Company property, and were agreeably surprised at the extent of the workings and buildings there. It is evident that plenty of work is going on, and according to the manager, Mr. Thompson, the real operations are just starting. The crusher has been installed and is grinding out the product. The shaft has been driven down ninety feet, but during the last few days considerable water has seeped through, and the crews are now bailing this out. Special pumps for this purpose will shortly be installed, the manager stated. In the crusher building a new dryer will be shortly ready for use. The manganese is ground to small pieces in a stream of water, and the product must be perfectly dry before it is shipped away. Another improvement on the ground, awaiting installation, is an air conditioning tank, which will pump fresh air into the underground workings. Machine shops are already completed, and a bunkhouse and cookhouse are being constructed. The headquarters is an attractive bungalow, and the visitors were amazed at the snug comfortable manner in which it had been furnished. The mining centre is situated in a wooded gully. A 'guest house' has also been built, and many other structures are planned. Water is brought from a distance of 2,200 feet from a point up on an adjacent hill. It is cold, fresh and clear. Here and there on the property are many appliances to be installed, among them being a dump hoist, which was the invention of Mr. Thompson. The party was shown the old workings, where the rotted remains of the dumping platform were dug up. The old shaft has fallen in to a great extent, but the vein will be followed by a spur tunnel from the new shaft, which will link up with what is left of the old. It is evident that the claim is a rich one. The firm has been making manganese for some time now, and has not yet touched any of the ore that is beneath the ground, but the men are still working, and will be working for months to come, on the manganese that thickly litters the ground. The entire plant appears to have been built upon a mound of the valuable ore. Everywhere are piles of manganese, thrown away by the former miners, but which the manager declares is more than fifty per cent pure manganese. It is evident that the Sussex Manganese Mining Co. work is destined to be a big undertaking in Kings county. The plant is seven miles from Sussex. Visitors are welcome, says the manager."

Kings County Record - Sep. 18, 1941 Sussex Manganese Mine Co. Planning Official Opening of Jordan Mountain Plant. - Elgin Regiment Slated to Take Part in Opening Gala Festivities. - Shafts Enlarged. - 100 ton Concentrating Mill Now Practically Ready For Work. - The 100 tons per day concentrating mill at the Sussex Manganese Mining Company's property on Jordan Mountain is now practically completed, The Record was informed this week, and milling operations are expected to get under way this week. With a rating of 100 tons per day the finished product will approximate twenty tons of shipping ore per day. A large tonnage of ore is stocked on the surface, much of this from previous operations when only handpicked high grade was marketable and the management expect that revenue from retreatment of the old ore piles will repay the cost of the concentrator. An old vertical shaft has been cleaned out and enlarged, over which the headframe has been built, this to serve as the main shaft for mining operations. A crosscut from this shaft connects with the old inclined workings to the west. Work now is centred on cleaning out the old workings, which when completed, a deeper connection will be made with the main shaft and development and mining prosecuted from lower levels. Road Improved. - The road to the property, a distance of three miles from the Smith Creek highway, has been widened and improved and it will be further improved by surfacing with rock from the mine and tailings from the mill. Steam, diesel and gasoline engines have been installed to furnish power for the operation. Complete equipment has been provided, including boiler and hoist, compressor and accessories for the mining plant. Crushers, elevators, screens, jigs and tables for the milling operation and a truck for ore transportation to the railway. Buildings consist of mill building, headframe, engine house, machine shop, office and a 4 room cottage where board is supplied to the force living at the property. A cookery and bunk house for accommodating 35 to 40 men has been planned and construction of these will commence shortly. Owing to lack of accommodation the present force numbers only 17 men, these being men with their homes in the vicinity of the mine. Many Sussex and other Kings county people have visited the mine and it is evident that it is a fine local asset and will be more so as operations are expanded. The people in the near vicinity of the mine are particularly pleased with the opportunity of procuring work so near home. The company actually started operations during the middle of last April - five months ago and the transformation of the mountain slope has been remarkable. It is said to be the first mining company in Canada to provide a concentrating plant for the production of manganese ores. It is a decided asset to the war effort as a great deal of the manganese supply of the world has heretofore been imported from Russia and other foreign countries. It has been estimated that

Canada and the United States will in the next twelve months, use approximately 1,500,000 tons of manganese in the manufacture of steel for the war thereafter. Less than 10 per cent of the world's supply of manganese ore is produced within the borders of the two countries. While an Ontario company is operating the mine, they are giving preference to local labor, and supplies and equipment required are as well being bought from Kings County dealers. An official opening is planned for the near future at which provincial officials and other dignitaries are to be invited. It will have a military aspect in that many of the officers and men of the Elgin Regiment of St. Thomas, Ontario, will attend and will take charge of the raising of the colors on a flag pole at the top of the headframe, 60 feet above the ground level. This will also give citizens of Sussex and other communities an opportunity of seeing what the manganese operation really looks like."

URN: 0763 / IDX_Names: Jordan Mountain Manganese;

Kings County Record - Apr. 30, 1942 Creditor's Meeting Called Of Sussex Manganese. - (The Northern Miner). - Pursuant to an order made under the Companies' Creditors Arrangement Act, Sussex Manganese Mining Co. Ltd., has called a meeting of its unsecured creditors for Wednesday, May 6th, at the King Edward Hotel, Toronto. According to the notice of the meeting the company is presently indebted as follows: To secured creditors, $8,372; to unsecured creditors, $20,323, made up of $3,276 owing to wage claimants, national defence tax, unemployment insurance and workmen's compensation dues, and $17,047 to trade creditors. The company is capitalized at 50,000 shares, $1 par, of which 48,094 shares have been issued. It is proposed to increase the authorized capitalization to 500,000 shares without par value. Of these shares, 12,500 would be sold to Robert Guild, of Toronto, for $5,000, the proceeds of which would be applied in payment of amounts due wage claimants, unemployment insurance rates, workmen's compensation and expenses in connection with the increase in capital. Mr. Guild would be granted an option to purchase 87,500 additional shares at 40 cents each and 100,000 shares at 60 cents each, money so raised to be used in the development of the mining properties. The company proposes to pay the unsecured creditors, other than wage claimants, unemployment insurance rates and workmen's compensation dues, the full amount of their claims together with interest at the rate of five per cent per annum on May 1st 1943."

Kings County Record - Aug. 13, 1942 Sussex Manganese Mining Company, Limited, has been adjudged bankrupt under an order made by O.E. Lennox, assistant master of Osgoode Hall and the Premier Trust Company Limited is appointed custodian of the estate. The order was made on the petition of Milton Brown and others. The company was organized in 1940 to develop mining property in Kings County. This company was organized in Toronto and was not a Sussex business

Kings County Record - Apr. 15, 1943 H. Thomson Leslie, president of the Mining Research Corporation of Toronto, has been spending a week at the Jordan Mountain property of the British Manganese Mines, conferring with C.N. Thompson, resident manager."

Kings County Record - Jul. 22, 1943 Manager of Mines Has A Miraculous Escape From Death. - C.N. Thompson Suffers Cuts and Broken Ribs When Car Steering Rods Break. - To pitch down over a ten foot bridge bank and crash into a telephone pole in a car which contained four cases of dynamite and 300 blasting caps, and live to tell the tale, was the hair-raising experience of C.N. Thompson, of Toronto, resident manager of the British Manganese Mines at Jordan Mountain, Kings county, last Thursday. ..."

URN: 0763 / 0425 / 0691 / HILL / Z2 / SPRI IDX_Names: Jordan Mountain Manganese; Millstream Iron; Markhamville Manganese; Grey Brook Gypsum; Sandstone, Building Stone, Monument Stone, etc.; Mineral Springs;

Weekly Record - Fri. Jun. 16, 1893 Charters letter #3 (extract below) .... The mineral displays from Ontario, Quebec and British Colombia are certainly fine and deserving of the highest praise. To the dismay and disgust of all Nova Scotians the mineral exhibit from that province is mean and unworthy: from New Brunswick nothing was expected, as the Local government did not take any active part, but in Nova Scotia it was understood the government had enteredinto the spirit of things vigorously and liberally and of all other objects the mines should have had a splendid showing. As it is, while quite a few minerals have been sent forward, nothing massive was forwarded to denote the vast coal, gypsum, iron and gold wealth of the province. It is much to be regretted so poor a showing has beenmade. From New Brunswick the Albert Manufacturing Co., have sent a tasty exhibit of ordinary and alabaster plaster, which causes much attention. The manganese ofMarkhamville and Jordan Mountain; the freestone from theMiramichi stone quarry near Newcastle; the magnetic iron,gold and silver and copper ores from Messrs. Payne &Ellis, of Bathurst, all have occasional inquirers. Smith's mineral water from Apohaqui is also here, but there is as yet no systematic showing of it. In a stone jug tightly sealed up, its virtues will probably never be known, unless John has some one to open it out to the admiring gaze of the public. I might say the shaft and bases representing the gold yield of Nova Scotia causes much comment. The statement thereon shows that up to 1893 the quartz crushed was 762,036 tons, and yielded in gold 551,000 ounces, or something over eleven millions in gold. To be more correct and account for stolen gold, and gold obtained on which the government never received any royalty, about one-third more should really be added to this total...."

URN: 0763 / 0643 / IDX_Names: Jordan Mountain Manganese; Gowland Mountain;

Kings County Record - Jul. 24, 1941 Manganese Mine Work Progressing. - An indication of the importance of the manganese industry in the war effort is seen in the speed with which the Manganese Mining Company Limited is moving to quickly equip the plant that is under construction at Jordan Mountain. Word from the officials states that loads of mining and milling equipment are arriving at the mining property. Manganese for the most part comes from Russia, but it is not certain that the British alliance with the Soviet government will make any great supply of Russian manganese available for British metal industries. Therefore the activities of the local mining plant is of definite interest. The manganese being taken out in the Jordan Mountain property is of a good type, and a vast quantity of the product which had been taken out and undeveloped in previous workings is now being used; and L.N. Gough told The Record that shipments will begin in the near future. Bunkhouses for the gangs have been built and work is going along merrily.Work at Elgin. - Considerable activity is also going on at Elgin where the Nabco Manganese Mining Company Ltd., is getting down to work. Officials of this company, accompanied by the company's consulting engineer, have recently visited the property and report that a site was selected for the concentrating unit, and the necessary land purchased. G.F. Nablo, president, advises that a close examination was made of the drifts north and south on the 195 ft. adit level and that ore was showing in the south drift. From this point underground drilling will endeavor to trace the downward extension of the vein. Surface operations have opened No. 1 vein for another 75 ft. and it continues strong, with five feet of high grade ore in place. Examinations of No. 2 and No. 3 veins proved very interesting and it was decided to drill No. 2 vein within the next 30 days. Dam Considered. - At present, it is stated, negotiations are under way to acquire a water storage daw. It is expected by this means to be able to store several hundred thousands of tons of water, as the concentration process will require 1,000 tons of water daily. The milling tests recently concluded in Ottawa prove definitely that the ore is relatively free of penalty minerals and that the concentration of the disseminated ore, which runs an average of 24%, will be two to one, the official states. A very simple flow sheet was provided. Equipment for the construction of the concentration unit is now being purchased and will be shipped to New Brunswick in the near future, it is stated. The possibility is being mooted of the concentrator acting as a custom concentrator for smaller operations in the neighborhood. At the present time about 75 tons of ore is being stockpiled at the Nabco property, awaiting completion of the mill."

Daily Telegraph - Aug. 8, 1882 The Elm Tree Silver Mine. - The Chatham World says:- Mr. Call has been appointed General Manager of the Elm Tree Silver Mine, and the work of development is to be pushed rapidly. A building is to be put up immediately for the use of the men."

URN: 0802 / IDX_Names: Martin Head;

Daily Times - Oct. 29, 1878 Discovery of Copper Ore in Albert County. - The Freeman says:- Some fine specimens of Copper ore have been given us by ex Captain Jones, who has just returned from Hillsboro. The veins run through the farm of Geo. Walton of Martin Head, county St. John, and within, about 80 feet of the Bay at high water mark. Men are at present employed sinking a shaft. Mr. Jones intends sending some samples to England."

URN: 0901 / IDX_Names: Elmtree;

Daily Telegraph - Feb. 3, 1882 Mr. Muirhead, vice-president of one of the Elm Tree Silver Mines....."

Fredericton Capital - Feb. 16, 1882 A Valuable Ore.- The very fine specimen of argentiferous galena, weighing 155 lbs., which has been on exhibition in the window of the Barker House for some days past, was taken from the Elm Tree Mine, which is situated in the county of Gloucester and is distant from the line of the Intercolonial Railway between three and four miles. The ore crops out on the north bank of the Elm Tree in what appears to be a true fissure vein, according to the opinions of some of these conversant with these matters. One selected specimen of ore from the Elm Tree yielded 187 ounces of silver to the ton. Another, which was analyzed by the Assayer for the State of Maine, yielded between $20 and $30 worth of gold to the ton of crushed and concentrated ore."

S.J. Daily Sun - Feb. 18, 1882 and S.J. Globe - Feb. 18, 1882 and Morning Freeman - Feb. 25, 1882 Messrs. R.R. Call, John Sadler, Wm. Muirhead, jr., W.K. Payne, W.A. Hickson, John Ellis, John J. Adams and Samuel J. Adams have filed in the office of the Provincial Secretary a memorandum of association for the incorporation of a company, to be styled The Elm Tree Silver Mining Company, for the purpose of mining and crushing silver and other ores and minerals, with a capital stock of $500,000, to be divided into 100,000 shares of $5 each. The office or principal place of business is to be at Newcastle, Northumberland County."

N.B. Reporter - Feb. 22, 1882 A square block of ore from the Elm Tree mine in Gloucester County has been on exhibition at the Barker House for several days and has attracted a great deal of attention. The location of the mine is quite near the Intercolonial Railway and its development will probably prove a great bonanza to those interested."

Moncton Daily Times - Jul. 13, 1882 Says the Advocate: Work has commenced at the Elm Tree Silver Mine in Gloucester; at present, however, the force is small. The ore which is to be found in large quantities, is of a very good quality."

Weekly Freeman - Jul. 22, 1882 Says the Advocate: Work has commenced at the Elm Tree Silver Mine in Gloucester; at present, however, the force is small. The ore which is to be found in large quantities, is of a very good quality."

URN: 0901 / IDX_Names: Elmtree;

S.J. Daily Sun - Jul. 29, 1882 Elm Tree Silver Mine. -Professor Bartlett's Encouraging Report. - A Mining Property which is Certain to Pay Handsomely. - Professor Bartlett, the State Assayer of Maine, has visited this mine in Gloucester County, N.B., and his report on the property will be found below. Professor Bartlett is high authority as a geologist and mining expert and his favorable report on the Elm Tree property will, no doubt, have a stimulating effect on the company's operations. While the Professor was at the mine he located a point at which to sink a shaft, 10 ft. by 6 ft. The work of sinking the shaft has already commenced and a few days ago the shaft had reached a depth of 10 feet, and work is being vigorously prosecuted. Professor Bartlett will visit the mine again next month. The Company are very fortunate in securing Professor Bartlett as an adviser, and are to be congratulated on the excellent prospects which are opening up for the early and profitable development of their property. REPORT ON THE ELM TREE SILVER MINE, SITUATED ON THE ELM TREE RIVER, GLOUCESTER COUNTY, N.B. - To the Directors of the Company: Gentlemen. - Agreeably to your request I have visited and examined the above named property, and I have the honor to submit the following report:- A careful examination of the various geological reports of this portion of New Brunswick fails to give me any definite information of the geology of this particular locality. One reason, presumably, is, that owing to the level nature of the land, very few rock outcroppings are exposed above the soil, and it is only by following up the streams that glimpses of them can be obtained, and then hardly sufficient to form a decided opinion of the formation. Judging from the few rocks that I did see, I am of the opinion that the Elm Tree rocks belong to the Lower Silurian formation. Indurated slates, calcareous and porphyritic rocks abound. The strike is not uniform and indicates much disturbance, and shows some evidence of trap dykes. The rocks evidently belong to a true mineral zone, as sulphurets of iron and copper abound and numerous veins of galena and blende. The formation in many respects resembles that above Eastport and Lubec, especially that portion adjacent to the Lubec lead and zinc mines. Without going into further details, I may say that the formation on and above the Elm Tree River is very favorable for ores of lead, zinc, copper and silver. I shall not be surprised if the existence of copper in abundance be proved. The Elm Tree Mine is located on the right bank of the Elm Tree River, some three miles from the main road leading to Petit Rocher on the Bay of Chaleur. The cost of transportation of ores and supplies is very light. Labor is exceedingly cheap - good men being obtained for $1.25 per day exclusive of board; consequently the natural advantages are extremely favorable. The Intercolonial R.R. passes in close proximity and the bay affords fine shipping facilities. The ore vein runs nearly N.W. and S.E. dipping to the N.E. about 75ø. It is a true fissure vein, well defined and prominent. It has been traced a long distance, and has every appearance of being extraordinarily long - I think it is safe to say one mile - while the probabilities are that it is much longer. The vein shows a uniform width of six feet, by actual measurement on the surface. The foot wall is well defined and has the usual fluccan, or gouge, common to all fissures, and in this case the gouge is composed of an unusually fine white clay, closely allied to Kaolin. The vein is of the ribbon or banded structure, being composed of numerous bands or ribbons of quartz and slaty rock filled with numerous cavities of galena, blende and copper pyrites. A portion of the vein is brecciated, or composed of sharp angular fragments of ore, rock and limestone, all cemented together by quartz. The explorations have thus far been confined to the surface, so that no estimate can be made of the appearance of the ore at depth. The chances, however, are always in favor of improvement in depth in such veins, but, to be on the safe side, I shall make all estimates on the results obtained at present, or upon the yield of the vein now in sight. The ore consists: 1st, of fine cubed galena in ribbons and bunches next the foot wall; 2nd, mixed galena and blende; 3rd, near the middle of the lode, zinc blende and fine copper pyrites; and 4th, next the hanging wall, mixed galena, pyrites and blende. The ore is exceedingly rich in silver and gold, and assays yielding from 35 to 180 ozs. of silver per ton have been obtained. Gold also exists, and if the ore be concentrated, I believe it will form no small item of value. Future Work. - It is always a serious question with a mining company what course to pursue in order to best develope and quickly realize from their mining property. In this particular case, happily, there can be no question as to the best method of working. A shaft must be sunk on the bank of the river far enough back to be clear of water, straight down and cutting through the ore vein to the footwall, thence downwards, following the course of the vein. If the vein holds out in quantity and quality at the depth of 100 feet, the company will be justified in erecting a first-class concentrating mill for cleaning and dressing the ores. All veins have lean and rich streaks, are wide in some parts and narrow in others. This lode will not likely be an exception to the general rule, and must not be considered thoroughly explored until several drifts are run from the shafts. The Elm Tree river at a point a few rods above the proposed shaft offers excellent facilities for all the water power necessary to drive a concentrating mill, an item vastly in favor of the mine. It is not my purpose to write a flattering report of the property, nor yet one by which stock may be sold, but simply to give the facts just as they stand, and I believe that the mine if decently managed may be made to pay handsomely on the capital invested, not lavishly, nor will any man who holds stock in the company become immediately rich, but I believe I can show by practical figures that profit enough can be made to satisfy anyone who is a friend to legitimate mining. Of course, the mine on development may prove enormously rich as many others have, but it is far better for us to figure on just what we know to exist. The ore, as at present mines, will yield at least five per cent. of concentrated ore, if put through a good mill. These concentrates, as shown by numerous assays, will yield about $200 per ton. The cost of mining, after the shaft is 100 feet deep, will not exceed $2 per ton, and the cost of concentrating will not exceed 75 cts. or $1 at most. Allowing for the cost of mining and milling to be $3 per ton on the above basis, there will be a net profit of $7 per ton on every ton mined or more than 200 per cent. profit. The figures I have just given are not prospective or imaginary, since they are being duplicated every day by mines in the New England States. It is an interesting and pertinent fact that more mines fail on their narrow veins of rich ore than on wide veins of low grade ore, in the proportion of ten to one. The big veins of low grade ore rarely ever fail to pay. In conclusion, I may say that I feel more than confident that this property may be made to pay well and for a long time. Respectfully submitted, (Signed) F.L. Bartlett, State

URN: 0901 / IDX_Names: Elmtree;

Daily Telegraph - Jul. 29, 1882 Silver in Gloucester. - Some time ago a block of galena, richly impregnated with silver, was shown at the Royal Hotel here. It created quite a sensation, so rich was its appearance. Other blocks of the same ore were shown at the Barker House, Fredericton, during the late session of the Legislature. It was stated at the time that the assays made by competent men, fully sustain the rich character of the silver ore. The specimens were from what has since become widely known as the Elm Tree Silver Mine in Gloucester. Since then several gentlemen who are more or less acquainted with geology, minerals, and mining, have visited the mine, and have been favorably impressed. The parties interested in the development of the property resolved, however, not to depend wholly on geologists or mining amateurs. They secured the services of Professor Bartlett, Assayer for the State of Maine, instructing him to make a Report on the mine, which he has done. That report is quite a guarded one. It avoids exaggeration and speculation, and deals with the facts observed. Yet, it is of the most encouraging and re- assuring character. It does not declare that the mine is an actual bonanza, but it makes it extremely probable that, under good management, the mine can be made to pay very handsomely. It also points out a simple inexpensive and judicious mode of testing the matter, the operations to commence at a spot selected by himself. A copy of that report is subjoined. The shaft spoken of by him is being rapidly sunk, and it seems morally certain, from all the considerations stated, that the result of the experiment will be most satisfactory to the promoters. The indications are extremely good. The policy of the owners of the mine is not to water the stock, or to get up a bubble company, but to raise a sufficient amount of money on stock, offered at a low price, in order to develop the mine for the benefit of all concerned. When its true commercial value is placed beyond a doubt, the course of future operations can then be reconsidered. The par value of the shares is $5, and in order to raise money for development, a limited number of shares will be sold at $2. The only particulars before us are those contained in the Report, but a pamphlet giving details has been issued, and, if we mistake not, a few copies of it were placed in the hands of Mr. David McLellan, M.P.P., who would, no doubt, gladly furnish copies to applicants. The least that can be said of the speculation is that it is one eminently worthy of being tested. It would not seem surprising if it should turn out, not only that a very rich silver mine has been discovered, but that other minerals of great economic value, including copper, will be found in that greatly mineralized region, whose geological character, as indicated by Professor Bartlett, exactly harmonises with the estimate made of it by Mr. Ells of the Geological Survey of Canada, in a report which does not seem to have come under the notice of the Maine Assayer. To the Directors of the Company:- Gentlemen, - Agreeably to your request, I have visited .... [SEE Daily Sun of July 29]"

S.J. Daily Sun - Feb. 1, 1882 Elm Tree Silver Mine. - We have just seen Mr. Edward Jack, who in the course of his travels through the counties of Gloucester and Northumberland, has visited the Elm Tree mine in the former county (owned by the Baie de Chaleur Co.) with which he expresses himself very much pleased. The description which he gives of this property is as follows:- It is situated on the north branch of the Elm Tree River, a stream in the county of Gloucester, about 12 miles in length, which empties into the Bay of Chaleur at a distance of 13 1/2 miles north from Bathurst. It is crossed by the Inter-colonial Railway, about 1 1/4 miles from the sea. The mine is situated between 3 and 4 miles from the Intercolonial Railway; between the railway and it there is a good highway for about half that distance. The vein crops out on the bank of the stream, which here is rapid, running over a rocky bed. The snow had been removed from the outcrop previous to Mr. Jack's arrival, and three men were engaged in doing some prospecting. It had been opened up for two or three feet in depth, and 800 lbs. or more of ore removed. Its breadth is from 6 to 7 feet. The south wall is of slate, and the north, so far as could be observed, is of whinstone. The gangue is of quartz.In the centre of the vein there appeared to be 2 1/2 feet in width of country rock, which Mr. Jack thinks may have fallen from the adjoining wall and become imbedded in the vein matter when this was in a plastic state, thus forming what is called a horse. The ore carried by this vein is chiefly galena accompanied by zinc blende. Assays have shown the former to be, in places at least, rich in silver. Mr. Jack observed also in this vein some yellow copper ore, especially near the south wall. There were also minute incrustations of malachite and azurite as well as a mineral which made its appearance in small quantities and which Mr. Jack believed to be the somewhat rare mineral bournonite. The strike of the vein is about N.W., the dip being as near as could be ascertained 75ø to the north. Mr. Jack says that this vein is the most promising looking one for abundance of ore which he has seen in New Brunswick with, perhaps, the exception of the antimony deposits of Lake George. It occurs at a point where the sedimentary rocks are intersected by those which are eruptive and he has every faith that other veins will be found in the same vicinity since the intrusion of the igneous rocks which formed the fissure in which this vein occurs has in all probability formed others of a like character. The situation of the vein is most desirable, close to a good water power, and in a neighborhood where labor is cheap and very abundant. Mr. Jack says, however, that before any final conclusions can be arrived at with regard to the extent of this metalliferous deposit a careful examination and survey of the vein must be made, when the snow leaves, and its character and extension east and west determined by cross cuts on the surface as well as by trial shafts in it. At the time of Mr. Jack's visit a mass of ore in quartz, which weighed 156 lbs., had been taken out and was on the surface. He states that he was informed that this originally weighed about 300 lbs. before it was broken. This is the only vein of any size which Mr. Jack has seen in the neighborhood. He entertains no doubt that much more mineral wealth will be discovered in the Counties of Gloucester and Restigouche."

URN: 0901 / IDX_Names: Elmtree;

Moncton Daily Times - Aug. 7, 1882 Gloucester's Mineral Wealth. - The official report of Prof. Bartlett, who recently examined the Elm Tree Silver Mine, more than bears out the anticipation we published. He says: I may say that the formation on and above the Elm Tree river is very favorable for ores of lead, zinc, copper, and silver. I shall not be surprised if the existence of copper in abundance be proved. And again: It is a true fissure vein, well defined and prominent. It has been traced a long distance, and has every appearance of being extraordinary long. I think it safe to say one mile, while the probabilities are that it is much longer. The vein shows a uniform width of six feet by actual measurement on the surface. The richness of the ore, already proved by a number of assays, is confirmed by this report, which also adds that gold also exists, and if the ore is concentrated I believe it will form no small item of value. Prof. Bartlett says, in conclusion: I may say that I feel more than confident that this property may be made to pay well and for a long time. It will not be at all surprising to find, before long, a strong mineral boom at Gloucester, the first steps toward which having already been taken, will-lead to the opening of others in the same mineral-bearing region."

N.B. Reporter - Feb. 1, 1882 R.R. Call and John Sadler, Esquires, left yesterday morning for the Silver Mines at Elm Tree, Gloucester Co. At Petit Rocher they were to be joined by Mr. Robt. Ellis, and others, of Bathurst, and would then proceed to the locality, for the purpose of clearing off the veins to make the necessary tests, so as to get at the correct dimensions and formation. Mr. Edward Jack, of the Crown Land Department, accompanies the party in the mining interests of the Province. - Advocate."

Daily Times - Aug. 9, 1882 The Elm Tree Mine. - We take the following from the official report of Professor Bartlett, concerning this property: Location. - The Elm Tree Mine is located on the right bank of the Elm Tree River, some three miles from the main road leading to Petite Rocher, on the Bay of Chaleur. The cost of transportation of ore and supplies would be very light. Labor is exceedingly cheap, good men being obtained for $1.25 per day, exclusive of board; consequently the natural advantages are extremely favorable. The Intercolonial Railroad passes in close proximity, and the bay affords fine shipping facilities. The Ore. - The ore consists: 1st, of fine cubed galena, in ribbons and bunches, next the foot wall; 2nd, mixed galena and blende; 3rd, near the middle of the lode zinc blende and fine copper pyrites; and, 4th, next the hanging wall, mixed galena, pyrites and blende. The ore is exceedingly rich in silver and gold, and assays yielding from 35 to 180 ounces of silver per ton have been obtained. Gold also exists, and if the ore is concentrated, I believe that metal will form no small item of value. Financial Prospects. - It is not my purpose to write a flattering report of the property, nor yet one by which stock may be sold, but simply to give facts as they stand, and I believe that the mine, if intelligently managed, may be made to pay handsomely on the capital invested, not lavishly nor will every man who holds stock in the company become immediately rich, but I believe I can show by practical figures that profit enough can be made to satisfy anyone who is a friend to legitimate mining. Of course the mine, on development, may prove enormously rich as many others have done but it is far better for us to figure on just what we know to exist. The ore, as at present mined, will yield at least five per cent of concentrated ore, if put through a good mill. These concentrates, as shown by numerous assays, will yield about $200 per ton. The cost of mining, after the shaft is 100 feet deep, will not exceed $2.00 per ton, and the cost of concentrating will not exceed 75 cents or $1.00 at most. Allowing the cost of mining and milling to be $3.00 per ton, on the above basis, there will be a net profit of $7.00 per ton on every ton mined, or more than 200 per cent profit. This property, situated in Gloucester county, is now being worked night and day, under the management of Mr. R.R. Call. The Directors anticipate great things."

Chignecto Post - Aug. 10, 1882 Mr. Call has been appointed General Manager of the Elm Tree Silver Mine, and the work of development is to be pushed rapidly."

Moncton Daily Times - Aug. 10, 1882 The Elm Tree Silver Mining Company are selling shares at two dollars each for a working capital. The par value of shares is $5, so that those who desire to invest should do so at once. For the accommodation of parties in Moncton, certificates have been placed in the hands of Mr. H.T. Steeves, of this paper, from whom any number of shares may be purchased on same terms as at the head office."

Moncton Daily Times - Aug. 12, 1882 and S.J. Daily Sun - Aug. 14, 1882 The shareholders of the Gloucester Mining Company were to have met at Bathurst yesterday. - Work at the Elm Tree Mine is progressing satisfactorily. The shaft is down about 13 feet and the walls all timbered up in good shape. It is expected to strike the hanging wall of the main vein at about 20 feet, which will be reached some time next week. It is stated one of the agents has disposed of 2000 shares of the Company's stock at $2 per share, the price fixed by the Directors for sufficient to give them a working capital for

Moncton Daily Times - Aug. 15, 1882 ADVERTISEMENT: Elm Tree Silver Mining Stock. Shares of this stock (par value $5.00) may be obtained for the present at $2.00 a share on application to the undersigned. This stock is being rapidly taken up and the sale of Shares at the reduced price will be stopped as soon as a working capital is realized. Intending purchasers should therefore secure what they want immediately. H.T. Stevens, Moncton, N.B., Aug. 10,1882 - dw."

Moncton Daily Times - Aug. 22, 1882 The Elm Tree Bonanza. - Messrs. J.J. Adams and R.R. Call have returned from a visit to the Elm Tree Silver Mine, bringing many fine specimens that have been found in the shaft that is sinking. They show traces of copper. - Chatham World."

URN: 0901 / IDX_Names: Elmtree;

S.J. Daily News - Sep. 25, 1882 and Daily Telegraph - Sep. 26, 1882 The Elm Tree. - Specimens of the ore taken out of the Elm Tree Silver mine, at a depth out of 33 feet, have been received by stockholders at Chatham, and look to be rich in silver and lead. Everything is progressing satisfactorily at the mine, and it is believed that the vein, at the point where it has been struck by the shaft, more than justifies the promise of the outcrop. - Chatham World."

Moncton Daily Times - Sep. 30, 1882 Miramichi. - The Silver Boom. - The Elm Tree men say they have struck it rich at the mine this time, for certain. They have driven the shaft right through the vein, thirty three feet below the surface, and found it thicker and richer than they had hoped."

S.J. Daily News - Oct. 23, 1882 A large lot of freshly mined ore from the ElmTree mine has been sent off for analysis."

S.J. Daily Sun - Nov. 30, 1882 North Shore. - The management of the Elm Tree Silver Mine are pushing work ahead at a lively rate and the developments are proving highly satisfactory. Some of the samples taken from a depth of 47 feet show a greater per centage of silver than the earlier output. Major Call has a grand array of samples in his office, Newcastle, open for the inspection of those who take an interest in mining matters."

Weekly Transcript - Aug. 2, 1882 Elm Tree Silver Mine. - Professor Bartlett, the State Assayer of Maine, has visited the mine in Gloucester County, N.B. While the Professor was at the mine he located a point at which to sink a shaft, 10 ft. by 6 ft. The work has already commenced and a few days ago the shaft had reached a depth of 10 feet. The Elm Tree Mine is located on the right bank of the Elm Tree River, some three miles from the main road heading to Petit Rocher on the Bay of Chaleur. The cost of transportation of ores and supplies is very light. The Intercolonial R.R. passes in close proximity and the bay affords fine shipping facilities. The ore is exceedingly rich in silver and gold, and assays yielding from 35 to 180 ozs. of silver per ton have been obtained. Gold also exists. The ore, as at present mined, will yield at least 5 per cent. of concentrated ore, if put through a good mill. These concentrates, as shown by numerous assays, will yield about $200 per ton. The cost of mining, after the shaft is 100 feet deep, will not exceed $2 per ton, and the cost of concentrating will not exceed 75 cents or $1 at most. Allowing the cost of mining and milling to be $3 per ton on the above basis, there will be a net profit of $7 per ton on every ton mined, or more than 200 per cent profit."

S.J. Daily Sun - Dec. 23, 1881 Another Silver Mine! - A Sled Load of Ore on Exhibition in Bathurst Yesterday! (Special to the Sun). - Bathurst, Dec. 22. - Another silver mine has been discovered in Gloucester, and considerable interest has been aroused in the matter. Hon. Mr. Adams and R.R. Call, Esq., arrived here yesterday from Newcastle and proceeded to the locality of the new mine, bringing with them to-day a sled load of splendid ore, which is to be forwarded at once to New York to be assayed and smelted. The new mine will be located under the mining license purchased last summer for five square miles, three in Gloucester and two in Restigouche. The mine will be owned by R.R. Call, John J. Adams (New York), William Muirhead, Jr., John Sadler and Samuel Adams."

URN: 0802 / IDX_Names: Martin Head;

Daily Telegraph - May 15, 1879 and Moncton Daily Times - May 16, 1879 Copper Ore. - Captain F.S. Jones, who has had considerable experience in copper ores, has handed us some very good specimens of copper ore found near Martin's Head, in the county of St. John. It was found on a property now owned by Mr. Walton. An English assay of portions of the ore showed that they contained from 53 to 58 per cent. copper. The lode is broad and well defined."

S.J. Daily Telegraph - Jul. 24, 1879 Copper Ore. - We have some further specimens of a very rich copper ore from Martin's Head. They are from Mr. Walton's property and will, we think, turn out well on assay."

URN: 0901 / LEGI / IDX_Names: Elmtree; Legislation, etc.;

S.J. Daily Sun - Aug. 25, 1881 Mining Licenses. - Our Fredericton correspondent telegraphed last evening: The following mining licenses were bid in to-day at the Crown Land Office for Mr. Samuel Adams, now of Leadville, Colorado, and Mr. Sadler, of Chatham. Mr. F.E. Winslow, of Chatham, was present at the sale and bid Restigouche County, 1 square mile, $25; 1 square mile, 2nd choice, $20; Gloucester County, 1 square mile, $33.50; 1 square mile, 2nd choice, $20; 1 do., 3rd choice, $20. Total, $3,435. It is understood that Messrs. Adams & Sadler intend forming a company for mining in these

URN: 0901 / LEGI / IDX_Names: Elmtree; Legislation, etc.;

Fredericton Capital - Aug. 25, 1881 Sale of Mining Licenses.- Yesterday, at noon, mining licenses for the counties of Restigouche and Gloucester were auctioned, according to the announcement in the Gazette, at the Crown Land Office. The conditions of purchase were, that buyers should have a year and ten days to locate the square mile which would be sold tothem. The choices in Restigouche County, first and second, sold respectively for $25 and $20 each, to Messrs. Adams (Samual) & Sadler, of Chatham. These gentlemen also bought 1st, 2nd and 3rd choices in Gloucester County for $3,350, $25 and $20 each. They were opposed in their purchase by Mr. Francis E. Winslow, Manager of the Branch Bank of Montreal in Chatham. Mr. Adams has, as many of our readers are aware, just returned from the silver mines, of which he is manager, in Leadville, Colorado."

URN: 0901 / IDX_Names: Elmtree;

Daily Telegraph - Aug. 25, 1881 Valuable Mining Properties Discovered. - Fredericton, Aug. 24. - Several mining licences in Restigouche and Gloucester Counties were sold at the Crown Land Office, today. Two square miles in Restigouche were sold to Adams & Sadler at $25 and $25 respectively.For the first square mile in Gloucester County there was some very lively bidding, and it was finally purchased by Adams & Sadler for $3,350. They were opposed by Mr. P.E. Winslow, of Chatham. The same parties also bought two more square miles in the same county. The total sales amounted to $3,435. It is evident that the purchasers believe they have discovered some rich mining country in Gloucester. Mr. Adams, one of the purchasers, has lately been engaged in silver mining in Colorado."

URN: 0901 / 0126 / IDX_Names: Elmtree; Nigadoo;

S.J. Globe - Sep. 2, 1881 Silver Mining in Gloucester is booming. The Nigadoo Silver Mining Company has been organized, and have their Mines in full working order. - Jas. Hickson is President, Edward Hickson, Jr. Sec'y., Edward Hickson, of St. John, Treas. This Company has a capital stock of $150,000. Of this amount, $50,000 has been placed on the market, the greater part of which has been taken up. The shares are $5.00 each, and met with a ready sale at prices ranging from $2.00 to $4.00. These mines are in charge of a competent and experienced engineer, who has worked in the Colorado and U.S. mines, and their prospects at present are looked upon as good. Two other companies have since been formed, one in Bathurst and the other in Miramichi, between which considerable rivalry exists, as was evidenced by the sale of Mining Leases a few days ago at Fredericton, the Miramichi Company obtaining the license at the high figure of $3,500. This company is now in the course or organization, and it is said will commence operations at once. It is said they have already received a handsome offer for their licence. - Advance."

URN: 0901 / 0126 / IDX_Names: Elmtree; Nigadoo;

Daily Times. - Sep. 19, 1881 Silver Mines of Gloucester. - Considerable interest has been excited of late by the reports of mining operations carried on or contemplated near Bathurst by several companies which had quietly secured certain tracts of Government land and organized for work under the Provincial Incorporation Act. It was known that a mining licence covering a desirable tract of land had been so sharply competed for, when offered by auction at Fredericton, that the Government had realized therefor the large sum of three thousand three hundred dollars, the bidders being North Shore men who were supposed to be well informed respecting the value of the deposits they sought to secure. So great an advance on the upset price of a mining license (twenty dollars) seemed to indicate that in the judgement of the bidders the property promised to be of great value, and this impression was deepened by the further report that the sale of the stock in the only company that had offered any was stopped by order of the Directors with a view to increasing the price for the unsold shares. We therefore thought it advisable to send a member of our staff to headquarters to ascertain the facts for the information of our readers. The result of the enquiries made leaves no doubt that very rich silver ore has been discovered in Gloucester and that the prospect of finding the mineral in large quantities is exceedingly good. We trust that this will prove to be the case and that the enterprise of the gentlemen who are now prospecting will be rewarded with success equal to their most sanguine anticipations. Silver ore was discovered in the bed of a small stream named Nigadoo early this summer by Robert Ellis, Esq., surveyor, who at once brought a specimen to James Hickson, Esq., of Bathurst, a gentleman who had considerable knowledge of minerals. Mr. Hickson thought it valuable, as also did his brother, Rev. Edward Hickson, of St. John, who also has given much attention to such subjects. These gentlemen resolved to secure a grant of the land containing the deposit. They succeeded in doing so without arousing suspicion as to their objects, thus obtaining a licence at a nominal price. They then associated with themselves Messrs. J.H. Harding, of St. John, and John Ellis, of Bathurst, and the five soon became incorporated under the Act of New Brunswick, by the name of the Nigadoo Silver Mining Company, the capital stock being fixed at $150,000 (30,000 shares at $5 each) and headquarters at Bathurst. They were able to organize on the 2nd August last, when James Hickson, Esq., was chosen President, Rev. Edward Hickson, jr., Secretary. At the same time Mr. H.H. Seccombe was employed as manager, and preparation made for immediate active operations. Some eight orten men have since been employed sinking a shaft a few rods from the bank of the creek, and they have now reached a depth of about 25 feet. Twenty thousand shares in the capital stock were allotted to the corporators (4000 to each) for their interest in the property, and it was resolved to sell a portion or the whole of the remaining ten thousand shares at $2 each for a working capital. Some six thousand shares were quickly disposed of when the Directors thought it advisable to discontinue the sale with a view to increasing the price. Meantime samples of the ore were sent to Professor Burwash, of Sackville, and Professor Bartlett, State Assayer, of Maine, for analysis. Two lots were sent to Professor Burwash, one in June and another in August. The first lot contained - lead, 613 lbs. to ton of 2000 lbs. silver, 31.1 oz. to ton of lead. Gold, slight traces. The second lot, assayed Aug. 8, yielded: lead, 71% or 1420 lbs. to ton. Silver, 36 ounces troy to ton of ore; nearly 50 ounces to ton of lead; value $119 per ton. The assay by Professor Bartlett (Aug. 15) showed following results: gold, 1/2 pennyweight, value $ 51 silver, 72.67 ounces troy, 81.39 lead, 60.75 per cent 60.75 Total value of a ton of ore $ 141.65 These results were naturally highly satisfactory and well fitted to establish confidence in the mine. The consequence has been that the Nigadoo Company has moved quietly along, developing their property and manifesting no disposition to sell stock until the necessities of the enterprise demand more money. They have now a shaft sunk about 25 feet, and the managers reports of the indications at different points are very encouraging. The Nigadoo people are, therefore, not only hopeful but sanguine; indeed they seem to have almost no doubt at all that they have a most valuable property. The Gloucester Silver Mining Company was organized on the 10th September instant under the Company's Incorporation Act of New Brunswick. The corporators are ten in number, each with equal interest, and the stock has been fixed at $250,000; 50,000 shares at $5 each. This gives 5000 shares to be sold at $3 each. These are being rapidly disposed of. In this Company the stock is pooled, sales being made for the benefit of all, and no individual member being at liberty to dispose of his shares at his own pleasure. The Gloucester S.M. Co. consists of R.R. Call, Newcastle, president; J. Sadler, Chatham, vice-president; Wm. A. Hickson, treasurer; James Hickson, Bathurst, Edward Hickson, jr., Bathurst, John Ellis, Bathurst, John Adams, New York, and Samuel Adams, Leadville, Colorado, manager. The last named gentleman is lately from Leadville, Colorado, where he is said to have been exceedingly fortunate, and where he must have learned much that will be useful in developing the mines of Gloucester, being similar in many respects to those of Leadville. The two Messrs. Adams are Miramichi boys and brothers of the Surveyor General. In addition to the Nigadoo and Gloucester companies, both organized, and now actively at work, there is another body of men who have secured mining licences covering the whole of Gloucester and part of Restigouche. We understand that this Company is composed of the members of the Gloucester Company and one or two others. It was this Company (not yet incorporated) whichpaid $3,350 for a mining licence as before stated. A mining licence gives the right to search for minerals for one year, with power to locate within the year. When so located the party has the right to carry on mining operations for 20 years. The mines are situated about 16 miles from Bathurst in a northwesterly direction. The vein runs nearly east and west, but how far in either direction is uncertain. Where the Nigadoo Company is working the vein is 8 feet wide and bounded at each side by smooth, perpendicular walls of slate, and the supposition is that the ore descends to a great depth. The time at our disposal did not permit a visit to the mines, the roads at present being exceedingly bad, but the fullest information was supplied by the Rev. Mr. Hickson and others."

URN: 0901 / IDX_Names: Elmtree;

S.J. Daily News - Feb. 2, 1882 The Elm Tree Brook Silver Mine. - Hon. M. Adams, Mr. Call, Mr. Sadler, and Mr Edw. Jack have returned from their visit to the Elm Tree Brook silver mine. Workmen under Mr. Ellis had preceded them and cleared off the snow and debris, and some blasting was done in their presence. An excavation was made into the vein three or four feet deep, and the ore appeared richer, and freer from trap rock and shale, than on the surface. The party secured between three and four hundred pounds of ore, including a pocket piece or watch charm weighing 156 pounds. Mr. Jack pronounced it the richest deposit of ore that has been discovered in the Province. The Company held a meeting at Newcastle this forenoon. - Chatham World."

S.J. Globe - Dec. 7, 1881 J.H. Harding, Esq., has retired from the Board of Directors of the Nigadoo Silver Mining Co. Mr. Hickson resigned the position of President, and is now Vice President, K.F. Burns, Esq., having been appointed President in his stead."

Daily News - Dec. 21, 1882 The Elm Tree Silver Mining Company. - The first annual meeting of the stockholders of the Elm Tree Silver Mining Company was held at the office of the President, at Newcastle, on Tuesday, the 12th inst., at which meeting a large amount of business was transacted. The following gentlemen were elected directors for the ensuing year, viz.:- R.R. Call, John Sadler, Wm. Muirhead, jr., W.R. Payne, James Robinson, Wm. A. Hickson and John J. Adams, Esquires. The report is a very encouraging one. The total expenditures at the mine have been $4,327.45; divided as follows:- Amount expended for sinking pit in vein near bed of river. ... $ 269.81 Books of certificates, seal, assays in New York, organizing Co'y, drawing papers, &c. ...426.50 Prof. Bartlett's report, assays, &c. ... 106.30 Expended for buildings, machinery, tools, &c., most of which is now in use ... 1,108.91 Amount expended in sinking shafts, &c. ... 2,415.93 The closing sections of the directors report contains the following:- The operations at the mine so far prove positively that there is an unlimited quantity of vein material containing mineral of different kinds (but particularly rich in silver and lead) to warrant you in prosecuting the work with all the speed possible. The quantity being an undoubted fact, you have the several certificates of assay from Prof. Bartlett during the progress of the work to satisfy you that the quality of the ore continued to improve as we proceeded downwards. Everything is progressing satisfactorily at the mine, and the President, before the meeting closed, recounted the favorable opinion of F.S. Knight, Esq., of Boston, as to the character of the vein and the value of the property generally."

S.J. Globe - Dec. 23, 1881 Another Silver Mine is said to have been discovered in Gloucester."

S.J. Globe - Dec. 24, 1881 Silver Mines continue to be found in New Brunswick, and it is hoped that silver will soon be discovered also."

S.J. Daily Sun - Dec. 30, 1881 A large specimen of silver ore from Petit Rocher, Gloucester Co., on exhibition in the window of the Royal Hotel, yesterday, attracted considerable attention. Gloucester is coming to the front as a region of untold mineral wealth."

Moncton Daily Times - Dec. 30, 1881 Mining. - The greater part of the specimens of silver ore obtained by Hon. M. Adams and R.R. Call, Esq.,from the new silver mine on the Elm Tree River, has been shipped to New York for the purpose of being tested. The mine will be located under the licenses purchased last August, and will be partly in Gloucester and partly

Daily Telegraph - Jan. 4, 1882 Rich Silver Ore. - Mr. John Sivewright, of Bathurst, who was at the Royal, last evening, had on exhibition very rich specimens of silver ore from the new silver mine at Elm Tree, in Gloucester, in which Major Call and others are interested. Two specimens were shown. One had a rich vein of galena with silver; the other, a large block, was well mixed with both galena and silver; it was one of the best and richest specimens we have ever seen. A telegram from New York states that the assay yielded an average result of $100 a ton; and that the prices ranged from $75 to $200, making the above remarkable average."

URN: 0901 / IDX_Names: Elmtree;

S.J. Daily Sun - Jan. 4, 1882 and Moncton Daily Times - Jan. 5, 1882 Gloucester's mineral wealth is well represented by several noble specimens of silver bearing quartz, which are to be seen at the Royal Hotel, having been brought from Bathurst by John Sivewright, Esq., yesterday. They are samples of the product of the new lead which has been struck at Elm Tree - the property of Messrs. Adams, Call and associates, who will presently be incorporated under the title of the Bay de Chaleur Silver Mining Co. Elm Tree is about 12 miles from Nigadoo, where the Nigadoo and Gloucester companies' properties lie, and about 16 miles from Bathurst. The mineral is found in great quantities in a body of rock rising, almost perpendicularly, for a considerable height, from the bed of the stream, and is readily mined. It has been submitted to several assays by the United States Government's officials at New York, and yesterday a telegram was received stating that from a barrel of the ore, selected at random at the mine, silver to the value of $100 per ton had been obtained, while a number of specimens gave as high as $175 to $200 per ton. It is proposed, in connexion with New York capitalists, to secure an expert, who will make a thorough examination of and report on the property, before proceeding to stock the company. The indications, as far as development has proceeded, are probably the most hopeful for silver of any which have been found in the Maritime Provinces up to this date. It will be recollected that during the summer a three miles license in Gloucester and Restigouche was sold at Fredericton for the large sum of, we believe, $3,500, it having been knocked down at this figure only after sharp competition. The owners of this license will locate one square mile at and near Elm Tree, where this find of silver bearing quartz has been discovered."

Daily Telegraph - Jan. 5, 1882 The Elm Tree Silver Mine in Gloucester is a concern of the greatest problem. The latest New York assay gives the value of the ore per ton as follows: $180 for silver and $70 for galena. These samples are of rare richness."

Daily Telegraph - Jan. 26, 1882 Elm Tree Silver Mine. - R.R. Call and John Sadler, Esquires, left yesterday morning for the silver mine at Elm Tree, Gloucester Co. At Petit Rocher they were to be joined by Mr. Robt. Ellis, and others, of Bathurst, and would then proceed to the locality, for the purpose of clearing off the veins to make the necessary tests, so as to get at the correct dimensions and formation. Mr. Edward Jack, of the Crown Land department, accompanied the party in the mining interests of the Province.- Newcastle Advocate."

S.J. Daily Sun - Jan. 30, 1882 Another Silver Mine. - (Special to the Sun) -Bathurst, Jan. 28. - Edward Jack, of the Crown Land Department, with Messrs. Call, Sadler and Adams, arrived here this evening from Elm Tree, bringing some splendid specimens of silver ore, one block weighing 150 lbs. Mr. Jack pronounces the vein a most promising one, and states he has abundant confidence in the future of these mines. The locality of the mine is 18 miles from Bathurst, and 4 miles from the Inter-Colonial Railway. It is situated on the banks of a fine stream affording an abundant supply of water for crushing

S.J. Daily Sun - Jan. 31, 1882 The Elm Tree Silver Mine. - The heading of our Bathurst despatch yesterday morning, Another Silver Mine, was somewhat misleading. The visit paid by Messrs. Jack, Call, Sadler and Adams to the Gloucester Mines on Saturday was the Elm Tree property which was described in the SUN in December."

Carleton Sentinel - Nov. 4, 1854 We are pleased in having it in our power toannounce that a valuable Copper Mine has been discovered in the neighborhood of the S____ Mill ..?. .?. .?. .?. this vicinity. We were aware of this discovery some time ago, in fact we were present at the first blast that was made, but deemed it prudent to keep silent until it should be ascertained beyond a doubt that the discovery was of importance. Specimens of the Ore have been submitted to the examination of Professor Robb, of King's College, and the satisfactory report of that gentlemanmust be gratifying to the public at large, yielding as he says upwards of 34 per cent. This exceeds, we understand, the celebrated Copper Mines in Cornwall, England. The specimens assayed by the Professor were from the surface of the rock, and it is fair to assume that as the quarry is deepened the richness of the ore will increase. We congratulate Mr. Stevens, the enterprising proprietor of the mine on the prospect that is now before him. We believe that he has done more than any other man to develop the mineral resources of this Province and we hope that he will now receive an ample compensation for all his

URN: 0880 / 0663 / 0662 / IDX_Names: Goose Creek; Mild Brook; Vernon Mine;

Weekly Record - Fri., May 8, 1903 Albert Co. - ... Leaving Rommel's Hotel where we were most kindly and comfortably entertained we took a row boat on Saturday morning and proceeded to visit the shore at various points, Pt. Wolfe, Mile Brook, Acie's (Azor's?) Beach, Mackerel Cove and Goose Creek Point, looking over the development going on in this vicinity in the research for copper which is now being prosecuted on what is known as the Vernon mine. Beyond any question, the surface indications of rich copper ledges, the huge bodies of carbonates, and other plain evidences, are all worth following up and the time is not far distant when most valuable copper mines will be working at different points in this locality. At the works now going on has been erected a comfortable boarding house and other buildings, and on the other side of the mountain has been sunk a tunnel now 250 ft. in by which it is proposed to cross-cut the copper ledges known to exist some seven in number it is said. The ore is very rich in sulphides, peacock ore, bornite and carries in the quartz body which contains it, values of from $4 to $5 per ton in gold and $4 to $6 in silver assaying very high in copper. The place is not easy of access for want of a good road and by the time one has rowed some ten or twelve miles and then scaled these precipitous cliffs 700 to 800 ft above the rocks on the beach below, with but a slight trail along the edge of the bluffs, it conspires to give one a wearied feeling, but you are well repaid by the beautiful views all along the shore, the Nova Scotia coast and the Isle of Hants in the distance, and the grim bluffs which you look up to as you row along or look down from when on top of the same, the whole being such a picturesque aggregation that he who is a lover of nature will feel well repaid for the hardships that may be in the way. On the way home we stopped at a point known as Mile Brook and after tramping up and up over a none too good trail we came upon the workings of the Mile Brook Mining Co., now idle for want of capital, and found excellent indications of ore here. The buildings, shaft house, and boarding house are in bad repair, but a very small amount of money would put them in good order and no doubt this point will again be the scene of renewed activity in the mining line. We walked to the Point Wolfe mill and through the kindness of Mr. Davis, Supt. of the mills there were sent by a team to Alma where we found food and rest after our long tramp, none the worse for the exertion over the same. ... Yours etc. Sussex, N.B. Straggler April 28th, 1903"

Weekly Record - Fri., Jun. 12, 1903 The Copper Cliff Mining Co., which has recently obtained a charter for carrying on copper mining operations on property adjoining the Vernon Copper mine are having the property inspected. The property is said to include an area of three square miles. A twenty foot stream of ore has been struck on Goose River. This is the property originally owned by Messrs. W.J. Weldon, F.W. Givan and A.E. Brown. Parties from Halifax, St. John, Amherst and Kentville are interested in the company."

URN: 0880 / 0662 / IDX_Names: Goose Creek; Vernon Mine;

Weekly Record - Fri., Jul. 3, 1903 Steps are in process of arrangement for the prospecting of apparently valuable copper, gold and silver claims near Goose River, and Agar's (Azor's?) Beach, in Albert County, where large territory has been taken up. Valuable samples of copper and what is apparently silver lead ores, have been found on the areas, and the chances are a first class mine may be opened up there at an early day. At request of promoters, E.A. Charters of this place has been making an examination of the same and arranging for the testing of the ores from this locality."

URN: 0901 / IDX_Names: Elmtree;

Moncton Daily Times - Dec. 1, 1882 The Elm Tree Mine. - The quartz taken from this mine is said to be increasing in richness. The Truro Sun notices samples as follows: We have often been shown very rich specimens of various kinds of quartz from mining properties all over these provinces, but never before have we seen anything that would for one moment compare with the specimens shown us last week by W.W. McLellan, Track Master, I.C.R. These specimens are from the Elm Tree Mining Company's claim in Gloucester, N.B. These specimens taken carelessly from the quartz are seen to be very richly impregnated with lead, gold, and silver, the yield of gold being sufficient thus far and increasing, to pay the working expenses of the mine, and secure a handsome profit. The yield of lead is very extensive, while that of silver is also good. Operations were some time ago commenced on the outcrop of this quartz at the surface and a shaft is now sunk to a depth of 50 feet 9x6, and the size of the lead is not yet known. The shares in this company are not yet all taken up, and as Mr. R.R. Call is one of the directors, a man of rare business qualifications and tact, we think it is a fine

St. Andrews Beacon - Jun. 16, 1910 Big Copper Finds on Quiddy River. - (Montreal Herald). - The belief that deposits of mineral ore in the eastern part of the Dominion are confined to such districts as as Cobalt, Montreal River, and other Ontario mining camps, has been exploded by the discovery of copper ore in great quantities on the Quiddy River, which empties itself into the Bay of Fundy, in the Province of New Brunswick. A number of Montreal business men, who are convinced of the value of these deposits, have purchased 644 acres of this copper bearing area and are placing it before the public under the title of the Quiddy River Mining and Smelting Company. This was the result of the most favorable report which was made by Mr. Armand Mosco Vici, chief engineer of the Milton Hersey Co., Ltd., of Montreal. The property

is situated on the side of a mountain which slopes down to a small protected harbor on the Bay of Fundy, so that the problem of transportation is solved easily. A shaft has been sunk to the depth of forty feet and a vein of rich ore has been struck which is eleven feet wide at that spot, while other veins have also been found, some of them giving from 20 to 30 per cent of copper. The company has a strong Board of Directors, with Mr. Chas. McLean, of McLean, Benn & Nelson, importers, at its head. The secretary treasurer is Mr. James Pennington, accountant with Messrs. Friedman Bros., of this city."

Weekly Record - Fri., Jul. 10, 1903 R.M. Dryden, local manager of the Copper Cliffs Mining Co., whose mine is at Goose River, reports that they are developing a good mine and expect to have eight miners to work in a few days."

URN: 0901 / IDX_Names: Elmtree;

Moncton Daily Times - Dec. 10, 1891 Elm Tree Mine. - The Newcastle Advocate says the proprietors of the Elm Tree Silver mine in Gloucester has had an expert mining engineer from Nova Scotia visiting their mine. After two days' investigation he has pronounced it one of the best looking he has ever seen and advises the owners to open it up in the spring when he will again return, and if the mine turns out as well as the indications would lead him to suppose, he states that he can raise one hundred thousand dollars to put into it. This must be cheering news for the proprietors who have foolishly sunk eight or ten thousand dollars in work that he pronounces to be useless."

Kings County Record - Dec. 16, 1910 A lead, silver and zinc mine located at Petit Roche, Gloucester County, has been sold by a syndicate for whom W.S. Montgomery has been acting. The property is said to be rich in mineral deposits. E.A. Charters, of Sussex, is largely interested in the property. The sale has been made to parties who will undertake to develop

URN: 0901 / IDX_Names: Elmtree;

S. J. Daily Sun - Jan. 3, 1883 New Brunswick's Silver Mines. - A good deal of public interest naturally centres in the initial operations of New Brunswickers in the development of the silver mines of the Province. There is no longer any question in regard to the existence of silver in the Province. If no other operations had attested to this fact, those of the Elm Tree Silver Mining Company, operating in Gloucester County, have placed the matter beyond dispute. Here an extensive vein, rich in silver ore, has been worked for some time past, the quantity of vein material raised being 3 to 5 tons every 24 hours. About 200 tons had been raised up to the 11th ult., and the vein was growing richer all the time. The report of the Manager, R.R. Call, Esq., of Newcastle, at the first annual meeting of the company, on the 12th ult., was published in the Chatham World a few days ago. That paper says:- The first annual meeting of the stockholders of the Elm Tree Silver Mining Company was held at the office of the President, at Newcastle, on Tuesday, the 12th inst., at which meeting a large amount of business was transacted. The following gentlemen were elected directors for the ensuing year, viz.:- R.R. Call, John Sadler, Wm. Muirhead, jr., W.R. Payne, James Robinson, Wm. A. Hickson and John J. Adams, Esquires. We give our readers a copy of the report of the manager, which was submitted to the meeting, and believe an examination of the same will convince people that the gentlemen who are largely interested in the mine believe that the same will prove to be a valuable property. Report. - To the Directors of the Elm Tree Silver Mining Company: Gentlemen - In accordance with the bylaws governing the said Company, I herewith submit a report, as manager of the mine, for your first annual meeting. 1st. The property owned by the Elm Tree Silver Mining Company comprises 300 acres of land situate on the north branch of the Elm Tree River, in the County of Gloucester, in the Province of New Brunswick, Canada, and is particularly described in the prospectus issued by the Company. 2nd. The mine is (in a direct line) about four miles west of the Intercolonial Railway. Parties wishing to visit it may get off at Petit Roche station, 13 miles north of Bathurst, convenient to which is the Woodside Hotel, where teams can be procured to drive to the mine, a distance of about 7 miles. 3rd. Actual work at the mine began early in July last by sinking a pit in, and following the course of, the vein, where the ore cropped out close by the bed of the river. Work continued here until the end of the month, when the site for the present shaft was selected by Prof. Bartlett, of Portland, Maine, who was then visiting the mine for the purpose of examining and reporting in the same. The mouth of the shaft is eleven feet from the bank of the river and twelve feet above the level of the water when it is at a medium height. 4th. The shaft at the surface is ten feet by six feet - ten feet following the course of the vein, and six feet, its supposed width. These dimensions were continued downwards, the walls being securely timbered to a distance of about twenty feet; below this the rock was found so hard and solid as to render the use of timber unnecessary, and the shaft was therefore reduced to eight feet by six feet, and continued at that to its present depth - a distance of fifty feet. 5th. The vein dips at an angle of about 70 degrees; consequently, in going back eleven feet from the bank of the river or surface of the vein we struck the hanging wall of the vein on the south side. Striking the vein at this angle we at first got but a small quantity of ore, but it continued to increase until it was, as it still is, the full width of the shaft, although at our present distance of 50 feet, we would be at the footwall on the south side. This convinces me that the vein is much wider than it was supposed to be at the mouth of the shaft. The accompanying sketch will show where the shaft intersects the vein. 6th. The work of the mine has been carried on day and night, as many men being employed as was found could work to advantage. At present we have one engineer, two blacksmiths, a day and a night boss, six men and one boy - total 12. The ore is hoisted with an ordinary windlass and tub, and is piled near the mouth of the shaft, where we now have about 200 tons, and I would suggest the advisability of forwarding it in its present state by rail to St. John for shipment to some smelting works in the United States until such time as we erect crushing and concentrating works on the property. 7th. The machinery at the mine consists of an upright boiler nine feet high with three feet shell, which has 45 2 1/2 inch tubes, will carry 80 pounds pressure, and steam easily. The water is raised with a No. 5 Knowles feed pump, which is at present placed in the shaft 35 feet from the surface, and keeps the mine quite dry running at less than quarter speed. There is a building over the shaft, 23 by 15 feet, with the roof shingled and walls double boarded. This, in addition to covering the shaft and boiler, is also used as a blacksmith shop and machine shop. There is also a building, 18 feet square, fitted as a dwelling, for the men to cook and live in. The other property consists of the tools and fit-out necessary for carrying on the business. 8th. The total amount expended since work commenced at the mine, not including the cost of the land or prospecting, amounts to $4,327.45. Divided as follows:- Amount expended for sinking pit in vein near bed of river. ... $ 269.81 Books of certificates, seal, assays in New York, organizing Co'y, drawing papers, &c. ... 426.50 Prof. Bartlett's report, assays, &c. ... 106.30 Expended for buildings, machinery, tools, &c., most of which is now in use ... 1,108.91 Amount expended in sinking shafts, &c. ... 2,415.93 -- $4,327.45 9th. The operations at the mine so far prove positively that there is an unlimited quantity of vein material containing mineral of different kinds (but particularly rich in silver and lead) to warrant you in prosecuting the work with all the speed possible. The quantity being an undoubted fact, you have the several certificates of assay received from Prof. Bartlett during the progress of the work to satisfy you that the quality of the ore continued to improve as we proceeded downwards. In conclusion I can say that everything at present is progressing very satisfactorily at the mine. The following will give you an idea of the quantity of ore raised by day and by night, taking the last five days of which we have a report. The tubs average 120 lbs. each. DAY NIGHT Dec. 4 ... 43 tubs 27 tubs Dec. 5 ..34 22 Dec. 6 .... 29 33 Dec. 7 ...25 20 Dec. 8 ... 81 37 Respectfully submitted, (signed) D.R. Call Newcastle, Miramichi, N.B., } Manager. 11th December, 1882 } The president of the meeting submitted correspondence that had passed between himself and F.S. Knight, Esq., of Boston, Mass., in reference to the mine, the location of the property, and the quantity and the quality of the ore. - Mr. Knight arrived at Newcastle on Friday morning last, and in company with Mr. Call, visited the mine that day. He made a thorough examination of the shaft, the location of the property, and railway facilities in connexion with the same, as also the large body of ore now piled up. He expressed a favorable opinion of the vein, as being well defined, and the water power offering facilities for cheaply running concentrating works. He was more than pleased with the mine, pronouncing the vein regular in its character, and stating

URN: 0901 / IDX_Names: Elmtree;

Daily Telegraph - Jan. 4, 1883 Mining Matters. - The report of the Elm Tree Silver Mining Company, recently presented to the Directors by the manager, D.R. Call, is of a very encouraging character. The property, which comprises 300 acres, is situated near Bathurst, and is easily accessible from that point; the sinking of shafts and the taking out of ore, have been done satisfactorily. These are about 200 tons at the mine awaiting shipment. The machinery is working well, day and night, and the expenses, thus far, have been moderate. The following paragraphs in the report, or attached to it, are highly important:- The operations of the mine so far prove positively that there is an unlimited quantity of vein material containing mineral of different kinds (but particularly rich in silver and lead) to warrant you in prosecuting the work with all the speed possible. The quantity being an undoubted fact, you have the several certificates of assay received from Prof. Bartlett during the progress of the work to satisfy you that the quality of the ore continued to improve as we proceed downwards. In conclusion I can say that everything at present is progressing very satisfactorily at the mine. The following will give you an idea of the quantity of ore raised by day and night, taking the last five days of which we have a report. The tubs average about 120 lbs. each. Day Night tubs tubs Dec. 4 .. 43 27 5 .. 34 22 6 .. 29 33 7 .. 25 29 8 .. 81 37 The President of the meeting submitted correspondence that had passed between himself and F.S. Knight, Esq., of Boston, Mass., in reference to the mine, the location of the property, and the quantity and the quality of the ore. Mr. Knight arrived at Newcastle on Friday morning last, and in company with Mr. Call, visited the mine that day. He made a thorough examination of the shaft, the location of the property, and railway facilities in connexion with the same, as also the large body of ore now piled up. He expressed a favorable opinion of the vein, as being well defined, and the water power offering facilities for cheaply running concentrating works. He was more than pleased with the mine, pronouncing the vein regular in its character, and stating that the company possessed a fine property. The owners of the mine may safely be congratulated on the prospects."

URN: 0901 / IDX_Names: Elmtree;

S.J. Daily Sun - Apr. 14, 1883 The Elm Tree Silver Mine. - Report of William Leonard, Esq., Mining Superintendent and Chemist. - The following is a copy of a candid and very encouraging report which has just been made on this mine by William A. Leonard, Esq., assayer and mining superintendent of experience. We presume the company will act promptly on this report, with a view of turning to immediate account the valuable property they possess in this mine:- To R.R. Call, Esq., President Elm Tree Silver Mining Co. Newcastle, Miramichi, N.B. Dear Sir - At your request I visited the mining property of the Elm Tree Silver Mining Co. (described in the prospectus), with a view of ascertaining whether the developments thus far made were such as to warrant any further outlay of capital. Owing to the ground being thickly covered with snow I was unable to examine the surface cropping or the character of the country rocks, in which the vein is located. As you already have a geological report on the property, I will simply confine myself to a statement of the condition in which I found the mine and what the probable results will be if the property is still further developed. In order to show at the outset that there is substantial prospective merit in the property, I will at once submit the results obtained from time to time by reliable assayers in relation to the value of the mineral output of the Elm Tree silver mine:- Assay by Prof. J.D. Marsh, 17 John street, New York City, January 3rd, 1882:- Gold ...Trace Silver, value ... $182.60 Lead (60 per cent) valued at 6 cents per lb … 72.00 – Valuation per ton of 2,000 lbs.$254.60 Other assays by Prof. Marsh gave valuations of $125, $77.60 and $86 per ton of 2,000 pounds. Assays made by Prof. F.L. Bartlett, Assayer and Chemist for the State of Maine, Jan. 4th, 1882, yielded:-Gold (in dwts.), 23.3, value … $24.00 Silver (in Troy oz.), 33 3/4, value … 37.80 Lead (per cent.), 71.1, value … 71.10 – Total assay value … $132.90 Another made Oct. 4th, 1881, by Prof. F.L. Bartlett, yielded:- Silver, value … $13.40 Gold, value … 12.30 Lead, value … 60.00 -- Total … $85.70 Another made Oct. 20, by Prof. F.L. Bartlett, yielded:- Gold, 2 dwts … $ 2.06 Silver, 9 oz. …10.08 Lead, 73 per cent … 73.00 – Total … $85.14 Assay made Feb. 24th, 1882 by Messrs. Johnson & Sons, Assayers to the Bank of England, H.M. Mint, etc.:- Silver, 17 oz. 15 dwt., value … $19.19 Lead, 59 per cent, value … 59.00 --Total … $78.19 An assay made May 17, 1882, by Prof. Edward Chapman, of Toronto:- Silver, 7 oz. 18 dwt. 15 gr. … Lead, 68 82-100 per cent. … Value per ton of 2,000 lbs... $67.00 In addition to the above named assays, many others have been made, yielding results equally favorable. The facts above submitted should convince the most sceptical that the ore from the Elm Tree Silver Mine contains a heavy percentage of the precious and useful metals. This being conceded, I may at once proceed to the consideration of the lode or vein containing these metals. This vein, which has a course nearly S.E. and N.W., with a dip of from 60ø to 70ø towards the North, was first discovered on the banks of the Elm Tree River and on the surface was between 6 and 7 feet in width. Owing to the fact that the croppings were nearly on a level with the water, it was necessary to sink a vertical shaft about 10 feet N.E. of the croppings on the bank of the river. In this shaft, ore was first encountered about 28 feet from the surface, but no well defined hanging wall was discovered. Ore continued to be found to a depth of 45 feet, when a clay seam of from 2 to 4 inches in width was encountered. Below this seam, ore continued to be found, but in less quantities, until a depth of 65 feet was reached, when another clay and spar seam was encountered, which evidently adjoins the foot wall, as nothing was encountered beyond this but the country rock. At a distance of fifty-five feet from the surface a cross cut was made towards the N.E. for the purpose of ascertaining the width of the vein, but after it had been run a distance of 12 or 13 feet without encountering the hanging wall, it was abandoned and a drift run in on the vein towards the S.E., a distance of 17 feet. A drift was also run a distance of 10 feet in a N.W. direction. This underground work has shown the vein to be upwards of 25 feet in width and the true hanging wall as yet not discovered. It must not be supposed that this immense vein consists principally of mineral such as the assays previously mentioned refer to, for such is not the case. The vein matter or gangue consists of a mixture of quartz, calc spar, country rock, etc.; and throughout the whole mass is found galena, zinc blende and copper pyrites. The silver is found principally with the galena, the zinc blende and copper pyrites containing but a mere trace. The valuable portions of the vein consist of narrow ribbons and of nests or pockets connected by stringers and disseminated throughout the entire vein. Those portions of the vein nearest the first clay seam referred to above are richer in mineral than the outer portions of the vein. In February last an average sample of the vein, taken at a depth of 55 feet, (weighing nearly 400 lbs.) was concentrated, for the purpose of ascertaining what proportion of the assay value of the ore could be saved. The result of this trial may be summed up as follows: The assay value of the ore was about $4 per ton, of which 75 per cent. could easily be recovered by concentration, making the net value of the ore $3 per ton. The ore was reduced by concentration at the rate of about 100 to 3 and the concentrates were worth about $100 per ton. The cost of concentration, smelting and shipping would average about $2 per ton, leaving a margin of about $1 per ton to pay for mining expenses. When the mine has been properly opened the cost of mining and hoisting the ore to the surface should not exceed $2 per ton. I may here say, that now that I have examined the mine, I consider the sample of ore above referred to as below average value of the present output. The ore, as taken from the mine, can be readily and economically sorted, so as to average upwards of $10 per ton, assay value, and doing this, would reduce the cost of concentration very much. From the above facts it may be readily seen that with a very slight increase in the quality or quantity of the ore the Elm Tree Mine can be worked at a profit. It is a known fact that as a rule, true fissure veins increase in productiveness as depth is attained, and as the vein in question is undoubtedly a vein of this character I see no reason why it should prove an exception to this rule. In view of these facts, I should advise you to abandon the work you are now doing on the 53 feet level and sink the shaft to at least a depth of at least 150 feet, and at this depth cross cut the vein so as to expose both walls. At this depth you will undoubtedly find that the mineral has increased in quality or quantity sufficient to enable you to work the mine at a profit. As soon as you have established this fact beyond question, you will have to erect suitable concentrating works at the mine. In sinking the shaft I should advise you to follow the vein, using the clay seam first encountered in the shaft, as the roof or hanging wall. By doing this, it will probably be unnecessary to timber any other portion of the shaft than the foot wall. It will be necessary to timber this wall so as to afford guides for the buckets, etc. In conclusion I would say that the prospects of the Elm Tree Silver Mine are such that you would be justified in expending whatever sum is necessary to fully develope the mine to a depth of 150 or 200 feet. I have the honor to remain, Yours, very respectfully, (signed) Wm. A. Leonard, Mining

Fredericton Capital - Oct. 27, 1883 Advertisement:- Elm Tree Silver Mining Co'y. A Splendid Chance for Investment. We have been appointed Agents for the Sale of Stock in the above Company. Shares are $5 each, and for the purpose of developing this Mine immediately, we are authorized to dispose of $5 shares for $2. Edward Jack, Esq., C.E. speaks very highly as to the extent of this Mine, and Assayers in New York and Boston pronounce the Ore exceedingly Rich. The Mine is situated in Gloucester County, N.B. We have Stock Certificates ready for issue. Prospectus and other information at our office. John Richards & Son. Fredericton, April 4, 1882"

S.J. Daily Sun - Mar. 18, 1884 The Geological and Natural History Survey of Canada. - ...The report of progress of this survey for 1880-81-82 has lately been issued by the Department of the Interior ...Explorations have also been carried on in Nova Scotia and New Brunswick ... A considerable portion of the present report of progress is devoted to New Brunswick geology, showing a continuation of the work of the survey in exploring and mapping the eastern and northern counties, and treating of their mineral and agricultural resources, etc. Mr. Fletcher spent some time in the fall of 1882 in examiningthe curious copper deposits at Albert, Albert County, which occur in so many places as grey copper ore. One of these at New Ireland seems to be worth developing, but owing to litigation the work is now suspended. It is to Mr. R.W. Ells, however, that we are indebted for valuable reports on this section of the province, he and his assistants having surveyed and mapped the counties of Restigouche, Gloucester, Northumberland, Kent and Westmorland during the last four years. Four quarter- sheet maps on a scale of four miles to an inch, embracing the area included in the counties mentioned, accompany his reports. These maps are topographical as well as geological, compiled from the best sources extant, as well as surveys made by Mr. Ells and his party, beautifully colored, and embrace all the available information in reference to the geology, minerals, etc., of that portion of the Province. In regard to the minerals of economic value occurring in the eastern and northern counties, careful examinations of outcrops and openings were made wherever they were found and details noted. Coal seams were seen at several points on the carboniferous area, especiallyat Clifton, Caraquet and Shippegan on the Bay of Chaleur coast; on Dungarvon and Renous Rivers, Miramichi; in the vicinity of Doaktown; at Barnaby River, and at Napan and Black Brook near Chatham. All these outcrops, however, so far as ascertained, are thin and of no economic value. The thickest seams in this part of the Province now known occur in Kent county, but they do not exceed 18 inches, and are therefore not of sufficient size, considering the quality of the coal, to be worked profitably. They resemble the seam on Coal Creek and Salmon River near Grand Lake, with which they are probably connected and have been locally mined and used for blacksmith work for some years. The locality is on Coal Branch, a tributary of the Richibucto, near Ford's Mill, and about six miles from Coal Branch Station on the Intercolonial Railway. Among other outcrops, one on the Buctouche River in Bishopland Settlement having a thickness of 10 inches, was noted. The occurrence of such a large number of outcrops within the area stated renders it desirable that efforts should be made by boring or sinking shafts to test more fully and accurately the existence of beds of coal along the shores of the Gulf, although Mr. Ells is of the opinion that there is little hope of any being found of greater value than those met with along the western rim of the carboniferous basin, near Grand Lake.Reference is made to the copper ores occurring inthe lower carboniferous rocks at Dorchester, Memramcook,Upper Salmon River, Albert County, Bathurst and other localities. Deposits, apparently of considerable extent, are met with at some of these places, especially Dorchester, but they have not been opened sufficiently to ascertain their true value, and although ore of this kind (that is, the green carbonate and grey copper ore), is frequently found in this formation, it is generally in too limited quantities to be profitably worked.The deposits of argentiferous galena on theNigadoo and Elm Tree rivers, Gloucester County, were also examined, and analyses of the ores from these places were made in the laboratory of the Survey at Ottawa from samples that fairly represented their quality. A specimen from the Elm Tree mine yielded a little over seven ounces to the ton of 2,000 lbs., and one from the so-called Nigadoo silver mine nearly six ounces to the ton. Ores of this kind, carrying no larger a percentage of silver than these, are said to be profitably worked in some parts of Europe. Mr. Ells remarks that, as the strike of the rocks at the Nigadoo mine would run directly to that on the Elm Tree, it is possible the two may be portions of the one vein, much broken up, the character of the country rock, as well as the quality of the ore, being similar. These ores occur in rocks very near the base of the Silurian system, possibly in transition rocks between them and the next oldest in the series. Careful attention was given to the character of the soil in all the explorations, and the report contains much information which ought to be useful to the intending settler as well as to the practical agriculturist. The intimate relation existing between the geological formations of the country and the agricultural value of the soil is every day becoming more clearly recognized, and no better information could be placed in the hands of intelligent immigrants than a carefully prepared map, showing the different geological formations the Province contains. In the greater part of the district to which the report relates, settlements are confined to the belt along the shores and river margins. The best lands are stated to occur on Silurian and Lower Carboniferous rocks, both of which have a considerable percentage of lime in their composition. The fertile uplands of Carleton and Victoria counties, and the rich soils of Sussex Vale and other parts of King's county are referred to in proof of this statement. A large area of excellent farming lands underlaid by Silurian limestones and slates, Mr. Ells states, occurs on the Restigouche and its branches, in New Brunswick territory, forming a sort of upland district with a rolling surface. The country is, however, almost entirely in a wilderness state yet, and is chiefly remarkable as a source whence large quantities of spruce logs are obtainable. No roads pass through it, and travelling is confined to the river routes. A large proportion of this land is suitable for settlement, and can be made available as soon as means of access are provided. Fine tracts and ridges of cultivable lands were seen along the Dungarvon and Renous rivers, S.W. Miramichi; and between these and the N.W. river there is a belt of country with an admirable soil, much of it a rich black loam. At present it is also inaccessible and practically useless for want of roads. Many other valuable facts relating to the forests, minerals, climate, etc., are scattered throughout the reports of Mr. Ells, to which we have not space at present to refer. The practice of cutting down the hemlock for its bark, leaving the trunks to rot on the ground, the injurious effects of which must be felt before long, is deprecated. This along with the fires which devastate our forests every season, and the destruction of the spruce by a worm or borer, is rapidly depleting them of the more valuable kinds of timber which are becoming well nigh exhausted in many localities. In western New Brunswick, counties of York and Carleton, surveys and explorations have been carried on for several years and a map and report on the geology of that interesting region are now in course of preparation and will probably be published at an early date. When this is accomplished there will still remain the counties of Madawaska and Victoria, the northern part of Carleton and parts of the interior in York and Northumberland, also the eastern part of Westmorland to be surveyed and mapped out, all the rest of the Province having now been pretty carefully explored by the officers of the Geological Survey. It is to be hoped that the survey of the whole Province will soon be completed, so as to enable our people to obtain correct topographical and geological maps and accurate information regarding the mineral resources of their own country. If this were accomplished, the data relating to its rocks, minerals and soils could then easily be compiled into a hand-book or text-book for general use - at present an important desideratum - as much of the information published annually in the Reports of Progress, while of great scientific and economic value, cannot be understood, and is inaccessible to the general public."

A special meeting of the stockholders of the Elm Tree Silver Mining company will be held at the office of the said Company, in Newcastle, N.B., on Wednesday the fourth day of January next, at two o'clock. p.m., for the purpose of considering the affairs of the said Company, and the propriety of selling and disposing of the rights, licences, interests and property of every description owned, held, used or enjoyed by the said Company. Dated at Newcastle, N.B., this 19th day of December, A.D. 1887. R.A. Lawlor, Secretary."

Gazette - Nov. 13, 1896 Silver Mining in Gloucester. - Mr. Fred Tweedie has returned from Gloucester county, where he has been engaged with Mr. Leckie in mining operations. After extensive prospecting a silver vein was discovered in Beresford, and a trial shaft sunk. Then a new shaft was opened at another place on the same vein, and work was carried on day and night. Two shifts of men, three in each, were kept at work until last week, when they were driven out by water. There is no road within eight miles of the mine, and work has been suspended until the snow makes a road over which an engine, boiler and steam pump may be transported. The vein is about forty feet wide, with thin streaks of ore through it and the miners expect to reach the true lead when they get down deep enough. The ore is rich in silver and contains some

Royal Gazette - Jan. 13, 1892 Notice. Notice is hereby given, that application will be made by the applicants hereafter named, to His Honor the Lieutenant Governor in Council, for a grant of Letters Patent under the Great Seal, according to the provisions of the Act of Assembly 48th Victoria, Chapter 9, and Actsin amendment thereof, incorporating the applicants, and such other persons as may hereafter become shareholders in the proposed Company, a body corporate and politic under the name and for the purposes hereinafter mentioned. 1. The proposed name of the Company is 'The Petit Rocher Silver Mining Company.' 2. The object and purposes for which such incorporation is sought is and are:- (1st.) For searching for Mines and Minerals in the County of Gloucester; (2nd.) The working and development of Mines in said County of Gloucester; (3rd.) The sale and exportation of such minerals and others acquired by them. 3. The chief place of business of the Company shall be in Petit Rocher in the parish of Beresford, 4. The proposed amount of Capital Stock of the said Company is Twenty five thousand dollars, to be divided into five thousand shares of Five dollars each. 5. The names, full addresses and calling of each of the applicants are as follows:- Jerome Boudreau, Petit Rocher, Gloucester Co., N.B., School Teacher. John Morrison, Petit Rocher, Gloucester Co., N.B., Clerk. Joseph F. Comeau, Petit Rocher, Gloucester Co., N.B., Merchant. Frederick Comeau, Petit Rocher, Gloucester Co., N.B., Merchant. Jerome H. Comeau, Petit Rocher, Gloucester Co., N.B., Merchant. J.A. Langis, Petit Rocher, Gloucester, N.B., Surgeon and Medical practitioner. Who are to be the first or Provisional Directors of the said Company. Dated at Petit Rocher, this 22nd day of December, A.D. 1891"

URN: 0901 / 0425 / LEGI / IDX_Names: Elmtree; Millstream Iron; Legislation, etc.;

St. Croix Courier - Apr. 6, 1893 Crown Lands... Year 1891 Year 1892 Mining receipts .... $2,264.50 2,305.83 ... A considerable portion of thereport is devoted to mining matters. Up to December 31st, 1892 four licenses to search, covering 12,800 acres, andtwo renewals of licenses to search covering 4,480 acres, were issued in Charlotte County. Several applications have been made during the year, by mining companies, for assisting in working and developing their properties. Only one of these companies - the Elm Tree Silver Mining Company of Gloucester county - fulfilled the requirements of the act in making their applications, and on the report of John E. Hardman, a competent mining engineer of Nova Scotia, the surveyor general recommended that an order-in-council be passed authorizing the expenditure of the sum of $750 to assist said company in further exploring and developing their mining property. Some exploration and development have taken placein what is known as the Rocky Brook mine in Gloucester county, in which Messrs. McNichol of Calais, Me., and John Sivewright of Bathurst are interested, and it is encouraging to learn that this company anticipate that on further development the property will prove a paying one. Coal is reported to have been found in several localities in the province during the year, but as prospectors do not report the result of their work to the mines department of the crown land office, it is difficult to state, with any degree of accuracy, what those results are. Most of the areas of the Province in which mines are supposed to exist are so heavily wooded that prospecting is carried on under considerable difficulties, and altogether prevented in many cases, owing to the expense involved. In consequence of this, the work of thoroughly prospecting over the whole province necessarily makes slow progress. The report contains a number of appendices which are valuable... relating to .... the mineral resources of the province and mining matters..."

URN: 0901 / IDX_Names: Elmtree;

Moncton Daily Times - Dec. 21, 1882 The Elm Tree Silver Mining Company. - The first annual meeting of the stockholders of the Elm Tree Silver Mining Company was held at the office of the President, at Newcastle, on Tuesday, the 12th inst., at which meeting a large amount of business was transacted. The following gentlemen were elected directors for the ensuing year, viz.:- R.R. Call, John Sadler, Wm. Muirhead, jr., W.R. Payne, James Robinson, Wm. A. Hickson and John J. Adams, Esquires. The following is from the report of the manager, Mr. Call, to the stockholders: The total amount expended since work commenced at the mine not including the cost of the land, or prospecting, amounts to $4327.45, divided as follows:- Amount expended for sinking pit in vein near bed of river... $ 269.81 Books of certificates, seal, assays in New York, organizing Co'y, drawing papers, &c. ... 426.50 Prof. Bartlett's report, assays, &c. ... 106.30 Expended for buildings, machinery, tools, &c., most of which is now in use ... 1,108.91 Amount expended in sinking shafts, &c. ... 2,415.93 – $4,327.45 The operations at the mine so far prove positively that there is an unlimited quantity of vein material containing mineral of different kinds (but particularly rich in silver and lead) to warrant you in prosecuting the work with all the speed possible. The following will give you an idea of the quantity of ore raised by day and by night, taking the last five days of which we have a report. The tubs average 120 lbs. each. DAY NIGHT Dec. 4 .. 43 tubs 27 tubs Dec. 5 ... 34 22 Dec. 6 ... 29 33 Dec. 7 ... 25 20 Dec. 8 ... 81 37"

S.J. Daily Sun - Mar. 18, 1884 The Geological and Natural History Survey of Canada. - ...The report of progress of this survey for 1880-81-82 has lately been issued by the Department of the Interior ...Explorations have also been carried on in Nova Scotia and New Brunswick ... A considerable portion of the present report of progress is devoted to New

Brunswick geology, showing a continuation of the work of the survey in exploring and mapping the eastern and northern counties, and treating of their mineral and agricultural resources, etc. Mr. Fletcher spent some time in the fall of 1882 in examiningthe curious copper deposits at Albert, Albert County, which occur in so many places as grey copper ore. One of these at New Ireland seems to be worth developing, but owing to litigation the work is now suspended. It is to Mr. R.W. Ells, however, that we are indebted for valuable reports on this section of the province, he and his assistants having surveyed and mapped the counties of Restigouche, Gloucester, Northumberland, Kent and Westmorland during the last four years. Four quarter- sheet maps on a scale of four miles to an inch, embracing the area included in the counties mentioned, accompany his reports. These maps are topographical as well as geological, compiled from the best sources extant, as well as surveys made by Mr. Ells and his party, beautifully colored, and embrace all the available information in reference to the geology, minerals, etc., of that portion of the Province. In regard to the minerals of economic value occurring in the eastern and northern counties, careful examinations of outcrops and openings were made wherever they were found and details noted. Coal seams were seen at several points on the carboniferous area, especiallyat Clifton, Caraquet and Shippegan on the Bay of Chaleur coast; on Dungarvon and Renous Rivers, Miramichi; in the vicinity of Doaktown; at Barnaby River, and at Napan and Black Brook near Chatham. All these outcrops, however, so far as ascertained, are thin and of no economic value. The thickest seams in this part of the Province now known occur in Kent county, but they do not exceed 18 inches, and are therefore not of sufficient size, considering the quality of the coal, to be worked profitably. They resemble the seam on Coal Creek and Salmon River near Grand Lake, with which they are probably connected and have been locally mined and used for blacksmith work for some years. The locality is on Coal Branch, a tributary of the Richibucto, near Ford's Mill, and about six miles from Coal Branch Station on the Intercolonial Railway. Among other outcrops, one on the Buctouche River in Bishopland Settlement having a thickness of 10 inches, was noted. The occurrence of such a large number of outcrops within the area stated renders it desirable that efforts should be made by boring or sinking shafts to test more fully and accurately the existence of beds of coal along the shores of the Gulf, although Mr. Ells is of the opinion that there is little hope of any being found of greater value than those met with along the western rim of the carboniferous basin, near Grand Lake.Reference is made to the copper ores occurring inthe lower carboniferous rocks at Dorchester, Memramcook,Upper Salmon River, Albert County, Bathurst and other localities. Deposits, apparently of considerable extent, are met with at some of these places, especially Dorchester, but they have not been opened sufficiently to ascertain their true value, and although ore of this kind (that is, the green carbonate and grey copper ore), is frequently found in this formation, it is generally in too limited quantities to be profitably worked.The deposits of argentiferous galena on theNigadoo and Elm Tree rivers, Gloucester County, were also examined, and analyses of the ores from these places were made in the laboratory of the Survey at Ottawa from samples that fairly represented their quality. A specimen from the Elm Tree mine yielded a little over seven ounces to the ton of 2,000 lbs., and one from the so-called Nigadoo silver mine nearly six ounces to the ton. Ores of this kind, carrying no larger a percentage of silver than these, are said to be profitably worked in some parts of Europe. Mr. Ells remarks that, as the strike of the rocks at the Nigadoo mine would run directly to that on the Elm Tree, it is possible the two may be portions of the one vein, much broken up, the character of the country rock, as well as the quality of the ore, being similar. These ores occur in rocks very near the base of the Silurian system, possibly in transition rocks between them and the next oldest in the series. Careful attention was given to the character of the soil in all the explorations, and the report contains much information which ought to be useful to the intending settler as well as to the practical agriculturist. The intimate relation existing between the geological formations of the country and the agricultural value of the soil is every day becoming more clearly recognized, and no better information could be placed in the hands of intelligent immigrants than a carefully prepared map, showing the different geological formations the Province contains. In the greater part of the district to which the report relates, settlements are confined to the belt along the shores and river margins. The best lands are stated to occur on Silurian and Lower Carboniferous rocks, both of which have a considerable percentage of lime in their composition. The fertile uplands of Carleton and Victoria counties, and the rich soils of Sussex Vale and other parts of King's county are referred to in proof of this statement. A large area of excellent farming lands underlaid by Silurian limestones and slates, Mr. Ells states, occurs on the Restigouche and its branches, in New Brunswick territory, forming a sort of upland district with a rolling surface. The country is, however, almost entirely in a wilderness state yet, and is chiefly remarkable as a source whence large quantities of spruce logs are obtainable. No roads pass through it, and travelling is confined to the river routes. A large proportion of this land is suitable for settlement, and can be made available as soon as means of access are provided. Fine tracts and ridges of cultivable lands were seen along the Dungarvon and Renous rivers, S.W. Miramichi; and between these and the N.W. river there is a belt of country with an admirable soil, much of it a rich black loam. At present it is also inaccessible and practically useless for want of roads. Many other valuable facts relating to the forests, minerals, climate, etc., are scattered throughout the reports of Mr. Ells, to which we have not space at present to refer. The practice of cutting down the hemlock for its bark, leaving the trunks to rot on the ground, the injurious effects of which must be felt before long, is deprecated. This along with the fires which devastate our forests every season, and the destruction of the spruce by a worm or borer, is rapidly depleting them of the more valuable kinds of timber which are becoming well nigh exhausted in many localities. In western New Brunswick, counties of York and Carleton, surveys and explorations have been carried on for several years and a map and report on the geology of that interesting region are now in course of preparation and will probably be published at an early date. When this is accomplished there will still remain the counties of Madawaska and Victoria, the northern part of Carleton and parts of the interior in York and Northumberland, also the eastern part of Westmorland to be surveyed and mapped out, all the rest of the Province having now been pretty carefully explored by the officers of the Geological Survey. It is to be hoped that the survey of the whole Province will soon be completed, so as to enable our people to obtain correct topographical and geological maps and accurate information regarding the mineral resources of their own country. If this were accomplished, the data relating to its rocks, minerals and soils could then easily be compiled into a hand-book or text-book for general use - at present an important desideratum - as much of the information published annually in the Reports of Progress, while of great scientific and economic value, cannot be understood, and is inaccessible to the general public."

APPENDIX 3

NEW METALLIC MINERAL OCCURRENCES IN MINERAL OCCURRENCE FILE

URN	NAME
2000	Oak Bay
2001	St. David Ridge
2002	Baillie gold
2003	Bald Hill gold
2004	Piskahegan gold
2005	Eel river gold
2006	Nerepis/Fairy stream gold
2007	Magaguadavic gold
2008	Mohannes gold
2009	Moores Mills gold
2010	Rollingdam gold
2011	Waweig gold
2012	Mispec gold
2013	Point de Bute
2014	Pocologan gold
2015	Pokiok gold
2016	South Oromocto gold
2017	Scoullar's Brook gold
2018	Anagance manganese
2019	Point de Bute manganese
2020	Dover Road manganese
2021	Hammond River manganese
2022	Little Rocher manganese
2023	Moores Mills bog manganese
2024	Cocagne copper
2025	Canaan River copper
2026	Steadman copper mine (Crooked Creek)
2027	Bull Moose Hill iron
2028	Hog Island silver-lead
2029	Mechanic Settlement
2030	Philamaroo
2031	Burnthill Brook
2032	Barnesville gold
2033	Scotch Ridge
2034	Smiths Creek gold
2035	Harvey manganese
2036	Sussex copper
2037	Sharpsville antimony
2038	Grand Anse copper
2039	Malakoff silver
2040	Todd Mtn antimony
2041	Ten Mile Creek iron
2042	Smokey Brook/ Burtts Corner antimony

2043	Rogersville bog iron
2044	Maugerville bog iron
2045	Grafton
2046	Grand Falls gold
2047	Rapid Defamme gold
2048	Falls Brook gorge gold
2049	Porter Brook gold
2050	Birch Island gold
2051	Stewart Brook gold
2052	Cross Creek gold
2053	Eel Brook copper
2054	Whittier copper
2055	Hartt mine
2056	Ganong mine
2057	Seelye mine
2058	Middle Southampton gold
2059	Digdeguash copper
2060	Liberty Hill
2061	Hanson Stream
2062	Hanson Reservoir
2063	Hepburn Basin
2064	East Branch Musquash River
2065	Harvey Hill
2066	Burns Brook
2067	Mascarene
2068	Mascarene
2069	Upper New River gold
2070	Fowle Lake
2071	Letang 1
2072	Greens Point
2073	Canal lead
2074	Waweig
2075	Lily Hill
2076	Allen Brook
2077	Tower Hill molybdenum
2078	Sawyer Brook
2079	Leverville
2080	Sorell Ridge
2081	Wilson Hill
2082	Wildcat Brook
2083	Deadwater Brook
2084	Oxbow Lake
2085	Robinsons Pond
2086	Little McDougall Lake
2087	Queenstown
2088	Waterloo Lake South

2089	Joslin Creek
2090	Pokiok Settlement
2091	Upper Queensbury
2092	Thomas Brook
2093	Armstrong Brook - zone C gold
2094	Marshall Brown farm manganese
2095	St. Anthony's
2096	Little Salmon River
2097	Big Rody Brook
2098	Quiddy North
2099	Roman Wolfe
2100	Hamilton Lake
2101	Lair Lake
2102	Mechanic Settlement
2103	Gold Mine Gully manganese
2104	Gold Mine Gully
2105	Hammndvale
2106	Midland
2107	Springfield
2108	Arseno Falls
2109	Devils Pike northeast
2110	East Scotch Settlement
2111	Sheba
2112	Hamilton Creek
2113	Lower Cape
2114	Rosevale
2115	Johnson Mills
2116	Jenks Brook
2117	Joe Brook 1
2118	Joe Brook 2

URN: 0001 / 2035 / IDX_Names: New Horton Copper; Harvey Manganese;

Moncton Daily Times - Nov. 11, 1881 Albert County News Items . - (Maple Leaf). -Manganese. - The mine on Mr. Newcomb's farm is being steadily worked. One of the leads has been lost but by sinking deeper two other leads have been struck that are being profitably worked. W.C. Pipe, Esq., was put in charge by the Hopewell Manganese Co., and keeps two and three men at work. Copper. - A sample of copper ore was left at this office the first of the week by Mr. Chipman Reid, which was taken from his farm, at New Horton, Harvey. The mine on this property was worked by Messrs. Harris & Allen, of St. John twenty years ago. At that time the firm fearedto expend a large amount of money in sinking a shaft, and were also carrying on a successful foundry business which they could not neglect."

URN: 0007 / 0275 / 2027 / IDX_Names: Lake George Antimony; Woodstock Fe; Bull Moose Hill Iron;

Daily Telegraph - Jan. 5, 1881 Natural History Society. - The Lake George Antimony Mines. - Mr. Edward Jack delivered an address, last evening, on the Antimony of New Brunswick, William Jack, Esq., in the chair. There was a full attendance. Mr. Jack, in his address, described the color and properties of the metal, stating that it was found in several places in York, on both sides of the river, at Bull Moose Hill, in Kings, and, in small particles, in the iron ore of Carleton county, and the pig made therefrom. It was only at Lake George, in York, in this province, that it was found in large quantities. Mr. Jack described the mineralogy of the region in which antimony, in the form of sulphide was found. It was three miles from the mines to the place where the granite belt crossed the province. As the authorities stated that most of the mineral wealth of England was found near the granite belt in that country, he suggested that the New Brunswick granite belt should be examined at the points in which it crosses York, Northumberland, and Gloucester, in which last named county it struck the Bay of Chaleur north of Bathurst. The mineralogical examination should be made at those points in the river beds at which the rocks are exposed. Coming back to the Lake George mines, he gave a particular account of the different properties, as more than once described in our columns, quoting records of still later surveys and explorations, showing the thoroughly rich character of the mines. For size, persistence in length, and quantity and quality of the ore, Mr. Jack stated that They exceed, by far, any other metalliferous veins which he had ever seen in New Brunswick. He said mining was now carried on scientifically, and would bring profit to the owners and confer benefit on the surrounding country. Before concluding he enumerated the many uses now made of antimony. The address, which want of space prevents us from giving more at length today, was highly commended and formed the subject of a pleasant interchange of sentiment at its close."

URN: 0007 / 2015 / IDX_Names: Lake George Antimony; Pokiok Gold;

S.J. Globe - Aug. 20, 1880 The Royal Gazette contains certificates of incorporation of three new companies. Henry A. Connell, G.W. Vanwart, F.H. Hale, of Woodstock, and Thomas McDonald, Oliver Speer, Henry J. Diblee, Joseph Crawford, Wm. Speer, of Richmond, and D.A. Grant, of Grafton, in the County of Carleton, and Jas. Rouse, of Dumfries, and W.H. Patterson, of Canterbury, and E.C. Freeze, of Fredericton, and J. Henry Cochran, of Pennsylvania, and Wm. Thompson, of Plainfield, New Jersey, U.S., compose the Poquiock Mining Company, the object of which is to develop the mines at Poquiock, York Co., the capital to be $250,000, in 50,000 shares of $5 each, and the principal place of business to be at Woodstock. ... Francis Hibbard of Saint George, Daniel W. Clark, Wm. Blizard, James R. Cameron, and John H. Harding, of the City of Saint John, and John Gardner, Wm. J. Russell, of Boston, and James W. Kilmball, of Newton, Mass., compose the Hibbard Antimony Co., with a capital of $650,000, in 130,000 shares of $5 each. This company is to

Chignecto Post - Sep. 2, 1880 There seems to be a boom in joint stock companies in New Brunswick, three companies have received letters of incorporation within the last few weeks. The Hibbard Antimony Co. composed of St. John and Boston capitalists, propose to work mines at Prince William, N.B., with a capital of $50,000 in $5 shares. The Poquiock Mining Company has been organized, with a capital of $250,000 to develop the mines at Poquiock, N.B."

URN: 0007 / 2031 / IDX_Names: Lake George Antimony; Burnthill Brook Molybdenite;

S.J. Daily Sun - Aug. 3, 1882 Burnthill ...... The region in the vicinity is unquestionably rich in mineral wealth, but I do not think that a development of the mineral resources would ever prove a paying investment. I have noticed a number of veins of auriferous quartz, from two to six inches in width, well defined on the surface, and these veins I take to be a continuation of the Nova Scotia gold fields, and which extend up into our own gold region of northern New Hampshire. Antimony, copper and iron exist in various parts of New Brunswick in large quantities, but what other minerals are to be found besides gold in this particular spot, with the exception of molebdinum, which is visible in almost every cranny in the rock, and that has no commercial value, I am unable to tell......"

URN: 0030 / 0001 / 2035 / IDX_Names: Teahan Mine; New Horton Copper; Harvey Manganese;

S.J. Daily Sun - Nov. 14, 1881 Mining in Albert County. - (Maple Leaf) -Mr. Francis Doherty has handed us a fine specimen of silver and galena ore taken from a twelve foot lead foundon the property of Lawrence Durning, New Ireland, last week. The lead is about a mile due west of the New Ireland mine owned by Dr. Goodfellow. The manganese mine on Mr. Newcombe's farm isbeing steadily worked. One of the leads has been lost, but by sinking deeper two other leads have been struck that are being profitably worked. W.C. Pipes, Esq., was put in charge by the Hopewell Manganese Co., and keeps two or three men at work. A sample of copper ore was left at this office,the first of this week, by Mr. Chipman Reid, which was taken from his farm, at New Horton, Harvey. The mine on this property was worked by Messrs. Harris & Allan, of St. John, twenty years ago. At that time the firm feared to expend a large amount of money in sinking a shaft, and were also carrying on a successful foundry business which they could not neglect. It would be a good idea for some mining expert to visit Mr. Reid's property and see what the indications are."

URN: 0030 / 0690 / 2030 / IDX_Names: Teahan Mine; Glebe Manganese; Philamaroo Silver, Gold, Copper;

Daily Times - Feb. 6, 1889 New Brunswick Mining Items. - (Correspondence Halifax Critic). - Operations are being conducted quietly on the Gold and Silver Mining Co.'s property at Waterford, and the prospects are encouraging. A meeting of the stockholders, and others interested, is to take place either in St. John or Sussex on the 10th of Feb. next. Work of development on the Glebe manganese property, Sussex, is going on steadily. The ore from this property is of a very high grade, and arrangements are being made for a shipment of the ore shortly. Nothing further has been heard of late to the silver find on the Clinch farm at Musquash. Recent reports speak of a new and valuable property of a man named Balcom

URN: 0030 / 0696 / 0763 / 2026 / IDX_Names: Teahan Mine; Stewarton; Jordan Mountain Manganese; Steadman Copper Mine (Crooked Creek);

Daily Times - Jul. 18, 1887 New Brunswick Mining Matters. - (Correspondent Halifax Critic). - Mr. G. Crandall, of Moncton, in company with some Philadelphia gentlemen, is actively engaged in opening upan antimony mine at Belleisle, in Queens county. The samples they have been getting lately are very fine, and ore that your correspondent saw recently is equal to anything of the kind seen from Rawdon or the Prince William Mines in York Co., N.B. The results so far are very encouraging, and it is to be hoped they will continue.The manganese mine on White's Mountain is showing up in magnificent style. It is confidently said this is the best deposit of the kind in Canada. There is probably $2,000 worth of ore on the dumps, and good judges say $10,000 worth in sight. This is known as the Stockton mine, but unfortunately it is at present in the Equity Court of this Province, owing to some claim made by outside parties. How it will terminate is unknown as yet. It is to be hoped it will soon be arranged one way or the other. A new lease or bond has been taken of on adjoining property by a citizen of Sussex, which, it isthought by many, will prove almost as good a deposit as the one just written of. A good interest in this property can be had by party possessing capital to help open it up properly, and make necessary payment on bond to ensure retention of property. Your correspondent has had given him a quantity of what evidently appears to be a graphite, or plumbago. The sample seems exceedingly fine, and is evidently the decomposed portion of vein or deposit. The parties having it in hand say there are large deposits of it, if it is worth handling, and as they are reliable, probably it is correct. A sample of it has been forwarded to competent authority for test, and the result is anxiously waited for. The manganese mine at Petitcodiac is idle at present, and it is understood that efforts are being made to form a joint stock company.Work in the big copper, lead, and silver belt at New Ireland, Albert Co., is being pushed forward, and owners have recently had an English expert examining same with, it is said, most satisfactory encouragement. Boston parties interested in the developments atCrooked Creek, Albert Co., have been examining the ground, and it is said are highly pleased with the appearance of matters. It is understood that a good equipment of latest and most improved machinery will shortly be erected."

URN: 0030 / 2018 / IDX_Names: Teahan Mine; Anagance Manganese;

S.J. Daily Sun - Jul. 22, 1880 Mineral Wealth. - Dr. Goodfellow, who practices dentistry in Sussex, recently issued a circular requesting all parties who had any knowledge of the existence of mineral deposits, to communicate with him and bring him specimens of their discoveries. The doctor, we understand, has considerable knowledge of Geology and Metallurgy, and has already received, in reply to his circular, a number of interesting, if not valuable,specimens of silver and copper, supposed to have been found in King's County and to be entirely new discoveries. He has also received one or two specimens ofgold quartz, said to be very promising and to have been found in King's County. It is said that manganese has been found at Havelock and Anagance. - We were shown not long since a very satisfactory sample of gold-bearing quartz, which was found in the North, and from which, it is highly probable, something more will be heard

URN: 0030 / 2026 / IDX_Names: Teahan Mine; Steadman Copper Mine (Crooked Creek);

Weekly Transcript - Jun. 6, 1886 and Daily Telegraph - Jun. 11, 1886 Gold in Albert Co. - We are pleased to note that the chances of having the value of the supposed gold deposits in this county thoroughly tested during the present season are beyond doubt. All the necessary machinery has been transported to the Freeze mine in New Ireland and is being put in position. Large quantities of rock are being got out and smelting will commence in a few days. The indications are said to be excellent for a more than paying yield. Captain F.J. Sargent is pushingthe work in the Steadman mine on Crooked Creek and proposes putting in machinery in a short time. In each case the means at command are sufficient to fully develope the work undertaken. - Maple Leaf."

Daily Telegraph - Mar. 16, 1888 and Moncton Daily Transcript - Mar. 17, 1888 OUR MINERAL RESOURCES.- Promising Mineral Indications in Various Portions of New Brunswick.- Albert county, at present, seems to be the centre of attraction for minerals, and some fine veins of silver and copper have been found. The silver ore contains sufficient gold alone to pay the expense of taking out the rock. Manganese is also being struck in various localities, and claims are being taken out. The New Brunswick Gold and Silver Mining Company is asking incorporation at Fredericton in the interests largely of American capitalists, who are already at work sinking a shaft. Another company, the National Mining Association, is also seeking legislation at the moment. This mine has a shaft sunk 170 feet, and claims to have found a large fissure vein of silver and copper, with some gold. They propose to smelt at once. They state that the district is a second Comstock lode, and the easy access to supplies, handy fuel, and port of shipping, enhances the value over mines in the Rocky Mountains. If these mines prove of the value the owners believe, the mining industries of this province will take a boom ere long. Albert county has always been known to be rich in minerals, and it is to be hoped that the efforts of these companies may be crowned with success. Foreign capitalists who have had experts on the spots making thorough explorations and investigations for some time past, must be convinced of the richness of the mines when they undertake to invest their own means in developing the properties. We constantly hear of new avenues of business, and perhaps our own people may find that there are in their very midst minerals not to be surpassed by any part of the world, and only waiting for the lucky finder to remunerate him fully for his trouble and labor - at any rate the Americans think so."

St. Croix Courier - Apr. 7, 1892 Minerals of New Brunswick. - Extracts from a Paper by Prof. L.W. Bailey, of the Geological Survey of Canada. - COPPER. - The ores of copper found in New Brunswick include native copper, copper glance, chalcopyrite or copper pyrites, bornite or erubescite, cuprite and malachite. NATIVE COPPER has been reported as occurringsparingly in connection with the basalt traps which form the northern half of the Island of Grand Manan. It hasalso been observed at Clark Point on the Mascarene shore of Passamaquoddy bay, and it is stated to have been found in small quantities along the coast, near the head of the Bay of Fundy. Little that is definite, however, is known of either locality. COPPER GLANCE accompanies the native copper in the traps of Grand Manan, where it has been found in small quantities of Grand Manan, where it has been described by Prof. E.J. Chapman as being sufficiently abundant to give promise of profitable extraction. Little effort, however, has as yet been made in this direction. The same mineral, and in larger quantities, has been found associated with other copper ores at different localities along the coast of Charlotte county, and on the adjacent islands among which may be mentioned Crow Harbor Island, Simpson's and Adam's Islands. It is,however, a less abundant mineral than the species nextdescribed. COPPER PYRITES OR CHALCOPYRITE is the most widelydistributed as well as the most abundant of the copperores of New Brunswick, and has been observed at many localities. The larger number of these occur along the southern seaboard, where a band of copper-bearing rocks, believed to be of pre-Cambrian age, is found to extend, with some interruptions, along the greater part of its length. Others are found in the interior, more particularly in connection with the older schistose rocks or the intrusive masses by which these have been invaded. A detailed list of these localities so far as they occur in the southern part of the province, will be found in the Report of Progress of the Geological Survey for 1870- 71. In the northern part of the province, the most noticeable localities are Bull's Creek, in the vicinity of Woodstock and the Tattagouche River, near Bathurst. InWestmorland county, ores consisting in part of this species occur in connection with rocks of the carboniferous age, near the town of Dorchester. BORNITE OR ERUBESCITE, sometimes known as peacock ore, accompanies the other ores of copper, more particularly about Passamaquoddy bay and the head of the Bay of Fundy, sometimes occurring to the exclusion of other varieties. Where abundant, it constitutes a very valuable source of the metal, and the ore of some of the most promising mines yet opened has been chiefly of this species. NICKEL. - Considerable deposits of pyrrhotitehave for many years been known to occur in different parts of Charlotte county, usually in connection with copper pyrites, but until recently have been considered to be without value. Attention, however, having been redirected to them in consequence of the developments at Sudbury, in Ontario, these have also been found to be nickeliferous, and attempts are now made to test their value. The deposits appear to be large, but, as at Sudbury, the nickel contents vary considerably. A fair average sample of 75 lbs., analyzed under the direction of Dr. Hoffman, of the Dominion geological survey, yielded nickel, 4.718 per cent., the material very closely resembling, according to Dr. Hoffman, a large proportion of the ore at Sudbury, Ont. BUILDING STONES. - Very extensive and valuablebeds of granite, freestones, slate, marble, etc., existsin the province, and in the case of the first two have been largely quarried for exportation, but have not beenthought to require extended notice in the presentconnection. The same is true of another of the rocks or minerals, including limestone, clays, infusorial earths, bog-ores, salt, &c. These may be made the subject of a subsequent contribution. LIMONITE. - In addition to the limonite referred to above as associated with the hematites of Carletoncounty, this same mineral is found at various localities in the form of bog ore. The largest deposits are upon the banks of the St. John river at Burton, in Sunbury county, and considerable quantities of the ore were removed during the continuance of operations at Woodstock, for admixture with the hematites of that locality. Spathic iron is only known to occur in the form of small veins in certain parts of Queen's and Charlotte counties. At West Beach, twelve miles east of the city of St. John, upon the shore of the Bay of Fundy, are beds consisting of red hematite mingled with specular iron ore, while at Black River, two or three miles east of West Beach, some of them with a thickness of 20 feet. They have not, however, as yet attracted the favorable notice of such iron experts as have visited them. Magnetite is not uncommon in the form of scattered grains in the crystalline rocks of the southern counties, and small veins are sometimes met with, but none has as yet been observed sufficiently large to

URN: 0043 / 0612 / 0039 / 2002 / IDX_Names: Hall-Carroll - St. Stephen; Oliver Cameron; Rogers Farm - St. Stephen; Baillie Gold;

St. Andrews Beacon - Jun. 14, 1900 Minerals of Charlotte County. - An impression prevails in St. Stephen that the English capitalists will abandon any further attempts to develop the nickel properties. Much, it is said, will depend upon the character of the report submitted by Mr. Hazen Grimmer who is now in England. As Mr. Grimmer, expressed his firm belief in the richness of the deposit before leaving for England it is difficult to see upon what ground the impression above alluded to is based. It is to be hoped that the rumor of abandonment is incorrect. It is worthy of note that the syndicate has renewed its option.The Oliver copper mine in the parish of St. George is being developed by Mr. H.H. McLean and a number of other gentlemen. The outlook for this mine is promising. Messrs. Fred W. Andrews, W.E. Rose and N. Marke Mills have secured 37 areas in Baillie settlement, in order to ascertain the value of a gold deposit they have located there. The surface croppings assay $2 per ton, and the quartz is expected to become richer as it goes down."

URN: 0051 / 0007 / 0045 / 2042 / 2050 / E6 / IDX_Names: Bathurst Copper; Lake George Antimony; Burnthill Tugsten; Smokey Brook/ Burtts Corner Antimony; Birch Island Gold; Southwest Miramichi/ Dungarvon/ Taxis Gold;

Daily Telegraph - Sep. 23, 1879 A Metalliferous Belt in New Brunswick. - By Edward Jack. - Any person who has examined the rock formation on the Saint John, between Fredericton and Woodstock, must have noticed a belt of granite and associated rocks crossing that river near Sullivan's Creek and Bear Island. This also crosses the Province in a N.E. course, extending nearly or quite to the Bay of Chaleur. South of this there exists a belt of rocks in which various metals and minerals have at different times been found. Commencing at Lake George, on the west side of the Saint John, we find various and in some cases extensive veins of sulphide of antimony, quartz accompanying which, the Hon. Mr. Hibbard states, has frequently yielded an assay of about $4 worth of gold to the ton of rock. The metalliferous district crosses the Mactaquac and Keswick, and I was shown by the late Mr. B. Friel a very fine specimen of sulphide of antimony which he informed me he had found in Smoky Brook, a branch of the latter stream. Thence the Nashwaak is crossed and I am informed by Mr Alexander Gibson that two or three days since he, in company with some others, obtained about 30specimens of gold near Burch Island, on that river, and that in the neighborhood of the place of discovery there was a large vein of rusty and honeycombed quarts in the bed of the river. The Taxis and Southwest Miramichi are next intersected and last summer Mr. S. Freeze, D.C.L. Surveyor, showed me several pieces of gold, which he had, himself, found on the former river and the late Mr. S. Shea, of Woodstock, told me that the best chance which he found for gold washing on the Miramichi was near Price's Bend. Graphite is found on Salmon Brook and there occursat Burnt hill, molybdenite. Thence crossing the Dungarvon we again find molybdenite on Bamford Brook and reaching the Northwest

Miramichi the yellow sulphide of copper is there found. Farther still to the N.E. copper and manganese are found at the Nepisiguit and Tatagouche. Near Bathurst bridge, on the subcarboniferous rocks, there is found copper ore deposited in pockets, evidently from solutions, the primary source of which was on the adjacent and older rocks. The proximity of the granite belt appears to have had some connection with the deposit of metal and Bernard Van Cotts, in his treatise on ore deposits, says that nearly all the mineral wealth of Cornwall is found in close proximity to the granite. The district above referred to is largely covered by forests, and is well intersected by rivers and streams offering good rock exposures, and it is not at all improbable but that careful explorations made by competent persons may bring to light valuable veins of metals, which may at some future day become a source of labor in place of the forests, which are disappearing so fast before the lumberman's axe. I need not recapitulate several genuine finds of alluvial and quartz-bearing gold, one of which has been lately reported. They will be fresh in the memory of all who take an interest in the subject."

URN: 0069 / 2043 / IDX_Names: Austin Brook; Rogersville Bog Iron;

Kings County Record - Jan. 12, 1912 and S.J. Globe - Jan. 12, 1912 Another Big Mining Proposition. - Dominion Iron and Steel Company Interested in New Brunswick Properties.- What looks like another big New Brunswick iron proposition is forecasted in a recent issue of the provincial gazette. Notice is given that Hector McInnis, K.C., of Halifax, a director of the Bank of Nova Scotia and one of the best known lawyers in Nova Scotia has applied for mining rights covering an area of 66 square miles in the counties of Northumberland and Kent. The property surrounds the rich bog iron deposits in the vicinity of Rogersville. This body of bog ore was located several years ago and two blocks of five miles each were taken up. Later on two large iron corporations had men on the ground looking over the situation and it is understood that the Dominion Iron and Steel Company, whose prospectors worked last summer on properties in the neighborhood are really behind the application of Mr. McInnis. While it is understood that nothing of a very definite character was determined by last year's operations, those who looked over the property saw enough to justify their principals in getting a hold on the supposed deposits. Next summer will probably see further prospecting on the holdings and if results justify action, it would not be surprising to see the big Nova Scotia company carrying on active work within the next few years. The sale of the big iron deposits on the NorthShore to the Drummonds and their activity since they acquired their rights there has attracted much attention to the possibilities of New Brunswick as a producer of commercial iron ores and the Dominion Iron and Steel company has evidently made up its mind to get in on the ground floor, if the Rogersville deposits should prove as rich as reported. An operation by this big company in New Brunswick would mean the employment of hundreds of hands and the building up of an industry which would have an effect on the advancement of New Brunswick as an important part of the Dominion. The outcome of this latest location will be watched with interest."

URN: 0084 / 0666 / 2050 / C1 / IDX_Names: Serpentine River; Muniac River; Birch Island Gold; Tobique/ Giberson Gold;

St. Croix Courier - Mar. 22, 1892 New Brunswick as a Gold Producer (The Colliery Guardian). - The amount of information in the hands of the public respecting the gold bearing districts of the province of New Brunswick is very small. There have been frequent reports of the discovery of gold at various points. According, however, to an opinion expressed by Professor L.W. Bailey, the majority of such appear to have been largely unfounded, although rocks nearly resembling those of the auriferous belt of Nova Scotia, and believed to be of the same age, are largely developed in the province. In connection with these rocks many of the reported discoveries of gold have been made.They are composed of slate and quartzite belts, and border the great central granitic axis of York and Northumberland counties. A great part of this region is still densely forest-clad and difficult of access, but should any portion of it prove to be auriferous the discovery would be of inestimable value to the province. Among the points at which gold has been reported in small quantities maybe mentioned the vicinity of the St. Croix River, in Charlotte county, the Nashwaak river above Stanley, in York county, the Muniac River, in Carleton County, and the Serpentine river in Victoria county. The head watersof the Tobique river would also appear to offer prospects of important discoveries, according to a report which has reached us from a correspondent in Restigouche county, and we recommend this district to the prospectors, as worth remembering when in the vicinity."

URN: 0087 / 2038 / E2 / IDX_Names: Dorchester Copper; Grand Anse Copper; Oil and Gas - Kings Co.;

Moncton Daily Times - Oct. 27, 1882 Mining Items. - Major Howell, of Boston, who has been successfully operating for copper on lands owned by Charles Crossman and others, at Dorchester, is negotiating for a sale of his mine to Mr. John Ely & Co., of New York. Mr. Amos A. Mooney, of Boston, has been in Dorchester the past week and has purchased some valuable properties there and instructed Mr. Chapman to put on ten men at once and develop it, which will be done. Messrs. Richard and Chapman have sold part of their Babcock property at Grand Aunce, to Mr. W.H. Tower, of Boston, for a good figure, and work is being prosecuted rapidly. They have now one shaft sunk adistance of about forty feet, where they find a high order of copper ore, and one incline, all of which shows a good average. Mr. Rufus S. Merrill, also of Boston, has takenup considerable land near St. Joseph's, Dorchester, for the purpose of boring for oil. There are several wells bored and in one, at the distance of thirteen hundred feet, the men broke their drill, and have experienced no little difficulty in getting it out. Mr. Merrill has obtained the services of a Bradford gentleman, and they hope in a short time to either drill through the old drill or get it out. Last Friday they unfortunately lost their pump with five hundred feet of rope attached, which will delay them considerably; though in spite of thirteen hundred feet of water, a heavy iron drill and pump and rope, they manage to get about thirty gallons of lubricating oil per day, which flows at the surface. Mr. Merrill has returned to Boston for the purpose of forming a company and obtaining machinery and will return in a week's time. - Post."

URN: 0275 / 2044 / IDX_Names: Woodstock Fe; Maugerville Bog Iron;
Fredericton Capital - Dec. 2, 1880 and S.J. Daily Sun - Dec. 4, 1880 The Company owning the Woodstock Iron Works have purchased from Messrs. Glasier and Banks the bog iron mines on their property on the eastern side of the river, about four miles below this city. The ore will be roasted and then taken to Woodstock, to be used to mix with that from the mines there; the former producing a soft and the latter a hard metal."

Fredericton Capital - Dec. 9, 1880 The Woodstock Charcoal Iron Company have purchased from Mr. Banks the right of mining iron ore on his farm below the city, and have contracted with Mr. John Cassidy to get out three hundred tons immediately. A furnace will be erected at once."

Fredericton Capital - Dec. 18, 1880 The Woodstock Iron Company began operations last week, on the property lately leased by them in Sunbury County. They have been very well rewarded so far, having already struck on a vein of the ore two feet thick only a yard below surface. They roast the ore on the grounds."

S.J. Daily Sun - Jul. 26, 1881 The Iron Works. - The Woodstock Iron Works, which were reopened April 10th, are now in full blast. They consume thirty cords of wood per day, besides that which is burned into charcoal for them elsewhere. The manager, Thos. Watson, calculates the number of men working in and for the establishment at 360. Of these 45 are at the works, 80 are at Muniac, 80 at Newburgh and another squad at Bumfraw. The works are making pig iron from a mixture of Jacksontown and Maugerville ore. The latter is bog ore, and is used to soften the product of the Jacksontown. The mixture has been, heretofore, in the proportion of six and a half of the former to two and a half of the latter, but just now, in the execution of an order from the Londonderry Iron Works for car wheel iron, the ores are mixed in the proportion of five to four. The bulk of the pigs made here are to be shipped to Sheffield, England, for the use of cutlery manufacturers. Very little has been sent away from the works so far. The fires are kept burning perpetually, night and day, Sunday and Monday, and the iron is drawn off every six hours, five tons at a time. A charge consists of 900 lbs. or ore and 70 lbs. of broken limestone, and 50 per day are used, 18 bushels of charcoal being employed with each. The waste coal is used in the smelting furnaces, and the escaping heat and gases drive the blast engine. These works are a big thing for Carleton County. Shipment of the iron will begin on the laying of the broad gauge to the N.B. and C. depot, when no transfer of the iron will be required."

Daily News - Mar. 17, 1881 Jacksonville. - The Iron Mines. - The Mining Company seems to have about given up working the mines here, and to have transferred their energies to the mines at Maugerville. It is said that Messrs. Admiral and Saul Nelson are about to form a Syndicate to start an opposition concern."

URN: 0275 / 2044 / IDX_Names: Woodstock Fe; Maugerville Bog Iron;
S.J. Daily Sun - Mar. 21, 1881 Says the Carleton Sentinel, of Woodstock, N.B.:-Coal making is the order of business at the [Iron] Foundry. They have on hand about 50,000 bushels ofcharcoal. The kilns are in constant operation. The bog- iron taken during the winter from Maugerville, Sunbury County, for the Woodstock Iron Works, still lies at Gibson awaiting transportation to Woodstock. The delay is said to be due to some trouble between the two companies with respect to the ownership of the little branch track laid down by the Iron Company at Woodstock. Some 400 tons of bog iron have been taken out and prospecting will be continued this spring."

Carleton Sentinel - May 7, 1881 Upper Woodstock. - The Foundry is now waiting for the word go. Bog-ore from below Fredericton is now being placed in the yard. The Company has been hampered in the prosecution of the branch of the business by the difficulty in procuring cars to deliver the ore. Matters are now improving in this respect, and we hope ere long to chronicle the actual commencement of work."

URN: 0275 / 2044 / IDX_Names: Woodstock Fe; Maugerville Bog Iron;
S.J. Daily Sun - Nov. 4, 1890 Board of Trade. - St. John as the Possible Centre of Great Iron Works. - Discussed by Edward Jack, C.E., Alfred Markham, G.F. Matthew and Members of the Board.. - Charcoal Pig Iron Could be Made Here at $15.50 Per Ton. - ... As there were some gentlemen present who were interested in mining matters, however, the meeting might profitably discuss that question. Geo. Robertson said that Edward Jack had placed in his hands some time ago a most valuable paper dealing with the agricultural and mineral resources of the province and the suitability of St. John, owing to its limestone deposits and other advantages, as a place for the establishment of extensive iron smelting works. In view of that he had thought it would be a good move to invite the iron men here and place the advantages of the city before them. Mr. Robertson went on to argue that having the coal, and we believe the iron, having the limestone, and he was sure we have the men, there was no good reason to believe that this city would in time become the centre of a great iron shipbuilding industry. Edward Jack, C.E., delivered a very interesting and important address. He said that with a view

to comparing the fertile belt of New Brunswick with England, he with F.H. Hale, M.P., and J.S. Leighton had accompanied W.H. Boyce, a Norfolk (England) farmer of high standing through a portion of Carleton county. They went up one side as far as Wicklow and came down through Centreville to Woodstock. It was a fine day and they had a splendid chance to examine the country. Mr. Boyce declared that the county of Carleton compared favorably with Norfolk, which is claimed to be the finest agricultural county in England. He further said, in looking at the sheep and lambs, that a better market could be found for them in England than in the United States if the proper pains were taken to fatten them. This could be done in the late autumn and early winter. Mr. Boyce further said that for men with families and having capital the fertile belt of New Brunswick was far better than the northwest. They would like it a great deal better. Passing then to the mineral resources of the provinces, Mr. Jack said that last spring the necessity being felt for a better knowledge of the iron ores and fluxes of the Bay of Fundy region, application was made to the dominion government for the engagement of Ernest Sjostedt to examine and report upon them. Mr. Sjostedt was a native of Stockholm, a graduate of Stockholm school of mines, a practical metallurgist, and who had been engaged in the manufacture of iron for ten years in America, part of the time as manager of the Katahdin works. He was therefore a most valuable man. But the minister of the interior had declined to recommend any appropriation for the purpose. Not to be deterred because of that, some gentlemen in St. John and elsewhere put their hands in their pockets and defrayed the expenses of two months exploration by Mr. Sjostedt on the Bay of Fundy coast. A very valuable report was the result. Mr. Jack said that the iron, coal and other mineral deposits of New Brunswick should be explored by practical men. The geological survey had done an admirable preliminary work that was the credit to the dominion, but it must be followed up by definite exploration by practical men who could tell the economic value of each deposit. The result should be embodied in a report accompanied by a map. There was now no small map of New Brunswick. There should be such a map, accurate and cheap, and having distinctly traced the mineral areas of the province. This exploration and the preparation of such a map would take two season's work. Speaking of a bog iron deposit below Fredericton, Mr. Jack said it would make good car wheel iron and could be delivered at St. John for about $2 to $2.50 per ton.It was better than that at Woodstock or Nictaux and probably as good as Katahdin. There was a deposit of magnetite on Bartholomew's River of probable great value, and a less valuable one in Gloucester county. But the most important statement Mr. Jack had to make was that using iron ores from the Bay of Fundy, fluxes from St. John, and charcoal pig iron could be manufactured here for $15.50 per ton. This allowed $1 for depreciation of plant and for repairs, and including the bounty of $2. And by mixing ores that are known to exist the product would equal the best Swedish. W.H. Thorne said that the consumption of high grade iron is limited in Canada, which would be a difficulty in the way of such an enterprise. Swedish iron, he said, cost about $4 a hundred. Wm. Grieg said that there would be money in it for ordinary iron at Mr. Jack's figures. Mr. Markham said that car wheel iron cost about $33. He was satisfied Mr. Jack's figures were correct. He had been with Mr. Jack one of those interested in Mr. Sjostedt's work, and had read most of the report, which was not yet in full in their hands. But it was most remarkable in the discoveries of iron ore made by Mr. Sjostedt, especially on the Nova Scotia side. Mr. Grieg remarked that ordinary pig iron cost $21 a ton. Charcoal iron was manufactured at Three Rivers. Their quotations were $25 per ton. Mr. Jack noted the fact that Mr. Sjostedt had in his own operations imported limestone from St. John and manganese from Sussex. Geo. Robertson was surprised to hear that the Fredericton deposit alluded to by Mr. Jack was superior to Woodstock ore. He had thought the Woodstock ore exceedingly valuable. He had also thought the Nictaux deposit very valuable. G.F. Matthew said the difficulty with the Woodstock and Nictaux ores was the presence of phosphorus. But some of the ores up river had a good deal of manganese in them and he had no doubt more valuable ores than that at Woodstock could be found. But the Bay of Fundy coast was as available for St. John as these. The deposits at Londonderry and in the Cobequid Hills are carbonates and probably free from phosphorus. Magnetic ores generally are. But magnetic ores are hard to smelt, and for that reason the mixture of bog ores is very desirable. Their are fair indications of an iron deposit at Quispamsis. There are some large boulders on the surface and exploration would probably reveal a bed of ore lower down. As to limestone, St. John had great deposits. There are also easy facilities for securing coal, and while perhaps not as favorably situated as Londonderry for the reduction of ores, the business could probably be carried on successfully. At all events St. John was a good place for the establishment of smelting furnaces for the second process in iron manufacture. Andre Cushing said that St. John had fine facilities for iron manufacture. Parts of Nova Scotia are more available to St. John than to Halifax or any other important centre. There was a very valuable deposit or iron at Whycocomagh, C.B., which, when the marine railway is completed, will be at our doors. It is remarkably free from phosphorus and easily workable, having been fully tested. He regarded St. John as an excellent central point for the obtaining of ores; and for facilities in manufacturing iron it was as good as any place in Canada at least. As a seaport there were fine facilities for procuring scrap iron, now so largely used in manufacture. He did not think that the idea of establishing important iron works here in the future as at all chimerical but a practical and economic possibility. A. Markham said that at Sparrow's Point, near Baltimore, great blasting furnaces had been erected. There was neither coal nor ore there, but this point had been selected because of its facilities for procuring these by vessel. The work of the chemist is now the most important one in connection with blast furnaces. No iron or steel is now made from any one deposit. The different ores are mixed in the desired quantities to produce any particular grade, and the work of the chemist is therefore the most important. There is now talk of establishing big furnaces on the Jersey flats, near New York. The United States imports immense quantities of ores from Spain and from Cuba. If, therefore, ores can be found, as is believed, in large quantities along the Bay of Fundy, St. John is a most desirable place for the establishment of blast and smelting furnaces. Mr. Matthew pointed to the presence of manganese in the province in large quantities as another

IDX_Names: Letete Mine; Simpson Mine; Magaguadavic River / Silver Island; Dick Farm; Hartt Mine; Tobique Gypsum; Charlotte County Coal;

St. Croix Courier - Apr. 14, 1910 30 Years Ago. - Mining is about to assume a leading place among Charlotte county industries. It has long been known that this country is rich in minerals which only await the application of capital and enterprise to make them a most productive source of wealth. We are glad to know therefore that their development is no longer a matter of speculation but that operations are now in progress which will become still more active during the coming summer. Considerable activity has lately been manifested at Mascarene. Men are actively employed in the 'Revenue' mine at that place, controlled by St. John parties. An assay of the ore shows that it produces $132 of silver and four ounces of gold to the ton. Great activity prevails at the Dick and Williamson mine, and the sum of $7000 has been guaranteed towards putting up machinery at once. Former assays of the ore from this mine gave $77 in silver and $21 in gold. Within the last few days ore richer than any before found has been struck and the prospects of the mine are constantly increasing. The stock has been increased 100 per cent and holders have no disposition to sell. The Mascarene Mining Co., are also placing themselves in a position to start operations at once, a number of stockholders from St. Stephen and Calais having gone to St. George the other day with that object in view. The stock has recently advanced 50 per cent and no more is to be sold. As soon as spring opens work is to be commencedon Silver Island, near St. George, known as the Bradbury mine, now owned by parties in Boston. The Hartt mine, in the same vicinity, recently owned by Thieckens and McLean, embracing sixteen acres, has recently changed hands and arrangements are being made to work it. It covers part of the same lode as Silver Island, which is known to be so rich. It is stated also that a company will sbortlytake hold of the mines near Moore's Mills, and a gentleman has shown us a fine specimen of anthracite coalfound within a few mines of this town. If all these enterprises go forward this summer, as they promise to do, they will give considerable employment and add materially to the business of the county. Success to them all."

IDX_Names: Millstream Iron; Stewarton; Teahan Mine; Jordan Mountain Manganese; Markhamville Manganese; Philamaroo Silver, Gold, Copper; Grand Lake Coal;

S.J. Daily Sun - Nov. 26, 1888 Mining Matters in New Brunswick. - A New Brunswick correspondent writes to the Halifax Critic: The Markhamville mines are still being worked in the interest of the trustees, and shipments of ore continue regularly. Negotiations are still pending on the Jordan Mountain or Stockton manganese mine. The exact nature of the negotiations are unknown, being enshrouded in a network of secrecy and rumor unfathomable, with hints of equity, law suits, etc. Work of exploration on a property above Waterfordis being quietly and systematically carried on. The principal promoters are from Bar Harbor, Maine, and evidently mean business. They are putting in a large engine and boiler to facilitate the work of development. About 40 or 50 feet have been tested in depth, and a large ore body is being exposed. The ore seems to be a galena, and rich in sulphuret, while, it is said, the quartz gangue carries considerable gold. We expect to hear of a bona fide working and paying mine in this locality before long. It was reported some negotiations had taken placefor the sale of the Freeze mine at New Ireland, in Albert County, but so far nothing definite has been made known. Prospecting for antimony, at or near Cromwell Hill, in the county of Queens, N.B., has been suspended for the present. The work of prospecting and developing on the Grand Lake coal fields is being vigorously prosecuted at present. The DeBertram syndicate have acquired rights on 30,000 acres of land, and testing is being made under the direction of Thomas Williamson, M.E. The prospects are good for the raising of large quantities of coal in this vicinity. A large deposit of magnetic iron ore of very goodquality so far as tested, with veins of valuable yellow sulphuret of copper on either side, is now in the hands of your correspondent for negotiation at reasonable figures. It is in the northern part of New Brunswick, and not far distant from I.C.R. railway and navigation."

Fredericton Capital - May 31, 1881 The Probability of Tin Ore Being Found in York.-Dr. Bailey has in his possession a specimen of tin stone said to have been found by Dr. Gesner, at the Pokiok; as the rock formation in the locality is granite, the statement appears to be not improbable, since this mineral is found in veins or beds, mostly in the former, in granite, gneiss, mica, slate, and clay slate. It is very often found in greisen, a rock composed of quartz and mica; this occurs in the parish of Queensbury, associated with molybdenite an ore frequently accompanying tin. Mr. Jack, of the Crown Land Department informs us that Dr. T. Sterry Hunt some years ago shewed him a piece of tin ore which he had found in the State of Maine, and told him (Mr. J.) that he had better keep an eye out for tin stone in the belt of mica schist whichcrosses the South-West Miramichi near the mouth of the Burnt Hill Stream."

IDX_Names: Simpson Mine; Ganong Mine;

Daily Telegraph - Aug. 10, 1880 Nova Scotia mining (long) .... Silver Mining in New Brunswick is carried on at the Revenue mines, Mascarene, in Charlotte county, in which Mr. J.H. Harding and others are interested. Many tons of ore have been taken up, and the yield is considered very encouraging. There are at least two other silver leads worked in the same neighborhood, under the auspices of Messrs. Ganong and other parties from St. Stephen."

URN: 0608 / 0604 / 0311 / 2056 / IDX_Names: Dick Farm; Simpson Mine; Letete Mine; Ganong Mine;

Bay Pilot - Aug. 12, 1880 To the Editor of the Bay Pilot: Mascarene, St. George, N.B. July 31st 1880 Sir:- In your number of July 29th I notices an article on the probable productiveness of the minerals of Charlotte County, signed J.B.K. on which I beg leave, through your valuable columns, to make a few comments. He claims to have tested galena from all parts of the Province and has not found a sufficient amount of silver in any samples to pay the cost of extracting. I wish to state, that by the Patterson Process lead ores are successfully desilvered as low as 3 ounces per ton of metallic lead. And at the Dick & Williamson Mine, in Mascarene, St, George, N.B., the surface galena has yielded in every assay upward of 25 ounces of silver, and in many, from 1/4 of an ounce to 21 dwt. of gold per ton, with from 55 to 65 per cent of pure lead, which has given our surface ores when dressed a value of from $65, to $105 per ton. The Boardman, Revenue and Mascarene Mines, on the same belt, produces ores of the same class. I don't wish to convey the idea that we have quantity of the above ores on the surface to pay the necessary outlay of developing the mines and purchasing the machinery &c., but when such ores are found in veins of such magnitude, with abundance of remains of soluble sulphates, our hopes for the future need not fail us. He also stated. A separate assay and of choice samples is of no importance whatever, either qualitative or quantitative value. Now to say the least, we can only ascertain if our veins contain true value in their surface ores by actual analysis, and their probable productiveness by their geological and mineralogical features. He further mentioned a 3 per cent. error, I too claim it an error, but do not wish all men in this section of the County, interested in said business, to be held up to the public as novices because an inexperienced man made an error. Again he said, The effectual working of a mine cannot be done by book reading but by long and practical experience. He should have added, and such experience to be obtained in the district in which the mines are to be operated. For we have the monuments of either inexperience or careless neglect left behind in this section of the County in the form of the Wheal Louisiana Mine, and others formerly worked by men whose knowledge and practical experience was obtained in foreign countries, principally Cornwall or Devon, Eng. which has been a great injury to some very promising copper properties in this part of the County, and would say in conclusion, that hard has been the task to raise mining from the state of lethargy into which it has been plunged by such management in this place. Thad. W. Dick"

URN: 0608 / 0604 / 2056 / IDX_Names: Dick Farm; Simpson Mine; Ganong Mine;

St. Croix Courier - Jun. 17, 1880 An Exploring Visit to the Mascarene Mines.- On Saturday at about 2 p.m. two prominent gentlemen of St. Stephen, accompanied by a member of the Courier staff, started in the yacht Jessie M. for Mascarene, for the purpose of visiting the mines at that place, and of seeing for themselves that portion of Charlotte County so famed of late for its rich mineral deposits. A strong northerly wind was blowing and the boat, skipped merrily over the waves, passing, in rapid succession, the Raven's Head, Devil's Head, Doucett's Island, and other points of the river and bay all well known to local boatmen, and, after a sail of three hours and a half, reached the shore a short distance above the village of Letete. The party landed on a fine gravelly beach, above which was a beautiful green spot, sheltered on one side by a lofty cliff and on the other by a growth of scrub spruce. Here, as everything had been arranged for a night in camp, the tent was pitched, a fire kindled and a heavy meal partaken of. Then, each having assumed an easy position before the blazing logs, cigars were lighted and past experiences recalled and related for mutual entertainment. The member of the party who had taken upon himself the duties of maid-of-all-work having washed the dishes and made a bed of canvas and quilts, the light was extinguished and soon all were asleep except the Courier man, who, whether disturbed by the prickings of a guilty conscience or disquieted by the change of situation, could not rest until at last, lulled by the mingled harmony of the song of some frogs, which occupied an adjacent marsh, the splash of the waters on the shore and the vociferous snoring of his companions, he succumbed to the influence of the god of dreams. Early next morning the journey to the mines was begun. Calling on the way at the residence of Capt. Simpson, who conducts the mining operations of the Revenue Company, the party were joined by that gentleman and the genial Mr. Thieckens of St. George. Continuing their onward march, they passed some cuts where the Mascarene Company had been prospecting, and at length arrived at the scene of the operations of the Revenue Company. Capt. Simpson has sunk a shaft to the depth of about forty feet and some fine specimens of are have been obtained. The representative of the Courier, accompanied by the captain, descended the shaft and saw the numerous passages which have been run in every direction, in search of the main lode. Buildings have been erected and the neighborhood presents every appearance of a vigorous prosecution of the work. The Ganong Bros. and Haley & Boardman mine was next visited. Although the operations at this point have not been extensive, the results of prospecting show a large deposit of mineral matter and, no doubt, when the shaft is sunk, the yield will be considerable. The vein worked by the Revenue Company and that on which the hopes of Dick & Williamson corporation depend both cross this lot, and the prospect of success, is even more favorable here than in either of the other mines visited. The members of the party then directed their steps to the Dick & Williamson property, which was reached after a long tramp over a rough road. Mr. Dick has erected a residence and other necessary buildings right on the ground. All his operations have been carried on in a hill which, from an examination of the ores obtained from several parts of it, seems to be composed principally of copper, lead and silver ores. At the surface, the main shaft is about 160 feet above the level of the sea and extends downward 36 feet. Lately, the expectations of discovering a lode sufficiently large and rich to repay the company for the expenses attending their operations have been strengthened by the discovery of several small veins in one of the galleries running out from the main shaft, which, while continually growing larger, appear to tend towards one another so that hopes are entertained of a union of all these in one. The company intend to purchase a borer, by which a depth of 250 feet may be reached and the work of prospecting considerably facilitated. Mr. Dick has strong and reasonable faith in the richness of the deposits in the ground which he is working and thinks that in the end, his perseverance will be rewarded. Having obtained several specimens of ore the party retraced their steps to the shore and after having a hearty hand-shaking of the friends they had met, took up the tent, packed it, together with the cooking utensils, on board, and re-embarked. The boat's bow was turned towards home, the sheet hauled flat aft in response to the breeze the Jessie M. careened gracefully over and dashed forward, and being fairly started, each one settled himself

St. Croix Courier - Apr. 15, 1880 Our Mining Industries.- Mining in Charlotte County is about to assume a leading position among our local industries. It has long been known that this country is rich in minerals, which only await the application of capital and enterprise to make them a most productive source of wealth. We are glad to know therefore, that there development is no longer a matter of speculation, but that operations are now in progress which will become still more active during the coming summer. Considerable activity, we are pleased to learn, has lately been manifested at Mascarene. Men are now actively employed in the Revenue Mine at that place, which is controlled by St. John parties. An assay of the ore, as we are informed, shows that it produces $132 of silver and 4 ounces of gold to the ton. Great activity prevails at the Dick & Williamson mine, and the sum of $7000 has been guaranteed towards putting up machinery at once. Former assays of the ore from this mine gave $98 in silver and gold, $21 of which was in gold. Within the last few days ore richer than any before found has been struck and the prospects of the mine are constantly increasing. The stock has increased 100 per cent and holders have no disposition to sell. The Mascarene Mining Company are also placing themselves in a position to start operations at once, a number of the stockholders from St. Stephen and Calais having gone to St. George the other day with that object in view. The stock, we learn, has recently advanced 50 per cent., and no more shares are to be sold at present. As soon as spring opens work is to be commenced on Silver Island, near St. George, known as the Bradbury Mine, now owned by parties in Boston. The Hartt Mine, in the same vicinity, recently owned by Thieckens & McLean, which embraces 16 acres, has recently changed hands, and arrangements are now being made to work the mine. It covers part of the same lode as Silver Island, which is known to be so rich, and will no doubt prove equally as productive. The shipping facilities from all these mines are the very best. It is stated also that a company will shortly"

Agriculture and Geology of Maine, 1862 - by S.L. Goodale, pp. 423-424 Gold ... Across the river in New Brunswick, upon land of Mr. Bolton of St. Stephens, is another locality where gold has been found. Its distance from Sprague's Falls cannot be very great, as it is about nine miles north-west from the Calais Bridge. The exact locality of the gold is in plumbaginous slate, very black and greasy. Near it is a large boss of quartz, with sub veins of quartz running through it; and there are also near by veins of quartz containing pyrites. These two localities are the most promising of anything seen by us in the St. Croix country. ... Mr. Steadman ... A very remarkable vein of the sulphuret of antimony has recently been opened in Prince William, New Brunswick. It is not a great distance from the Maine boundary; and the rock is the same mica schist

IDX_Names: Albert Manganese; Waterside Manganese; Shepody Mountain Manganese; Dickson Brook; Harvey Manganese; Hopewell Gypsum; Sandstone, Building Stone, Monument Stone, etc.; Grey Brook Gypsum; Lime - General; Gypsum; Albert County Mercury; Albert Mines; Albert / Kings County Oil

Daily Telegraph - Aug. 7, 1880 Albert County. - ... Mineral Deposits. - Albert affords a fine field for the geological explorer, and the justly celebrated Hugh Miller would have found, here, many Schools and Schoolmasters to excite interest and stimulate his favorite study. Accepted theories might, however, be more disturbed than strengthened by a critical examination of the characteristics of this district. A considerable belt of metalliferous rock,follows the higher ranges from Shepody Mountain, westward to St. John County, and contains more or less of gold, copper, tin, iron and telluride - quicksilver has lately been discovered, the locality known only to a few, andasbestos is reported near the western line, a short wayfrom the Bay shore. Alma is the parish richest in metals so far as known, and the copper beds there have exchanged owners at high rates, though little has yet been done in working. Pockets of manganese may be seen at Waterside and Germantown in Harvey and in Hopewell, where theMessrs. Steadman expended $60,000 in erecting works for manufacturing chemical products from local deposits. Lime rock is plentiful in Elgin, Harvey, Hillsborough and Hopewell, and in the last named parish, a company is engaged in its burning and preparation for market. Marble exists in several places, but has not yet attracted the attention of capitalists.Very fine freestone is found all along the shore of the bay and on the Petitcodiac. Two quarries at St. Mary's and one at Curryville on the railway line are being worked at present. Gypsum of the best grade outcrops in many places.The rock is being exported from Hopewell, about 3,000 tons being now ready for shipment; and in Hillsborough the Albert Manufacturing Co., at present managed by Joseph T. Tompkins, Esq., has, since 1854, carried on a large business. The proposed capital was œ50,000, and, in this case, the objects of the original charter have been exceptionally well carried out, though always laboring under the disadvantage of the high tariff of the United States. The company has continuously afforded local work for a number of men at all seasons, and has greatly promoted the carrying trade. Railways have been built; a superior factory has been erected to replace the one burned; and, with the necessary equipment of wharves, stores, warehouses, etc., the company has added much to the appearance of the village. The excavating, road making, trucking, cooperage work, grinding, calcining, barrelling, shipping, etc., have for a number of years secured for Hillsborough a hum of which few villages can boast. The recent increase of 7 « per cent duty on imported calcined plaster has, perhaps, enabled the company to place larger quantities in the Canadian markets, whatever may have been the counteracting influences of the tariff regarding it in other directions. The Hillsborough Plaster and Railroad Company of 1851 has not continuously operated. Other valuable gypsum properties are held by Sir A.J. Smith and others. Of these James Blight, Esq., is local agent, and this gentleman, in fact, did a great deal of initiatory work in developing the business. Coal in limited seams may be seen in everyparish, mostly cannel of inferior quality, but the most important carboniferous deposit, yet discovered, lies in the interior of Hillsborough. This has long been called Albertite, and was first noticed, accidentally, by the Messrs. Duffy in 1848, was obtained from the Crown in January, 1850, a mining licence over a mile square, and their rights were shortly purchased for œ3,000 by a company, of whom the late Edward Allison, Esq., was the chief promoter. A charter was granted in 1852, and the noted lawsuit ensued between Henry Gesner, Esq., a proprietor of the soil, vs. the Albertite Mining Co. Wilmot, J., the late Hon, J.M. Johnson and Hon. J.H. Gray, now a B.C. judge, were among the counsel employed. The trial lasted several weeks, and the twelve jurors, who were instructed to determine and report, what the substance was, must have found their first lessons in geology rather tedious while listening to words of learned length and thundering sound, employed in the testimony as given by several of the most celebrated scientific men of the Continent. The substance had the chemical properties of coal, but the geological formation differed from all recognized theories. It differed from the Trinidad asphaltum in luster and fracture. The savants were evidently puzzled; but the jury said it was coal. A later conclusion, however, made it consolidated oil, and it is now known under the name of Albertite. Between costly litigation and unskilful management the net earnings were small till, in the person of John Byers, Esq., the company secured the services of one, who combined practical knowledge with executive ability. In one year about 15,000 tons were shipped, worth $15 per ton on the wharf. Latterly the export is less, as the drifts are at great depth, and the facilities for cheap working are becoming more impaired. It is hoped that further searches may restore confidence in the extent of this valuable article. Albertite is also found in minute quantities in Midland and other parts of Elgin and in Hillsborough, and it is known to exist in Hopewell in considerable quantities, by an old discovery; when its value was unknown, which late searches have failed to recover. The Princess Alexandra, East Albert and Prince of Wales companies, of which Mr. Blight is manager, have each expended large sums in freehold leases and prospecting work, but excepting the finding of comparatively narrow veins of Albertite nothing has resulted beyond the very useful employment of labor in the locality. In Rosevale and other districts are found large quantities of oil shale or bituminous rock, containing about 45 to 50 gallons of refined oil per ton, besides a residuum of pitch or asphaltum, making the whole volatile matter over 60 gallons to the ton. The oil is very pure and exceedingly valuable for illuminating purposes. Mineral oil exudes from the soil on McLatchey's farm in Hillsboro, and at Hopewell Hill, but the coming millionaire, who will first strike a flowing fountain, is not yet known, either to himself or others."

St. Croix Courier - Mar. 31, 1892 Minerals of New Brunswick. - Extracts from a Paper by Prof. L.W. Bailey, of the Geological Survey of Canada. - From a paper by Prof L.W. Bailey, written for the Canadian Mining and Mechanical Review and published in the Crown Land Report, we take the following extracts concerning minerals in Charlotte county:- New Brunswick has, as yet, certainly established no claim to prominence as a mineral producing country. This is the more remarkable as within her borders are not only to be found those geological formations which elsewhere are usually the seat of valuable ore deposits but these occupy extensive areas, and present features in the way of plication, metamorphism, granitic and igneous intrusions, which would greatly enhance the probability of occurrence of such deposits. It is, however, to be remembered that very large portions of the province, and particularly those which might be expected to be metalliferous, are still densely forest clad, and that while the limits and age of the different rock formations have been worked out and mapped with a considerable degree of accuracy by the officers of the Geological Survey, but little has yet been done in the way of intelligent and systematic prospecting. ANTHRACITE. - This mineral is found to be limitedin extent in the Devonian rocks in St. John county. In many instances it is evidently the result of alteration, wholly or in part, of the individual trunks of fossil trees scattered throughout the sandstones of the Devonian formation; but in a few cases the vegetable accumulations would seem to have been such as to give rise to actual beds of coal, though of no great thickness. The best known locality for these beds is that of Lepreaux basin, near the western border of St. John county, and not far from the mouth of the Lepreaux river. A seam of mixed coal and shale is here met with, having a total thickness of fifteen feet; but the shale is irregularly distributed through the coal, and the latter, where purest, does not exceed a thickness of four feet, while it also contains much earthy matter. Analyses of samples from the outcrop, made by Dr. Harrington, gave 36.38 per cent of ash. The beds at this locality are all highly disturbed, and the area over which they are distributed is but small. MOLYBDENITE. - Molybdenum sulphide, or molybdenite has been observed at several localities, but chiefly in connection with the gneissic and micaceous strata, which border the great central granitic axis of the province, or in the granite itself. It has been thusfound near St. Stephen in Charlotte County, near thegranite belt in York county, and below the Pabineau Fallson the Nepisiguit river in Gloucester county. At the second of these localities it appears to be quite abundant. GRAPHITE. - Graphite or plumbago, in a finelydivided state, is not unfrequently disseminated through the altered rocks of the older formations to which it imparts a dark color and more or less glossy aspect. It is most abundant with the pre-Cambrian rocks which are believed to represent the Laurentian system in St. John county. Much of the limestone of this formation is dark grey or even black from this cause, while in places the graphite assumes the form of veins, pockets or well defined beds. A band of this character crosses the mouth of the St. John river at the falls, and is traceable both east and west for several miles. Mining operations for its removal have been frequently undertaken, and at one time (1868-1870) about 6000 barrels per year, averaging when crushed and screened about 4 cwt. to the barrel, were removed. The beds vary in thickness from one to four feet. The mineral itself is somewhat impure and incapable of being directly applied to the uses for which the finer qualities of graphite are employed, but has been found to answer well for foundry facings, stove polishes and the like, and by appropriate treatment can be rendered available for other purposes as well. Quite recently these mines have been reopened. Of other formations containing considerable quantities of graphite may be mentioned the Cambro-Silurian and the Devonian. The slates and schists of the former, as found near St. Stephen and elsewhere in Charlotte county and in the parish of Canterbury, York county, are often highly plumbaginous, but neither in these nor in the Devonian are there any known deposits of economic value. GOLD. - The amount of positive information regarding the presence of this metal in New Brunswick at present possessed is very small. Reports of its discovery have indeed been frequent, but in the very few instances in which these appear to have eminated from reliable sources the amount of gold observed has been so small as to discourage further efforts to obtain it. While, however, the amount of the metal actually obtained is thus insignificant, it is worth while to notice that rocks very nearly resembling those of the auriferous belt of Nova Scotia, and believed to be of the same age, are largely developed there, and further, that it is in connection with these same rocks that very many of the reported discoveries of gold have been made. The rocks referred to are those comprising the slate and quartzite belts which border the great central granitic axis of York and Northumberland counties, and which with the latter traverse the entire breadth of the province. Much of this region is still densely forest clad and difficult of access, but should any portion of it prove to be auriferous the discovery would be of inestimable value to the province, as helping to open up an extensive region otherwise likely to remain permanently in a wilderness condition. Among the points in which gold has been reported in small quantities may be mentioned the vicinity of the St. Croix river in Charlotte county, theNashwaak river above Stanley, in York county, the Muniacriver, in Carleton county, and the Serpentine river, inVictoria county. (to be continued)"

URN: 0690 / 0763 / 0688 / 0030 / 0693 / 2030 / S6 / IDX_Names: Glebe Manganese; Jordan Mountain Manganese; Gold Mine Gully; Teahan Mine; Stewarton; Philamaroo Silver, Gold, Copper; Kent County Coal;

S.J. Globe - Oct. 31, 1887 and Daily Times - Oct. 31, 1887 New Brunswick Mining Items. - Halifax Critic. -The manganese property at the Glebe, owned by F.J. Alley and others, of Bar Harbour, Maine, is showing up finely, and some quantities of ore taken out recently, are worth upwards of $200 per ton. The uses of manganese to some part of the electric business will create a new demand for the same. Mr. Alley and others are also making somedevelopments at Waterford, on a belt of metals which seems promising. The ore consists of yellow sulphuret of copper, and other metals in combination.Work at the Mineral Vale Mine in New Ireland, Albert County, is also being pushed forward. One of the principal proprietors visited the United States recently to examine various modes ot treating this class of ores; and it is said concentrating machinery of the best and latest description will be put in shortly. The prospecting for antimony, at or near Springfield, is steadily progressing under the charge of Mr. Gilbert Crandall, of Moncton. It is said the outlook is favorable. Very little is being done in the way of coal development at Weldford, Kent County. No late advices have been received from that quarter.The extensive manganese deposit I have so often written you about, at Jordan Mountain of White's Mountain, owned by Stockton and others, is about being disposed of to a syndicate of capitalists from Baltimore. A sample piece of ore was recently shipped to the parties in Baltimore which weighed 1,800 lbs. There is every evidence that the sale is bona fide, and the owners will receive $40,000 in cash for the property. Should no hitch occur in the negotiations, which we sincerely trust will not be the case, it will give a great impetus to mining matters in this vicinity. The existence of five veins of galena not many miles from Sussex, which show evidence of containing considerable gold, is worthy of the attention of capitalists."

URN: 0690 / 2030 / IDX_Names: Glebe Manganese; Philamaroo Silver, Gold, Copper;

Daily Telegraph - Mar. 3, 1888 Capt. Alley, of Bar Harbour, is again here looking after his mining interests in Waterford. He reports the outlook as good and that mining operations will be actively prosecuted on both of the properties he has

S.J. Globe - Mar. 24, 1888 ADVERTISEMENT: Notice. – A meeting of the Directors and stockholders of the Waterford Mining Company will be held at the office of C.N. Skinner, in Pugsley's Building, on the corner ofPrince William and

Princess streets, in the City of Saint John, New Brunswick, on Saturday, the thirty first day of March, instant, at eleven o'clock in the forenoon, for the purpose of transferring the property of the company to The New Brunswick Silver and Gold Mining Company, and for general business of the Waterford Mining Company. Dated March 13, 1888. By order of the president, John T. Higgins, secretary."

Moncton Daily Transcript - Jan. 25, 1889 Mr F.J. Alley and other investors, of Bar Harbor, Maine, and the points in the United States, have been investing in manganese and other properties in Dutch Valley and above Waterford, Kings Co. The indication of a very extensive body of lead and silver ore is apparent."

URN: 0690 / 2030 / IDX_Names: Glebe Manganese; Philamaroo Silver, Gold, Copper;

Weekly Record - Fri., May. 24, 1889 The New Brunswick Gold and Silver Mining Company's Prospects, etc. For some time past the readers of the Record may have seen brief accounts of the doings of the above company at Cedar Camp, in the parish of Waterford. Avisit to the property on Friday the 17th inst is deemed worthy of notice in the columns of the Record. A pleasant drive through the Dutch Valley past Waterford brings us to the property of the New Brunswick Gold and Silver Mining Company where we find the work of development being proceeded within a systematic and business like manner. A snug shafthouse with a splendid boiler, hoisting and pumping gear in the best of condition, and a shaft 100 ft. on the southern side of the vein has been put down and is substantially and thoroughly timbered throughout. The material raised from this shaft consists of a shale or slaty matter mixed with bands of quartz which is fast assuming a durable and mineralogical appearance. The sinking of the shaft has developed mineral matter in the shape of pyrites, galena meconite (?meaning dark?), iron, etc. sufficient to warrant the belief that their exists in the main ore belt, mineral in paying quantities when once freely cross cut and opened up. In fact assays from time to time have shown returns in silver, lead and traces of gold in quantity enough to warrant the expense of development. We came away favorably impressed with all we saw and heard, and firmly believe that the time is not far distant when a good paying mining property will be in full operation in this charming and romantic region. On Saturday, the 18th., a delegation of the stockholders of this mine came to Sussex from St. John and Bar Harbor, Maine, when an annual meeting of the company took place in the Sussex Civil Court room which was kindly placed at the disposal of the company by Stipendiary Wallace. The usual business matters were transacted, and the views of a number of practical and experienced persons placed before the meeting. The election of officers for the ensuing year was then gone on with and the following persons were elected: W.H. Love, St. John. N.B., President; A.M. Foss, Bar Harbor, Maine; W. Fennell, do.; W.K. Kennard, Mr. Farrell, do., Directors. The Directors subsequently appointed a Mr. Sherman, of Bar Harbor, Maine, as Sec-Treas. The Directors and some of the stockholders then drove out to the mine and made a full inspection of the same and came away apparently well satisfied with what they saw. It is now understood that they will go on sinking the shaft probably 100 ft. further before cross cutting the main belt or lode which is a large one and it is hoped they will meet with abundant success as they will certainly deserve credit for the quiet and unostentatious manner in which they have pressed forward this development. To the President of the company, W.H. Love, of Scott, Lawton & Lore, of St. John; Mr. Arthur Foss, of Bar Harbor, Maine, Sec-Treasurer for the past year, and Mr. F.J. Alley, of Bar Harbor, Maine, Managing Director for the past year, much credit is due for the manner in which they have pushed forward the work of development of this company. Mr. Alley particularly who has for some time past been identified with the opening up and development of Manganese ore in Dutch Valley is well known in our midst, and is evidently the right man in the right place, and we trust he will often favor us with his presence as he is of that class that not only talks but acts, and has been the cause directly and indirectly of spending considerable amount of money in the locality. Such men are always welcome. The visitors left for home on Monday, the 20th, highly pleased with their trip to Sussex and vicinity, and we expect this will mot be the last visit they will pay us. I might add that the New Brunswick Gold and Silver Mining Company is incorporated under the laws of New Brunswick with a capital of $280,000, and that appearances are that it will become in the near future one of the most prominent and substantial concerns. Visitor May 20,

Kings County Record - Feb. 10 and 17, 1982 Memories by Donald Smith. - ..... Through courtesy of Cecil B. Jeffries, Sussex Corner, there comes to the Memories Column ' The Markham Family' , as researched and written by Harold Markham... The continental progenitors of the Markham family came to England before the Norman Conquest of 1066-1070 and are thought to have been of Nordic, or Scandinavian, blood, not Anglo-Saxon or Celtic. That the family is not of Celtic origin is certain, as the invading continental tribes drove this native tribe northward and westward. It was in that part of the island occupied by the Nordic tribe that the Markham family had its origin. The family surname is derived from the name of two parishes in the northern extremity of Nottinghamshire, anciently known as Ouest and Est Markham. The place where the Markham progenitors established their abode is not indicated but their little suburban town of Cottam, or Cotham, in Nottinghamshire, which is situated near the Lincolnshire border and about fifteen miles directly east of the important town of Worksop (pronounced Worsup). At the time of the Norman Conquest there lived in Ouest Markham a large land owner known as ' Claron de Ouest Markham' a son of whom, known as ' Roger d'Est Markham' , lived in the tangent parish of Est Markham. In the course of time, descendants of this Nordic family migrated to other parts of Nottinghamshire and into other tangent counties, notably northern Lincolnshire, where was born the one in whose honor the New Brunswick village of Markhamville, N.B., was named. Among the many illustrious descendants of Claron and Roger there were Sir John Markham, lord chief justice of England, who died in 1409; his son, Sir John Markham, another lord chief justice, who held office about the period 1444-1471, and Reverend Dr. William Markham, Archbishop of York, born in 1719 and died in 1807. In Port Greville, Nova Scotia, the writer (Harold Markham) had the pleasure of meeting a direct descendant of the archbishop; this was Rev. Mr. Markham, a rector of the Church of England and a native of Nottinghamshire. In 1810 John Markham, grandfather of the writer, was born somewhere in northern Lincolnshire. The place of his birth is unknown but it is thought to have been Barton-on-Humber, where he spent at least the unmarried portion of his life. His wife was Miss Elizabeth Bailey, of Kelsey, Lincolnshire, and by her he had four sons and six daughters, of whom three, including two sons and one daughter, died in infancy. Three others, Alfred, John and Caroline (Mrs. Francis) and a grandaughter, Mary (or Polly) Watson, migrated to North America and eventually settled in Kings County, N.B. The elder John Markham engaged in Lincolnshire's staple industry of horse breeding, and also conducted farming, express, and ship chandlery businesses. Following the death of her husband at Sussex, N.B., Mrs. Francis and her niece, Mary Watson, returned to England and resided at Cottingham, near Hull, where, as Mrs. Green, Miss Watson died during World War I, and Mrs. Francis in 1926. John Markham and his wife and family lived variously at Kirton and Laceby, in the immediate suburbs of Great Grimsby, at the mouth of the Humber River. Mrs. Markham died in Laceby in 1888 at the age of 72 years, and her husband at the same place in 1903, aged 93 years. In size and strength, Mr. Markham could verily be described as a giant, of massive build and weighing at the time of his death 230 pounds. Colorful Career. - As to Lieutenant-Colonel Alfred Markham, the writer is largely indebted to Colonel Markham himself for data contained in the following account of his active and prosperous life. In his various business adventures, vocations, avocations and hobbies he was remarkably versatile and readily adaptable. Railway service, marine service, military service, mining, journalism, botany, gardening, farming, politics, civic affairs, athletics, etc., it was remarkable variety indeed. He was born at Laceby, near Great Grimsby, Lincolnshire, on Feb. 28, 1841, and died at Elsona, a suburb of Vancouver, B.C., on July 16, 1935, at the rare old age of 94. He was born to a family remarkable for its longevity. His father lived to the age of 93; one of his grandfathers died at 95 and one grandmother at 100; his only brother John, died in his 92st year. One of his sisters was accidentally killed at the age of 78. From 1857 to 1864 he obtained railway experience in the offices of the Manchester, Sheffield and Lincolnshire Railway and Dock Company, and for some time was manager of a deep sea fishing concern (Great Grimsby has long been an important port for North Sea fishing). The Manchester, Sheffield and Lincolnshire Railway and Dock Company was incorporated in 1837, only four years before Markham's birth and 20 years before his employment with it. The world's first steam operated railway, the Stockton and Darlington, had begun operation only 12 years before the M.S. and L. That was the age of embryo steam railway construction in Europe and North America. About the year 1850 a company known as the Grand Trunk was formed in England for the construction of this railway, begun in 1853 and completed to Sarnia, Ont., in 1860, four years before Markham came to America to enter its employ, and only months before the outbreak of the American Civil War. Canadian Confederation came seven years later, in 1867. During the Crimean War, Markham, then only about 13 years of age, performed some military service in his native country, this being the only war service he ever experienced as a soldier during his long life and 20 years' service as an officer in the New Brunswick Militia. In February 1864, while Uncle Sam was trying to beat his rebellious states into submission, Markham left England for that country. His arrival on this side of the Atlantic proved a very damp one. His vessel, the Allan liner Bohemian, was wrecked on the rockstrewn shore at Cape Elizabeth, near Portland, Me., its port of destination. In this marine disaster 42 persons lost their lives. Markham reached shore in an open boat, but lost all his possessions except the clothes he wore. At Portland, the Atlantic terminus of the Grand Trunk Railway, he entered the employ of that transportation company, and later in the same year (1864) that of the International Steamship Company as purser on their vessels plying between Boston, Portland, Eastport and Saint John. Again in that year he found himself permanently settled in Kings County, N.B., as the manager of the mining interests of the Pope Manufacturing Company of Boston. This mining business was known by the name of the Queen's Manganese Company. Without mining knowledge, and only 24 years of age, this was quite a bold venture but it was characteristic of his dauntless and venturesome spirit. If he failed he had the railway service to fall back on, and there was a big demand for experienced railway men in North America. It was the mining company, not he, that failed. He turned the company's failure into a very profitable success for himself and became his own general manager. In other words, he purchased the company's mining business after five or six years of operation. He Was 'The Boss' - The headquarters of the Queen's Manganese Company was established at what was included under the name of Hammondvale, about 10 milessouth of Sussex. Subsequently, other mines were opened upat Waterside and Little Rocher, in Albert County, and St.Martins, in Saint John County. These, however, soon petered out. At the beginning of mining operations at Hammondvale, a new post office was opened up at the mining area, three miles distant from that at Hammondvale, and given the honor of Markhamville, in honor of the gentleman upon whom the villagers bestowed the appellation of ' The Boss' . In common slang use of that word, he surely was well designated, for in his business affairs he was a most rigid disciplinarian and had his father's physical prowess to back it up. He and his arm crippled brother John, could handle any of the most ill-disposed and obstreporous employees. In later years one of the latter said to the writer ' I myself was considered as being exceptionally strong but your one- armed father was too much for me.' After a quarter of a century of mining at Markhamville, during which he located about 70 pockets of ore, he sold his business to an American concern and went into another business he knew nothing about, the printing business. In 1890 he became the general manager and practically the sole owner of the Sun Printing Company, Saint John issuing a very Conservative daily newspaper in a very Conservative constituency. Unfortunately, in 1893 the nation went over to Liberalism, a change that gradually brought about the demise of the brand-new newspaper, the Daily Sun, the publication of which was discontinued in 1899. It was succeeded by another Conservative Daily, the Standard, of which the circulation manager was the colonel's elder son, Alfred J. Markham. Reverting to the year 1881 for a retrospective glimpse of the colonel's life and a brief outline of his service in the New Brunswick militia, we find that this began in the Canadian Hussars, 8th Regiment of Cavalry, when the name of that was changed to 8th Princess Louise's New Brunswick Hussars. Originally this mounted unit was known as the New Brunswick Yeomanry Cavalry, and in the Second World War as the 5th Armored Regiment. In 1881 Lieutenant-Colonel James Domville took command of the regiment, and has Markham as senior major; for 18 years those two officers held their respective ranks, much to the annoyance of Major Markham and other subordinate officers. In politics both Domville and Markham were Conservatives but when the Laurier-led Liberals defeated the Conservative government in 1896, Domville, in order to retain command of the regiment, changed to the Liberal party and successfully contested the federal general election of that year in Kings County for that party. Subsequently it was enacted that regimental commanders could hold their commands for only five years and must, in any case, retire at a definite age. In 1896 Markham was promoted to the rank of lieutenant-colonel in the Canadian militia and later succeeded Domville in the command of the 8th Hussars on the latter's promotion to the rank of Colonel. In 1899 Markham, in accordance with the then new regulation, was retired to the reserve of officers. His older son, Alfred John Markham, succeeded to the command of this regiment in 1918, and his younger son, Ralph Farrar, became lieutenant in it in 1896. The latter was a veteran of the South African and First World War. During his brief tenure of command of the 8th Hussars, Colonel Alfred Markham, sr., went to England in 1896 as commander of the Bisley team of marksmen but was not on hand when the Prince of Wales made a royal visit to greet and welcome the team. County Warden. - Though a keen politician and an eloquent speaker, Colonel Alfred Markham was never a candidate for election in either federal or provincial politics, nor ever occupied any public office save those of county councillor and warden. He was elected warden in 1879, the year in which the governor-general, the Marquis of Lorne, and his lady, Princess Louise, toured Canada. As warden he presented the address to Their Excellencies when they visited Sussex. He was credited with having induced Sir Robert L. Borden to enter politics. Sir Robert was one of Canada's prime ministers. Associated with him in the founding of the Sun Printing were Ward H. Thorne, who later became a senator, and S.D. Scott, who attained considerable prominence in Canadian journalism. The chief editor was George E. Foster, who later became a senator and then was knighted. The Sun tried hard to shine under Liberal administrations at Fredericton and Ottawa but it finally was eclipsed and sold out to a company that published the Standard. (This company became the Journal, which in 1923 amalgamated with the Telegraph to become today's Telegraph-Journal). In 1906 Messrs. Scott and Markham removed to Vancouver, where the former had become editor of the Vancouver Province and the latter the superintendent of the Canadian Pacific Railway lands in British Columbia. Thus the colonel ended his career in Canada as he had begun it in England - in the railway business. He planned and cleared the land for Shaughnessy Heights, Vancouver's fashionable residential section, and supervised the Canadian Pacific's garden at Korrisdale. Later he assumed supervision of Shaughnessy Military Hospital and became the local director for the department of soldier' civil re-establishment. As an experiment, he attempted the transplantation of Atlantic oysters, and for this purpose had a carload shipped from Buctouche to the Pacific ocean. The experiment proved a complete failure. He also lost heavily in a collapse of the New York stock market, as did his son-in-law, John Foote, Toronto, and, to a small extent, his brother, John Markham, of Sussex. Until his retirement he resided at 2210 Arbutus Street, Vancouver, with his wife and daughter, Edith. There Mrs. Markham died on Feb. 21, 1914. When Fire Swept. - On Nov. 19, 1866, Colonel Markham married Miss Naida Turnbull, eldest daughter of John E. and Annie Turnbull. Mrs. Markham's father operated a factory on Main (now Broad Street), Saint John, and resided near it. In the disastrous conflagration of 1877 both residence and factory were completely destroyed. One of the many stories of that great fire is a rather weird one in which the participants were James Turnbull, a brother of Mrs. Markham, and a Mrs. Reed, her mind unhinged by the catastrophe, walked into the burning Turnbull home with her clothing on fire while James Turnbull and others were inside striving to save the building from destruction. Leaving the house to its fate, James attempted to carry Mrs. Reed to safety in the northern end of the city. She died on the way, and he left her body under an upturned boat on Queen Square. Carrying her through scorching flames and air filled with flying embers for about two miles was, even though not crowned with success, extremely heroic. Mrs. Markham was named after the steamer on which she was born on a voyage from England to Saint John; to all who knew her she was called by the shorter name of Ida. Mrs. Markham's father and paternal grandparents were natives of England. The children of Colonel and Mrs. Markham, all of whom were born at Markhamville, were, in order, Alfred John, born in 1867; Edith; Blanch Hobbs (Mrs. Secord); Lillian (Mrs. Foote); Ralph Farrar; Clara; Emily (Mrs. Derrerton, born in 1887. Clara died shortly after birth in 1880, and Ralph was killed in action at Armentieres, France, in 1915. Alfred J. married twice and Ralph died unmarried. The former's first wife was Miss Annie Jeffries, of Jeffries Corner, N.B., and his second was a young widow when he married her. The first wife was a daughter of Mr. Jeffries, a native of Somersetshire, Eng. The Jeffries family migrated in 1816 from England where Mr. Jeffries was born in 1814. Miss Edith Markham died in London, Ont., in 1938. Blanch (Mrs. Secord) lived in Saint John, and Lillian (Mrs. Foote) in Toronto. Regarding the military service of the two sons, both began as troopers in the 8th Hussars, in which Alfred J. rose to the rank of Lieutenant-colonel. Ralph's service was more varied. In World War I, ' Fred' Markham, as Alfred J. was generally known, went to Europe as major and second-in-command of one of the battalions of the Canadian Mounted Rifles, all of whose four battalions served as infantry. ' Fred' had temporary command of his battalion following the cashiering of its lieutenant- colonel. Being very much over the required military age, ' Fred' , at 48 years, was recalled from service at the front, returned to Canada and placed in command of the Saint John area for the rest of the war. A few years later he was put on the reserve of officers. On the outbreak of the South African War, Ralph Markham resigned his captaincy in the 8th Hussars and proceeded to that distant seat of war as a trooper in a cavalry regiment. He returned home as a non-commissioned officer and left again for South Africa as a lieutenant in another cavalry regiment. In his second campaign he was wounded in the action at Hartt's river. At the conclusion of this war he remained in South Africa for a few years in the employ of the Rand Daily News, of Johannesburg, Transvaal. Giving this up, and after touring Great Britain and the Continent, he returned to Canada but not to his native New Brunswick. He went, instead, to Brandon, Man., where he was engaged for a short period on the staff of the Daily Sun. Thence he moved to Vancouver for further newspaper work and to reside with his parents and sister, Edith. The Big Bang. -On his return to Canada from the Boer War he brought with him a decidedly lively souvenir in the form of an unexploded artillery shell. To have carried a loaded shell all that distance without an accident is a testimony to the gentleness of South African and European baggage handlers and also to some of that fraternity in Canada. But eventually Mr. Shell concluded he had travelled far enough; he objected in a very vehement and explosive manner to the rough handling by the Brandon baggagemen, and exploded. Fortunately, nobody was killed. As British Columbia did not have a cavalry regiment, Ralph continued in the military service as an officer in Vancouver's 72nd Seaforth Highlanders, which furnished recruits for the 16th Battalion of the 1st Division of the Canadian Army Corps in World War I. This war broke out in August 1914, six months after the death of Ralph's mother and almost exactly a year before his own. When in October 1914 the First Contingent sailed from Canada to England, Ralph went with it as captain and signalling officer in the 16th Battalion, and his cousin, Harold Markham, as a private in the 12th Battalion. Both met for the last time at the Valcartier Military Camp, near Quebec. Shortly before his death on Aug. 19, 1915, Ralph was promoted to major and second-in-command of the 16th battalion; had he lived a year or two longer he would have succeeded to the command of this battalion when its Lieutenant-Colonel Leckie became a brigade commander. He and another officer met their death while proceeding with others to the front line through a communications trench in the Armentieres sector. His body and that of the young officer who was killed with him were interred with military ceremony in the civil cemetery at Armentieres, five miles from the scene of their death. By Stage Coach. - John Markham, jr., was born at Laceby, near Great Grimsby, Lincolnshire, on April 30, 1854, exactly 32 days after the outbreak of the Crimean War, in which his only brother, Alfred, enlisted for home service. He was educated at the Laceby parish school and then at the Humberstone grammar school. After serving for short periods in a Grimsby mercantile establishment and the Hull dock offices, he sailed in 1871 for Canada, landing at Halifax, whence he proceeded to his destination at Markhamville by way of Digby, Saint John and Sussex. Between Halifax and Digby, trains were then operated three days a week, going in one direction one day and returning the next; on the other three days, horse drawn stage coaches were operated. Young Markham, then 17 years of age, made the journey to Digby by stage coach, and by railway from Saint John to Sussex. For a short time he was in charge of the mining operations at Riverside and Little Rocher, Albert county, and when mining was discontinued there he moved to Markhamville, where he became the postmaster and conducted a mercantile business. Following the closing of the Markhamville mines he moved in 1893 to Sussex Corner, where he continued in the general mercantile business in partnership with King McFarlane, a native of Markhamville. Shortly before moving to Sussex Corner he was urged by Simeon H. White, president of S.H. White and Company, to join Mr. White and his partners in the creation of the Sussex Mercantile Company, of which Mr. White became president. However, he declined this offer. At Markhamville, in November 1879, he married Miss Caroline Albrighton Boyer, eldest child of John and Elizabeth Boyer. His wife was born in Saint John in 1859 and died at Sussex Corner in 198. Of this union one son and three daughters were born, namely, in order, Florence; George Harold (1882); Alice Elizabeth (Mrs. Upham) (1887); and Irene Noble (1899). All except Irene were born at Markhamville. Irene was born at Sussex Corner and for some years lived in the United States. Since 1893 Florence lived at Sussex Corner. Alice married the late H. William Upham, son of the late Charles W.J. Upham, of Sussex. G. Harold entered the Canadian postal service in 1911 and retired on pension in 1946. Irene was a registered nurse. 5 Years Overseas. - G. Harold Markham held the Colonial Auxiliary Forces Long Service Medal and had almost enough service in the Canadian Militia for an additional bar. In World War I he had five years service in Europe with the Canadian Expeditionary Force, and served variously in the infantry, postal corps and artillery. In 1913 he married, at Saint

URN: 0691 / 0645 / 2022 / IDX_Names: Markhamville Manganese; Waterside Manganese; Little Rocher Manganese;

Kings County Record - May 4, 1944 John Markham, Sx. Cor, Enters His 91st Year. - Friends of John Markham and his family, Sussex Corner, will be interested to know that he entered the ninth decade of his life on April 30, and will wish him more years of health and happiness. Born at Laceby, Grimsby, Lincolnshire, in 1854, his birth coinciding with the opening of the Crimean War, Mr. Markham left his native land in 1871 to join his onlybrother, Alfred, in the mining operations in Kings, Albert and Saint John counties and has resided near Sussex ever since. His brother Lieutenant-Colonel Alfred Markham, a former well known citizen of Sussex and Saint John, and who was called to the colors at the outbreak of the war with Russia, preceded hi to America in the winter of 1864, during the course of the American Civil War, landing at Portland, Maine, from the wrecked Allan liner 'Bohemian'. This steamer was wrecked off Cape Elizabeth, with a loss of 42 lives. The arrival of the younger brother on this side of the Atlantic was not so eventful as that of the elder. Mr. Markham landed at Halifax and journeyed by stage coach to Digby, thence by steamer to Saint John and railroad to Sussex. He began life in this province incharge of mining operations at Waterside and LittleRocher, Albert County, under the general managership of his brother. About the year 1891 he went into the mercantile business at Sussex and retired at the close of the First World War. His wife, a native of Saint John, died at Sussex sixteen years ago. It is hoped that Mr. Markham's remarkable longevity will at least equal that of his father, who died at the age of 93, and that of his brother, who was 95 at the time of his death. He is now the sole survivor of a family of two sons and five daughters all of whom, with the exception of three, lived beyond 80 years in age. One sister was accidentally killed at the age of 78. One son and three daughters were born to Mr. and Mrs. Markham, all of whom are living; these are Miss Florence Markham, Sussex; G. Harold Markham, Saint John; Mrs. H. William Upham, Moncton; and Miss Irene N. Markham, in Connecticut. He has two grandsons, Clarence M. Upham, with the R.C.A.F. in Europe and J. Raymond Markham, R.C.N. His son served in Europe throughout the whole of the last Great War in the Canadian infantry and artillery."

S.J. Daily Sun - Dec. 25, 1897 Mining in Albert. - The Minerals Products Company of New York. - Have There the Only Plant for Treating Manganese Bog Ore in the World. - Very Expensive Works- Description of the Process - The Point de Bute Deposit - the Scientific Theory. - In the beds of wad or bog manganese which are known to exist in large quantity in two places, and may no doubt be found in others, New Brunswick has a mineral product not found in any other country in any quantity. The hard manganese ore that is got by mining and found in pockets in the rock formation, is of course quite familiar, though an uncertain quantity, but to find the material in a bed varying from five to thirty feet thick, immediately under the turf or first layer of soil, and so soft that it can be simply shovelled up without the aid of a pick, is quite a novel occurrence in manganese mining experience. If this fine, flour-like deposit of the mineral could be treated as simply as the hard ore from the mines, it would of course be of great value. But that is not possible, and up to the present time there appears to be only one process for treating it with any success at all. To be available for commercial purposes this pyrolusite or manganese dioxide must be converted into what is technically termed ferro-manganese. That must be done through the agency of a blast furnace. Now hard manganese ore can be treated simply enough, but this bog ore or wad, after the fifty per cent. or thereabouts of water has been dried out of it, becomes a fine dry powder. Put it into a blast furnace and it would simply blow away. The great aim of all experiments has been, therefore, to discover some otherwise suitable substance to mix with the powder to bind it together in such a form that it would stand the furnace and enable the operators to produce ferro-manganese, which, as everybody knows, is used in the manufacture of steel. The reading public will remember that Edison, in his famous iron works in the New Jersey mountains, first separates the iron from the sand in the ore and then takes this iron, which is also in the form of a fine sand, and by employing a 'binder' is able to convert the iron sand into iron bricks, which will stand the operations of the blast furnace. Such a process of treating the manganese bog ore has been discovered and has stood the test, and is now to be applied by The Mineral Products Co. of New York at the great bed of ore found at Dawson Settlement, half a dozen miles from Hillsboro, in Albert County. An American company tried once before to utilize the ore, but was not successful. The present owners are satisfied that they can succeed, and have indeed proved it by actual test. It may be added that theirs is the only process known which has proved effectual. It involves a large expenditure and a complicated plant, and their works in Albert County are the only ones of the kind in the world. The Mineral Products Co. is incorporated under the laws of New York. Hon. F.C. Sayles of Pawtucket, R.I., is president, F.C. Sayles, jr., of Providence, R.I., treasurer; Dr. Edwin F. Ward of New York, secretary; Russell P. Hoyt of New York, general manager; N.M. Longdon of New York, superintendent of works. The company began operations in Dawson Settlement six months ago, and have spent about $50,000 in purchase of land, clearing it up and erecting their plant. They have had about forty men employed until lately, when they were laid off to await the beginning of operations in the works themselves, which will start now in a very short time, and be run night and day, employing thirty hands or more, and treating probably a hundred tons of ore a day. The company own four hundred acres of land, on seventeen of which the ore is found under a thin coating of soil or vegetable matter, and extending to a depth of five to thirty feet of the ore, which can be got out by merely shovelling it into the cars. A member of the Sun staff, being in Hillsboro on Tuesday, paid a visit to the place. He was fortunate enough to find Mr. Hoyt, the general manager, and that gentleman went out with him. The deposit lies on a hillside, with a slightly higher elevation behind it and a deep gully running along its base. The place was covered with a thick growth of woods. Seventeen acres of this has been cleared and stumps taken out and drains dug. The ore lies in a bed of varying thickness all over it. The Sun man walked over the place, and a man with a pick went along, and, on the sides of the drains and the holes dug all over the place, sunk the pick in through the coating of frost, and everywhere the ore was disclosed. A singular fact is that there are quite a number of living springs on the property. There are two close together on the highest point of the deposit. The scientific theory of the deposit appears to be that in the hills back of the bed there is manganese in place or in formation. If the former, as is thought probable, there must be a very large deposit of the ore, and streams of water passing over these large beds have in past ages carried the ore in solution to the place where it is now deposited, and perhaps is still being deposited, as wad or bog ore. This bog ore in its natural state contains about fifty per cent. of water, and this of course must be got out. When that is done the result is, as stated a powder, black in color and about as fine as flour. The company have erected their plant at the foot of the hill that forms the ore bed, the lower side of the structure being on a level with the bed of the gully, where a branch railway comes right up to the back door. The building is 52x72 feet, with 30 foot posts on the upper side and extending 16 feet lower on the side next the railway, being thus erected on the shoulder of the hill. The building is equipped with heavy machinery, specially made for the work. There is an 80 horse power engine and 50 horse power boiler. The 'drier' is a brick chamber 10x44 feet and 30 feet high, in which there is a revolving cylinder of half inch iron, five feet in diameter and 28 feet long. The process through which the ore must pass is a very interesting one. It goes in as rough ore, looking to the unpractised eye not very unlike any other blackish colored fine earth, and it come out in the form of a hard, black, cylindrical brick, three inches in diameter and two and a half inches long. The process is not easy to understand without being seen, and even then of course the secret of the process by which the dried powder is cemented together remains a mystery, known only to the company who control it. The ore is brought in little tram cars from the ore bed, a distance of only 600 to 1,000 feet, and, running into the building, is dumped on a platform on a level with the feed hopper of the revolving drier already spoken of. It is shovelled into this hopper, and the revolving drier, which is kept heated by wood or coal fires, carries it to the back end of the brick chamber, where it drops into a spiral conveyor, which carries it out to the boot of a bucket elevator, by which it is elevated to the top of the building, some thirty- odd feet, where it passes through a revolving screen. The fine ore sifts through the screen into what is called the dry ore bin. The coarser part, which will not sift through, goes on and out of the farther end of the revolving screen, and is carried from thence down into a grinder, which grinds it up fine, and it is then carried back again to the boot of the elevator, and up again to the revolving screen, through which this time it sifts without difficulty into the dry ore bin. But this is not all. Above the brick drier is a dust chamber with a V-shaped bottom, provided with a spiral conveyor. Any fine ore passing off from the drier along with the steam or gases, settles in the bottom of the dust chamber, and is carried out by the spiral conveyor and passes to the boot of the elevator and up to the revolving screen and into the dry ore bin. Thus every bit of the ore is saved. The steam and gases pass out and away though two smoke stacks rising from the dust chamber above the drier. The ore from the dry ore bin is drawn into a mixer, where it is mixed with a suitable 'binder', the purpose of which is to cement the powder together. The mixed material is then carried up to a sufficient height to pass in at the top of the briquetting machine, a very complicated piece of mechanism, from the bottom of which the ore comes out in the hard cylindrical bricks or briquettes already described. These briquettes are carried to a pocket on the level of the railway, with capacity to store 250 tons, and from here the ore is shipped on cars to be taken to the company's blast furnace at Bridgeville, N.S. The company would have erected a blast furnace at Hillsboro, but there was some difficulty in getting a site, and they purchased the furnaces at Bridgeville, N.S., which along with a fine belt of hardwood happened to be on the market. The briquettes will be taken by rail to Bridgeville, converted into ferro-manganese, and from there can be shipped to steel works in any part of the world. The company have had the property examined and reported on by seven of the best experts in the United States and Canada, and the ore analyzed by ten of the principal steel makers and prominent chemists of the United States; and the result shows that the ore deposit is a valuable one. The analysis is as follows: Per cent. Metallic manganese 48.24 Metallic iron 5.70 Sulphur 0.096 Phosphorous traces Silica 1.88 This analysis was made on the dried mineral at 212 deg. Fahr. The value of the ore is shown by the very slight proportion of phosphorous and sulphur. No process has yet been discovered that will eliminate phosphorous. When an ore contains more than 0.10 per cent. of phosphorous or more than 12 per cent. of silica, the price is scaled down in proportion to every unit above these figures. The Albert county ore is thus a very valuable one if it can be successfully prepared for the blast furnace. The ore is covered by a few inches of vegetable matter. A cubic yard of the ore in its natural state weighs 1,200 lbs. Besides erecting their plant the company have built a branch line of railway from the works one and a half miles to Stony Creek on the S. and H. railway. The latter connects with the I.C.R. at Salisbury, eleven miles away over which the ore is taken to Bridgeville, and which connects the works with the Grand Trunk system and practically with the railway systems of the continent. It is only five and a half miles from the works to Hillsboro, where at a wharf which the company propose to construct, vessels of a thousand tons can lie, and thus they will have direct water communication with Boston, New York, Philadelphia and other American ports, and also with Europe by vessels which come there to load lumber. The vessel rate of freight to U.S. ports is $1.50, and to British ports about the same. When the works are in full operation, running night and day, they will employ about thirty men, and expect to ship about 50 tons of briquettes per day to the blast furnaces. Mr. Longdon, the superintendent of works, has had long experience in manganese working in New York State, and his inventive skill has been utilized in adapting the briquette machine to its present purpose. There has been some difficulty in getting this new machinery properly adjusted and the binder effectively mixed with the ore, but they were making hard briquettes when the Sun man was there, and were confident that in a very short time the plant would be in full operation day and night. Machinery practically does it all, from the time the ore goes into the hopper of the revolving drier until the briquettes come out. The building is equipped with an elevator connecting the floor where the briquetting machine stands with the storage room beside the railway. The market value of ferro-manganese today is $46.50 per ton. Two tons of the bog ore will make one ton of ferro-manganese, which is the only material that will successfully purify steel. It is imported by steel works from South Africa, Spain, Cuba, Mexico and Japan, and is not therefore found in quantity in any country, the bog ore so far as known only in New Brunswick. In Canada the returns show that only twelve tons were produced in this country in 1896. Reference has already been made to a deposit of wad at Point De Bute. This has been secured by the Mineral Products Co. There is a bed, said to cover a hundred acres to a depth of five to fifteen feet. Gov. McClelan told the Sun man about a deposit on the property of a Mr. Reid, near Harvey, but Mr. Hoyt thinks it is not the same and not large enough to be of value. There may be deposits in other parts of the province, and possibly in Nova Scotia. If so, they are, however, of no value unless the fine ore can be fitted for the blast furnace, and the only process for doing this that has been discovered is known only to this company, who have it patented. The process is the result of several years effort and hundreds of experiments. The company have taken up some twenty areas where hard manganese ore is found in the province. They expect to develop an important industry, and have made a large investment. Russell P. Hoyt, the general manager, has spent six months in Hillsboro, flitting back and forth between there and Bridgeville, or making

Chignecto Post - Feb. 1, 1894 Albert County.- ..... Principal among these reverses was the closing of the Albert mines which threw some three hundred men out of employment... The Albert Manufacturing company of Hillsboro are getting out the usual amount of plaster. It is understood that the King Dimock, plaster quarries at Curryville will be worked to a greater extent than last year. Plaster was first shipped from this quarry last summer by way of Gray's Island. Mr. Jas. Blight a gentleman of large experience and excellent judgement in such matters has charge of these quarries. Operations in Alma coal mine are suspended butwill be renewed in the spring. Mr. Bliss Steeves of Salem is manager. The manganese mine near Albert of which Capt.Sargent is manager will resume operations in the spring. Several tons of ore were shipped to New York have been sold at a good price. It is expected that this mine will prove a good paying property when properly

URN: 0723 / 2013 / IDX_Names: Memramcook Gold; Point de Bute Gold;

S.J. Daily Sun - Dec. 27, 1893 Gold Mines. - The citizens of Point de Bute are of the opinion that they have discovered a genuine gold mine in their vicinity. The lots have been surveyed and last fall excavations were made in the most favorable place, which was on the farm of Howard Trueman. Persons who have had some experience in such matters say that the deposit is rich in gold and not unlike that found in the Memramcook mine. Some time ago they sent about twenty tons of the conglomerate to a crusher in Nova Scotia, their object being to get it thoroughly tested before proceeding further. It now turns out that it will be impossible to get it tested until spring, therefore it is not probable that anything further will be done till then. So confident do the people feel that the mine is a rich one, that stock has been taken to quite a considerable extent. If the thing pans out it will be a fine thing for the place. The Memramcook mine seems to be panning out well.A crusher was put in last spring and a paying business was carried on during the summer. The firm is now erecting a much larger building and will equip it with more modern machinery."

Moncton Daily Times - Oct. 28, 1893 Mining Matters. - Work commenced at the Point de Bute mine on Monday. Mr. J. Herbert Wright, who is the owner is stocking it at $500,000, a small portion of which is being sold to carry on preliminary expenses and prospecting. He has sold some shares for that purpose. He proposes to send the ore to Oldham Mines, Halifax, for crushing. The work will commence in the conglomerate at Mr. Albert Carter's place. Mr. Wright has secured 302 acres, extending from T.E. Oulton's to the Ebenezer Bowser farm. The formation seems to be identical with that at Memramcook and the quantity is unlimited.Foundations for the batteries are being laid at Memramcook Mine under the superintendance of Mr. Benson Gladwin. The mill was built in 1890 for a gold mine at Gay's River, N.S., which proved a failure. The mill is a modern one, cost $50,000 originally and not over 10 of the 50 stamps have been used. The company expect to have it ready for work in December. The stockholders are paying up a second call of 5 per cent. Kent of

S.J. Daily News - Apr. 27, 1864 and Carleton Sentinel - May 7, 1864 and S.J. Daily Globe - Apr. 27, 1864 Gold bearing quartz - We have received a piece of gold-bearing Quartz obtained in the vicinity of Ball's Mountain, about 21 miles up the St. John River. It seems to be a very good specimen. The curious can call at our office and examine it. [NOTE Probably Bald Mountain a.k.a. Mount Champlain]."

URN: 2004 / IDX_Names: Piskahegan Gold;

Feb. 1872 - Copied from: St. Croix Courier - Feb. 15, 1902 30 Years Ago. - The gold discoveries in the parish of St. George announced in the Courier some time since are said to be very valuable. The land upon which the deposit is situated have been purchased and are now owned by Dr. Gove and D.B. White. The property embraces about six hundred acres and is situated near Lake Peltoma. The vein of gold-bearing quartz in some parts is said to be as wide as three feet on the surface. (Feb. 15, 1872)."

St. Andrews Standard - Feb. 7, 1872 and S.J. Daily Telegraph - Feb. 9, 1872 Gold Discovered. - We are happy to state that rich Gold quartz has been found near the Piskahegan river in this county, and that it exists in considerable quantities. A large and influential company will be prepared to work the lodes early in the spring, according to the most approved methods, as practised in Nova Scotia. The Estate comprises nearly 600 acres, with a good water power, and is owned by Dr. Gove and Mr. D.B. White. By reference to M.M. Han's map, the Piskahegan river takes its rise from Lake Peltoma, and empties into the Magaguadavic. The mine will be called the ""Peltoma"". Many years ago we stated that gold had been discovered in the locality indicated, but the exact spot has been forgotten. It is also known that particles of gold were picked up in a stream which runs into one of the Chamcook Lakes. Lead and silver are known to exist in St. George parish. These are no sensational reports but facts."

S.J. Daily News - Feb. 10, 1872 Gold.- The St. Andrews Standard states as a fact that gold exists near Piscohegan River in Charlotte County."

Daily Telegraph - Feb. 10, 1872 Gold In Charlotte County. - We have obtained a history of the discovery of Gold quartz in Peltoma, Parish of St. George, County of Charlotte, which will be read with interest. In the autumn of the year 1838 Dr. Gove, while returning from a visit to a patient in the neighborhood of Peltoma, had his attention distracted to what he supposed was a vein of white marble cropping out of the side of the road. The doctor alighted from his horse to examine the vein, and, on close inspection, he found that it was full of small shiny particles of some metallic substance which he supposed to be mundic. Not having any occasion to visit the locality again, the matter was forgotten until the discovery of gold in California, when the doctor came to the conclusion that the marbles he had seen in Peltoma was quartz, and instead of mundic the shiny particles were gold. In consequence of the hurry and bustle of practice, he did not take time to visit the place, although when opportunity offered he made enquiries in relation thereto. About three years ago, Mr. D.B. White, then teacher of the Superior School, St. Andrews, and who, in his lecture hours, pursued the study of geology - while rambling through the forest gun in hand, or sitting by the lakes engaged in fishing, still continued his favorite study, which, by the way, seems to come natural to many Scotchmen, accidently discovered some veins of quartz. Being prepared, he took his hammer and pick and dug out some specimens, to be examined more carefully when he got home. In the meantime, having accidently heard of the discovery made by Dr. Gove years before in the same vicinity, he submitted the specimens to the doctor's inspection, without informing him where they had been obtained. On examination they were found to contain pieces of gold of great purity, varying in size from ""snipe"" up to ""B.B."" shot. The doctor and Mr. White immediately took steps to secure the lands on which the discovery had been made which was a matter of some difficulty, but in which they have been entirely successful, having now secured an undoubted title. Dr. Gove and Mr. White are now in a position and prepared to offer the estate at private contract, or for proper consideration, admit other parties as joint proprietors, to erect mills, and procure the necessary machinery for crushing the quartz and separating the gold. When the spring opens up, a thorough examination at greater depth will be instituted, and specimens will be sent abroad for analysis, previous to which no definite arrangements can be made with any parties. A few gentlemen of capital have already offered their support, should a company be formed to work the quartz, the veins of which vary in width from a few inches to three feet, and from present appearances are equal to the richest lodes in California. The depth to which they extend of course is at present unknown."

St. Croix Courier - Feb. 15, 1872 Gold Discoveries.- The gold discoveries in the parish of St. George, announced in the Courier some time since are said to be very valuable. The lands upon which the deposit is situated have been purchased and are now owned by Dr. Gove and Mr. D.B. White. The property embraces about 600 acres and is situated near Lake Peltoma. The veins of gold-bearing quartz in some parts is said to be as wide as three feet on the surface."

S.J. Daily Telegraph - Feb. 19, 1872 Gold in Charlotte. - The Courier reports that the veins of gold bearing quartz recently discovered in St. George are in some parts as wide as three feet on the surface."

S.J. Daily News - Feb. 19, 1872 The gold in Charlotte County appears to be bonafide. The property upon which the discovery was made, consisting of 600 acres, has been purchased by Dr. Gove and Mr. D.B. White."

URN: 2004 / IDX_Names: Piskahegan Gold;

St. Croix Courier - Jul. 11, 1872 Peltoma Minerals.- Dr. S.T. Gove and D.B. White, Esq., have recently visited the gold fields of Peltoma, for the purpose of prospecting and securing specimens, with a view to prepare for the working of the enterprise. The mine is believed to be an exceedingly rich one."

Dec. 1891 - Copied from: St. Croix Courier - Dec. 1, 1921 30 years ago. - The Royal Gazette contains notice of applications for license to search for minerals at Piskahegan from James McLean and Dr. Harry Gove."

St. Andrews Beacon - Nov. 12, 1891 It is Gold, not Coal.- What was thought to be an enormous bed of coal on Dr. Gove's property at Piskahegan is now said to be a deposit of much greater value. Prof. Roberts, the well-known mineralogist of Philadelphia, who has been looking after the Musquash anthracite mine, was taken over the land last week by the owner, and he declared that it was not coal, but that it bore gold and silver in seemingly paying quantities. Gleams of gold are visible by the aid of the microscope in pieces of the ore taken from the surface. Prof. Roberts was astonished at the apparent richness and extent of the vein. It is totally unlike the formations around it. The Professor believes that at some period in the misty past this bed of mineral was thrown up from the bowels of the earth by volcanic eruption. Dr. Gove intends when Spring opens to sink a shaft and ascertain if the vein is as rich as Professor Roberts says it is. If it should prove to be, it will be a big bonanza for Charlotte County. Meanwhile, it is just as well for the public to know that the

St. Croix Courier - Nov. 19, 1891 It is said that the property of Dr. Gove of St. Andrews, situated at Piskahegan in this county and which was supposed to contain coal, really contains a valuable deposit of gold. When spring comes, Dr. Gove intends to develope the property and find out just what it does contain."

St. Andrews Beacon - Oct. 22, 1891 Is It a Coal Mine? - In the Piskahegan woods, between St. Andrews and Fredericton, Dr. Gove is the owner of a large tract of land. Until recently it was thought to be of little value, except for the wood that was on it, but since finding of what bears a strong resemblance to coal upon the property, the owner has changed his opinion regarding its value a good deal. A sample which was shown at the BEACON last week looks very much like what would be on the surface of an anthracite bed. The area embraced by what appears to be this coal is very large. Dr. Gove says he will sink a shaft next summer, and satisfy himself as to the quality of the stuff. Should it turn out to be anthracite, as there is every reason to believe it will, it will be a good thing for this section of the Province. The deposit spoken of is about fourteen miles from Blissfield, on the Shore Line railway, and about sixteen miles from Rolling Dam on

St. Croix Courier - Oct. 29, 1891 Dr. Gove, of St. Andrews, has a piece of property on the Piskahegan which he thinks contains coal. The mining boom is spreading."

S.J. Globe - Sep. 19, 1911 Gold Quartz Found in Charlotte County. - Specimen Shown Indicates a Find of Great Value. - (Special to the Globe). - St. Stephen, Sept. 18. - A rich find of gold bearing quartz is reported from the centre of Charlotte County. If the quantity is as good as the quality of the specimen shown here today, it is an important find."

St. Andrews Beacon - Sep. 28, 1911 and Granite Town Greetings - Sep. 29, 1911 and St. Croix Courier - Oct. 5, 1911Gold at Piskahegan. - Rich Find of Precious Metal Made. - Mr. Joseph Johnson claims to have made e rich discovery at Piskahegan, about 30 miles from St. Andrews. About three weeks ago he was out on a shooting expedition when, in searching for a bird he had shot, he came across a protruding piece of what looked like gold quartz. He broke off a piece which showed almost clear gold. He took the quartz to Fredericton and had it assayed. He says it will go $500 to the ton. Mr. Johnson has secured the necessary license to protect his valuable find. This is not the first time that gold has been found at Piskahegan. Some years ago, traces of the precious metal were found on a piece of property owned by the late Dr. Gove. There was such a small quantity of the metal, however that it was not worth working. If Mr. Johnson has discovered the mother lode he has made a rich find."

St. Croix Courier - Aug. 21, 1913 The Gove homestead at St. Andrews was purchased at the estate sale last week by Dr. Henry Gove for $35,000. The Piskahegan property was sold to William Carson for $501."

St. Andrews Beacon - Nov. 13, 1913 Messrs. G.D. Grimmer, F.H. Grimmer, G. Skiff Grimmer, E.P. McColl, Nathan Treadwell, Jacob Toal, and James Storr have been among late visitors to the Piskahegan region."

URN: 2004 / IDX_Names: Piskahegan Gold;
St. Andrews Beacon - Nov. 13, 1913 and St. Croix Courier - Nov. 20, 1913 Seeking Yellow Gold. - For many years there has been more than a suspicion of the existence of gold at Piskahegan, the famous hunting resort in the woods about 30 miles from St. Andrews. Hunters who have gone thither in quest of moose or partridge have returned from time to time with some remarkably alluring specimens of gold quartz. A little over a year ago, Mr. Joseph Johnson, of St. Andrews, brought back with him to town some samples of gold quartz that could not be beaten even at the Klondyke. He had fired at a partridge, he said, and the shot had unloosed the secret of the hills. Just now, there is a mild stampede on for the new gold fields. Staid citizens, men of wealth, men of mining experience in Alaska and Klondyke, and men with no experience, are participating in this 'Rush' for the yellow metal. So far as we can learn, it has been a quiet, most orderly rush. There have been no privations on the trail; no corpses strew the pathway over the hills such as strewed the road to Klondyke or Chusana, except it be the remains of a ginger beer bottle or what is left of some stronger form of beverage or 'bait'. There has been nothing to suggest sufferings from hunger or thirst or anything else. The stampeders have taken their guns along, and while seeking partridge and other game, have been quietly prospecting, in anticipation of the greater rush that is bound to follow when the outside public has learned of this new Eldorado of the East."

St. Andrews Beacon - Nov. 20, 1913 and St. Croix Courier - Nov. 27, 1913 Piskahegan Gold. - A mining man of considerable experience has recently been making an examination of the rocks at Piskahegan. To the Beacon he said that he found considerable float quartz with stringers running through it, carrying gold in minute quantities. This float quartz is spread over a large area, and it does not seem to vary in its percentage of richness. Unless a greater body of gold was found he did not think that it was worth the working. What was regarded as graphite by some was pronounced by this gentleman to be plumbaginous slate. Some of those who have gone over the ground are still pursuing their researches in the hope that they might be able to strike a rich vein."

URN: 2005 / IDX_Names: Eel River Gold;
Sackville Borderer - Aug. 18, 1869 THE EEL RIVER GOLD DISCOVERY. - In regard to the Woodstock ""Acadian"" of Friday says: ""It is well that the very truth should be known. We understand that gold has been found in the locality named. Of the existence of extensive seams of quartz there can be no doubt. Whether this quartz contains gold in sufficient abundance to make its crushing a profitable business is the point, and it is a point which is as yet utterly undecided. But means are in operation by which the value of the quartz will be thoroughly tested, and that soon. Meanwhile it is scarcely worth while for any one to take the gold fever seriously.""""

Sackville Borderer - Jul. 2, 1869 Gold-bearing quartz has been discovered on the property of Mr. David Thomas, Eel River, York County."

Daily Telegraph - Jul. 3, 1869 Important Discovery of Gold at Eel River, York Co. Interesting Particulars. - The Telegraph having been the first of the City Newspapers to announce the discovery of a Gold Mine at Eel River, it was but ""logically pursuing"" the investigation on our part to despatch a special reporter to the interesting and, likely to be, important locality. The area in which the precious metal has actually been found is about an acre in extent, although it is generally believed that the whole gold field is not contained in such narrow limits. It is situated on Eel River, about 100 rods from McAdam's Mill, on a property owned by Mr. D.R. Thomas, and takes the form of a ledge or mound of land, on the surface of which the quartz containing gold is found. Our reporter, in a letter dated the 28th ultimo, states that on that day, and previous to his arrival, the place was visited by a number of gentlemen from Woodstock and Richmond, some of them old Californians, who gave the quartz and the property a thorough examination. Immediately after, a company was formed, who divided the mine into twenty-five shares; fifteen of these were disposed of at the time, realizing about $150 each, the remaining ten being still in the market. Our reporter was shown on the spot a number of specimens of rich gold-bearing quartz that had just been taken from the lead, among them one in particular weighing three and a half ounces, containing a nugget of pure gold about the size of a pea. His curiosity was gratified by examining a small piece of quartz, which at first view gave no apparent indication of enclosing pure gold; but after it was crushed and washed it was found to contain nearly one hundred ""sights"", any of which would have delighted the soul of a practical miner. A portion of the quartz was subjected to a rigid analysis by Professor Bailey of the University, who announced that it contained the precious metal in all its purity. What adds to the value of the property is a never failing stream of water flowing into the river contiguous to the mine. At the date of writing, 28th ult., our reporter anticipated ""a raid"" from the upper country in a few days. This visitation came on the 30th; but we have our reporter to tell his own story, which is necessarily brief though reassuring and important: - ""I came from the mines to Woodstock by yesterday's train. No little excitement prevails in this vicinity to-night. The raid referred to in Monday's letter, was made to-day. A large number of gentlemen from Woodstock, many of whom are old miners, and among them, S. Shea, Esq., visited the mine at Eel River and reported favorably. They explored the River some distance below Murchie's Mill, and found strong indications of gold in the mineral sand. Hammers are sounding in many directions, crushing the quartz which the victorious miner's carried to the town as a trophy of their expedition. Water will be in no little demand in the morning, as the washings are to come off, that the precious metal may de disclosed, to convince many who are still skeptical. I will keep you posted in every move that may be made in the gold direction"". Subsequent telegrams from Woodstock confirm the statements presented above. Last evening, the Editor of the Woodstock Sentinel telegraphed in reply to an inquiry from this office: - ""Specimens of great richness are being found every day. Can't judge justly as to extent."""

URN: 2005 / IDX_Names: Eel River Gold;

Daily Telegraph - Jul. 5, 1869 The Eel River Gold Mine--its Richness Placed Beyond a Doubt--The Mine Closed to the Public! - On Saturday we received a letter from one of the leading citizens of Woodstock, who writes in glowing terms of the new Gold Mine at Eel River. This locality is as most of our readers probably understand, is but ten or eleven miles below Woodstock, the river emptying into the St. John. The Gold district, however, lies some distance up, and immediately adjacent to the Hon. John McAdam's saw mills, and consequently along side of the St. Andrew's railroad. Our Woodstock friend states that Mr. Shea, a reliable gentleman who had also had great experience in the mining region of other countries, expresses the utmost confidence in the mine proving a valuable property. Another correspondent at Woodstock writes as follows, under date of July 1st. ""Yesterday, a number of gentlemen of this town visited the locality, and among them William S. Shea and John McCarthy, who have been a number of years mining in California. They both pronounce the gold to be ""the real thing"" and have no doubt that it exists in the vicinity to a considerable extent. A further and very thorough examination will be made in a few days."" Our own reporter who also dates from Woodstock, 1st. inst. writes briefly: - ""The washings came off this morning and gold was found in abundance. New discoveries were made to day and the mines pronounced invaluable. The excitement still reigns in this upper region, and machinery will be got ready to commence operations at the diggings."" In order to bring our advices from Eel River down to the latest date, we telegraphed on Saturday to the Sentinel office, Woodstock, and on Saturday evening received the following reply:- People anxiously awaiting further developments in regard to the Eel River Gold Mines. Samples are in the hands of numerous practical miners. Expected after they have thoroughly tested them that their quality will be found to be very rich. The California miners say that if the quantity be equal to the quality, it exceeds any thing they have seen. It is thought the quartz will yield one (1) dollar to the pound. The owners have closed the Mines to the public. Estimated that a large quantity of gold has already been carried off in specimens."" The information furnished from the Sentinel office is necessarily couched in cautious phrase, as it ought to be under the circumstances. It is not well to excite too high hopes in the hearts of the venturesome. One cannot help thinking, however, that if the Eel River Mine is what it is represented to be by the very cautious, an impetus will be given to mining investigation which will hardly fail to lead to important results. Gentlemen from this city are about to visit the mine and test the facts which have been furnished through our columns."

S.J. Daily News - Jul. 6, 1869 GOLD AT EEL RIVER. - About ten miles below Woodstock, on the St. Andrews Railway, the line crosses Eel River, where Messrs. John McAdam and Son have erected large saw mills, and for the past year or so have been doing a profitable business. The stream is the boundary between the counties of York and Carleton, and upon a farm on the York side gold was accidentally discovered by the owner, Mr. David Thomas, about two weeks ago. Securing a few specimens of quartz and sand, he submitted them to some returned California miners, who expressed a most favorable opinion upon them, and since then the place has been visited every day by the curious and speculative to ascertain, if possible, the extent and richness of the yield. At first the general impression was that the owner wanted to dispose of his property and took this means to give it a factitious value, but upon closer investigation there appears no room to doubt but that the gold deposits are real. Indeed, those who have had considerable experience in gold mining, to whom specimens have been submitted, declare that the quartz will produce one dollar to the pound, a yield so rich as to cause a latent suspicion that the report is ""too good to be true"". However, the proprietor has taken steps to keep visitors, anxious to obtain specimens, off his property, and it is probable that before long we shall have more reliable information than has yet been obtained of the quality and extent of this auriferous deposit. If there is any truth at all in the reports, it will be established beyond doubt by other ""finds"", as there is a large extent of country in that section possessing exactly the same characteristics of soil as that upon which the discovery is said to have been made, and a thorough exploration will, without doubt, be made at once. In the meantime, we advise everybody to remain calm and undisturbed by the witching stories that will inevitably be told, at least till the presence of gold in sufficient quantities to warrant the getting up of a ""fever"" has been fully established. It is to be hoped that ""prospecting"" will be carried on by men who are thoroughly competent for the work, and if the prospects do not warrant the exciting of the public mind that they will be honest enough to say so before visions of sudden wealth decoy the people from their legitimate pursuits to engage in the toilsome and generally unremunerative labor of gold digging."

St. Andrews Standard - Jul. 7, 1869 The Eel River Gold.- The topic of week has been the discovery at Eel River Mills of a vein of Gold-bearing quartz. The discovery was made by Mr. David R. Thomas, the owner of the land upon which the quartz crops out. The quartz is found on a bluff on the south side of Eel River about fifty rods from the stream, and not far from the mill of Messrs. McAdam, and the Railway Bridge across the river. Of the richness of the quartz which appears to the eye there can be little doubt: and should the vein prove upon inquiry to be extensive, the prospect of the discovery being valuable appears to be good.- These points, however, can be ascertained only by experiments which we hear, Mr. Thomas has caused to be commenced by a practical miner.-[Acadian."

Daily Telegraph - Jul. 13, 1869 and St. Croix Courier - Jul. 15, 1869 Discovery of Gold at Eel River. - A gentleman who lately visited Eel River and whose experience in mines and minerals is very extensive, favored us with a call at our office yesterday. He is a resident of Westmorland and has no interest, whatever, in the Eel River Gold Mines or any other property there, and he has placed in our hands the following memorandum: - Accompanied by a highly respectable and intelligent gentleman I visited ""Eel River"" on Wednesday last and examined the Gold formation lately discovered in that locality. The lode, where uncovered, is about four inches, and evidently Gold bearing. The quartz has a matrix of slate enclosed by what I would call ""Mountain Limestone"", resembling in some degree the ""Whin Rock"" accompanying Gold bearing quartz in Nova Scotia. I had a piece of quartz which was taken from the lode crushed and washed (about half a pound weight) and which gave five-eights of Gold. I consider the prospects are sufficiently encouraging to warrant a judicious expenditure of capital in prospecting the property. The name of the writer of the above and his fellow-traveller, who is also skilled in minerals (as well as learned in the law) may, if desired, be learned at our editorial rooms."

URN: 2005 / IDX_Names: Eel River Gold;

S.J. Daily News - Jul. 13, 1869 The Eel River Gold Discovery. - The Woodstock Acadian, referring to the gold question in its last issue, says:- ""We understand that gold has been found in the locality named. Of the existence of extensive seams of quartz there can be no doubt. Whether this quartz contains gold in sufficient abundance to make its crushing a profitable business is the point which is as yet utterly undecided. But means are in operation by which the value of the quartz will be thoroughly tested, and that soon. Meanwhile it is scarcely worth while for anyone to take the gold fever

Carleton Sentinel - Jul. 13, 1969 Gold.- There exists at present in this community quite an excitement over the recent discovery of gold at Eel River, near McAdam's Mills, on the York County side of the stream, which is here the boundary. The first indications of gold were accidentally discovered by Mr. David Thomas a week or two ago on his farm, and since then daily parties of explorers have visited the place to search among the rock and soil, and these have been rewarded by specimen lumps, quartz and gold bearing sand, which in the opinion of returned Californians, experts in gold finding, are of an extremely rich character, and such as to establish the fact that, if the quantity of the precious deposit corresponds with the quality, there are workings there of a highly profitable character. We have seen some of the specimens - some good sized lumps and sand which to the unskilled eye sparkle, with exceeding richness. From the number of persons who daily visit the ""diggins"" we suppose we shall soon know more as to the extent of the auriferous deposit."

St. Andrews Standard - Jul. 14, 1869 The Eel River Gold Discovery.- In regard to this the Woodstock Acadian of Friday says:- ""It is well that the very truth should be known. We understand that gold has been found in the locality named. Of the existence of extensive seams of quartz there can be no doubt. Whether this quartz contains gold in sufficient abundance to make its crushing a profitable business is the point, and it is a point which is yet utterly undecided. But means are in operation by which the value of the quartz will be thoroughly tested and that soon.- Meanwhile it is scarcely worth while for any one to take the gold fever severely.""

St. Andrews Standard - Jul. 14, 1869 The discovery of gold at Eel River, has been confirmed by a gentleman of experience in mines and minerals, a resident of Westmorland who imparted the information to the Editions of the ""Daily Telegraph & Morning Journal"". He considers the prospects sufficiently encouraging to warrant - ""a judicious expenditure of capital in prospecting the property.""'

Daily Telegraph - Jul. 15, 1869 The Gold Discoveries Confirmed! - We are glad to be in a position to confirm the reported discovery of Gold at Eel River, as first announced in these columns, on the testimony of our own reporters and agents. The tendency of a portion of the Press and people to slight everything belonging to our own country, or question its value, having induces a degree of scepticism in regard to the existence of Gold at Eel River, we despatched a trust worthy correspondent to make a further personal examination, free from all influence which could by any possibility lead to deception, and to report to us as soon as possible. We felt that this was only a part of the services which a daily newspaper emanating from the commercial metropolis of New Brunswick ought to be able to confer on its readers. We have just received the report of our correspondent and shall quote the most essential portion of it: - Agreeably to your instructions I made a second visit to the gold diggings at Eel River on Saturday last, accompanied by Mr. P.R. Bowers of St. Stephen, a most intelligent gentleman. As we were proceeding to examine the mine we met the proprietor Mr. Thomas. He felt somewhat annoyed as it was known that he had closed the mine to the public for thirty days, that being the time given to a gentleman in Woodstock to commence operations at the mine, or forfeit his claim based on a conditional bargain. After explanations had passed Mr. Thomas was, however, good enough to permit us to explore and report as we wished through the Daily Telegraph and Journal. Mr. Bowers and I then removed the sod, uncovered the lode, and taking an axe broke off a piece of quartz at random, of about a pound in weight. We then took and crushed and washed the quartz. The result was that we found that it contained ten nuggets of pure gold, each the size of a pin head. We came to Woodstock by the evening train and proceeded to the drug store of Mr. H.R. Baird that we might test the gold by the application of the proper acids. We did so and the gold proved genuine beyond any doubt. Were the yield, generally to prove equal to that in the piece of quartz which we tested in a rude way, a ton would give about $500. Of course we may have hit upon an unusually good specimen, but, if we did so, it was purely by chance, and while it is possible that much quartz may be found containing less of the precious metal, it is by no means improbable, that much larger ""finds"" may reward enterprise in this new El Dorado at Eel River. At all events such a show of gold surely warrants the opening up and thorough testing of the mines and others that may be found in the same formation. I have been particular in giving you details for I am surprised at the scepticism that exists on the subject. One gentleman asked me if I really believed the gold was got in the mine and not carried to it by a ""California trick"". Another said it was strange if the quartz was gold-bearing that the St. John Telegraph was its only herald in that city, while a St. John paper had thrown cold water on the discovery by the publication of an alleged telegram from Woodstock, denying that the discovery was genuine. It is possible that if I had not once again examined the quartz, in its native bed, and taken the gold out of it in a rough way, by my own hands I might have been argued out of it. As matters stand you may assert most positively that gold-bearing quartz is found in situ at Eel River. It is for practical miners to determine to what extent the precious metal is diffused and to what expense it can be extracted. The above statements, taken along with others, including one that we published on Tuesday, leave no room for doubt that gold-bearing quartz of considerable richness does exist at Eel River. As our correspondent states it is for practical men to determine to what commercial account the discovery can be turned. Our present impression is that this discovery bids fair to make New Brunswick known as one of the gold producing countries of the world."

URN: 2005 / IDX_Names: Eel River Gold;

Morning Freeman - Jul. 15, 1869 It has been asserted that all the rumours about the discovery of gold at Eel River has a very slight foundation. The Woodstock Acadian says:- It is well that the very truth should be known. We understand that gold has been found in the locality named. Of the existence of extensive seams of quartz there can be no doubt. Whether this quartz contains gold in sufficient abundance to make its crushing a profitable business is the point, and it is a point which is yet utterly undecided. But means are in operation by which the value of the quartz will be thoroughly tested and that soon.- Meanwhile it is scarcely worth while for any one to take the gold fever severely."

Daily Morning Telegraph - Jun. 24, 1869 Gold at Eel River, York Co.- A few days ago, Mr. David Thomas, who owns a tannery at Eel River, while breaking up some quartz rock on his land, near McAdam's Mills, discovered that it contained gold. The quartz was examined and the portion lying on the surface was found to contain about fifty dollar's worth of the precious metal. No doubt, the property will be mined immediately. Mr. Thomas refused a handsome offer for the mining right, as soon as gold was known to exist on the land."

St. Andrews Standard - Jun. 30, 1869 and S.J. Daily News - Jul. 3, 1869 Gold it is reported, has been discovered at Canterbury, York Co. We trust we will be in a position to announce the fact of a similar discovery in this county; a specimen is at present in the STANDARD office, and we are only waiting for further developments to make ""assurance

URN: 2006 / IDX_Names: Nerepis / Fairy Stream Gold;

Morning News - Feb. 1, 1858 and N.B. Reporter - Feb. 5, 1858 The Gold Mines. - We are informed that there are upwards of fifty persons at work at the ""gold diggings"", about eight or ten miles from this City, on the Nerepis. Mr. Gard, Silversmith, Germain Street, washed out a small measure of the sand which was taken to him the other day, and it yielded

7s. 6d. worth of gold (say to half a peck measure of sand) which he melted in the crucible, and found it to be of a pure kind. Mr. Gard has the piece of metal in his possession, and any one may see it by calling. - Morning News."

Morning News - Feb. 5, 1858 The Yellow Fever - The Gold Regions. - A correspondent sends us the following account of an expedition to the ""gold regions"" on Tuesday last. He says- From the excitement raised in consequence of the reported gold discoveries in our vicinity, numbers of persons left this city on Tuesday, (being the first favourable day as regards the weather, since the epidemic became contagious in this climate) to hunt for the precious metal. The expeditions consisted of persons on foot, and others with horses and wagons, who wended their way, some through Carleton, and some through Portland by way of the Suspension Bridge, to the vicinity of South Bay, the distance being about ten miles to the diggings from the City. Those on foot had walking sticks, thinking, no doubt, that a slight scrape in the sand would be quite sufficient to bring the yellow stuff to sight; while those in wagons had picks, pans, shovels, &c., quite California-like. Many who were provided with the necessary tools ridiculed those who had not been so thoughtful as to fit themselves out for the expedition in a proper manner. While on the way, the most anxious said that they had worked all their days for gold which came through the hands of other people; but now they were determined to get it for themselves. The sticks (or rather those who carried sticks) of the expedition, found out that Jack Frost had taken possession, and he was not so easy to conquer; so they concluded to watch the operations of those who were better provided for beating at the frozen earth. Many had heaps laid up for transportation, of what they thought to be the precious stuff. But in the course of the day a Californian, or an Australian, chanced to come along, who pronounced the stuff to be mica, and themselves jackasses for taking so much trouble for nothing, when the countenances of every one changed, and the head and spirit fell together. Then a dialogue followed -""is this not the right place?"" ""I guess not."" Says another, ""it must be further away; but it has commenced to storm; we had better make tracks for home"". ""But,"" said another, ""I bought a pair of big boots and a monkey jacket with sleeves, for the purpose of mining; but I suppose they will do again when we find the right place."" One of the number of the party, who called himself a Professor of Geology, when asked if this was the spot, answered ""you must dig and ascertain for yourselves - that's all I can tell you."" ""Well, well,"" said one, ""if we don't benefit ourselves, we should get credit for having benefitted the ferry boat and the suspension bridge."" So they all concluded not to camp out the first night of the expedition. Further progress will be reported. A Miner"

Miramichi Gleaner - Feb. 6, 1858 Discovery of Gold. - It is said that small quantities of gold dust and little nuggets of the precious metal have been discovered in Fairy Stream, above South Bay, a few miles from the City. Specimens said to have been procured there are on exhibition at Mr. Venning's and Mr. Gard's. Hundreds of people have gone from the city, and if reports are correct, the Government have received official intimation of the circumstance. - Constitution."

Carleton Sentinel - Feb. 6, 1858 GOLD DIGGINGS. - St. John papers state that gold has been found in the vicinity of that city, and that large numbers of persons are employed searching for the yellow dust."

Miramichi Gleaner - Feb. 27, 1858 New Brunswick Gold Diggings. - The Temperance Telegraph informs all outsiders that the precise locality of the Gold Mines has not yet been discovered, and that they had better not come to the diggins until it

Morning News - Jan. 29, 1858 New Brunswick Gold. - Mr. Editor. - I have just seen some specimens of pure gold, brought from a small stream running into the Nerepis, about twenty miles from the city. It appears to be equal to the very finest Australian ore. Should the locality prove to be as rich with the auriferous sands, what a grand rush there will be some of these days to that quarter! You can see the gold at Mr. Venning's, in King Street. Yours, &c. A FACT"

URN: 2006 / IDX_Names: Nerepis / Fairy Stream Gold;

N.B. Courier - Jan. 30, 1858 and St. Andrews Standard - Feb. 5, 1858 Gold Discoveries in New Brunswick. - Quite a sensation has been created among our Citizens during the past few days in consequence of the reported discovery of gold in Fairy stream, above South Bay, a few miles from Carleton. - Numbers have gone out to search for the precious metal, and it is said that small quantities of the real dust and a few little nuggets have been found. Whether the precious metal is there in sufficient quantities to reward the searchers, remains to be seen. - New Brunswicker."

URN: 2007 / IDX_Names: Magaguadavic Gold;

Colonial Farmer - Nov. 11, 1872 Gold has been discovered near the mouth of the Magaguadavic. Some of the ore assayed yielded gold to the value of $16 per ton."

St. Croix Courier - Oct. 17, 1872 and S.J. Daily Telegraph - Oct. 18, 1872 and Carleton Sentinel - Oct. 26, 1872 Gold Discovery.- Gold has been found near the mouth of the Magaguadavic, on land owned by Mr. Hector MacKenzie. Some of the ore lately assayed yielded metal to the value of $16 per ton. It is hoped that the deposit will prove to be very valuable."

S.J. Daily News - Oct. 18, 1872 St. Stephen Courier reports ""Gold at mouth of Magaguadavic"" .... See Courier."

URN: 2008 / IDX_Names: Mohannes Gold;

St. Croix Courier - May 6, 1880 and S.J. Daily News - May 7, 1880 More Mines.- We understand specimens of gold and silver ore have been found on the farms of Messrs. Henry Knights and Thomas Casey, Mohannes."

May 2, 1910 - Copied from: St. Croix Courier - May 2, 2000 90 Years Ago. - Specimens of gold and silver ore have been found on the farms of Henry Knight and Thomas Casey at Mohannes."

URN: 2009 / IDX_Names: Moores Mills Gold;

S.J. Daily News - Jul. 2, 1875 Black lead. - The St. Stephen Journal says: - Black lead is said to gave been discovered in paying quantities on Mr. Lyle's Farm at Moore's Mills about three fourths of a mile from the locality where the gold bearing quartz was recently found."

S.J. Daily News - Jul. 3, 1875 Quartz specimens. - Mr. Thomas Main, of the Provincial Building Society, returned from an extended visit to St. Stephen on Dominion Day, much improved in health. He has laid on our table some specimens of gold- bearing quartz from the lately discovered veins at Moore's Mills, seven miles from St. Stephen, near the line of the New Brunswick and Canada Railway. These auriferous pyrites we have had examined by a gentleman of much experience, and he gives as his opinion, that gold exists in the quartz in sufficient quantities to repay a fuller investigation and large development of this source of wealth to our country. We understand that there is a probability of a company being

St. Croix Courier - Jul. 22, 1875 Quartz Specimens.- Mr. Thomas Main, of the Provincial Building Society, returned from an extended visit to St. Stephen on Dominion Day, much improved in health. He has laid on our table some specimens of gold-bearing quartz from the lately discovered veins at Moore's Mills, seven miles from St. Stephen, near the line of the New Brunswick and Canada Railway. These auriferous pyrites we have had examined by a gentleman of much experience and he gives his opinion that gold exists in the quartz in sufficient quantities to re-pay a fuller investigation and large development of this source of wealth to our country. We understand that there is a probability of a company being organized to work in the mine.- St. John News."

S.J. Daily News - Jun. 10, 1875 Gold Discovery. - Messrs. J. Carroll and John Gardiner, two experienced miners, have it appears discovered gold-bearing quartz on the farm of Mr. James Love of Moore's Mills, Charlotte Co. Hearing that they were at work on Monday last, the editor of the Journal paid them a visit. He thus describes: We found them along with ex-Councillor Lindsay and several of the farmers of that neighborhood, hard at work blasting a quartz lode or seam of considerable thickness, and searching for the hidden treasures it was thought to contain, and therefore rather unfavorable for the operations being carried on; but nevertheless Messrs. Carroll and Gardiner succeeded in obtaining a number of pieces of quartz with golden colored specks in them which they considered highly satisfactory and every way encouraging. Where the prospecting is being carried on, there are three quartz lodes, running across the country"

St. Croix Courier - Jun. 10, 1875 and Daily Telegraph - Jun. 11, 1875 Gold At Moore's Mills.- The other day as Mr. John Gardner, the popular clerk of the Watson House, was taking a stroll in the country he discovered near Moore's Mills what he believed to be gold bearing quartz. He had had experience in gold mines in California and on a second visit to the place he took with him Mr. Jeremiah Carroll who was for several years interested in gold mines in Australia. The extent of their united observations was such as to justify them in purchasing a portion of Mr. James B. Love's farm on which the quartz is located. Subsequent examinations have more than confirmed their first impressions. They are still continuing to prospect and several of the specimens when crushed have yielded a considerable share of gold, shewing the quality of the quartz to be quite rich in that valuable mineral. On the land which has been obtained for mining purposes there are three quartz lodes, the central one being about three feet thick. We hope Messrs. Gardner & Carroll will succeed in working their new

URN: 2009 / IDX_Names: Moores Mills Gold;

St. Croix Courier - Jun. 17, 1875 The Gold Discovery.- The recent rains have been unfavorable for prospecting, but it is the intention of the proprietors to make an exhaustive investigation. No"

URN: 2009 / F5 / IDX_Names: Moores Mills Gold; Charlotte County Graphite;

S.J. Daily News - Jul. 2, 1875 Black Lead. - The St. Stephen Journal says:-Black lead is said to have been discovered in paying quantities on Mr. Lyle's Farm at Moore's Mills about three fourths of a mile from the locality where the gold bearing quartz was recently found."

URN: 2010 / IDX_Names: Rollingdam Gold;

S.J. Daily News - Sep. 9, 1869 GOLD IN CHARLOTTE CO. - Specimens of gold bearing quartz, said to be quite rich, have been found on the farm of Mr. George Rigley at the Rollingdam, Charlotte County. There appears to be no doubt of the existence of gold on the streams of that section of the country, although it is doubtful if it will be found in sufficient quantities to make the working profitable for some time to come."

URN: 2010 / G3 / IDX_Names: Rollingdam Gold; Granite;

S.J. Daily Sun - Jun. 21, 1895 Joseph McVey has just finished the construction of two stone abutments for the bridge which the government is erecting at Rollingdam. The bridge will bea covered one, with a seventy-five foot span. Mr. McVey also erected in the Catholic cemetery at Rolling Dam a granite pedestal eight feet high, on which he placed an imposing statue seven feet high representing the resurrection of the Lord. His work was finished in such a satisfactory manner that the congregation made him a handsome present over and above the contract price."

URN: 2011 / IDX_Names: Waweig Gold;

St. Andrews Beacon - Dec. 15, 1911 Mineral Discovered. - The people of Lower Waweig and Bartlett's Mills are mildly excited over the discovery of a bed of mineral, which resembles nickel, on Ellsworth Higgins farm, at the head of the tide, about twelve miles from St. Andrews. The discovery was made by William Nixon and Herb McAdam. The two were trout fishing in the neighborhood, when they were attracted by this seam of glistening metal. The seam is about eighteen inches wide on the surface and runs in sight a considerable distance. Samples of the ore were sent away to be assayed. The assay shows a small percentage of gold and silver, but says nothing of any other ore. Mr. McAdam, who is an old Klondiker, thinks that there is lead in it as well. License to search has been granted to Messrs. McAdam, Nixon and Uriah

URN: 2012 / IDX_Names: Mispec Gold;

Carleton Sentinel - Apr. 16, 1864 A piece of gold bearing quartz is said to have been picked up by a gentleman at Mispeck, a few miles below St. John, and is now on exhibition in the city."

Daily Telegraph - Feb. 8, 1869 Further Development. - Last week we noticed the discovery of a rich lead mine at Mispeck. This week we have the pleasure of announcing on the same authority, that gold has been discovered in the same vicinity, specimens of which may be seen at the Store of D. Sullivan, corner of Charlotte and Union streets."

URN: 2013 / IDX_Names: Point de Bute Gold;

S.J. Daily Sun - Dec. 4, 1893 Amherst, Dec. 2 - A car was loaded yesterday at Aulac with thirty tons of ore from the gold mine on the and at Point de Bute, leased by J. Herbert Wright of St. John. The ore is to be sent to Enfield, N.S., to be tested. Denis Bourgeois has also discovered gold in a conglomerated form at Fox Creek, Wallace."

Moncton Transcript - Dec. 30, 1893 Prospecting for Gold.- The interest in prospecting for gold has not yet abated. About 100 more areas have been taken up this week at Westmorland Point by parties in Sackville. This makes about 450 areas covering nearly 200 acres, and extends from Ebenezer Bowder's in Upper Point de Bute to Fort Cumberland."

Chignecto Post - Nov. 14, 1893 and Moncton Daily Times - Nov. 17, 1893 (or later) Gold mining at Pt. de Bute is progressing favorably. Five men are employed and the outlook is promising. Besides large quantities of gold bearing conglomerate, some samples of pure gold and various mineralogical curiosities have been found. Recently a piece of stone was found bearing distinctly and strongly the smell of the sea. It is probable that when the St. John explorers get down below their 100 foot limit they will strike the Atlantic Ocean and make their fortunes by fitting up Pt. de Bute as a

S.J. Daily Sun - Nov. 24, 1893 Gold at Point de Bute. - Mention was made in the Sun some time ago of the discovery of a gold mine at Point de Bute, Westmorland Co. The samples have been compared with those discovered at the Memramcook mines, and they were found to be very much alike in composition. It is believed that the ore exists in quantities to pay for the mining, and a company has been formed and shares taken. A gentleman who visited the mines a few days ago broke off a small piece of the ore and took it to Amherst, where he disposed of it for $5. It is understood that the company purpose securing a plant as soon as possible."

URN: 2013 / IDX_Names: Point de Bute Gold;

S.J. Daily Sun - Nov. 27, 1893 and Moncton Transcript - Nov. 27, 1893 Westmorland. - The finding of gold at Pt. de Bute some weeks ago has made quite an excitement around here. There are now five men at work blasting. A carload of quartz is to be sent to Nova Scotia, besides a number of barrels to New York and Boston, to be tested."

Weekly Record - Fri. Oct. 6, 1893 Gold Find.- Point de Bute notes speak of the discovery of gold at that place. Two hundred mining areas have been laid off by Surveyor Lund and probably one hundred more will be laid. The lead of conglomerate is the same as that at Memramcook and the quantity inexhaustible. J.H. Wright of St. John who is taking up the areas has every confidence in his investment. The Telegraph make the somewhat doubtful statement that the deposit is 4 miles in length and 100 feet long and 100 feet deep. It would appear that nature has placed the deposit in an elongated cube of those dimensions removing rocks &c. in order that it may be easily worked by the St. John people."

Moncton Daily Times - Oct. 10, 1893 Gold at Point De Bute. - Gold has been found in extensive deposits of conglomerate at Point de Bute ridge, and on Saturday, Surveyor Lund of Sackville was at work staking out areas. Mr. J. Herbert Wright of St. John has taken out a mining license for a large number of areas and intends working the property. The deposit is extensive, and through some of the finest farms in the section. Mr. Wright has some samples of the ore which he collected on Saturday and which has the appearance of being rich in the yellow metal. - Amherst Press."

URN: 2014 / IDX_Names: Pocologan Gold;

S.J. Daily News - Dec. 6, 1880 Gold at Popologan. - Some parties belonging to Searsport, Maine, have obtained a grant of two square miles of land on Popologan stream, close to the line of the Grand Southern Railway, and are now said to be finding gold in paying quantities. Mr. Knight, of Musquash, is about to erect gold crushing works at Little River in the same

St. Croix Courier - Dec. 16, 1897 Those interested in the gold mine at Pocologan are still working with a view to operating it. Samples of the quartz have been tested by experts in Nova Scotia and Mr. Fair's son in Montana. Reports from the former are very encouraging, but those from the latter are not so hopeful. The Nova Scotia experts think there is silver, gold and copper in the quartz, but Mr. Fair thinks it is mostly copper with a little gold. Further investigation will be made at another opening in the mine and if results justify it the mine will be worked."

St. Croix Courier - Oct. 21, 1897 A Klondyke in Charlotte. - Gold Bearing QuartzFound at Pocologan - St. John People Interested. - Fairville, St. John, has been thrown into a great whirl of excitement over the alleged finding of a rich vein of gold by some of its residents, and if the anticipations of the owners of the mine are in the slightest way realized the wealth of the Klondyke will be rapidly surpassed and the rushing tide of lucre seekers turned in the direction of New Brunswick. Messrs. Robert Fair, Wm. Miller, James Wood and Wm. Stymest are the lucky owners of the mine, which is situated at Pocologan, in Charlotte County, just thirty-two miles from Fairville. The gentlemen have been prospecting for some time, and have gathered a large quantity of quartz, some of which has been submitted to Mr. W. F. Best, who is examining it now. Mr. Fair also sent some specimens to his son in Butte, Mont., who is the owner of a large mine in Montana. The son's answer was that the quartz was worth about $1.60 a hundredweight. This, of course, would hardly pay to work, but as the samples were all taken from the surface of the earth it is thought the value would greatly increase at a distance in the ground. Messrs. Fair, Miller, Wood and Stymest returned from the mine on Friday evening after spending the week there. They were greatly pleased with the results, and had several large pieces of quartz with them in which the glittering gold could be plainly seen. The vein in which this gold was found is four feet wide and is believed to be very deep and long. Some of the samples will be sent to Nova Scotia for inspection. The mine is an old one which was worked unsuccessfully about fifteen years ago. The present owners, however, are thoroughly convinced that the first prospectors made a mistake when they ceased operations. If the mine turns out to be a success it will be a great advantage over the Klondyke fields, as little or no difficulties or hardships will be experienced in getting to it; winter will have no terrors, and shipments can be easily made. No shares have been offered for sale as yet, but when they are they will be eagerly taken up, as already enthusiasm over the discovery is strong. It is just possible that Col. Domville, M.P., has acted hastily in taking his English company to the Klondyke, when there is every prospect of finding as much wealth so near home."

St. Andrews Beacon - Oct. 21, 1897 Samples of gold-bearing quartz have been taken from a deposit at Pocologan in this County. The surface samples are not very rich, but it is thought the value would improve the deeper it went. The mine is owned by Messrs. Fair, Miller, Wood and Stymest, of Fairville, St. John."

Gazette - Sep. 22, 1897 Gold in New Brunswick. - There is a quartette of youths of Fairville who claim they have struck a Klondyke in New Brunswick territory. The find is in the vicinityof Pocologan and New River and according to the prospectors is rich in gold ore. Last week the four returned from their gold fields with samples of ore and specimens which they took to analyst Best to report on. Mr. Best it is said pronounced the specimens as good samples of copper ore with a faint trace of gold therein. The quartette are highly elated over their discovery and they are talking of forming a company. Mr. Robert Fair, a capitalist of Fairville, Mr. Wm. Miller, a well known carpenter, Mr. James Wood, an experienced man with dynamite and Mr. William Stymest, who is thoroughly versed in N.B. minerals will compose the company. The party have secured drills, dynamite, derricks, crowbars, etc., and will again leave for the gold fields at an early date."

URN: 2014 / IDX_Names: Pocologan Gold;

St. Croix Courier - Apr. 28, 1898 Lepreaux. - The gold mine at Pocologan does not seem to create much excitement. One house has been erected and the company are sinking a shaft, which looks as though they felt sure of finding something to

St. Croix Courier - Aug. 18, 1898 Lepreaux. - Two young men were discovered this morning busily engaged in washing a pan of dirt, and from the utensils and quicksilver used, it is supposed they have found gold. They seemed very much pleased with their find."

Gazette - Feb. 14, 1898 and St. Andrews Beacon - Feb. 17, 1898 Charlotte County Gold. - Samples of gold quartz from the

Charlotte County gold fields which were sent to Halifax to be tested by expert analysts have been received together with good reports thereon. The Fairville gentlemen who are interested in the gold are so elated over the report that they have decided to form a company to work the claim. a meeting is shortly to be called by the promoters."

St. Croix Courier - Jun. 9, 1898 Lepreaux. - The mining excitement seems to be over, just at present, and war is all the

St. Andrews Beacon - May 12, 1898 The mine at Pocologan, in which Mr. Robert Fair,of Fairville, and others are interested, has been yielding considerable copper ore lately. Four men have been at work at it and the result is said to be most satisfactory to the owners. So far gold has not been discovered in any large quantities. - Globe"

St. Croix Courier - Dec. 14, 1899 Lepreau. - The copper mine at Pocologan is doing bravely. The company talk of wonderful things being done in the future. Both copper and gold have been found there, but no one seems to have located the old silvermine that was found so many years ago and lost again. The writer of this has seen the spectacle bows, shoe buckles and shawl pin, that were made from the silver found at Pocologan at that time, but it seemed impossible ever after to find the same place, although every effort was made to do so."

URN: 2015 / IDX_Names: Pokiok Gold;

Daily Telegraph - Aug. 20, 1880 New Mining Company. - A memorandum of association has been filed in the Provincial Secretary's office by Henry A. Connell, G.W. Vanwart, F.H. Hale, of Woodstock, and Thomas McDonald, Oliver Speer, of Richmond, and D.A. Grant, of Grafton, Carleton County, James Rouse, of Dumfries, W.H. Patterson, of Canterbury, E.C. Freeze, of Fredericton, J. Henry Cochran, of Pennsylvania, and William Thompson, of Plainfield, New Jersey, for the incorporation of a a company to be styled the Poquiock Mining Company. The object of the company is mining and developing the precious metals near Poquiock, York County, with a capital of $250,000, to be divided into 50,000 shares of $5 each. The office or principal place of business is to be at Woodstock."

Weekly Freeman - Aug. 28, 1880 A stock company, to be styled the Poquiock Mining Co., is about to commence mining operations at Poquiock, York Co."

URN: 2015 / IDX_Names: Pokiok Gold;

Daily Telegraph - Sep. 17, 1880 Gold Discoveries in New Brunswick. - The following was handed to our Woodstock correspondent, a day or two ago, for publication in the Telegraph:- In company with some of the stockholders of the Poquiock Gold Mine, [York County] I visited the mine and at the request of James Rouse, M.D., proprietor of the above mine. I washed three pans of dirt and to my own satisfaction and that of the rest of the party found gold in quite a quantity to the value of ten or twelve cents to the pan at the least, which I consider quartz gold. This I am satisfied would be a good prospect in any country. One charge of powder threw out a quantity of rock from which I procured some of the sand in which I found the gold. I examined the lode and from the prospects should judge the mine to be rich. (Signed) John G. Vanwart. We the undersigned visited the mine owned by James Rouse, M.D, at Poquiock, York County, New Brunswick, and after minute examination fully concur with the statement of Mr. John G. Vanwart. (Signed) G.W. Vanwart, H.C. Connell, F.H. Hale. Besides this alluvial gold thus found in the County of York, parts of Carleton, etc., of which Mr. Longstaff while resident in the Upper St. John made a high estimate, four specimens of gold bearing quartz have been found in the mine above mentioned, in which Dr. Rouse is interested. They are considered similar to those found in the Nova Scotia mines, more particularly the Waverley, with some of which they have been compared. Our correspondent, who has examined the Nova Scotia gold mines very carefully, is most favorably impressed with these specimens, and with various points of resemblance in the respective mining localities in the two provinces. In particular, between Poquiock and Oldham in Nova Scotia, there are many marked points of resemblance. It is hoped that Dr. Rouse and his associates may find this enterprise worthy of their attention, and that they will be encouraged to develop the mine, and thus furnish employment to a number of our people and add to the industrial resources of the Province. If their experience should be favorable, other lodes of gold bearing quartz in different parts of the Province will soon be tested. In the vicinity of St. George, in the County of Charlotte, there are such rocks. On the road leaving the village towards St. Andrews, there can be seen a rising hill on the left, a short distance from the town, where on the surface of the ground a rock resembling the whin rock of the Waverley is found. The article which we lately published on the gold areas of New Brunswick, indicated the localities in which search for gold might be hopefully undertaken. Mr. Longstaff, above referred to, now resident at Digby, N.S., proved beyond a doubt some time ago, that gold-bearing rock was found on the Shiketehawk stream, in Carleton County, though he did not succeed in getting a company organized to undertake to test the matter. There is a disposition now, more especially in the United States, and also to some extent among ourselves, to take more stock in mining enterprise than formerly. They should only be taken up under good advice, and on mature consideration, but, so entered upon, there are many reasons to believe that districts in New Brunswick may yet be as much heard of as the mineral regions of Maine, which are now exciting so much interest, or as the gold fields of Nova Scotia which have obtained a

Carleton Sentinel, Sep. 18, 1880 A Visit to Poquiock Gold Mine. - Woodstock, Sept. 10, 1880. - In company with some of the stockholders, I visited the above mentioned mine, and at the request of Jas. Rouse, M.D., proprietor of the above mine, I washed three pans of dirt, and to my satisfaction and that of the rest of the party found gold in quite a quantity - to the value of ten or twelve cents to the pan at the least, which I considered quartz gold. This, I am satisfied, would be a good prospect in any country. One charge of powder threw out a quantity of rock from which I procured some of the sand in which we found the gold. I examined the lode and, from the prospects, would judge the mine to be rich. John G. VanWart. We, the undersigned, visited the mine owned by Jas. Rouse, M.D., at Poquiock, York Co., N.B., and after minute examination fully concur with the statements of John G. VanWart. G.W. VanWart, H.A. Connell, F.H. Hale."

Gazette - Jan. 8, 1898 Gold in York County. - It is now reported that gold quartz of rich quality has been discovered in the parish of Dumfries, York county."

URN: 2016 / IDX_Names: South Oromocto Gold;

N.B. Reporter - Oct. 11, 1861 and St. Andrews Standard - Oct. 19, 1861 and Morning News - Oct. 14, 1861 and Carleton Sentinel - Oct. 12, 1861 and Miramichi Gleaner - Oct. 19, 1861 Gold! Gold!! - We understand that Gold has been discovered on the South Branch of the Oromocto in the County of Sunbury. A portion of the quartz picked up lately has been sent to Boston for chemical examination, and has realized $6.00 for the finder."

Morning News - Oct. 23, 1861 and N.B. Reporter - Oct. 25, 1861 Gold in New Brunswick. - There are no less than eight men hard at work at the quartz rock in a certain locality up country, and what is more they are getting enough gold out to pay them for their trouble. As soon as they get deeper into the ""lead"" they expect to do a good business."

URN: 2018 / IDX_Names: Anagance Manganese;

Moncton Daily Times - Jul. 6, 1880 and Daily Telegraph - Jul. 7, 1880 Important Discovery. - A rich vein of manganese has been discovered on the farm of Mr. David Hayward, some two miles from Anagance Station. It is reported that this discovery was made by a large tree being blown up by the roots, thus exposing this valuable mineral. It is to be hoped that immediate efforts may be made to develop this deposit and that it may prove remunerative."

Daily Telegraph - May 19, 1882 New Manganese Discovery. - Mr. George W. Fowler, student at law, is credited with having discovered a very valuable find of manganese within a few miles of Sussex station. Specimens shown to our correspondent are very fine."

URN: 2019 / IDX_Names: Point de Bute Manganese;

Dorchester Spectator Dec. 4, 1897. MANGANESE. - It is reported that large quantities of manganese have been found in a bog near Point de Bute. It is said to be fifteen feet deep and of good quality."

Daily Times - Dec. 7, 1897Manganese at Pt. de Bute. - Alfred Tingley Has Sold His Swamp for $1,000: Operations to Begin Next Spring. - (Amherst News) - It turns out that the deposit of black manganese at Upper de Bute is a valuable one. The ore is contained in a mud swamp owned by Alfred Tingley. It is only a few rods from his house and like the majority of such swamps was of very little use to the owner. The mud differs from that usually found in such places in that it was of little value as manure. Instead of promoting vegetable growth it retarded it, and in summer time grass would not grow upon it. Some time ago a man from Albert county, representing an American company, called upon Mr. Tingley and asked to be allowed to test the swamp for manganese. He did so and as a result offered the owner $200 for the right to begin and carry on operations. Mr. Tingley partly agreed to accept the offer; but after the man went away other parties put in an appearance and made him much more tempting offers. As a consequence when the Albert County man returned, which he did in a few weeks, Mr. Tingley asked a thousand dollars for his swamp and a certain per cent on all manganese raised. This offer was finally accepted and the papers drawn up. The company expect to begin operations in the spring. They will erect a drying house and stall the necessary machinery for handling the manganese. It will be shipped to the states. The same company have, it is understood, secured large deposits in Albert county."

URN: 2020 / IDX_Names: Dover Road Manganese;

S.J. Globe - Jan. 3, 1890 and Daily Telegraph - Jan. 4, 1890 That Manganese Find. - Mr. John Duncan, baker of this city, will probably be a very wealthy man one of these days if the manganese recently discovered turns out well. The mines are situated on the Dover Road, three miles from Moncton. Mr. Duncan some time ago sold his farm but reserved ownership of all minerals. The specimens gathered are said to be very fine."

Moncton Daily Times - Jan. 4, 1890 and Moncton Daily Transcript - Jan. 4, 1890 Discovery of Manganese.- The St. John Globe says:- John Duncan, a baker of this city, will probably be a very wealthy man one of these days if the manganese recently discovered turns out well. The mines are situated on Dover Road, three miles from Moncton. Duncan some time ago sold his farm but reserved ownership of all minerals. Specimens gathered are said to be very fine."

URN: 2021 / IDX_Names: Hammond River Manganese;

Daily Telegraph - Aug. 22, 1882 Manganese has been discovered near the bank of the Hammond River in the Parish of Upham, three miles from Upham Station. It has chiefly been found on the farm of Mr. Wm. DeBow, and there are indications of it on other farms. The discovery was learned by land caving in along the banks of the river. The specimens have been tested and found to be first quality, while experts who have visited the locality pronounce it rich in the mineral."

Chignecto Post - Aug. 24, 1882 Manganese has been found in the parish of Uphamon the DeBow farm, by the caving in of the bank of the Hammond River."

URN: 2023 / IDX_Names: Moores Mills Bog Manganese;
S.J. Globe - Oct. 19, 1898 St. Stephen, Oct. 18. - A considerable quantity of the bog ore of manganese of a very fine quality has been found near Moore's Mills, and may prove to be of commercial value."

Oct. 1898 - Copied from: St. Croix Courier - Oct. 25, 1928 30 Years Ago. - A considerable quantity of the bog ore of manganese of a very fine quality has been found near Moore's Mills, and may prove to be of commercial value."

URN: 2024 / IDX_Names: Cocagne Copper;
Moncton Daily Transcript - Oct. 19, 1891 and Moncton Daily Times - Oct. 20, 1891 Copper Mine at Cocagne.- Mr. Philip Gogan has discovered a copper mine on his property in Poirier Settlement. The lead is about five feet in depth."

Richibucto Review - Oct. 22, 1891 Mr. Philip Gogan is reported to have discovered a copper mine on his property at

URN: 2025 / IDX_Names: Canaan River Copper;
Daily Telegraph - Oct. 12, 1882 and Weekly Transcript - Oct. 18, 1882 Mining. - The silver and copper mine, which was located near Canaan Station by Mr. W.A. McKim a few days ago, promises to be a rich find. A company has been formed consisting of Messrs. Warren Taylor and Alfred Steeves. John Taylor, station agent at Salisbury, and a party of men from Salisbury went north, on Monday, to commence to open it up. Mr. E. McKim, who is an experienced miner, is foreman. -

URN: 2025 / IDX_Names: Canaan River Copper;
Chignecto Post - Oct. 12, 1882 and Moncton Daily Times - Oct. 13, 1882 A find of copper and silver was made some days ago near Canaan Station by Mr. W.A. McKim. A company has been formed consisting of Messrs. Warren Taylor, Alfred Steeves and John Taylor to prospect it. A party of men, under Mr. McKim, who is an experienced miner, are now opening it up. They believe the indications are promising."

URN: 2026 / IDX_Names: Steadman Copper Mine (Crooked Creek);
Daily Telegraph - Sep. 4, 1880 Andre Cushing, Esq., of Andre Cushing & Co., St. John; Mr. Allston Cushing, of Cushing & Clark, Salisbury; and Mr. John Steadman, were in Hopewell on Wednesday, in connexion, it is said, with some copper mines in that vicinity, which will be developed at an early date."

Chignecto Post - Jan. 14, 1886 Albert.- Those everlasting hills extending west from Mount Shepody, through the Chemical Work, Caledonia, New Ireland, to and through Alma, are still haunted by miners. A new company (American) has just commenced near the Steadman digging, on Crooked Creek, with confidence of finding the bed rock of gold and copper."

S.J. Daily Sun - Jan. 25, 1886 and Moncton Daily Times - Jan. 26, 1886 and Fredericton Capital - Jan. 26, 1886 and Daily Telegraph - Jan. 27, 1886 and S.J. Globe - Jan. 26, 1886 Mining in Albert County. - A number of Boston capitalists, represented by a Mr. Sargent, who has been in the village of Albert for the last few weeks, have purchased the Steadman property at Crooked Creek and cleared out the beds. We understand that good silver and tin have been found, and that the prospects are quite good. It is said they intend putting in a steam crusher at a cost of $25,000. We trust they may strike it rich, and that this may lead to further enterprise of the same kind. The prospect at present seems brighter for the development in a partial manner at least, of our vast mineral resources, which we believe require only enterprise and capital to render profitable investments. - Observer."

Chignecto Post - Jan. 28, 1886 The Observer says that a number of Boston capitalists, represented by a Mr. Sargent, who has been in the village of Albert for the last few weeks, have purchased the Steadman property in Crooked Creek and cleared out the beds. We understand that good silver and tin have been found, and that the prospects are quite good. It is said they intend putting in a steam crusher, at a cost of $25,000."

Moncton Daily Times - Jun. 3, 1887 Albert Co. - Captain F.J. Sargent returned to Albert last Tuesday, from Boston and intends actively working the Crooked Creek mines. We hope to be able to make a good report of the work in a short time."

Moncton Daily Times - May 16, 1887 Albert Co. - Capt. Sargant, of Boston, who has been working the Forestdale mines, is now in Boston having a crusher constructed, so soon as completed he will return and place it in operation. The ore shipped from the mines yielded a good percentage of gold. The working of these mines will benefit the village of Albert in particular, and the country at large. - Observer."

S.J. Daily Sun - Nov. 7, 1891 Albert County. - Prospecting for Gold in Albert. - (From a member of the Sun staff). - Albert, Nov. 5. - ... When one thinks of the failure of the Albert mines, the closing down of the stone quarries and the failure of other past enterprises, he is compelled to admire the richness of a county capable of standing such a drain. ... The greed of gold is not unknown in this region, and many men in days gone by spent some time and money seeking to extract the rich metal from the rocks that abound within easy distance of tide water. None of them grew rich out of the business. Captain Sergeant, the proprietor of the Globe hotel here, has done a great deal of prospecting for gold within four miles of Albert. He showed the Sun correspondent some very fine specimens that he keeps in his office, but he did not talk very encouragingly about the prospect of finding gold in paying quantities. He bought 200 acres of land, drove in a tunnel some seventy feet, built a bridge and roadway to the property, spending considerably over a thousand dollars in the operation. The ore is so mixed with copper, etc., that, he says, it will not pay to work, though some of the samples yielded a goodly amount of the precious metal on analysis. He is not working there now. Mr Sergeant is no novice in gold mining. He had quite a large experience at Elmsdale, Nova Scotia, where he built somewhat extensive works. He says the Albert Formation is the same as that of Nova Scotia, and believes that some lucky man will yet strike it rich. He does not think much of the new provincial mining regulations, which permits a party obtaining a license to dig up a man's farm just as he likes without even obtaining the land owner's consent. Mr. Sergeant liked Albert so well that he opened a hotel here, and, judging by the patronage it receives, he is in fair way to accumulate a pot of gold, though not in the manner he originally intended. Mr. Sergeant is a subscriber to the Daily Sun, and there was quite a row among his guests last evening when it failed to arrive. The proprietor made them all happy by going out and borrowing a neighbour's copy. ......Manganese is said to exist in fairly good quantity about a mile back of Riverside, but no one has worked at it yet. ...."

URN: 2026 / A2 / IDX_Names: Steadman Copper Mine (Crooked Creek); Albert / Kings County Oil Shales;

Moncton Daily Transcript - Jan. 30, 1886 and S.J. Globe - Jan. 30, 1886 MINING IN ALBERT. - The Steadman mine on Crooked Creek has been worked for some time past, by Samuel H. Cochrane and Frank J. Sargent of Boston. The prospects are said to be good for gold and silver and there are indications of tin or some other ore not yet known - We might here say that the Englishmen, who recently examined the Baltimore shale, have not made any definite arrangements for proceeding with the work, and the figures recently given by many of our contemporaries are decidedly wrong. It is by noising abroad such silly and buncombe statements that the mining resources of Albert County have been incalculably injured, and honest mining concerns are losing faith in the county. We have frequently spoken at length about this matter, and hope that those who are anxious to give the public information will first go to the proper parties to get it. - Maple Leaf."

URN: 2027 / E5 / GYP / Y1 / LIME / D7 / IDX_Names: Bull Moose Hill Iron; Sussex/ Plumwesweep Salt; Gypsum; Salt Springs Salt; Lime - General; Kings County Coal;

Daily Telegraph - Aug. 13, 1880 Kings County. - ..... Coal. - Some search has been made for coal, but hitherto with only partial success. Some loads of bituminous coal, closely resembling that of the Springhill mines, has been mined quite near the surface on the lowlands near Stone's Brook, at Dunsinane mills. Specimens of unmistakeableAlbertite were found some years ago in Mechanics' Settlement, and some land property changed hands at a good valuation in consequence, but the discovery was not further developed. More recently, Albertite has been discovered on the lands of Mr. George Teakles, at the head of South Branch, Cardwell, and a considerable effort has been made to test its value. Salt has been manufactured on a small scale for agreat many years beside the old Post Road, and midway between Penobsquis and Sussex. The manufacture is carried on by Mr. Mercer, the lessee of the property, by boiling in iron boilers, producing ten or twelve bushels a day, we are told. The excellent quality of this salt for dairy purposes is so well established that good butter makers in the vicinity will have no other, even though they may have to pay double the cost of other salt for it. Purchasers of butter in the city also not infrequently inquire as to what salt butter which they propose to purchase is preserved with, a preference being given, whether on real or imaginary grounds, for butter flavored with Sussex salt. Of several natural brine springs in the county only one other has yet been utilised. This is located at Salt Springs Settlement, Upham, some three or four miles distant from the St. Martins and Upham railway. The spring is a remarkably large one, and the salt produced a few years ago was apparently of equal excellence with the Sussex salt. The works are now out of repair and idle. There are here some remarkable indications that the salt deposit is not far from the surface, as in several places the earth has settled and fallen in, in some spots quite recently, which is believed to be occasioned by cavities underneath formed from the dissolution of the salt, which finds it way to the surface in the brine of the spring. It is not probable that the manufacture of salt will even be productive of large profit until a stronger brine or the rock salt itself is reached by boring as is done at Clinton, Seaforth and Goderich, Ontario. Salt is there very largely and profitably manufactured out of brine formed in the salt beds a thousand feet deep and pumped to the surface, boiled in immense boilers 120 feet long and 20 feet wide. There is good reason to believe that salt would be struck at half this depth at some points in Kings if borings were made and that the venture would prove a highly profitable one if undertaken. Plaster, etc. - Among other economical mineral products are plaster orgypsum, which is found in several sections of Kings and has proved an excellent fertilizer. Notwithstanding that it is native to Sussex there are still extensive importations of plaster chiefly from Petitcodiac. Lime stone crops out extensively in almost every section of Kings. Kilns for burning it are also quite numerous, including a large one on the farm of Mr. Wm. Pugsley atSussex. Lime is coming more and more into use as a fertilizer and with excellent results. Iron ore of excellent quality was reported yearsago as existing at Bullmoose Hill, in Springfield, and bog iron in several localities near Sussex, but as yet nothing has been done to develop their value."

URN: 2027 / G3 / IDX_Names: Bull Moose Hill Iron; Granite;

N.B. Courier - Aug. 1, 1840 and Royal Gazette - Aug. 5, 1840 and St. Andrews Standard - Aug. 7, 1840 and Morning News - Aug. 3, 1840 Provincial Geology. - We are informed that an extensive deposit of Iron Ore has recently been discovered at the Head of Belleisle Bay, by Dr. Gesner, and his son. The importance of the labours of our Provincial Geologist are daily becoming more obvious. Forty men, we learn, are employed in quarrying the Granite found by him on the banks of the Saint John in 1838, and a number of vessels are now engaged in transporting the beautiful and durable rock to this City, where it is extensively used in rebuilding the Burnt District, being much cheaper and preferable to the imported varieties. We are informed that the jail at Kingston is to be built of this superior material. It has found its way to Fredericton also, and will doubtless soon become an article of commerce. It is pleasing to observe that the natural resources of the country, by the foresight of the Provincial Government, are becoming better known, and practically applied to the credit and advantage

URN: 2027 / G3 / LIME / GEOL / IDX_Names: Bull Moose Hill Iron; Granite; Lime - General; Geology - General;

Weekly Observer - Mar. 3, 1840 Second Report on the Geology of New Brunswick by Dr. Gesner. - We have perused this Second Report with great pleasure, first, because it is written in a very easy and pleasing style, avoiding technicalities as muchas possible, and secondly, because it conveys the gratifying information that New Brunswick possesses within herself hidden treasures, greater even than were anticipated by the most sanguine, and which lead us to expect that further and richer discoveries may follow those which have already been made by the enthusiastic zeal and laborious research of our Provincial Geologist. The tract of country under examinations the past season is situated eastward of the Saint John. A line from the entrance of Bellisle River to Shediac will mark its northern side; its eastern limits are fixed at Cape Tormentine and its southern side lies along the shore of the Bay of Fundy, and the Nova Scotia boundary, or isthmus between the Cumberland Basin and the Gulf of St. Lawrence. The length of this tract is about one hundred and thirty miles, and its mean breadth forty-five miles; it embraces the Counties of Kings, St. John, and Westmorland. We have not sufficient knowledge of Geology to follow the writer through the various details connected with the survey of this valuable portion of the Province, but would barely notice some of the leading features of the Report. Of these, the great Coal Field of the County of Westmorland is by far the most important and striking in its character. This great Coal field commences at Shediac and extends along the eastern shore as far as Tedish River, thence running along an irregular line southward it approaches Sackville and meets the new red sand stone near Dorchester Island. A line drawn from Shediac to the Petitcodiac about ten miles below the Bend, marks its northern side. To the westward of the Petitcodiac the coal field becomes more narrow, but maintains an average breadth of ten miles westward until it reaches Sussex Vale; here its extremity is forked; one branch is curved northwest until it meets the source of 6 Studholm's Mill stream, the other becomes very narrow, and disappears a few miles southwest of Sussex church. The whole length of this coal field is upwards of seventy miles, and its average breadth about seventeen miles. The remaining part of the country explored is composed chiefly of new red sandstone, and conglomerate, containing numerous deposits of gypsum, limestone and rock salt, with mineral springs. At the close of the season, Dr. Gesner discovered in the greywacke system, near this city, some fossil trees, accompanied with anthracite coal; and fine specimens of the cactus accompanying indications of the same description of coal, were found in Charlotte street, near the residence of his Worship the Mayor, and also in King's Square. - These discoveries were made in consequence of the cuttings made for levelling the streets, and open a wide and curious field for enquiry. The fossil trees were discovered on the north side of Little River near the Bridge, upon land owned by J.R. Partelow, Esq., in a quarry which had been opened to supply stone for the new Penitentiary. In removing the rock, the trunks of two large fossil trees were exposed, and several of smaller dimensions. The largest was two and a half feet in diameter, and ten feet of its trunk was exposed; the other was sixteen inches in diameter and nine feet long - both were nearly cylindrical. The original trunks are now composed of sandstone, anthracite and sulphuret of iron; the vegetable fibre of the plants still remains distinct, and is now represented by these minerals. These trees belong to the fir tribe; other small plants and impressions of leaves were also found, among them a calamite, a species of reed. According to the latest discoveries, these plants belong to the first classes of vegetables that ever flourished on the earth; they are different from any now growing on its surface, and are relics whose history cannot be traced, reminding the Geologist of the changes each kingdom of organic nature has sustained, since they were first established on this globe. The various discoveries which were made public by Dr. Gesner's first Report, have already, in several instances, been made available, and we have no doubt that those comprised in this second report will call theenergy and enterprise of the people of the Province into operation most profitably. The marl discovered near St. Andrews last year, has already been extensively employed in enriching the soil - the excellent granite on the St. John, at the head of the Reach, is now being quarriedvery extensively, and we shall this year see it employed in the rebuilding of the burnt district, and be quite independent both of Nova Scotia and the United States for the necessary supply of that most useful and durable material. But for the researches of the Provincial Geologist this granite might have remained undiscovered 7 for many years, and we should still have continued importing an article which exists so very near to us, in abundant quantity, and of superior quality.

Limestone has been discovered in many places and pointed out to the neighboring farmers, who have almost invariably availed themselves of it. Numerous lime kilns have been established in places where a few years since no limestone was pposed to exist, and lime could only be procured at much expense and with difficulty. The greatdeposit of iron, in Queen's county, has also attracted attention, and as we understand, has been brought under the notice of some English capitalists, who intend prosecuting inquiries respecting it the coming season, and we trust it may prove all that they ticipate. The discovery of the Westmorland coal field has already raised up a host of petitioners for mining leases, and we observe that a special committee of the House of Assembly has been appointed to take the various petitions into consideration, and decide on the best course to be adopted for the interests of the province. If the unassisted labours of Dr. Gesner during two seasons have effected so much, what may we not expect if those labours are continued, and a liberal provision made for carrying them on more extensively, and in a more minute manner. We trust that the Legislature in their wisdom will see the propriety of following up these researches without delay, and on a more extensive scale, for we believe the real interests of the country will thereby be consulted, and many advantages derived, not only in an Agricultural, but a Commercial point of view. Meantime we recommend a perusal of the second Report, confident that it will afford much pleasing and instructive information to every inhabitant of New Brunswick."

URN: 2028 / IDX_Names: Hog Island Silver - Lead;

St. Andrews Beacon - Jan. 21, 1892 Promising minerals have been found on Hog Islandin Passamaquoddy Bay. On Monday a number of interested parties, among them G.D. Grimmer, visited the island in Pendleton Bros. tug-boat. They brought back with them a quantity of ore, which will be assayed."

St. Andrews Beacon - Jul. 14, 1892 and Evening Gazette - Jul. 15, 1892 Some fine samples of silver ore were recently taken from the Hog Island deposit and are now on exhibition in G.D. Grimmer's store. Mr. Grimmer intends sinking a shaft to see how the ore pans out further down."

URN: 2029 / IDX_Names: Mechanic Settlement;

Carleton County Sentinel - May 24, 1862 and St. Andrews Standard - May 21, 1862 and Morning News - May 19, 1862 GOLD! - We have been shewn specimens of gold bearing quartz which was found in the Mechanics Settlement, at the upper end of Kings County, near the Albert County line. Similar samples sent to the Fredericton University for an analyzation turned out the precious metal. Mr. Flewwelling, Station Master at Hampton, has four or five men at work prospecting and digging at the place. We shall probably know before a great while whether the quartz can be profitably

Weekly Record - Fri. Sept. 5, 1890 There are rumours of finds of valuable mineral- bearing quartz, etc., in the vicinity of Mechanic Settlement. The chances are, however, that it will take considerable time and money to place this locality on the basis of a paying mining region."

URN: 2029 / 2016 / 2017 / D8 / Y2 / IDX_Names: Mechanic Settlement; South Oromocto Gold; Scoullar's Brook Gold; Northumberland County Gold; Saint John County

Miramichi Gleaner - Dec. 7, 1861 Gold in New Brunswick. - Last week we announced that good specimens of gold-bearing Quartz had been discovered in this County. We are indebted to the Colonial Empire for the following intelligence in reference to the discoveries of gold in several localities in the Province. We hope the intelligence respecting the ""vein of gold-bearing quartz of superior richness,"" discovered in the Northwest branch of the Miramichi, may prove correct. For all the purposes of commerce, to facilitate trade, to enable persons to conduct their business satisfactorily, to encourage enterprising persons to engage in manufactures, and to develop the capabilities of this section of the Province, gold, or some other precious metal, has been long desired by our people. The Empire says: ""The probability that gold will be found in this Province, in considerable quantity, grows stronger as from day to day we hear of its being found in sections of country very widely apart. In Quaco, near the Bay of Fundy, several persons are seeking gold, and it is said are finding enough to pay them fair wages. In Albert County, further up the Bay, two small specimens of gold were found accidentally a few days since in a bed of the brook that flows into the Bay, by a person who was travelling in that quarter. Upon Scoullar's Brook, a tributary of the South Branch of the Oromocto, some three hundred persons it is said have lately been digging and prospecting, nearly all of whom have obtained gold in greater or lesser quantity. But the finest specimens yet found in the Province, have been brought to Fredericton by two gentlemen who were fly fishing on the North West Miramichi, and by chance struck upon a vein of gold-bearing quartz, of superior richness to anything found in New Brunswick. The precise location is of course a profound secret, and will probably remain so until satisfactory arrangements can be made."

URN: 2030 / IDX_Names: Philamaroo Silver, Gold, Copper;

S.J. Daily Telegraph - Aug. 30, 1884 It is rumored that a very valuable mine up Dutch Valley, in the parish of Waterford, has fallen into the hands of an American company, three of which are now on the ground and declare there is a great wealth in the mines. They are to commence work immediately, and will spend large sums of money. This cheering news to the people in the vicinity of the works. The mines are on what is known as the Watson farm."

Moncton Daily Transcript - Oct. 4, 1884 GOLD, SILVER AND COPPER MINES. - Mr. J.T.Watson, of Gordon Settlement, Waterford, Kings Co., showed your correspondent some of the fine specimens of the silver, copper and gold-bearing quartz taken from the mines which Mr. Watson has discovered in the Gordon Settlement, Parish of Waterford, Kings Co. Many specialists pronounce the silver ore to be of remarkable richness, yielding a large percentage solid (?) silver. Mr C.

W. Smith, of St. John, has analyzed the silver ore and pronounces it to be an unusually rich specimen. Mr. Watson has also sent specimens to Mr. Frank L. Bartlett, Assayer and Chemist, for the State of Maine, 385 Congress St., Portland, and he declares, as the result of his assay, that the copper yields 45 pc and the gold bearing quartz 10 pc. Mr. Watson discovered the traces of silver and copper some two years ago, and since has been working up a scheme whereby he might develop the mines. He has interested several old mining men and capitalists of Boston and Bar Harbor. Mr. Watson has two-thirds interest and the Americans one-third. Mr. Watson holds the lease of 700 acres in the vicinity in which the mines are situated. He purchased 100 acres from Archibald Munroe, 300 acres from Daniel McGlone and James Munroe, 100 from Thos. Forgrave and 100 from Joe Watson. The mines are situated 14 miles from Sussex Station. Mr. Watson declares the silver lead to be 10 feet 6 inches wide, between walls and runs due east and west. The copper and gold lead is 12 ft wide, running same way. He found the silver but 7 feet below surface and gold and copper but 4 feet below. Prof. Sheldon, of England, arrived at Sussex early in the week to visit the mines and report upon the quality of the ore. Your correspondent does not know the result of his investigations as yet."

URN: 2030 / IDX_Names: Philamaroo Silver, Gold, Copper;

Daily Transcript - Oct. 8, 1884 Sussex, Oct. 3. - Gold, Silver and Copper Mines. - Mr. J.T. Watson, of Gordon Settlement, Waterford, Kings Co., showed your correspondent some fine specimens of the silver, copper and gold bearing quartz taken from the mines which Mr. Watson has discovered in the Gordon Settlement, Parish of Waterford, Kings Co. Many specialists pronounce the silver ore to be of remarkable richness, yielding a large percentage of gold and silver. Mr. C.W. Smith, of St. John, has analyzed the silver ore and pronounces it to be an unusually rich specimen. Mr. Watson has also sent specimens to Mr. Frank L. Bartlett, Assayer and Chemist, for the State of Maine, 385 Congress St., Portland, and he declares, as the result of his assay, that the copper yields 45 p.c. and the gold bearing quartz 10 p.c. Mr. Watson discovered the traces of silver and copper some two years ago, and since has been working up a scheme whereby he might develop the mines. He has interested several old mining men and capitalists of Boston and Bar Harbour. Mr. Watson has two thirds interest and the Americans interested one-third. Mr. Watson holds the lease of 700 acres in the vicinity in which the mines are situated. He purchased 100 acres from Archibald Munroe, 300 acres from Daniel McGlone and James Munroe, 100 from Thos. Forgrave and 100 from Joe Watson. The mines are situated 14 miles from Sussex Station. Mr. Watson declares the silver lead to be 10 feet 6 inches wide, between the walls, and runs due east and west. The copper and gold lead is 12 feet wide, running the same way. He found the silver but 7 feet below the surface and gold and copper but 4 feet below. Prof. Sheldon, of England, arrived at Sussex early in the week to visit the mines and report upon the quality of the ore. Your correspondent does not know the result of his investigations as yet."

S.J. Daily Telegraph - Sep. 5, 1884 and Moncton Daily Transcript - Sep. 6, 1884 Mineral Discovery. - Mr. S. Cunningham, of Waterford, Kings County, has forwarded to this office specimens of quartz containing valuable ore, found on the lands of Messrs. Munro and Watson in that parish. The specimens forwarded appear to be rich in metals, said to be copper, quicksilver and gold. A miner of fifteen years' experience states the find is valuable, and one of the most promising he ever opened. The Waterford region is believed to be a promising one for those in search of valuable minerals."

S.J. Daily Sun - Sep. 16, 1884 Sussex. - Machinery for the recently discovered gold and copper mines in Dutch Valley, Waterford, is daily expected. About 15 men are now engaged and more are to be employed."

Chignecto Post - Jul. 29, 1886 The Waterford mining company of Sussex owns 200 acres containing veins of copper, galena and free gold. They propose at present mainly devoting their attention to the latter."

Weekly Record - Fri., Dec. 7, 1888 The boiler for the mine at Waterford will be started in a day or two."

Weekly Record - Fri., Dec. 28, 1888 The work of placing the machinery on the N.B. Gold and Silver Mining Company's property is progressing.The work is being done under the superintendence of W. N. Gould. When finally in order the work of further development will be continued regularly."

S.J. Daily Sun - Jun. 6, 1888 Mining Company. - A meeting of the New Brunswick Gold and Silver Mining Company was held in the office of C.N. Skinner, M.P., yesterday afternoon. After passing the by-laws the company adjourned."

S.J. Daily Sun - Jun. 30, 1888 Mining. - Work has been resumed on the Watson mine in Waterford, Kings Co., under the management of Thomas Proctor, who is an experienced and practical man. Mr. Proctor has good hopes that the mine will turn out to be a valuable property. He says the company intend to sink a shaft one hundred feet.- [Cor. Sussex Record"

Moncton Daily Transcript - Mar. 7, 1888 Application will be made to the local government for the incorporation of the New Brunswick Silver and Gold Mining Company. The office of the company is to be established in the Parish of Waterford, Kings county. The amount of the capital stock of the said company shall be $280,000, to be divided into 140,000 shares at two dollars each. Fifty thousand shares, one hundred thousand dollars has already been subscribed."

Chignecto Post - Mar. 22, 1888 The New Brunswick Silver and Gold Mining Company has applied to the local government for incorporation. Capital stock $280,000 in 140,000 shares of $2 each."

S.J. Globe - May 19, 1888 New Brunswick Silver and Gold Mining Company. - At a meeting of the above company held this morning for the purpose of organizing, the charter lately granted by the Provincial government was accepted. The following board of directors was elected: Frederick J. Ally; Bar Harbour; William H. Love, St. John; Arthur M. Foss, Bar Harbour; Charles C. Morrison, Bar harbour; Edward J. Baxter, Norton. The directors will meet this afternoon to elect a president. A meeting is called for June 5th at the office of C.N. Skinner, Esq., M.P."

S.J. Daily Sun - May 21, 1888 Silver and Gold Mining Co. - The New Brunswick Silver and Gold Mining Company met Saturday for the purpose of organizing, in accordance with the charter obtained from the local government. Directors were elected as follows: Fred J. Ally, Bar Harbor, W.H. Love, St. John; A.M. Foss, Bar Harbor; G.E. Morrison, Bar Harbor; E.J. Baxter, Norton. Another meeting will be held on June 5th at the office of C.N. Skinner, M.P."

URN: 2030 / IDX_Names: Philamaroo Silver, Gold, Copper;

Weekly Record - Fri., Nov. 30, 1888 From time to time items concerning the doings of the above company have appeared in the 'Record' and other N.B. papers. Lately a number of the interested parties, from the neighbouring State of Maine, in company with Mr. F.J. Alley, of Bar Harbour, visited the property, and were evidently well satisfied with what they saw. The shaft has been put down about 35 or 40 feet, and it is the intention to go still further so as to thoroughly test the value of the mine. To this end they have placed upon the property a 25 or 30 H.P. Engine and Boiler with all the necessary hoisting gear, hose, etc. and a powerful Blake pump which will keep the shaft free from water. The promoters of this enterprise feel that they have a good and valuable property only requiring development, and that they intend doing. The ore vein is large, and carries considerable metal, and the owners believe it to be reasonably productive in silver and gold producing metals. The Managing Director Mr. Alley has shown considerable pluck and energy in the matter and means business thoroughly. Let us hope that the efforts of the promoters may be crowned with the fullest measure of success, The company's property is situated just a short distance above Waterford, in Kings County."

Weekly Record - Fri., Nov. 30, 1888 (quoting the Halifax Critic) Work of exploration on a property above Waterford is being quietly and systematically carried on. The principal promoters are from Bar Harbor, Maine, and evidently mean business. They are putting in a large engine and boiler to facilitate the work of development. About 40 or 50 feet have been tested in depth, and a large ore body is being expected. The ore seems to be galena, and rich in sulphuret, while it is said, the quartz gangue carries considerable gold. We expect to hear of a bona fide working and paying mine in this locality

Weekly Record - Fri., Feb. 22, 1889 Mr. Love and Mr. Scott, of St. John, were in Sussex on Monday in connection with matters relative tothe N.B. Silver and Gold Mining Company in which they are interested."

Weekly Record - Fri. Jan. 25, 1889 The owners and promoters of the mine at Philemaroe, above Waterford, are pushing forward the work of sinking a shaft on same. Fuller and more detailed particulars of these mines will be furnished later on. Note: Philmunro is 11 miles east of Sussex. Possibly means 'Munro clan'. People of this name may have been among squatters c. 1831. Among grantees were John, James and Archibald Munro (or Munroe or Minrow). Also spelled Filamunro, Filomaro and Phillamaroo. Later (1884-1908) called Fosters Croft."

Moncton Daily Transcript - Jun. 1, 1889 A Donegal, Kings Co., correspondent of the RECORD says Excitement here still continues about mineral mines. A gentleman from Albert Mines was examining the mineral on the places of M. Adair and Geo. Teakles. Esquire McGarrigle has sold his place for $6,000."

Weekly Record - Fri., Mar. 15, 1889 Work on the N.B. Silver and Gold Mining Company's property, at Cedar Camp, is progressing. They are stillsinking a shaft and all indications are, it is said, most favorable."

Weekly Record - Fri., May. 3, 1889 As will be seen by notice in another column the annual meeting of the N.B. Silver and Gold Mining Company, at Waterford, will take place at the Depot House on Saturday, the 18th day of May inst. This company still continues developing its property at Waterford and it is hoped they will meet with all the success their enterprise merits. NOTE: The notice of the meeting is signed by Arthur M. Foss, secretary."

S. J. Daily Sun - May 14, 1889 Mr. Alley of Bar Harbor, who is greatly interested in the mineral mines at Waterford, is in Sussex today."

Evening Gazette - May 20, 1889 A number of gentlemen from Bar Harbour, Maine, reached Sussex on Saturday, the 18th, being interested in the N.B. Silver and Gold Mining Company, at Cedar Camp in the Parish of Waterford. The annual meeting of the Company was held and the operations of the past year reviewed. The stockholders are seemingly well satisfied with the results and are prepared to go on with the work of development and it is probable that the present shaft which is now down 100 ft. will be put down 100 ft further before work of cross cutting the leads will be undertaken. A visit to the mine was made by the gentlemen spoken of in the afternoon and they were much pleased with all they saw. On Friday last a visit of inspection was made by some parties among whom was your correspondent and the work at the mine showed the shaft, machinery and the plant to be of a superior character, and it was gratifying to know that this work of development was being done in so systematic a manner. The appearance of the mine indicate good results to follow and it is not at all improbable that the near future may witness the permanent working of a good bona fide dividend paying property, as the stockholders seem to be going at it in the right way to produce results. Every credit is due them for the pluck and energy they have shown and to Mr. W.H. Love of St. John, the President of the Company, Mr. A.M. Foss, of Bar Harbour, Maine, Secretary and Treasurer. Mr. F.J. Alley, of Bar Harbour, Managing Director for the past year, too much praise cannot be given for the plucky, energetic and pushing manner in which they have forwarded the interests of the Company."

URN: 2030 / IDX_Names: Philamaroo Silver, Gold, Copper;

S.J. Globe - May 21, 1889 Silver and Gold Mining. - Nine Bar Harbor, Me., gentlemen reached Sussex Saturday morning to attend the annual meeting of the N.B. Silver and Gold Mining Co., which was held at that place at 11 o'clock in the forenoon. The following directors were elected for the ensuing year: Messrs. W.M. Love, of St. John; Wm. Fennelly, A.M. Foss, W.K. Kennard, and J.C. Farren, of Bar Harbor. At a subsequent meeting of the directors, Mr. W.M. Love was chosen president of the company, and Mr. W.H. Sherman, of Bar Harbor, secretary and treasurer. After inspecting the property the gentlemen returned to St. John on Monday morning and left in the evening for Bar Harbor."

Daily Telegraph - May 22, 1889 Silver and Gold Mining. - The annual meeting of the N.B. Silver and Gold Mining Co. was held at Sussex on Saturday last. The following directors were elected for the ensuing year. Messrs. W.M. Love, of St. John; Wm. Fennelly, A.M. Foss, W.K. Kennard, and J.C. Farren, of Bar Harbor. At a subsequent meeting of the directors, Mr. W.M. Love was chosen president of the company, and Mr. W.H. Sherman, of Bar Harbor, secretary and treasurer."

Weekly Record - Fri., Dec. 5, 1890 and S.J. Evening Gazette - Dec. 6, 1890 The Waterford Gold and Silver Mining Co.'s property was sold by sheriff's sale on Friday last infront of the Dominion Building. It was bid in by Mr. Wm Fennelly of Bar Harbor, Maine, for $381.96. It is thought work will be resumed again on this property later on."

URN: 2030 / LEGI / IDX_Names: Philamaroo Silver, Gold, Copper; Legislation, etc.;

Royal Gazette - Apr. 25, 1888 Notice of Granting Letters Patent. Public Notice is hereby given, that under The New Brunswick Joint Stock Companies' Letters Patent Act, Letters Patent have been issued under the Great Seal of the Province of New Brunswick, bearing date the fourth day of April, A.D. 1888, incorporating Edward J. Baxter, or Norton, in King's County, Province aforesaid, Farmer; Alexander J. Grant, Editor; William K. Kennard, Carpenter; Charles A, Ingalls, Engineer; Jeremiah J. McGowan, Gentleman; John T. Watson, Trader; J. Crowell Farrell, Manufacturer; and Frederick J. Alley, Hotel Keeper, all of Bar Harbor, in the State of Maine, in the United States of America; for the purpose of the purchase and holding of all kinds of Mineral lands and lands which Minerals are supposed to be, with land necessary and requisite to carry on a Mining business, and the selling, mortgaging and encumbering all or any such lands; the carrying on of a general mining business, and searching for Mines and Mineral substances, and the purchasing, holding, owning, and selling of all kinds of property connected with, and necessary and convenient for the carrying on of a general Mining business; and the digging for, mining for, and procuring by all lawful means, of all manner and kinds of mineral and mineral substances; and the erection and maintaining of all necessary works, buildings and ways, and doing all things necessary to the carrying on the business of the said Company, with such other things as are incident to the attainment of these objects, by the name of The New Brunswick Silver and Gold Mining Company. with a total capital of Two hundred and eighty thousand dollars, to be divided into one hundred and forty thousand shares of two dollars each. Dated at the office of the Provincial Secretary, at Fredericton, this Twenty fourth of April A.D. 1888 David McLellan, Provincial Secretary."

Royal Gazette - Mar. 7, 1888 Public Notice. We, the undersigned, hereby give notice of our intention to apply for Letters Patent to incorporate the Company hereinafter named under the provisions of Chapter 9, 48th Victoria, of the Acts of Assembly of the Province of New Brunswick, intituled An Act respecting the incorporation of Joint Stock Companies by Letters Patent. 1. The proposed corporate name of the said Company is the The New Brunswick Silver and Gold Mining Company. 2. The objects of the Company are the following, namely:- The purchase and holding of all kinds of Mineral Lands and lands in which Minerals are supposed to be, with land necessary and requisite to carry on a Mining business, and the selling, mortgaging and encumbering all or any such lands; the carrying on one of a General Mining business, and searching for Mines and Mineral substances, and the purchasing, holding, owning and selling of all kinds of property connected with and necessary or convenient for the carrying on a General Mining business; and the digging for, mining for and procuring by all lawful means, of all manner and kinds of Minerals and Mineral substances, including Silver, Gold, Lead, and every other kind of Minerals and Mineral Substances; and the erection and maintaining of all necessary works, buildings and ways; and doing all things necessary to the carrying on the business of the said Company, with such other things as are incident to the attainment of these objects. 3. The Office or chief place of business of the said Company is to be established in the Parish of Waterford, in the County of King's, in the Province of New Brunswick. 4. The amount of Capital Stock of the said Company shall be two hundred and eighty thousand dollars ($280,000), to be divided into one hundred and forty thousand shares (140,000) at two (2) dollars each. 5. The amount of Capital Stock actually subscribed at the present time is fifty thousand shares, amounting to one hundred thousand dollars. 6. The names of those chosen as the first or Provisional Directors of the said Company are - Edward J. Baxter, Farmer: of Norton, King's County, in the Province of New Brunswick; Alexander J. Grant, Editor, of Bar Harbour, in the State of Maine, and William K. Kennard, Carpenter, of Bar Harbor, in the State of Maine. 7. The names of the applicants are - Edward J. Baxter, Farmer, of Norton, King's County, New Brunswick. Alexander J. Grant, Editor, of Bar Harbor, Maine, United States. William K. Kennard, Carpenter, of Bar Harbor, Maine, United States. Chrales A. Ingalls, Engineer, of Bar Harbor, Maine, United States. J.J. McGowan, Gentleman, of Bar Harbor, Maine, United States. John T. Watson, Trader, of Bar Harbour, Maine, United States. J.C. Farrell, Manufacturer, of Bar Harbor, Maine, United States. F.J. Alley, Hotel keeper, of Bar Harbor, Maine, United States. C.N. Skinner, Solicitor for Promoters."

URN: 2030 / LEGI / IDX_Names: Philamaroo Silver, Gold, Copper; Legislation, etc.;
S.J. Globe - Mar. 8, 1888 New Mining Company. - Notice is given in the Royal Gazette of an application to the Local Government for the incorporation of a company, to be known as The New Brunswick Silver and Gold Mining Company. The object of the new Company is the purchase and holding of all kinds of lands, on which Minerals are supposed to be; the carrying on of a general Mining business, and the buying, selling and mortgaging of all such lands; the holding erecting of all necessary works, buildings, etc., for the requirements of the business. The Office of the company is to be established in the Parish of Waterford, King's county. The amount of the Capital Stock of the said Company shall be $280,000, to be divided into 140,000 shares at two dollars each. Fifty thousand shares, one hundred thousand dollars has already been subscribed. The names of those chosen as the first or Provisional Directors of the Company are - Edward J. Baxter, of Norton, King's, Alexander J. Grant, Bar Harbour, Maine, and William K. Kennard, Bar Harbor, Maine. The names ofthe applicants are - Edward J. Skinner is Solicitor for Promoters."

URN: 2031 / IDX_Names: Burnthill Brook Molybdenite;
S.J. Daily Sun - Aug. 16, 1888 Molybdenite has been found at two places on the Southwest Miramichi - at the mouth of Burnthill and on Bamford Brook."

URN: 2032 / IDX_Names: Barnesville Gold;
Chignecto Post - Feb. 6, 1890 The gold mines of Barnesville, Kings Co., N.B.are being actively worked. A shaft 63 feet has been sunk and a drift 45 feet long has been run along a 2 1/2 foot vein. Various assays made show the quartz to yield from $3.50 to $40.00 per ton. 15 men are now at work."

Weekly Record - Fri. Feb. 7, 1890 Rumors of a gold mine in Kings Co. are very prevalent. The St. John Sun had quite a lengthy account of work done on a property of a Mr. Cusick near Barnesville. It is said the ore runs from $30 to $40 perton under assay. Arrangements are being made for placing machinery on the property when other positive evidence of its value will be given. We trust the above is correct as it has often been said, by persons capable of judging, that gold exists in paying quantities in New Brunswick. It is a well known fact that in many of the silver-lead deposits in New Brunswick, gold is associated with the ore, all the way from 12 to 22 pennyweight per ton."

Weekly Record - Fri. Jan. 3, 1890 We have heard of some late developments being made in the vicinity of Barnesville by some parties who feel confident they have struck it rich, or will do soon,which we hope will be the case. It is said the metal that has been found, some of which has been assayed, shows good results in gold, silver, etc. We do not know the names of the active movers in the enterprise."

S.J. Daily Sun - Jan. 30, 1890 and Daily Times - Jan. 31, 1890 A KING'S COUNTY GOLD MINE.- Work Being Actively Prosecuted at Barnesville by a Company.- The company who are interested in the gold mining enterprise at Barnesville, Kings Co. are pushing the work with vigor. There are 15 hands employed, under the supervision of J.J. McDonald, a practical mining engineer who has been all over the continent, and on Newfoundland as well, in the prosecution of his business. They have sunk a shaft 63 feet, and have run a drift 45 feet along the vein which is 2 1/2 feet thick. Mr. McDonald and M. Cusick (on whose property the mine is located) were in the city yesterday, and arranged with Mr. Evans, agent for E. Leonard & Son, for the delivery of a six horse power engine and a 10 horse power boiler with necessary hoisting gear. It is their intention to employ about ten more hands at once, and they are now pushing work night and day. Mr. Wilson, of Hampton, has been engaged to fit up the hoisting machinery. Mr. McDonald is of the opinion that the mine, which he says is very much like the mines in Nova Scotia, will yield good returns if properly worked. Various assays have yielded all the way from $3.50 to $40 per ton. Mr. McDonald showed a SUN man a piece of quartz in which the yellow metal was plainly visible. Should this enterprise prove as successful as its promoters are confident that it will, gold mining in New Brunswick will no doubt have a boom."

Moncton Daily Transcript - Jan. 31, 1890 The company who are interested in the gold mining enterprise at Barnesville, Kings Co., are pushing the work with vigor. There are 15 hands employed. Mr. McDonald, the manager, is of opinion that the mine, which he says is very much like the mines in Nova Scotia, will yield good returns if properly worked. Various assays have yielded all the way from $3.50 to $40."

URN: 2034 / D8 / IDX_Names: Smiths Creek gold; Northumberland County Gold;

S. J. Daily Globe - Jun. 23, 1862 and Morning News - Jun. 23, 1862 Gold Quartz. - We have seen several specimens of quartz with the gold as large as peas, sticking in the sides, which have been taken out of a locality near Smith's Creek, Kings County; and the indications are that gold in any quantity may be had there. Persons are hard to work taking out the quartz. Steps are about being taken by certain enterprising persons residing in Kings, to get up a company to go to work in

URN: 2035 / IDX_Names: Harvey Manganese;

S.J. Daily Sun - Sep. 10, 1881 Manganese in Albert. - The company who have taken charge of the manganese mine on J.B. Newcomb's property, Hopewell Corner, intend pushing forward their operations and will put up the necessary buildings at once. The manganese found is said to be of a first-rate quality."

URN: 2035 / IDX_Names: Harvey Manganese;

S.J. Daily Sun - Dec. 23, 1892 Hillsboro. - Mr. Sargent, proprietor of the Globe hotel at Albert, who has been engaged in manganese mining on the property of William Newcomb, Germantown, reports the prospects good, the ore being of a superior grade and unusually free from clay. Mr. Sargent has several men employed, and intends prosecuting the work right along. They recently got out three tons of the mineral with seventeen and a half days' work."

Moncton Daily Times - Nov. 17, 1893 Albert Co. - Manganese shipped by Capt. Sargent to New York, from the mine on the Newcomb property, fetched $80 per ton and averaged 92 per cent. Some four tons have already been shipped and the prospects for the future are excellent as the supply is abundant."

S.J. Daily Sun - Nov. 17, 1893 and Moncton Transcript - Nov. 18, 1893 Manganese in Albert Co. - Manganese shipped by Capt. Sargent to New York, from the mine on the Newcomb property, fetched $80 per ton and averaged 92 per cent. Some four tons have already been shipped, and the prospects for the future are excellent as the supply is abundant.-[Albert

S.J. Gazette - Aug. 1, 1894 The Crooked Creek manganese milling property in Albert County is now turning out some rich ore. The owner had about given up in disgust, but they struck an exceedingly promising vein of rich ore, which is now being uncovered and it is expected to give good results. Experts say the ore is of extra good quality and worth from $80 to $100 per ton."

Weekly Record Fri., Aug. 10, 1894 Manganese in paying quantities has been found near Harvey, Albert County. A company has been formed for the purpose of mining the deposit, which appears to be of high quality."

Moncton Transcript - Jan. 27, 1894 Manganese shipped by Capt. Sargent to New York, from the mine on the Newcomb property, Albert Co., N.B., fetched $80 per ton, and averaged 92 per cent. Four tons have already been shipped, and the prospects are excellent. - Albert Maple Leaf."

URN: 2036 / IDX_Names: Sussex Copper;

S.J. Daily Sun - Dec. 3, 1883 Sussex. - A considerable amount of excitement is caused here by the supposed discovery of a very valuable vein of copper ore, on the farm owned and occupied by Mr. Cornelius McIntyre, about two and one-quarter miles above Sussex Railway station on the main post road. The discovery of this ore was made when digging a well a short distance from Mr. McIntyre's residence. Local experts who have examined the ore say it gives every indication of being of a good paying quality. Indeed, they go further and say there can be no doubt that beds of coal are in the vicinity of the copper ore. Specimens have been sent on to the United States to be thoroughly assayed, and should the reports be favorable capital will be invested in unearthing this treasure."

Weekly Transcript - Dec. 5, 1883 Copper Mine. - The Sussex correspondent of the Sun says: - A considerable amount of excitement is caused here by the supposed discovery of a very valuable vein of copper ore, on the farm owned by Mr. Cornelius McIntyre, about two and one-quarter miles above the Sussex Railway station. Local experts who have examined the ore say it gives every indication of being of a good paying quality."

S.J. Daily News - Dec. 24, 1883 That Copper Mine. - The vein of copper ore found on the farm owned and occupied by Mr. Cornelius McIntyre, about two and one quarter miles above Sussex, K.C., Railway Station, has every indication of turning out well. Local experts who have examined the ore say it gives every indication of being of good paying quality."

Chignecto Post - Dec. 27, 1883 A valuable vein of copper ore has been found on the farm owned and occupied by Mr. Cornelius McIntyre, about two and one quarter miles above the Sussex, K. C. Railway station."

URN: 2037 / IDX_Names: Sharpsville Antimony;
Weekly Record - Fri., May 4, 1899 Mr. Bates, an English mining engineer and an expert in prospecting, is in the vicinity exploring for gold, coal and other minerals. He says he has struck a rich antimony mine, which he had analyzed and found the mineral abundant, on the farm of Mr. Hiram Sharp, at Sharpsville, on the road to Belleisle. He has already some rich specimens, and I should not wonder if before long miner's camps will rise up and take the place, which is now growing up in woods. No doubt we need a boom of some kind."

URN: 2038 / IDX_Names: Grand Anse Copper;
Moncton Daily Times - Jul. 8, 1882 and Daily Telegraph - Jul. 10, 1882 Discovery of Copper. - A report is current of a valuable discovery of copper, made recently on the grand Aunce shore in the Parish of Dorchester. The discovery, it is said, was made by a boy, son of Mr. Charles Teed, farmer. Mr. Teed has been offered a considerable amount for a part of his property, and the outcrops of ore extend over various other farms. It is said the indications are that the ore exists in quantities, but on this point authentic information is not at hand. The shore is at all events, a very rocky one and minerals have been found in less likely localities. The shore in question was once visited by the late John Steadman of Albert, who was an indefatiguable searcher of minerals."

URN: 2038 / IDX_Names: Grand Anse Copper;
Daily Telegraph - Jul. 14, 1882 That Copper Find. - There has been quite a rush of visitors to Mr. Charles Teed's farm on the Grand Aunce shore, parish of Dorchester, where a copper mine was lately discovered."

Chignecto Post - Oct. 12, 1882 and Moncton Daily Times - Oct. 13, 1882 Mr. Edmund Babcock has laid upon our table some specimens of copper ore from a vein now being opened on his farm at Grand Aunce. A shaft has been driven down on the vein about ten feet and the specimens produced are very good. It is situated on the Bay Shore where facilities for shipping exist, which would increase its value. Mr. Babcock has bonded the property for $5,000."

Chignecto Post - Oct. 26, 1882 Messrs. Richard and Chapman have sold part of their Babcock property, Grand Aunce, to Mr. W.H. Tower, of Boston, for a good figure, and work is being prosecuted rapidly. They have now one shaft sunk a distance of about forty feet where they find a high order of copper ore and one incline all of which show a good average."

Chignecto Post - May 3, 1883 Mr. Mooney, from Boston, has been prospecting at Grand Aunce and has purchased some rights there from E. Babcock and others. This district is considered moderately promising."

Chignecto Post - Jan. 24, 1884 and Daily Telegraph - Jan. 26, 1884 Copper Mine Sold.- On Monday the sale of another Sackville Copper property was closed, viz: that of Mr. Rufus Tower, Rockport, near Cape Maringuin. The veins show themselves on the shore at either side of the cape, running through the peninsula in a north-easterly direction. The sum paid is about $2,000. The purchaser is Mr. Abner C. Goodall, President of the Horse Railway Co., Salem. The sale was affected through Messrs. Chapman and Major Howell."

S.J. Globe - Jan. 25, 1884 On Monday the sale of another Sackville Copper property was closed, viz: that of Mr. Rufus Tower, Rockport, near Cape Maringuin. The sum paid is about $2,000. The purchaser is Mr. Abner C. Goodall, President of the Horse Railway Co., Salem."

Chignecto Post - Apr. 2, 1885 Rockport - The copper excitement seems to have blown over."

URN: 2039 / IDX_Names: Malakoff Silver;
Moncton Daily Transcript - Jun. 2, 1885 and Carleton Sentenil - Jun. 6, 1885 and S.J. Globe - Jun. 3, 1885 SUPPOSED TO BE SILVER. - Some time ago Mr. Nasaire Melanson, of Hanicoff, Westmorland Co., discovered, while digging for water, some ore, which resembled silver ore. He showed it to several parties, who sent the piece found to Montana to have it tested. It proved to be very valuable, and leases of the property and adjacent farms have been obtained by parties in Moncton, who intend to commence operations in a short time. Your correspondent was shown a piece yesterday about the size of a robin's egg, which weighed over four ounces. The place is situated about 14 miles from Moncton, and about 4 miles from the line of the Intercolonial. (SUSPECT MALAKOFF as location)."

URN: 2041 / IDX_Names: Ten Mile Creek Iron;

Daily Sun - Dec. 1, 1899 There May Be Iron. - W.E. Skillen of St. Martins has secured a mining lease of five square miles at Quinn's Hill, running toward the shore at Ten Mile Creek, St. John county. Specular iron ore occurs there, along a bluff that is at places a hundred feet high. Mr. Skillen had Thomas Blackwood of Joggins Mines look over the place some two months ago, and the latter reports that the indication are apparently good, and one sample of ore showed 64 per cent of iron and 7 per cent of sulphur. Of course the value of the property can only be determined by development work, to ascertain the length and thickness of the vein. Mr. Skillen proposed shortly to have some work done along that line. If there is a good vein, the ore could be carried by a tramway with easy grade three miles to a harbor at Ten mile Creek, where lighters could load for shipment to smelting furnaces at St. John or wherever else established."

URN: 2043 / IDX_Names: Rogersville Bog Iron;

Campbellton Graphic - Jan. 26, 1912 After Rogersville Ore. - Notice is given in the Royal Gazette that Hector McInnis, K.C., Halifax, a director of the Bank of Nova Scotia, has applied for mining rights covering an area of 66 square miles in the counties of Northumberland and Kent, N.B. The property surrounds the rich bog iron deposits in the vicinity of Rogersville. This body of bog ore was located several years ago and two blocks of five miles each were taken up. Later on two large iron corporations had men on the ground looking over the situation and it is understood that the Dominion Iron and Steel Company, whose prospectors worked last summer on properties in the neighborhood, are really behind the

Carleton Sentinel - Nov. 16, 1923 Ad. For The Fall Brook Mining & Developing Co. GOLD AND SILVER The Fall Brook Mining and Developing Company, Limited, has opened offices with Mr. Fred C. Squires, Barrister, on Main Street, Woodstock, N.B. Mr. Squires will arrange with all who wish to take stock in the Company. All are invited to read the 'PROSPECTUS' and all are invited to pay a visit to the exposed vein of quartz, which is located one mile up Fall Brook from the end of the Woodstock Bridge on the Grafton side. No other recent discovery in New Brunswick has such promising outlook. Work is being started towards opening up the lead. A limited amount of shares will be sold now, and it is believed that very little expense will show wonderful results. ARE YOU IN IT? The shares are $1.00 each, not less than five shares to each applicant. There are only $1500.00 now remaining unsold, and when these are disposed of on more will be offered. Send your application to The Fall Brook Mining & Developing Co. Limited Woodstock, N.B.:"

Carleton Sentinel - Nov. 16, 1923 NEW MINING COMPANY. - W. Ludlow Wise (formerly of Woodstock), Elery D. Howard and Charles Carpenter, Houlton, Maine, Mrs. Eva Pike and Albert D. Wort ofWoodstock, have been incorporated as the Fall Brook Mining and Development Company, Ltd., with capital stock of $5,000 and head office at Woodstock. The president of this company is Manly Craig and the solicitor is F.C. Squires. The land is near the Mose McDonald farm, Rockwell Brook, Grafton, a short distance from Woodstock. The company has held the claim for 10 years. Copper, lead and gold have been found on the claim. It is said that the assay showed two ounces of gold to the ton. They have 100 acres, and as the assay has been very encouraging, Mr. Craig will arrive here from Houlton this week to proceed with the

URN: 2046 / IDX_Names: Grand Falls Gold;

12S.J. Daily News - Aug. 29, 1866 Victoria County seems to be just now in a great fever of excitement concerning the discovery of a gold deposit near Grand Falls. Some parties have been engaged in washing the sands there for some time, and they appear satisfied with the amount of the precious metal they obtain - Fred. Farmer"

Moncton Times - Aug. 27, 1878 Gold Hunting. - Two Portland men, Mr. John Navarro and Mr. Tysick, started for Grand Falls a couple of days ago on a gold hunting tour. They are to visit a certain brook, in the sands of which there is good reason, in their opinion, to believe that the auriferous metal may be found. - Freeman. Should they be successful, we know of several parties in this locality who will take a share of any surplus stock they may have on hand."

URN: 2046 / GEOL / IDX_Names: Grand Falls Gold; Geology - General;

Fredericton Capital - Sep. 20, 1880 Geological Explorations.- Prof. Hitchcock, in his able report on the Geology of Maine, says that he knows of no State or Province which affords a more promising field for the discovery of valuable mineral deposits than New Brunswick. A professor of Geology from a United States college, who spent several weeks upon the

Tobique River and in that neighborhood, expressed, in conversation with the writer, the same opinion, and added that an exploration, to be of any value, would have to be made by practical men. He further said that he found traces of gold in many places; and that his experience in practical geology led him to the belief that thorough prospecting by competent persons might lead to very valuable results. We have not at hand the report of Prof. Bailey on this section of the province; but think we may say, speaking from memory, that Prof. Bailey found gold and other valuable minerals in small quantities, and expressed belief that the indications were favorable for the existence of larger deposits. During the past twenty years, many persons have found gold in the tributaries of the upper St. John. The writer has seen it washed fromthe sands at Little River and Falls Brook, Grand Falls, and several places along the main Tobique, at the Salmon Hole on the Campbell River, or Right Hand Branch (so called) of the Tobique, at the mouth of the Serpentine, a branch of the same stream, at a point two miles below the Serpentine Falls. But his observations have been limited in comparison with others. Mr. Ward C. Burpee, of Grand Falls, has had a most interesting experience in this connection, and has, or recently had, in his possession a number of specimens of gold-bearing quartz, which were found in the County of Victoria, and is able to give a great deal of information upon the subject. Mr. Shea, Mr. C.A. Hammond, ex-M.P.P., Mr. Longstaff and Mr. J.H. McPhair, of this city, have also, among others, had more or less success in their explorations. In addition to the places mentioned above, gold has been found in the Muniac, The Becaguimec, the Wapskehegan, the Nepisiguit and indeed in nearly all the streams which have their source in or near the great belt of azoic rocks which stretches across the Province from the St. Croix to the Baie Chaleur. Indications and specimens of other minerals have been found. Mr. Jack, it is needless to say, has devoted some attention to this matter; and his admirable habits of observation have enabled him to learn very much which would be of value in the prosecution of an exploratory survey. Among the minerals of which he and others have observed indications, beside gold, there are silver, copper, lead, iron and antimony. We do not know that any one person has found all these, but there are numerous witnesses of the existence of each of them in small quantities at least. It is, of course, impossible to detail in a paper of this description all the testimony which can be given as to the likelihood of a profitable discovery some day or other. We can only indicate its character, and we do so for the purpose of recommending that if an exploration is at any time made,the person to whom it may be entrusted will inform himself as to what observers who have preceded him, not the scientific ones merely, but others as well, have been able to discover. It is worthy to note in this connection, that there is increased activity in gold mining in Quebec; and a number of New york capitalists have invested money in quartz mining. If we are not mistaken, these gold mines are upon one of the great divisions of the Alleghanies. This range of highlands divides near New Hampshire, Maine and Quebec - one branch extending across the State of Maine and into New Brunswick, south of the Tobique, and forms in Maine the range which Great Britain claimed as the boundary line previous to the Ashburton Treaty, and in New Brunswick what was claimed by the then province of Lower Canada as its boundary. The other continues parallel, or nearly so, to the St. Lawrence, and forms the present boundary between Maine and Quebec. If gold exists in one of these branches, it is not unreasonable to look for it in the other. It is also worthy of remark, that mining is becoming an important industry in Maine. The existence of minerals there of economic value was considered at the most as exceedingly problematical until very recently; that is, until a thorough exploration of the State was made. In a country like New Brunswick or Maine, where the rocks for the most part are covered with a thick carpet of living and dead vegetation, and support a tangled forest, it is difficult, - it is indeed impossible - in the explorations which a college professor can make, whose sole staff consists of his Indian guides and perhaps a single companion, can lead to any valuable results, particularly when he is asked to report upon the thousand square miles of rugged country in as many weeks. A thorough and systematic investigation is requested: one made by a staff of men sufficiently numerous to enable them to accomplish the labor which is really necessary. We ask our representatives at Ottawa to give the matter their consideration, and to solicit from the Government an appropriation sufficient to warrant the inception of the exploration during the coming summer in a manner reasonably calculated to

URN: 2047 / IDX_Names: Rapid Defamme Gold;

Carleton Sentenil - Oct. 11, 1873 Gold at Grand Falls. - The people of Grand Falls are somewhat excited over fresh discoveries of gold bearing quartz in quite close proximity to that village. There has as yet been no scientific test made of the metal found, but should it prove to be the ...(?) pure article, the discovery will be a most important one, as the indications are that the gold bearing rock is very plentiful and very rich. C.H. Lugrin, Esq., showed us, on Monday, a very fine specimen of the metal found, which he was about submitting for examination to Prof. Bailey, Fredericton."

S.J. Daily News - Oct. 13, 1873 Gold at Grand Falls. - A week or two ago the NEWS announced the discovery of gold near Grand Falls, and the results of the labors of Dr. Colwell and others with the ""washer"". The Carleton Sentinel follows up what the NEWS said in this wise:- ""The people of Grand Falls are somewhat excited over fresh discoveries of gold bearing quartz in quite close proximity to that village. There has as yet been no scientific test made of the metal found, but should it prove to be the ...(?) pure article, the discovery will be a most important one, as the indications are that the gold bearing rock is very plentiful and very rich. C.H. Lugrin, Esq., showed us, on Monday, a very fine specimen of the metal found, which he was about submitting for examination to Prof. Bailey, Fredericton."

S.J. Daily News - Sep. 29, 1873 Gold washings have been found on a branch of the Rapid Defamme, near Grand Falls and a number of persons are ""panning"" to advantage. About five dollars worth of gold was obtained a few days ago by the labors of two or three men under the guidance of Dr. Colwell with the crudest kind of washer. The discovery is attracting considerable attention in the neighborhood, and just now persons are operating with the more improved kinds of apparatus."

URN: 2048 / IDX_Names: Falls Brook Gorge Gold;

S.J. Daily News - Oct. 1, 1880 Gold found.- A few days ago Mr. Samuel Johnson, of St. George, discovered indications of gold-bearing quartz in Falls Brook Gorge, near Grand Falls. Mr. J.'s experience enabled him also to readily detect symptoms of the precious metal in the sand of the stream. For twenty minutes washing he found sixteen grains of the clear article. Mr. Johnson believes that he has found a mine."

Bay Pilot - Oct. 7, 1880 It is reported that a gold mine has been discovered near Grand Falls, Mr. Samuel Johnson of St. George being the lucky finder."

St. Croix Courier - Sep. 22, 1904 30 Years Ago. - The gold fever has again broken put at Grand Falls, where several people have been washing with pans at the Falls Brook and have secured some fine specimens."

URN: 2049 / IDX_Names: Porter Brook Gold;

Miramichi Gleaner - Dec. 30, 1865 Gold in Reality. - Mr Richard Atridge, formerly of the South West, Miramichi, but lately of Vancouver's Island, and California, called into our office yesterday, and showed us a piece of gold which he had found up the river about 3 miles above Boiestown, on the opposite side. From the resemblance of the country to that of districts where gold abounded he was induced to prospect, and the result proved quite satisfactory - it now only remains to be proved whether it will be found in paying quantities before we have a second California in Miramichi."

Morning Journal - Jan. 3, 1866 Gold in Miramichi. - Mr. Richard Atridge, formerly of the South West Miramichi, but lately of Vancouver's Island, and California, called into our office yesterday, and showed us a piece of fine gold which he had found up the River about three miles above Boiestown, on the opposite side. From the resemblance of the country to that of districts where gold abounded he was induced to prospect, and the result proved quite satisfactory - it now only remains to be proved whether it will be found in paying quantities before we have a second California in Miramichi. - Gleaner"

S.J. Daily Sun - Jun. 29, 1899 Boiestown. - James Fairly has in his possession a very rich sample of gold-bearing quartz, obtained within a few miles of this place. Experts who have seen it state that it is surprisingly rich in the precious element."

URN: 2050 / IDX_Names: Birch Island Gold;

S.J. Daily News - Sep. 23, 1879 Gold Discovered on the Nashwaak. - [Fredericton Star.] - Some time ago we stated a party was to start up Nashwaak on a gold prospecting expedition. The party, numbering five persons, went up the river about forty miles to the spot whence the specimens had been brought. The country is wild and wooded, and a vein of quartz runs down to the banks of the Nashwaak. The party found on examination that the vein towards the river was crumbly, and there among the sand saw shining grains of yellow metal. The party then began to search on the surface, and found two dozen grains of pure gold, varying in size from a mustard seed shot to a swan drop. The land on which the gold was found belongs to Mr. A. Gibson, and he has taken immediate steps to put up a quartz crushing mill. The gold region is about two miles below the Napadoggin stream and there is every reason to believe that quartz, rich in gold, extends through a wide track. The quartz was shown to experienced gentlemen who pronounce it richly laden with gold. The grains picked up were valued at $10. Among those at the expedition were A. Gibson, Rev. W.W. Brewer and John Gibson. [Same paper, editorially] - Some men seem to have been born under a lucky star. The discovery of gold by Mr. Gibson himself, forty miles up Nashwaak, as will be seen under another column, testifies to the fact. We wish Mr. Gibson millions in his discovery."

Moncton Daily Times - Sep. 23, 1879 Parties have been prospecting for some time on the Nashwaak for gold, among them A. Gibson, Esq., and several specimens have been found, but none of any great value."

N.B. Reporter - Sep. 24, 1879 and St. Croix Courier - Oct. 9, 1879 Gold on the Nashwaak. - Some time ago Mr. Hugh Eggar, a lumberman in the employ of Alex. Gibson, Esq., showed Mr. Gibson several small pieces of gold which he had found in the Nashwaak stream, about seven miles above Stanley, near Birch Island, while washing his face one day. Upon the strength of this, and of information obtained from other sources, Mr. Gibson concluded to ascertain whether there was anything in the stories that had been circulated. Accordingly Mr. Gibson and his sons, accompanied by Rev. W.W. Brewer, Mr. John Gibson and Mr. Baker who has had experience in working in mines in California, and several others went up to the place several days ago and made some discoveries of value, going to prove that the real article was there sure enough, but in what quantities remains to be tested. They found rotten slate, rusty quartz, and black sand. The quartz was much honeycombed, the result probably of ferruginous action. Without any picks or shovel, and using only an old tin plate for washing, they secured about thirty pieces. Mr. Gibson intends commencing operations immediately, and if he meets with fair success will engage in the mining business on a very extensive scale. Mr. Baker brought home with him a quantity of the black sand which he purposes to analyze. When a man of Mr. Gibson's energy takes hold of a matter of this kind we may be sure he will not allow it to fall through without a determined effort to secure the prize if it is there, and it really looks as though he had struck the real article this time. Mr Edward Jack informs us that several years ago a returned Californian discovered gold at Stanley."

URN: 2050 / IDX_Names: Birch Island Gold;

Daily Gleaner - Aug. 12, 1890 and S.J. Evening Gazette - Aug. 13, 1890 Gold in Stanley. - M.B. McMinneman discovered recently on his property at Stanley some gold quartz, which he believed to be of good quality. An expert, now in Houlton, has been sent for, with a view of analyzing. He will arrive the latter part of this week."

Daily Gleaner - Aug. 12, 1890 and S.J. Globe - Aug. 13, 1890 The Nashwaak Gold. - The reported find of rich gold-bearing quartz a few weeks ago raised quite a sensation. This morning, it is reported, that Mr. James Humble's party of experts will examine the rocks at low- tide, the present condition of the river preventing minute operations. What specimens have been examined are undoubtedly rich."

Fredericton Daily Gleaner - Dec. 10, 1890 and S.J. Evening Gazette - Dec. 11, 1890 and Weekly Record - Fri. Dec. 19, 1890 Gold Dust. - The people of Stanley say that many mining undertakings will be commenced there in the spring and that there is not the least doubt as to their paying capacities. Gold and silver have been found in several places in the immediate neighborhood of the village and indications show many rich pockets on the Upper Nashwaak."

Daily Gleaner - Jul. 3, 1890 Stanley. - Gold has been found in the Nashwaak stream."

Daily Gleaner - Jul. 5, 1890 Looking For Gold. - A Stanley correspondent sends word that Mr. James Humble and party have been exploring the old site of Mr. Alex. Gibson's last venture. Latest reports from Stanley say that the experts expect something rich."

Daily Gleaner - Jul. 9, 1890 Gold on the Nashwaak. - The gold finding prospects, reported by our Stanley correspondent the other day, has created considerable excitement along the Nashwaak. A specimen of the very rich quality is said to have been found."

S.J. Evening Gazette - Jul. 10, 1890 and S.J. Daily Sun - Jul. 10, 1890 Fredericton. - There is a flutter of excitement on the Nashwaak Stream over the alleged discovery of gold in that locality."

Daily Telegraph - Jul. 10, 1890 Fredericton, July 9. - The reported finding of gold on the Nashwaak causes quite a sensation along that river."

Daily Gleaner - Jun. 26, 1890 Stanley. - Gold has been found in quartz among rocks here."

Moncton Daily Times - Nov. 3, 1890 Nashwaak Gold. - The St. Croix Courier says that John McCallum, the Nova Scotia mining expert, has been prospecting in this province. From what he saw of the formation of gold quartz up the Nashwaak, he believes that the mineral deposits are as promising as in Nova Scotia."

Evening Gazette - Nov. 10, 1890 In Stanley. - A correspondent writes from Stanley, York Co., Nov. 8th: ... They have in addition to this a rich gold mine within four miles of the village on the Nashwaak stream. I have seen several specimens of gold bearing quartz, indicative of rich deposits of gold. ..."

Fredericton Daily Gleaner - Nov. 15, 1890 and Moncton Daily Times - Nov. 19, 1890 Rich Gold Mine. - B. McMinamin of Stanley, has sent some specimens of quartz to this city to be analyzed. They are very rich in gold and the find may prove a bonanza to the village. These specimens were picked up on his farm and there can be no doubt that a profitable mine will be opened. The whole country in this neighborhood shows all the formations incident to gold. A ridge of red sandstone with pockets of very heavy black sandstone crosses the province from Charlotte to Miramichi, passing through Stanley. At various places on this belt, gold has been obtained, but is small quantities as no important work was undertaken. A scientist in minerals, examined the mine, and found iron pyrites and galena besides gold."

St. Andrews Beacon - Nov. 20, 1890 Gold quartz is being found at Stanley. The GLEANER, speaking of the find, says:- The whole country in this neighborhood shows all the formations incident to gold. A ridge of red sandstone with pockets of very heavy black sandstone crosses the province from Charlotte to Miramichi, passing through Stanley. At various places on this belt, gold has been obtained, but in small quantities as no important work was undertaken. A scientist in minerals, examined the mine, and found iron pyrites and galena besides gold."

URN: 2050 / IDX_Names: Birch Island Gold;

Weekly Record - Fri., Nov. 21, 1890 According to recent despatches the finding of gold in Stanley, York Co., is beyond question. This should be good news to capitalists and others wishing forthe progress and welfare of the province. The opening of a few well directed and properly managed mining districts will do much towards bringing New Brunswick prominently before the capitalists of Great Britain and the United States."

Fredericton Daily Gleaner - Oct. 1, 1890 Nashwaak Gold. - The St. Croix Courier says that John McCallum, the Nova Scotia mining expert, has been prospecting in this province. From what he saw of the formation of the gold quartz up the Nashwaak, he believes that the mineral deposits there are as promising as in Nova Scotia."

Fredericton Daily Gleaner - Sep. 10, 1890 Prospecting at Birch Island. - Mr. James Humble, of Stanley, was in town today and reports very successfuloperations in the neighborhood of Birch Island, in Stanley parish. The quartz rock found there in the claim belonging to Alex. Gibson is rich in quality and quantity and a sure indication of lead. The specimens submitted to the experts have been excellent. The Rev. Mr. Mullin, B. McMinneman and H. Turnbull, all of Stanley, have seen the samples of quartz produced from the claim. Mr. Humble intends starting for the scene of operations this afternoon, accompanied by an Australian gentleman of the name of Nichols. This gentleman, it will be remembered, was the fortunate discoverer of the largest nugget of gold in Australia, which was submitted to the Queen's inspection some years ago. The nugget weighed 140 lbs., and measured 42 feet long and 10 inches broad. This nugget was afterwards presented to the

Moncton Daily Transcript - Sep. 11, 1890 There is quite an excitement at Stanley, YorkCo., over the discovery of gold on Birch Island. The land belongs to Alex. Gibson."

Fredericton Daily Gleaner - Sep. 17, 1890 Gold At Stanley. - The specimens of gold and silver found at the Alex. Gibson claim, about 6 miles from Stanley, have now been examined by Mr. Napier. He pronounced both specimens rich, and the location worth the risk of working, both metals existing in good paying quantities. The nugget found by this expert in Australia should have been 42 inches and not as previously reported. The error crept in through a proof reader's oversight. A nephew of Mr. Gibson who has had 15 years experience in California, has also visited the mine, and his opinions coincide with that of Mr. Napier."

S.J. Daily Sun - Sep. 18, 1890 Local Gold Fields. - The reported discovery of rich gold bearing quartz in large quantities at Stanley, in York County, has caused some local sensation. It may turn out to be a valuable discovery, not only for the locality but for the province. The gold fields of Nova Scotia are among its most valuable resources. Some of the richest deposits now worked are within a brisk hour's drive from Halifax. They have been undiscovered while gold was obtained near by, and while prospecting has gone on all over the province. It is therefore not surprising that gold should abound in York county without previous discovery. The gold mines of the neighboring province now give direct employment in the works during some part of the year to over 1,000 men, and to at least 700 hands the year round, while indirect employment is given to many more. The value of last year's output was $470,000 at $18 per ounce, and though a considerable force is engaged in preliminary work caused by the opening up of new areas, the average product of each man's labor was $2.22 per day the year round. This is not so large an average return as one or two years in the history of the province could show, but is above the average for the quarter of a century of operations reported. Gold mining in Nova Scotia has not been so speculative a business as in some countries, but it has undergone some considerable fluctuations. In 1862 the total output was 7,275 ounces. At that time the gold fever prevailed and people were rushing to the mines in large numbers. The number of days worked given for that 7,275 ounces was more than two- thirds that given last year for nearly four times the quantity. The output doubled the next year, and went on increasing until 1867, when high water mark was reached in a product of 27,314 ounces, a quantity that has never been recorded since, though it probably will be reached in 1890. From 1867 there was a pretty steady decline for some years. In 1874 only 9,140 ounces was reported, and the number of miners had declined to about one-fourth of the number ten years before. Some of the old leads which had made the most money for the owners were worked out, and capitalists had spent thousands making unproductive holes in the ground. From 1874 to 1881 there was but little improvement. Then came the revival and the gradually increasing product which in eight years climbed up from 10,756 ounces to 26,155 in 1889. The oldest gold fields are in Halifax, Guysboro and Hants. Colchester, Lunenberg and Yarmouth are also good gold counties, and valuable deposits exist in Cape Breton. But the most extensively worked and most productive fields, which are also among the newest, are those in Queens county. At Malaga Barrens, the most important mining district of the county, gold was discovered in 1886. Last year two tons of gold was extracted from over four thousand tons of quartz in that region. Four years ago the only habitation in the district was a tent, now there is a town of 500 people, having a school, meeting house, stages, daily steamer service, and all the modern conveniences, which might be expected in a village that sent abroad $70,000 worth of its own produce last year. Queens county exported some $160,000 worth of gold in 1889 which quantity may be increased by fifty per cent in 1890.

Gold mining in Nova Scotia is believed to have a great future before it, and the same may be true of New Brunswick. In this at least there can be no rivalry, for the gold market is not likely to be over-stocked."

URN: 2050 / IDX_Names: Birch Island Gold;

Weekly Record - Fri. Sept. 19, 1890 We notice by a dispatch from Fredericton to the Sun that gold has been found on the Nashwaak, near Stanley, in York County. The prospecting has been done by Samuel Napier, Esq., at time a M.P.P. for Gloucester who had some experience in gold mining in Australia some years ago. According to all reports the quartz is in large quantities and well studded with the precious metal. We believe it is correct, and all along have been given in the opinion expressed time and again that gold would be discovered in paying quantities in New Brunswick; and, further, we believe it is not all concentrated in York County as events at a later day may prove. We should be pleased to see gold mining prosecuted successfully in N.B. and trust these new developments will not be allowed to lie intact, but that the thump of the stamp mill will be heard in the vicinity of Stanley before many months. Again in the face of the recent mining developments in the province, we call the attention of the local government to the necessity of a better regulation of the

St. Andrews Beacon - Sep. 25, 1890 If Mr. Samuel Napier, formerly MPP, and previous to that an Australian gold miner, is not astray in his conclusions, there is a large sized bonanza on Alexander Gibson's timber lands in the shape of a gold mine. It is alleged that there is an enormous quantity of very rich gold bearing quartz, which is not, in fact, by any means confined to Mr. Gibson's property. Everybody hopes this is true.- HERALD"

Fredericton Daily Gleaner - May 4, 1891 Mining. - A correspondent writes to the Halifax Critic in regard to mining in New Brunswick. Here is an extract: Reports of probable paying gold claims at Stanley, in York county, above Fredericton, awaitverification. Fair sized leads of gold and silver and combination, in Gloucester county, in the northern part of the province, are reported, and it is said negotiations with a view to opening up the same are in progress."

Daily Telegraph - May 19, 1891 Stanley. - Gold has been found in the village of Stanley, and the surrounding districts in the surface boulders, and large loads of quartz rock crop out in many places on the Nashwaak stream."

S.J. Daily Sun - Sep. 30, 1897 Marysville. - James Hoyle returned from the Upper Nashwaak last week with two or more boxes of gold dust."

URN: 2050 / 2051 / E6 / IDX_Names: Birch Island Gold; Steward Brook Gold; Southwest Miramichi/ Dungarvon/ Taxis Gold;

Evening Gazette - Oct. 29, 1890 The Occurrence of Gold in New Brunswick. - It is a very remarkable fact that the existence of gold in Nova Scotia was only discovered within a few years, and that now since public attention has been directed to the fact of its occurrence there, new discoveries are being daily made. Such being the case, and seeing that the rocks in the gold districts of Nova Scotia so much resemble some formations in New Brunswick, we may at any moment expect to learn of gold deposits being found in this province, which can be as profitably worked as those in Nova Scotia. We are aware that gold in small quantities has been found on the Becaguimec, and Muniac, two of the branches of the St. John, as well as on the south-west Miramichi. Mr. Freeze, Crown Land Surveyor, also found gold on the head of the Stewart Brook, a branch of the Taxis. This was seen by Mr. Edward Jack, who has informed us of the fact. This find he says was made some years ago, and he further said that Mr. Freeze informed him at the time he showed this gold to him he had also found gold on the Dungarvon. For some time there have been parties at work in Nova Scotia who have been obtaining gold from the lower carboniferous rocks, and we hear that a trial has been made of 4 tons of rock of this horizon, which in fact formed part of a cliff, yielded 4 dwts of gold to the ton. An enormous yield if it be considered that there are mountains of this rock there. Now the lower carboniferous rocks cross New Brunswick, and we also know that small quantities of gold have been washed from the sands of certain streams by which they are intersected. Should, therefore, the present extensive mining operations which we are informed are about being carried out at Gay's River, in Nova Scotia, in the lower carboniferous district, prove remunerative, a great impetus will be given to gold prospecting in New Brunswick. In this manner the Gazette unlike some of its contemporaries, has not allowed itself to be carried away by the bold assertion of weak and ignorant men, who falsely claimed to have made gold finds in New Brunswick, but the opinions which it expresses are based on the testimony of cool headed and intelligent men, who understand the subject which they undertake to discuss."

URN: 2050 / I1 / IDX_Names: Birch Island Gold; Stanley Gold - General;

Fredericton Daily Gleaner - Sep. 12, 1890 John S. Manzer, of Houlton, Me., who has had several year's experience in gold mining in California, was in Stanley last week, and reports that the specimens of gold found at B. McMinneman's farm are rich, and thatit would be a payable concern if worked. The Rev. J.S. Mullin discovered recently on the manse lot, specimens of gold in good paying quantities. Lots of specimens have been discovered here, but men of capital are wanted to come here, investigate and work the claims found."

S.J. Daily Sun - May. 4, 1891 and Weekly Record - Fri. May 8, 1891 New Brunswick Mining Notes - Halifax Critic: My notes are rather few and far between but really there has been nothing very exciting of late to tell you of. The government at last session passed a mining act to all intents and purposes very similar to your Nova Scotia mining act. They however made the royalty on goldand silver 2 1/2 per cent. Other minerals and metals about same as your own. There is considerable difference of opinion in the matter among many of our mining men, and much objection is made by some, but as a whole I think the new regulations will be regarded favorably. As New Brunswick has not been fully prospected, it would perhaps have been a wise policy if the government had included a clause, making all mining operations free and exempt from royalties for a period of say ten years, which would probably have had the effect of encouraging capitalists to more fully look into and explore the mineral deposits of the province. Not much is being done in the shipment of manganese at the present time. A number of manganese properties are reported as being on the market for development and sale... Reports of probable paying gold claims at Stanley in York county, above Fredericton, await verification. Fair sized leads of gold and silver in combination in Gloucester County, are reported, and it is said negotiations with a view to opening up the same are in progress. The prospects are that a more vigorous research for minerals and metals in different sections of the province will be made this summer than heretofore, as a better chance is offered under the new mining act to acquire leases and prospecting licenses."

URN: 2050 / M6 / IDX_Names: Birch Island Gold; York County Coal;

N.B. Reporter - Sep. 24, 1890 Gold. - There is a report that gold bearing quartz has been recently discovered on Mr. Alex. Gibson's lands on the Nashwaak, by Mr. Samuel Napier, ex M.P.P. Mr. Napier has had experience as a gold miner in Australia, and should know of what he speaks, and when he says the land is rich in this quartz there must be some truth in it. It has been shown that coal in large quantities is to be found in several places on the Nashwaak, but no one has ever felt disposed to invest sufficient capital to develop the find."

URN: 2051 / IDX_Names: Steward Brook Gold;

S.J. Daily Sun - May 17, 1899 Boiestown. - A quantity of mining pans have been imported by those interested in Stewart Brook, and washing operations are to be at once inaugurated. If they are successful more appliances will be secured in the near future."

S.J. Daily Sun - Oct. 26, 1899 Boiestown. - ... The interest in the Stewart Brook gold ares appears to be on the decline. Although several were prepared to invest largely in the enterprise nothing more than a survey has been accomplished. Some very promising specimens of gold-bearing quartz from this locality have been exhibited, as well as some small pieces obtained by washing, but capital appears cautious. This location is in the same formation as Cross Creek."

URN: 2051 / 2052 / IDX_Names: Steward Brook Gold; Cross Creek Gold;

Semi-Weekly Telegraph - Apr. 12, 1899 Boiestown, April 8. - There is a great gold fever in our town today. Councillor Hinchey came down from Bloomfield yesterday and was closeted with W.K. McCloskey, Fred Duffy and others for several hours. Report says a company was formed to be known as the Stuart Brook Gold Mining Company. It is also said that the company will erect a stamp mill, the cost to be about $5,000. Quartz mining will be commenced at once. There were some gold nuggets shown in town today. It is a well known fact they came from Stuart Brook. It is said that a man at Bloomfield has for a number of years been in the habit of getting small nuggets of gold at or near Stuart Brook and sending them to friends in Boston and getting gold coin in return. Stuart Brook is about ten miles west of Boiestown in the parish of Stanley. Among those who have taken out prospectinglicenses in the Cross Creek (Stanley) gold fields, the first discovery, are: John Harris, James Robertson, Thomas Gordon, Wesley VanWart, W. Emile Smith, A.A. Snute, Harry Beckwith, Albert Everett, W.A. Carroll, Havelock Kelly, Daniel Elliot, Adrian S. Tibbits, J.T. Sharkey, Oliver Staples, John Christie, W.H. Steeves, John Limerick, T.D. Babbitt, Francis Dinsmore, James L. Neville, Fred H. Peters, James Wetmore, Daniel Kelly, Michael Doohan, W. Lister, J. Baird, Francis Dinsmore, Robert Biggs, Edward L. Grear, James Carton, John Kelly, John Black, J.L. Lister, W. Turvey, F. & J. Wetmore, N.C. Woodbridge, S.S. Pride, (in trust), Edward S. Thomas, Samuel Cook, E. Thomas Scott, Theresa Lynch, J. Hayes, E.B. Wilson, F. McGoldrick, Fred M. Tweedie, H.B. Spragg, A.A. Sterling, C. Osman, Geo. Kimball, Wm. Humble, F.B. Dunn."

URN: 2052 / IDX_Names: Cross Creek Gold;

N.B. Reporter - Apr. 5, 1899 Nashwaak Gold. - The excitement over the discovery of gold at Cross Creek and vicinity continues, and yesterday several samples of the gold were exhibited in town. Great interest is noticeable and the applications for additional areas are being daily made at the Crown Land office. It will be fortunate if some people don't lose their heads in the scramble after the yellow metal."

URN: 2052 / IDX_Names: Cross Creek Gold;

Semi-Weekly Telegraph - Apr. 5, 1899 Stanley Gold Fields - Not Only the Precious Metal But a Poet Has Been Found. - Away out the road leading from Fredericton to Chatham, the old post road, a new settlement has been carved out of the primeval forest. It is not only rural in aspect but the natives perhaps feared that civilization would come upon them too suddenly, and wipe away every trace of the original condition of things. To prevent this they named their village Greenhill. There for some years reposed the virgin gold hidden away in the rocks Silurian - there hidden away for years was a poet of the wild and wooly west type. But as the gold came to the surface, so did the poet and that he may come forth into the sunlight of popular favor the Telegraph opens its columns to the following:- The Stanley Gold Fever. ... B'gosh, the people's got the fever, An' it's got the under hold; Their minds are gettin' yaller Thinkin' of this land of gold. ... They do not work at all now, But eat, an git' an' hum, An' talk o' golden nuggets An' the mine they say will come. ... They've talked an' talked about it Till it's got an awful pitch, While everyone's a-buyin' claims, A-thinkin' they'll get rich. ... They've got the fever pretty bad, An' it's ketchin', too, I'm told, An' no medicine will help it - Nothin' but a dose of gold. ... They say they've formed a syndicut To make the gold mine boom, An' says within a month or two There won't be standin' room. ... Of course they can't dig gold yet For there seven feet of snow; They'll have to wait till bare ground Or take their duds an' go. ... They won't need any dog teams To get to this here gold. It's in a settled country, An' not so very cold. ... H.B.G."

Daily Sun - Apr. 6, 1899 Letters from the People. - Mining on Private Lands. - Lower Prince William, N.B. March 30th, 1899. To the Editor of the Sun: Sir - During a conversation upon the gold find lately reported at Stanley, it became apparent that the parties to the discussion were not well informed as to the respective legal rights of the owner of the land and the miner who wished to mine upon the land. It was even stated that the whole area of a man's farm might be taken up by the holders of mining licenses, and that the owner of the land would have no claim for compensation nor any redress, which is manifestly absurd. Will you be so kind as to inform the readers of your paper what rights the law gives to the miner who wishes to operate on private lands, and what compensation it awards to the owner of the land for the invasion of his prior right? By so doing you will greatly oblige. Yours, etc. Subscriber. --1) Prospecting licences to be in force for twelve months or less, may be issued by the surveyor-general. The applications must accurately define by metes and bounds the lands applied for, and a fee must be paid according to the extent of the land to be prospected. A bond must be given with two sureties for the recompense of the proprietor of the soil, in case of entry on private lands, for damages done to such lands, also to make returns and pay royalties. The proprietor of private lands, if he claims damages, must make his claim three months before the expiration of the license. If the claim is not adjusted by agreement within one month, it is settled by arbitration, as in the case of mining leases hereafter mentioned. Buildings, houses, stores, barns, or the curtilages attached thereto, or gardens, orchards or grounds reserved for ornament, or under cultivation for growing crops, or enclosed, can not be entered upon except with the consent of the occupier or a special license to be obtained upon setting forth the special circumstances of the case. 2) In case of a lease from the crown of mining areas, where the holder of such lease can not make an agreement with the owner of the lands, and with the tenant, if there be a tenant, for leave to enter and for easements and for damage that may be done, the holder gives notice to the owner and tenant to appoint an arbitrator to act with another named by the holder. In case the owner and tenant differ as to the selection of an arbitrator, the owner's choice controls, and there can be but one arbitrator for both interests. If the holder of the lease enters before an agreement with the owner and tenant, or before having proceeded to have the damages appraised, a judge of the supreme court may declare the leases forfeited. Provisions are made for the service of the notice of appointment of Arbitrators, and in case the owner or tenant does not appoint one, the warden of the municipality may do so. In estimating the damages the value of the land is to be taken, irrespective of any enhancement by reason of its containing minerals."

Semi-Weekly Telegraph - Apr. 8, 1899 Fredericton. - The excitement over the discovery of gold at Cross Creek still continues. Thus far 5,000 areas have been applied for and the provincial treasury has been enriched to the extent of

Semi-Weekly Telegraph - Apr. 15, 1899 Stanley. - The gold discovery is still causing great excitement. During the past week several experienced miners have visited the gold district and pronounced the prospects for gold excellent."

St. Croix Courier - Apr. 20, 1899 A gentleman who returned from a business trip to Stanley this week, says that the greatest excitement prevails among the inhabitants of that section over the alleged gold discoveries at Cross Creek. He says that a number of stories about new finds are afloat and are generally accepted as true. One story he heard was that James Campbell had washed out a dollar's worth of gold dust in less than an hour, from a quantity of sand near Douglas' mill. He afterwards had this report corroborated by Mr. Douglas himself. As soon as the snow has disappeared a genuine Klondyke boom is anticipated by Cross Creek residents. - Fredericton Herald"

Semi-Weekly Telegraph - Jul. 19, 1899 Stanley. - Notwithstanding the fact that gold has not yet been found in paying quantities, the search is being kept up. One party found on Friday last quite a number of specimens in one washup. Preparations are being made for sinking shafts."

URN: 2052 / IDX_Names: Cross Creek Gold;

N.B. Reporter - Jul. 19, 1899 Crude Mining. - Many inexperienced persons are still prospecting in the neighborhood of Cross Creek and Stanley and from lack of knowledge of the requirements of the work much labor is lost. It has just now leaked out that many of the fishing parties this season who were supposed to be scrambling through the underbrush and wading streams have been using pickaxe and shovel among Nashwaak boulders and in quiet valleys. When prospecting parties have a hardware merchant among them they probably have the option of returning implements they do not desire to use again. Mining is rough work but where the returns are good the roughness is a secondary consideration. The fever still claims its victims and by the last Gazette we notice the following applications for prospecting licenses: C.A. McDougal, et al 15 areas in Williamsburg Settlement, Stanley; Benjamin Collicot, 10 areas on Northwest side of Howard Settlement road, Canterbury; James Hoyle et al, 16 areas on northwestern side of Cross Creek road at Cross Creek; W.H. Griffin and others 20 areas on Taxis river, above English Brook on lands owned by A. Gibson and Wm. Richards."

St. Andrews Beacon - Jun. 15, 1899 and Carleton Sentenil - Jun. 17, 1899 (also Gleaner) The Stanley Gold Fields. - Mr. A.G. Beckwith has returned from a week spent at Cross Creek, says the Gleaner, where he has been surveying the gold areas of the Vanwart syndicate. Prospecting affairs at Cross Creek are now assuming a practical phase, and tools and machinery are being used in developing and opening up the various claims. Mr. Beckwith states that there are without doubt large quantities of quartz at Cross Creek, and that much of the quartz showed unmistakeable signs of gold, but whether or not the yellow metal is present in paying quantities yet remains to be proven. It is understood that Mr. D. McCatherine, who has spent the past week at Cross Creek, is to do considerable blasting on the claims in which he is interested. Messrs. John McCoy and W.T. Whitehead are also upon the scene prospecting their areas, and they express themselves sanguine at the results. Other Fredericton gentlemen who have taken up areas have also visited Cross Creek during the past few days, but all are awaiting with much interest the outcome of the operations now going on under the direction of Mr. McCatherine. Mr. F.P. Thompson, and Mr. McNaughton, the manager of the mine in Nova Scotia of which Mr. Thompson is partial owner, were at Cross Creek prospecting upon claims in which Mr. Thompson is interested. Mr. Foster, manager of the Merchants Bank, was up at Cross Creek yesterday with a party of friends upon a fishing trip and himself broke off a ledge there a specimen of quartz showing freely gold, and which Mr. McNaughton, above mentioned, pronounced to be a rich specimen."

Semi-Weekly Telegraph - Jun. 17, 1899 Gold at Stanley. - The recent discoveries of gold bearing quartz have revived the interest in the Cross Creek ophir, and the daily visits of miners and capitalists tend to keep the subject the all absorbing topic of conversation."

Semi-Weekly Telegraph - Mar. 18, 1899 and Carleton Sentinel - Mar. 18, 1899 York County Excited. - Good Indications of Gold at Stanley. - Stanley, March 15. - A great sensation has been caused owing to the reported finding of gold near Cross Creek, about two and a half miles from Stanley. The first discovery was made last autumn by Mr. John Harris, and ever since gold has been the leading topic of conversation. Last week Mr. John Robins, Mr. Robert Brewer and Mr. Mark Sullivan went out prospecting, and on Friday their labours were rewarded with good specimens of the shining metal. Their success soon became known in the village and surrounding districts, and on Saturday thirty persons at least might have been seen at work shovelling away the snow, and with hammers and drills breaking off portions of the rock. Some came prepared with dynamite and fuse which was used with good effect. It is believed that gold exists in paying quantities, and it is to be hoped that further research may prove this to be correct. Some nine or ten years ago Mr. Napier, the gentleman who found the large nugget in Australia, visited Stanley and is reported to have said that there were good indications of gold. Ever since then search has been made from time to time, and it is generally believed that at last their efforts have been successful. (also Globe and Gleaner.)"

Semi-Weekly Telegraph - Mar. 19, 1899 More Stanley Gold.- John A. Humble of Stanley, brought to Fredericton yesterday many pieces of quartz from the Cross Creek gold mine, showing evidence of large quantities of gold. The prospects for a booming gold mine in that vicinity when the snow leaves are excellent."

URN: 2052 / IDX_Names: Cross Creek Gold;

N.B. Reporter - Mar. 22, 1899 The Home Klondyke. - For some time past certain persons have been tracing signs of gold in the rocks above Cross Creek and around Stanley. The movement was kept as quiet as the exploits of the hunters after Capt. Kidd's treasures years ago, but all secrecy was disclosed last week when Messrs. Harris and Robbins, the discoverers of the quartz applied at the Crown Lands office for fifty mining areas. This was enough to excite the curiosity of the ordinary man and since then all eyes are turned to Cross Creek. Messrs. Barker and Harrison were despatched to the locality and at once staked off areas to be in readiness to meet the public demand which is already growing. The size of a mining area is 250 by 150 feet, and a person taking out ten areas is required to pay to the government 50 cents an area or $5 for the ten areas. Additional areas in excess of ten and not exceeding one hundred, he may purchase at the rate of twenty-five cents an area. For instance a block of fifty areas cost $15, and for the sum of $27.50 he can produce 100 areas. He can hold these for the period of one year, and can renew the lease at the expiration of that time for half the sum that was originally paid. Those who have purchased areas up to the present time are not overly sanguine as to the results, but merely want to be on the safe side, if something substantial does come out of Mr. Harris' alleged find. Syndicate after syndicate has been formed and several of our monied men have entered wholesale into the prospective mining business. More than a thousand areas have been taken up and among the applicants are the Mayor, at least one ex-Mayor, aldermen and ex-aldermen, hotel proprietors, physicians, lawyers, clerks, merchants, mechanics, and in fact every feature of labor will have its counterpart at Cross Creek as soon as the snow leaves the rocks. The most contagious fever is a gold fever and it is to be hoped our people will keep a little cool lest in their delerium they see sparkling gold in spurious metal.

Everybody will be glad to have the valley of the Nashwaak dotted with shanties sheltering miners and will be glad to witness an increased demand for building lots in Fredericton and vicinity, but just now in the midst of growing excitement it would be a catastrophe for people to lose their heads. Canada Eastern railroad stock will now receive a boom and in a few weeks the company will probably find it necessary to largely increase the rolling stock. We are sure Supt. Hoben will be equal to any emergency and will be able to despatch special trains to the gold fields every hour of the day when the rush sets in."

Richibucto Review - Mar. 23, 1899 Gold in New Brunswick. - Areas Being Taken Up in York County. - Fredericton, March 19. - There seems to be no doubt in the minds of many people that there is lots of gold at Cross Creek, near this city. Already a large number of claims have been staked off and it is understood that many more areas will be taken. Yesterday R.S. Barker and W. Harrison, of the Board of Works office went up, staking out areas for applicants. The former returned to the city last night, and though he made no definite statement, he intimated that there is certainly lots of

St. Croix Courier - Mar. 23, 1899 Gold bearing quartz, said to be very rich, has been found at Stanley, near Fredericton, and there is already a great rush for prospecting licenses."

St. Andrews Beacon - Mar. 23, 1899 Specimens of gold have been found near Stanley,York Co. The find has occasioned considerable excitement around Fredericton, and there is quite a brisk rush at the Crown Land office to secure mining areas. Over 250 were disposed of within an hour."

URN: 2052 / IDX_Names: Cross Creek Gold;

Semi-Weekly Telegraph - Mar. 29, 1899 York County's Ophir. - Mr. Harris Refuses Twelve Thousand Dollars. - For His Claims in the Cross Creek Mines. - People Have a Carload of Rich Gold Bearing Quartz. - Stanley, March 24. - The excitement over the discovery of rich gold-bearing quartz at Cross Creek continues unabated. The reports reaching us of the rush at the Crown Land Office in Fredericton, for prospector's licences would lead us to believe that others besides the people here have faith in the genuineness of the find and the future of Stanley as a gold-producing district. Notwithstanding the fact that the snow is very deep and other circumstances make this an unfavorable time for prospecting, yet many have already located what they consider good positions and will, no doubt, lose no time in taking out the licence necessary to secure them. If, as has been stated, the specimens exhibited were brought from British Columbia, a carload must have been imported, as nearly everyone in the place have specimens of all sizes varying in richness, some containing small specks barely visible to the naked eye and others nearly half composed of the precious metal. It is absurd to suppose that such is the case as men of the highest standing here have themselves broken off good specimens from the ledge after a charge of dynamite has shattered it. Mr. Harris was in the village yesterday and stated that he had received an offer for his claim of $12,000 from a New York gentleman, and had refused it as he considered it too low. Although large areas have been taken up on the Cross Creek there is no reason to doubt that the prospects are equally as good if not better on the Nashwaak, and some claims have already been located on that stream. That the government is satisfied that the discovery is genuine and of much value is seen from the following proclamation which appears in the last issue of the Royal Gazette:- Whereas upon the report of the surveyor general of the said province, it has been made to appear to the satisfaction of the lieutenant-governor in council, that gold has been discovered on Cross Creek, in the parish of Stanley, in the county of York; And whereas it has been reported by the said surveyor general, that numerous applications have been made for mining areas in that locality, under the General Mining Act of 1891, and that in his opinion, in order to prevent complications arising, and to satisfactorily regulate, control and equitably deal with such applications, it is desirable that the herein after bounded and described locality be, by proclamation, declared to be a gold district under the provisions of section 8 of the said General Mining Act of 1891. I do therefore, by virtue of the provisions of the said General Mining Act of 1891, and amendments thereto, proclaim the district in the county of York, limited and bounded as follows, that is to say:- Beginning at the Mouth of Cross Creek, where the northern line of the parish of St. Mary's, in the county of York, intersects the same, thence running by the magnet west 6 1/2 miles to the Douglas parish line, thence north along said line 10 miles, thence east 10 miles, south 10 miles to St. Mary's Parish line aforesaid and thence west 3 1/2 miles to place of beginning; to be a gold district under the provisions of said act and amendments thereto. During the past few days many additional mining areas have been taken up at Cross Creek by the following named gentlemen:- John A. Humble and D. McCatherine, 10 areas. Francis Dinsmore, 10 areas. Wesley Vanwart and others, 200 areas. Robert Briggs and others, 200 areas. J. Carten and J. Kelly, 10 areas. O. Staples and J, Christie, 10 areas. W.E. Smith and others, 40 areas. Jas. Wetmore, 100 areas. D. Kelly, 30 areas. M. Doohan, 10 areas. Walter Lister

L'Evangeline - Mar. 30, 1899 La population des environs de Fredericton semble n'avoir aucun doute qu'il y a de l'or a Cross Creek, pres de la ville. Plusiers lots ont deja ete pris et plusieurs autres le seront d'ici a quelques jours. MM. R.S. Barker et W. Harrison, du bureau des Traveax Publics, sont revenus, d'un voyage a cet endroit ou ils ont delimite certains lots, et bien qu'ils ne l'aient pas dit carrement, ils ont donne a entendre qu'il y a beaucoup d'or a cet endroit."

Semi-Weekly Telegraph - May 10, 1899 High water is the only thing that interferes with the operations of a large number of prospectors at Stanley looking for gold. It is reported that some Americans are trying to buy up a number of claims. William Douglas and Joshua Ward, it is stated, found a piece of quartz right in Stanley village from which they removed two pieces of gold as large as grains of buckwheat."

St. Andrews Beacon - May 18, 1899 A Deposit of Brass. - A Fredericton gentleman whowas recently in Ottawa says that the officials of the metallurgical department, do not seem to have much faith in the alleged gold discovery at Cross Creek, this county. Their opinion is based on an examination of some samples of quartz recently forwarded to them, which they found to contain nothing but brass, evidently put there by hand. Perhaps the sample of quartz sent to Ottawa, belonged to the lot unearthed on Tay Creek by a party od prospectors, and said to have been doctored with what was thought to be a gold brooch. - Fredericton Herald."

Moncton Daily Times - Sep. 19, 1899 Cross Creek Gold. - Fredericton, Sept. 18. - D. McCatherin, accompanied by several other gentlemen, left today for Cross Creek with requisite mining tools and will begin at once searching for gold."

N.B. Reporter - Sep. 20, 1899 Off to the Mines. - On Monday afternoon a monster express wagon loaded with a forge of large size, drills and other articles attracted attention on Queen street. Dugald McCatherin was evidently commander of the party consisting of Mark Sullivan, Charles Gallop, and Kenneth McDonald. Some of the crew had experience in mining and with a big team hitched to the rig they started for Cross Creek determined to get to the bottom of the gold mines of Stanley district, if they have any bottom. Speculators as well as shrewd businessmen will govern their future attitude on the local gold question upon the success or failure of Mr. McCatherin's venture."

URN: 2052 / 2051 / IDX_Names: Cross Creek Gold; Steward Brook Gold;

S.J. Daily Sun - Apr. 28, 1899 Boiestown, Northumberland Co., April 20. - Gold mining areas are being rapidly taken up by our citizens. The areas on Stewart Brook are now being surveyed. This gold region is in the same range as the celebrated Stanley fields. Some very fine specimens from Stewart Brook have been shown recently. ... John Harris, son of the original gold prospector at Stanley, has in his possession some excellent specimens of gold-bearing quartz, obtained at that place. The specimens are certainly genuine, and with the arrival of spring great operations will be begun. Councillor W.A. Campbell and Wm. McMillan of this place, are interested quite largely in the Stanley discoveries."

Boiestown, May 21. - ... The interest in the Stewart Brook mining areas is rapidly spreading. Last week a party of those interested therein explored several of the areas located. They brought back some quartz specimens, a portion of which evidently contain the precious metal. Last summer washing operations were carried on on a small scale and some gold was found. This year important developments will follow, as the location is in the same formation as that of Cross Creek."

URN: 2052 / A2 / IDX_Names: Cross Creek Gold; Albert / Kings County Oil Shales;

Semi-Weekly Telegraph - Apr. 1, 1899 More Gold Areas. - Cross Creek Prospectors Are Still Coming In. - Fredericton, March 28. - The rush for areas in the Cross Creek gold district continues unabated. During the past two days eight hundred additional areas have been taken up. J.R. McDonald, a wealthy New York capitalist, is registered at the Queen. Mr. McDonald and his associates are arranging to form a joint stock company with a capital of a million dollars to develop the coal and oil deposits of the province. The proposed company expects to handle a thousand tons of coal per day before

URN: 2052 / LEGI / IDX_Names: Cross Creek Gold; Legislation, etc.;

N.B. Reporter - Mar. 29, 1899 The Gold Region. - Samples of Cross Creek gold continue to be brought down for examination, and the York County Klondyke has assumed such proportions that the Surveyor General has found it prudent to make this proclamation in the Royal Gazette: I do therefore, by virtue of the provisions of the said General Mining Act of 1891, and amendments thereto, proclaim the district in the county of York, limited and bounded as follows, that is to say:- Beginning at the Mouth of Cross Creek, where the northern line of the parish of St. Mary's, in the county of York, intersects the same, thence running by the magnet west 6 1/2 miles to the Douglas parish line, thence north along said line 10 miles, thence east 10 miles, south 10 miles to St. Mary's Parish line aforesaid and thence west 3 1/2 miles to place of beginning; to be a gold district under the provisions of said act and amendments thereto."

St. Andrews Beacon - Mar. 30, 1899 The New Brunswick Klondike. - The Cross Creek gold boom still continues. Already over one thousand areas have been taken up by prospectors. The Provincial government has given the boom recognition by establishing Cross Creek as a gold district, with limits and bounds asfollows:- Beginning at the Mouth of Cross Creek, where the northern line of the parish of St. Mary's, in the county of York, intersects the same, thence running by the magnet west 6 1/2 miles to the Douglas parish line, thence north along said line 10 miles, thence east 10 miles, south 10 miles to St. Mary's Parish line aforesaid and thence west 3 1/2 miles to place of beginning; to be a gold district under the provisions of said act and amendments thereto."

URN: 2053 / IDX_Names: Eel Brook Copper;

N.B. Reporter - Oct. 2, 1872 A Copper Mine, said to be over one mile in extent, has been discovered at Eel Brook, Grand Manan. The correspondent of the St. Croix Courier, thus writes:- ""To make evidence indubitably sure your correspondent picked two pieces of broken rock from the bed of the brook in the narrow gorge aforesaid, and from one of these, with the point of a pen knife, took pure copper and bright as a new coined cent of the New Dominion. ""In fact the whole extent of Eel Brook from the sea to the saw mill and extending to the opposite water of Bay near ""Long's Eddy,"" so called - a distance of over one mile, is a solid bed of copper and copper ore. Perhaps, when duly explored it will be found that the copper mine at Eel Brook will be proven not much inferior, if any, that of any other in the world. That such an important mineral, and to such an extent, should have been lying at Eel Brook, Northern Head, Grand Manan, unknown ever since the period when chaotic darkness gave place to light, seems passing strange. ""Eel Brook, in its murmuring march to the sea, seems to chide this age of progress for its tardiness. Let then the rumbling of the Brook's disapprobation be answered by the sound of the miner's pickaxe, spade and shovel. There needs no shaft-sinking - tunnelling is all that is required.""""

URN: 2053 / IDX_Names: Eel Brook Copper;

Daily Telegraph - Sep. 27, 1872 Copper in Grand Manan. -The Courier publishes a long and interesting account, from a correspondent, of the discovery of rich deposits of copper at Eel Brook, Grand Manan. The locality is near the scene of the wreck of the Lord Ashburton and Sarah Sloan. The Courier's correspondent, who seems to tend a little to exaggeration, writes:- ""It is among the rocks of this narrow defile that the owner of the Eel Brook property, Mr. James Tatton, first obtained many valuable specimens of the genuine copper, although he had taken years previously specimens of copper from the loose fragments of the rocks along the northerly bank of the Brook, which had been broken out by the action of the water, frost, &c. Several years ago Mr. John Steadman, of Moncton, examined the specimens and the place, and became satisfied that an abundance of copper ore was in that location. He wrote Mr. Tatton on his return home and from the tenor of his letter Mr. T. inferred that it was Mr. Steadman's intention to return for further investigation; but from subsequent information Mr. Tatton learned that Mr. Steadman had become engaged in the mines nearer home. About six weeks since Professor C.H. Gifford of the United States, came on a visit to tour the Island, and took up his headquarters at Mr. Tatton's principally for the purpose of investigating the copper at Eel Brook. His scientific researches resulted in his thorough conviction that sufficient inducement was at Eel Brook for the formation of a company to commence operations, expressing his desire to be a shareholder. This gentleman took away with him several pieces of the rock containing the pure metal, but Mr. Tatton recently tried what drill and gunpowder would do for him in opening up the time hidden mine of wealth at Eel Brook. He made two blasts in the narrow gorge about midstream (the water being very low), and to his surprise and delight took up nearly a half bushel of pieces of the rent rock, glistening and sparkling with pure bright copper! ""Mr. Tatton delighted with his important discovery came to North Head Village, which, by the way, we intend to have called Spragueville, and requested your correspondent to visit the lucky spot. We found Mr. Tatton at work near his mill, and he soon piloted us to the scene of action. ""The banks on each side of the Brook are broken and steep, and it requires careful stepping among the sharp pointed and loose fragments of rocks in descending to the bed of the stream in order to keep from paying your respects to the precious metal on your knees. We landed safely in the gorge, and Mr. T. having pointed out the spot where he blasted the rock and gathered up his specimens, rather alarmed our nervous system by suddenly exclaiming in a loud and rather excited tone - ""O, see here, Mr. L., just look here under the water!"" the forefinger of his right hand ""suiting the action to the word"". I looked at his finger. I followed with visual organs the direction expecting that a tremendous eel, for which the brook is so famous, had coiled itself up Anaconda like, or like the serpent of Lake Utopia! But, bewilderment tinged with apprehension, soon gave place to wonder and pleasure at seeing what Mr. Tatton saw - a point of rock shining like gold - so bright was the copper. I counted eleven pieces of the glittering metal, sparkling beneath the running water. ""To make evidence indubitably sure your correspondent picked two pieces of broken rock from the bed of the brook in the narrow gorge aforesaid, and from one of these, with the point of a pen knife, took pure copper and bright as a new coined cent of the New Dominion. ""In fact the whole extent of Eel Brook from the sea to the saw mill and extending to the opposite water of the Bay near ""Long's Eddy,"" so called - a distance of over one mile, is a solid bed of copper and copper ore. Perhaps, when duly explored it will be found that the copper mine at Eel Brook will be proven not much inferior, if any, than of any other in the world. That such an important mineral, and to such an extent, should have been lying at Eel Brook, Northern Head, Grand Manan, unknown ever since the period when chaotic darkness gave place to light, seems passing strange. ""Eel Brook, in its murmuring march to the sea, seems to chide this age of progress for its tardiness. Let then the rumbling of the Brook's disapprobation be answered by the sound of the miner's pickaxe, spade and shovel. There needs no shaft-sinking - tunnelling is all that is required.""""

S.J. Daily Telegraph - Jul. 3, 1874 Copper Mining in Grand Manan. - A wealthy English firm has determined to prosecute mining in Grand Manan on an extensive scale."

St. Andrews Standard - Jul. 15, 1874 Copper ore. - Grand Manan. - An English Company have been now for some time working the copper ore on the North-West side of Grand Manan, and find it quite equal to their expectations. They have a quantity of the ore ready for shipment, but Thos. Watson, Esq. their agent, does not feel inclined to ship before having a full cargo. We have seen some very superior specimens of the ore, and feel satisfied that it will warrant the company in prosecuting the works, and will ere long be of great benefit to the Island, which will profit by the large number of men

St. Croix Courier - Sep. 9, 1880 Grand Manan notes.- .....On the island as well as in other places of the province, mining has taken hold of the attention of the people. A rich copper mine has been recently discovered on the farm of Mr. Tatton, which has indications of great value."

Daily Telegraph - Sep. 10, 1880 A rich copper mine, says the Courier, has recently been discovered on the farm of Mr. Tatton, Grand Manan, and has indications of great value."

St. Andrews Beacon - Oct. 8, 1891 and S.J. Daily Sun - Oct. 9, 1891 GRAND MANAN ...... Some of the formations of these cliffs are very curious. There is one, just after passing Fish Head, where the rocks are laid one on top of the other in seven regular layers, as if they had been placed there by some bygone giant. And a giant he would need to have been, for these layers, stretching along the cliff for hundreds of yards, must be at least twenty feet each in thickness. This cliff, on account of the peculiar formation we have just mentioned, is known as The Seven Days' Labor In the neighborhood of the Seven Days' Labor alittle purling stream runs through a canon, its banks on either side fringed with close-growing spruce. This is Eel Brook, which has its source in a freshwater lake a mile or more back. There is quite an abundance of copper ore in this vicinity, but very little has been done toward mining it. Some day the islanders may wake up and find that they have a bonanza at their doors. At present fish is uppermost in their thoughts, though, like the rest of us, they have no objection to copper if it comes in a marketable shape."

URN: 2053 / IDX_Names: Eel Brook Copper;

St. Andrews Beacon - Apr. 30, 1903 A sample of copper ore recently found near North Head (Grand Manan), was shown in the city yesterday and was rich in copper. It is said some American capitalists are talking of visiting the island to look over the field. - Telegraph."

St. Croix Courier - Jun. 4, 1953 Bay of Fundy Islands and Islets in Charlotte County (Republished in Part From a Book Printed in 1876). - ... Grand Manan ... Minerals, Copper Included. -This island presents a fair and an extensive field for a more thorough investigation of its mineral resources than it has yet received. Its geological researches have not yet been adequate to its deposits. Lumps of copper ore, one weighing several pounds in its native purity havebeen picked up at different places from time to time in the vicinity of Eel Brook, Fish Head and around the shore of Whale Cove; and yet, strange to say, those tangible proofs of this valuable ore existing here remained disregarded until, in 1862, Moses Bagley made a new discovery of copper at the western part or back of the island near a small cove called Sloop Cove. Parties from England attracted by the report of this discovery visited the place and began mining operations in 1870. The ore is known as grey copper and contains 90 per cent of pure copper. This mining party penetrated 210 feet into a cliff near the beach finding as they progressed the prospects of the ore in quality and quantity increasing. Why the party discontinued and returned to England cannot well be accounted for. The statement has been made and it remains uncontradicted that the soil of the island covers a strata of copper. Baryta Too. - Baryta, combining the sulphate and carbonate acids is found to abound plentifully near Pettes' Cove and in the Fish Head vicinity. It is a very valuable mineral, and only requires a little capital and more enterprise to make it yield a large return for all outlays. The time may not be far distant when the hammer of the geologist may strike the blow that will set the miner's pickaxe at work in true earnest; and then the cheery song of the fisherman as he nears the rocky shore with his boatload of fish will blend merrily with the ring of steel striking the shining metal from its bed of ages. Thus will land and sea contribute in making Grand Manan shine brighter and brighter as one of the gems of the Bay."

St. Croix Courier - Mar. 5, 1953 Bay of Fundy Islands and Islets in Charlotte County. (Republished in Part From a Book Printed in 1876). - ...... Here is the noted Eel Brook, which has gained a name on account of its copper ore - that valuable mineral having been discovered there in beautiful specimens......."

URN: 2054 / IDX_Names: Whittier Copper;

St. Croix Courier - Nov. 27, 1878 Specimens of copper or silver ore have been found on the farm of M. Whittier, Esq., Whittier's Ridge."

URN: 2055 / IDX_Names: Hartt Mine;

Bay Pilot - May 13, 1880 An assay of ore taken from the mine about to be opened on the Hart property, near St. George, shows 18 ounces of silver and 75 per cent. galena. F.W. Andrews, of St. Stephen, owns the mining right."

URN: 2056 / IDX_Names: Ganong Mine;

St. Croix Courier - Aug. 26, 1880 The mines at Mascarene continue to be very promising. Mr. C.E. Boardman brought up some very rich specimens of ore the other day."

St. Croix Courier - Mar. 13, 1902 and Weekly Record - Fri., Mar. 21, 1902 G.W. Ganong, M.P., has made application for license to search for mineral on land at Letete, Charlotte County, and at Scotch Settlement in Kings Co."

URN: 2057 / IDX_Names: Seelye Mine;

St. Croix Courier - Dec. 4, 1890 and S.J. Evening Gazette - Dec. 12, 1890 and St. Andrews Beacon - Dec. 18, 1890 St.

George.- The prospects of the Seelye coppermine are flattering. Capitalists from the United States have recently been examining the mine and are well pleased. The ore has been found on analysis to yield at the rate of $20.00 per ton of fine copper. There are three or four leads within a space of twenty rods, one of which is clearly defined and about fourteen feet in width."

S.J. Evening Gazette - Jan. 10, 1890 and St. Andrews Beacon - Jan. 16, 1890 Rich specimens of copper ore have been discovered on the property of Mr. A.J. Seelye, at St. George, says the Courier. An assay has yielded 33 per cent. of copper. The indications are that a workable vein extends for some two miles southward from the Magaguadavic River, near the head of tidewater, across land belonging to Mr. Seelye and others; and an immediate effort will be made to form a company for opening up the mine."

Chignecto Post - Jan. 16, 1890 Rich specimens of copper ore have been discovered at St. George. An assay has yielded 33 per cent of copper. The indications are that a workable vein extends for some two miles southward from the Magaguadavic River, near the head of tide water. An immediate effort will be made to form a company for opening up the

URN: 2057 / Z5 / IDX_Names: Seelye Mine; St. George Sate;

St. Andrews Beacon - Mar. 13, 1890 Allusion was recently made to the discovery of valuable minerals on Mr. A.J. Seelye's property at St. George. This mineral property, a St. George correspondent informs us, is over a mile square. It abuts on the Magaguadavic river and basin, just below the village of St. George, close to Silver Island, which miners think is a dropper from the main lead, and as there is one well defined on Mr. Sellye's property at high water mark, where fine silver ore has been obtained on the surface, it points strongly to the existence of the main lead there. There is also a fine water-power at tidewater close to shipping, which could be used for crushing ore or for any other purpose. The silver lead runs close beside it. Trout abound in the stream and there is an abundance of game on the land. There are several leads on this property, says our correspondent. The sample of copper from the copper lead is pronounced fine byjudges. There is also a promising slate quarry in the near vicinity."

URN: 2058 / IDX_Names: Middle Southampton Gold;

Gazette - Dec. 22, 1897 and Woodstock Dispatch - Dec. 29, 1897 and St. Andrews Beacon - Dec. 30, 1897Gold In York County. - The Fredericton Gleaner has the following:- The gold fever has struck Southampton in this county, and today eight men, under the direction of Mr. Brittain of Woodstock are digging for gold and other valuable minerals on a ledge of the farm of Geo. W. Brown at Southampton Front. Some time ago Mr. Brown while in Woodstock, drew Mr. Brittain's attention to what he thought were freaks of lightning about parts of his farm. Mr. Brittain soon afterwards visited the place, and within a few days following secured a mining license. He proceeded to work last week, and since Friday or Saturday claim to have taken out ore showing richness in gold, and other valuable minerals. Mr. Brown who is also a valuable mill owner, is to at once take the machinery from his mill and bring it into service crushing ore."

N.B. Reporter - Dec. 22, 1897Gold Discovery. - There is a reported discovery of gold at Middle Southampton which is causing considerable excitement in that locality. It is on the farm of Mr. Geo. W. Brown, and the prospecting is going on on the various farms, with the hope of finding more of the same quartz."

URN: 2059 / IDX_Names: Digdeguash Copper;

Carleton Sentenil - Aug. 26, 1871 Valuable mine near St. George. - Mr. John Kerr, of Toronto, Ont., a practical miner and a gentleman of great experience, who has been on a tour of pleasure through this section of the Dominion, writes us as follows under date of 12th August: ""Seeing the bare mountains in Digdeguash, near St. George, I experimented a little among the rocks and found on the farm of William Carson, three extensive veins of mineral substance, two of copper, and one of iron. I have a surface piece which will give sixty per cent. of pure metal, copper or iron. I can certify from what I have seen that we have here a Caliornia on no small scale."" - Courier"

Chignecto Post - Sep. 7, 1871 New Mines.- Digdeguash, near St. John, abounds according to newspaper reports, in silver, copper, lead, iron, and manganese."

Carleton Sentenil - Sep. 9, 1871 A St. George correspondent to the St. Croix Courier, thus writes concerning the discovery of copper in that section: - ""On the farm of William Carson, in Digdeguash, appears a lode of mineral from 30 to 36 inches wide, showing silver, copper, lead, iron, sulphate of iron and manganese. A party of men were at work at the time of my visit; the cutting made by them shows considerable of ore, and in the last 18 inches downward it is increasing, proving that there is a productive vein of grey copper. Forward! Forward!!"""

St. Andrews Standard - May 20, 1863 Manganese has been discovered in this county, Edward Jack, Esq., has some fair specimens. The fact has been established long since, that this county abounds with mineral wealth; it only requires capital, energy and scientific knowledge to develop the great natural resources of Charlotte; and we believe the day is not far distant when our mines will be worked. A good business is already doing by the company who are working the copper ore at

Codes: 0030 / 0721 / HILL / Z2 / P3 / H6 / E4 / IDX_Names: Teahan Mine; Shepody Mountain Manganese; Grey Brook Gypsum; Sandstone, Building Stone, Monument Stone, etc.; Albert Lime, Phosphate and Brick Company; Albert County Copper; Alma Coal;

Chignecto Post - Apr. 14, 1881 Mining and quarrying will be prosecuted with increased vigor during the coming summer. Preparations are being made to work the rich vein of manganese discovered last summer at Hopewell Hill; operations ingold and silver mining will be commenced at New Ireland; and copper mining will be actively prosecuted at Alma.Coal mining will also receive some attention in the latter parish. The Albert Manufacturing Company, under the energetic management of Mr. J.T. Tompkins, will, of course, do its usual extensive work in the plasterbusiness, and Mr. McHenry's lime (which is an unusually good article) will probably find a more extensive market.In the freestone quarries, unusual activity prevails. The Bay of Fundy Company are giving employment to a large number of men and expect to do a good business. A short distance from them are the quarries of Messrs. Stevens, while not far from them are those on the lands of F.W. Watson, and for the working of which the International Company has just been organized by Boston capitalists. All these quarries will be busy hives this summer, and on Grindstone Island a large boarding house, for the accommodation of the quarrymen, is

Daily Telegraph - Mar. 16, 1888 and Moncton Daily Transcript - Mar. 17, 1888 OUR MINERAL RESOURCES.- Promising Mineral Indications in Various Portions of New Brunswick.- Albert county, at present, seems to be the centre of attraction for minerals, and some fine veins of silver and copper have been found. The silver ore contains sufficient gold alone to pay the expense of taking out the rock. Manganese is also being struck in various localities, and claims are being taken out. The New Brunswick Gold and Silver Mining Company is asking incorporation at Fredericton in the interests largely of American capitalists, who are already at work sinking a shaft. Another company, the National Mining Association, is also seeking legislation at the moment. This mine has a shaft sunk 170 feet, and claims to have found a large fissure vein of silver and copper, with some gold. They propose to smelt at once. They state that the district is a second Comstock lode, and the easy access to supplies, handy fuel, and port of shipping, enhances the value over mines in the Rocky Mountains. If these mines prove of the value the owners believe, the mining industries of this province will take a boom ere long. Albert county has always been known to be rich in minerals, and it is to be hoped that the efforts of these companies may be crowned with success. Foreign capitalists who have had experts on the spots making thorough explorations and investigations for some time past, must be convinced of the richness of the mines when they undertake to invest their own means in developing the properties. We constantly hear of new avenues of business, and perhaps our own people may find that there are in their very midst minerals not to be surpassed by any part of the world, and only waiting for the lucky finder to remunerate him fully for his trouble and labor - at any rate the Americans think so."

St. Croix Courier - Apr. 5, 1956 Buchanan in Legislature: - Reviews Mining, Forest Conditions in Province. - Fredericton. - Lands and Mines Minister Norman Buchanan of St. Stephen reviewed mining ..... making specific mention to Charlotte county ...... Interesting. - The minister said nickel in 'the St. Stephen area' and copper on the 'south coast' of the province were still of interest to mining companies. He did not elaborate. '... Speaking of mining, sir, it is like a story I read the other day of a pink and blue surprise party held in one of the homes and after the lady opened all the parcels she said: 'I will tell you of another surprise, I am not expecting.' That is the way it is in New Brunswick. Nobody was expecting any discoveries would be made here. I didn't mean to be rude, sir. 'We might wonder why these mineral finds were delayed. To put it simply, it was because of the terrific overburden, excepting the Brunswick property which will be mined in the open pit method. 'The great difficulty was that the old methods of prospecting wouldn't apply. Prior to the discoveries in New Brunswick, geophysics was somewhat like water witching. They have proved themselves, they have shown their worth and discovered for us that which is going to be something of great importance. 'In geophysics we simply mean the magnetometer and electromagnetometer air and ground surveys. A magnetometer is a survey which measures the variation in the earth's magnetic forces. By these variations and the measures of the variations, different forces indicate different types of minerals. The electromagnetometer measures the phase difference between the current in the primary field and induced current. The measure of these phase differences then indicates to the prospector that there is a certain mineral there but the amount of it has still to be ascertained. Several Methods. - 'There are other things that contribute - geochemistry, which is the analysis of water and soil which indicate the proximity of minerals. 'There is geobotany which is the analysis of leaves and roots which indicates the proximity of minerals. Discovery depends on all of these things being taken together and studied with the use of maps and the study of geological structure, sir, and a high degree of application and perhaps some luck, because many anomalies are graphitic. 'This must be followed up by drilling to indicate the quantity of the quality. As Mr. Glendenning said, delimited as to attitude and grade of ore all done in logical sequence. This, then is followed by a study of the treatment and disposition of these ores which includes research of processing and separation. 'There has been some suggestion that we should be concerned because so much time has elapsed. When we think of other mining operations of this magnitude we understand that seven to ten years is not long to work out these problems. I do not think we should be disturbed. We should be mindful that the first orebodies were discovered in 1953 and their problems are much more complex. Apart from the known minerals we have also, inthe Moncton area, oil. Mr. Elwell from Boston indicated to me they were having some measure of success. The oil shale has been staked and worked on for some considerable time and we hope the young men working on this will come up with something worthwhile. Nickel Here? - 'Several parties have expressedinterest in our salt deposits.'The gypsum plant in Albert county has added new equipment and it would seem they have stabilized themselves.'The cement plant at Havelock is working full capacity and on last report had a full year's order ahead.'The nickel in the St. Stephen area and the copper in the southern coast still suggest interest tomany of the mining people.'The manganese in the Woodstock area at the moment is being treated in a pilot plant in the Niagara peninsula.'Just recently someone brought me a sample of asbestos and I trust it will prove successful. All this is indeed stimulating to our province. ...."

Legislation, etc.; Exploration - General;

Morning News - Apr. 30, 1862 Gold Quartz. - The fact that the Government introduced into the Legislature and carried without any opposition a ""Gold Bill"" to provide for anticipated discoveries of the precious metal, has led some persons to believe that perhaps there is something tangible in the reports which occasionally find currency - of gold having been found in different parts of the Province. What the precise nature of the Act is we do not know, as the members of the House appear to have thought it unnecessary this Session to forward copies of printed bills (in which the public generally take an interest) to the public journals for their information - not even in the case of important City bills which have been drawn up in Fredericton. But we suppose the Royal Gazette will contain it bye and bye. Be that as it may, we have here to notice that during a debate in the House of Assembly, specimens of gold which had been found in Albert County, were handed round among the members, and the opinion was expressed that very strong probabilities existed that important discoveries would be made in that county at an early day. Paragraphs have found their way into thenewspapers at different times respecting discoveries in other places. For instance, it was said that gold had been found at Hampton, and we ourselves have examined specimens in which gold could be detected with the naked eye. Next it was alleged that quartz raised at Chamcook and L'Etete in Charlotte County was found to bear gold; and some of this quartz was sent to a Boston chemist whose report states that there really was gold in it, but ago it was said that gold had been found on the Oromocto River, although this is probably only a repetition of a similar statement respecting that locality, which was circulated several months since - Whether there is any truth in it or not we have not heard. It is alsoconfidently stated that the precious metal has been found near Sackville. Whatever room there may be for exaggeration in the above it is nevertheless quite clear that gold has been found in the Province; and it is our opinion that if the parties who have made these discoveries - even though their labor has been very triflingly rewarded - would persevere with their searches, in the vicinity of theplaces they have taken the gold from, they may yet obtain very profitable returns. It is the belief of scientific gentlemen that gold exists in the Province; and one gentleman in the city who is well informed upon this subject, does not hesitate to say that it will yet be found in the streets of St. John! The number of places in Nova Scotia where it exists, is really remarkable, and all originating out of the Tangier discovery. When it was known that gold was found at Tangier people in other parts commenced prospecting and examining the stones and earth in their own locality. Inquiry was stimulated on all sides, and the desire to acquire wealth in the shortest possible time imparted a keenness to the eyes of ""prospectors"" which they had never before possessed. The result has been the discovery of gold in not one but twenty places - the gold being taken from quartz, as Lunenberg is the only place where it is found in washings. ""A miner"" who has spent some time and money in searching for the metal wrote his experience to the Halifax Chronicle a few days ago. He says he first went to the Lunenberg washings, and although report had exaggerated the richness of the sands, he saw enough to convince him that gold was there in paying quantities, requiring only improved appliances for separating it to make highly remunerative work. He next visited Tangier where, he says, the appearance of the quartz (to an unpractised eye, at least) indicated no great richness; and for want of proper ""crushers"" it was impossible to say whether money could be made or not. [This was before the introduction of good crushers for extracting the gold. We wish our readers to note the last paragraph particularly as we shall refer to it again.] The miner next went to Wine Harbor, Isaac's Harbor, Laidlaw's farm, and Sherbrooke. In all these places gold had just then been discovered, but there was no proper machinery for extracting it from the quartz;

consequently it was impossible to tell the extent of its richness. After examining all these localities he has at last settled down at Sherbrooke, which he thinks affords the best field for the investment of capital, skill and labor. This person insists particularly upon the necessity of erecting quartz mills for extracting the gold, believing that without them the labor of the miner goes for nothing. He says that at Sherbrooke gold can be found anywhere in the ground over a pretty large area; and this being evidently the debris of the quartz, it shows that the ""leads"" must not only be rich but very numerous. Now, the point to be noticed particularly is that quartz may really contain gold, and yet the precious substance may not be visible to the eye. It would be a great mistake in a miner to throw away quartz simply because he cannot see the gold in it at once. If this plan had been adopted at Tangier and other places the mines would have been abandoned at once, and we would have heard nothing of ""nuggets"" which have occasionally turned up by the persevering men who have been at work there. It seems to us that if there be good reasons for supposing that gold exists in New Brunswick - or if (as has been the case) gold has really been found - the proper way would be to keep on searching and digging, and not give up simply because a man cannot see the gold shining out of every piece of quartz he turns up. The great fact being once established that gold does exist in a certain locality, is the main thing to look at; and after that patience and perseverance will probably have their reward in this field of industry as in every other. We have an abiding faith in the probable discovery of gold in this province; and for the following reasons. The character of the rocks in many places is similar to what it is in countries where gold has been found; the opinion of scientific men who have made the subject their study is decidedly in favor of the existence of gold in New Brunswick; then there is the fact that it has been found on the Canadian frontier on the North of us, and in all parts of Nova Scotia on the south east. But, the most powerful reason of all is that gold has already been found in two or three localities in the Province. If the same inquiry be made, the same intelligence displayed in searching for it in New Brunswick as has been done in other countries now celebrated as gold fields, the result may be the same. We say, then, to those whose turn of mind leads them in search of gold among our rocks, not to be discouraged if they do not immediately make a lucky hit. The California mines were not discovered until a few years ago. Australia - until a quarter of a century ago - was only looked upon as a place for the reception of convicts. It took a long time to find out that gold existed in Nova Scotia; and it was only yesterday (as it were) that the amazing wealth of British Columbia and New Zealand was known. Discoveries in all these countries have been sudden; but when ""the ice"" has once been broken new proofs of gold discoveries have flowed in from all sides. The same luck probably awaits us; and who knows but we may awake some morning and find ourselves the happy possessors of a country which will be able to boast of as extensive

Legislation, etc.; Exploration - General;

Morning News - Apr. 30, 1862 Gold Quartz. - The fact that the Government introduced into the Legislature and carried without any opposition a ""Gold Bill"" to provide for anticipated discoveries of the precious metal, has led some persons to believe that perhaps there is something tangible in the reports which occasionally find currency - of gold having been found in different parts of the Province. What the precise nature of the Act is we do not know, as the members of the House appear to have thought it unnecessary this Session to forward copies of printed bills (in which the public generally take an interest) to the public journals for their information - not even in the case of important City bills which have been drawn up in Fredericton. But we suppose the Royal Gazette will contain it bye and bye. Be that as it may, we have here to notice that during a debate in the House of Assembly, specimens of gold which had been found in Albert County, were handed round among the members, and the opinion was expressed that very strong probabilities existed that important discoveries would be made in that county at an early day. Paragraphs have found their way into thenewspapers at different times respecting discoveries in other places. For instance, it was said that gold had been found at Hampton, and we ourselves have examined specimens in which gold could be detected with the naked eye. Next it was alleged that quartz raised at Chamcook and L'Etete in Charlotte County was found to bear gold; and some of this quartz was sent to a Boston chemist whose report states that there really was gold in it, but ago it was said that gold had been found on the Oromocto River, although this is probably only a repetition of a similar statement respecting that locality, which was circulated several months since - Whether there is any truth in it or not we have not heard. It is alsoconfidently stated that the precious metal has been found near Sackville. Whatever room there may be for exaggeration in the above it is nevertheless quite clear that gold has been found in the Province; and it is our opinion that if the parties who have made these discoveries - even though their labor has been very triflingly rewarded - would persevere with their searches, in the vicinity of theplaces they have taken the gold from, they may yet obtain very profitable returns. It is the belief of scientific gentlemen that gold exists in the Province; and one gentleman in the city who is well informed upon this subject, does not hesitate to say that it will yet be found in the streets of St. John! The number of places in Nova Scotia where it exists, is really remarkable, and all originating out of the Tangier discovery. When it was known that gold was found at Tangier people in other parts commenced prospecting and examining the stones and earth in their own locality. Inquiry was stimulated on all sides, and the desire to acquire wealth in the shortest possible time imparted a keenness to the eyes of ""prospectors"" which they had never before possessed. The result has been the discovery of gold in not one but twenty places - the gold being taken from quartz, as Lunenberg is the only place where it is found in washings. ""A miner"" who has spent some time and money in searching for the metal wrote his experience to the Halifax Chronicle a few days ago. He says he first went to the Lunenberg washings, and although report had exaggerated the richness of the sands, he saw enough to convince him that gold was there in paying quantities, requiring only improved appliances for separating it to make highly remunerative work. He next visited Tangier where, he says, the appearance of the quartz (to an unpractised eye, at least) indicated no great richness; and for want of proper ""crushers"" it was impossible to say whether money could be made or not. [This was before the introduction of good crushers for extracting the gold. We wish our readers to note the last paragraph particularly as we shall refer to it again.] The miner next went to Wine Harbor, Isaac's Harbor, Laidlaw's farm, and Sherbrooke. In all these places gold had just then been discovered, but there was no proper machinery for extracting it from the quartz; consequently it was impossible to tell the extent of its richness. After examining all these localities he has at last settled down at Sherbrooke, which he thinks affords the best field for the investment of capital, skill and labor. This person insists particularly upon the necessity of erecting quartz mills for extracting the gold, believing that without them the labor of the miner goes for nothing. He says that at Sherbrooke gold can be found anywhere in the ground over a pretty large area; and this being evidently the debris of the quartz, it shows that the ""leads"" must not only be rich but very numerous. Now, the point to be noticed particularly is that quartz may really contain gold, and yet the precious substance may not be visible to the eye. It would be a great mistake in a miner to throw away quartz simply because he cannot see the gold in it at once. If this plan had been adopted at Tangier and other places the mines would have been abandoned at once, and we would have heard nothing of ""nuggets"" which have occasionally turned up by the persevering men who have been at work there. It seems to us that if there be good reasons for supposing that gold exists in New Brunswick - or if (as has been the case) gold has really been found - the proper way would be to keep on searching and digging, and not give up simply because a man cannot see the gold shining out of every piece of quartz he turns up. The great fact being once established that gold does exist in a certain locality, is the main thing to look at; and after that patience and perseverance will probably have their reward in this field of industry as in every other. We have an abiding faith in the probable discovery of gold in this province; and for the following reasons. The character of the rocks in many places is similar to what it is in countries where gold has been found; the opinion of scientific men who have made the subject their study is decidedly in favor of the existence of gold in New Brunswick; then there is the fact that it has been found on the Canadian frontier on the North of us, and in all parts of Nova Scotia on the south east. But, the most powerful reason of all is that gold has already been found in two or three localities in the Province. If the same inquiry be made, the same intelligence displayed in searching for it in New Brunswick as has been done in other countries now celebrated as gold fields, the result may be the same. We say, then, to those whose turn of mind leads them in search of gold among our rocks, not to be discouraged if they do not immediately make a lucky hit. The California mines were not discovered until a few years ago. Australia - until a quarter of a century ago - was only looked upon as a place for the reception of convicts. It took a long time to find out that gold existed in Nova Scotia; and it was only yesterday (as it were) that the amazing wealth of British Columbia and New Zealand was known. Discoveries in all these countries have been sudden; but when ""the ice"" has once been broken new proofs of gold discoveries have flowed in from all sides. The same luck probably awaits us; and who knows but we may awake some morning and find ourselves the happy possessors of a country which will be able to boast of as extensive

St. Croix Courier - Dec. 24, 1953 PHOTOS. - Mining activity at high level in northern New Brunswick - Top left, A Canadian Manganese crew is shown diamond drilling for manganese on the company's property at Tetagouche Falls, some eight miles from Bathurst. Top right, a grader and four of the 100 trucks used in the construction of the 66 foot wide highway connecting Bathurst with the two main properties of the New Brunswick Mining and Smelting Company are shown hauling gravel as the 13 1/2 mile stretch nears completion. Lower left, with installation of the equipment almost completed, Keymet Mines' concentrator at Elm Tree, 14 miles northwest of Bathurst, is expected to go into operation in February. To the right of concentrator (left) can be seen the head frame of the company's shaft, which has reached a depth of 950 feet. Extreme right is the hoist room. Lower right - Above is shown deep trenching exploration on the Canadian Manganese property at Tetagouche Falls. (NB Government Photos). MAP of province with mineral occurrences and areas of exploration... Fredericton.- A titanium find, several new base metal strikes plus reports of early drilling operations on the Province's lone uranium potential marked the closing stages of the biggest year on New Brunswick's mining history. Sparked by a 12-month-old multi-million dollar base metal strike in the Bathurst area, outside mining corporations and native New Brunswickers have staked close on 40,000 claims, a single-year record unequalled by any province in Canadian mining annals. Widely Distributed. - Spreading beyond the Bathurst area to all sections of the Province, the unprecedented staking rush has turned up potential radio- active minerals near Hampton in the south of theProvince; revived interest in nickel deposits at St.Stephen, in the southwest corner; manganese near Woodstock, farther north on the western border; titaniumin the northern section; and more base metal finds in the Bathurst and central New Brunswick sections.The staking rush prompted by the Bathurst strikes has been followed by a flow of capital. Fourteen companies have been incorporated in New Brunswick with a combined capitalization of close on $38,000,000. These figures do not include companies incorporated outside the province which are carrying out mining operations and investigations. Economic Value. -

Exploration and development to date has given much employment to New Brunswick people, one authority estimating that wages, supplies and services have added upwards of $10,000,000 to the Province's economy during the past 12 months. Confident that the Province stands on the threshold of its greatest mining boom, Premier Hugh John Fleming's administration since the first of the year has: (1) Authorized a $3,000,000 extension to the New Brunswick Electric Power Commission's plant at Chatham to provide power for the mining interests in the Bathurst area; (2) Joined the M.J. Boylen interests in financing an upwards of $300,000 highway project connecting the CNR, 13 1/2 miles distant, with the Brunswick Mining & Smelting Company's multi-million dollar base metal-pyrite ore-body strike on the old Bathurst iron mine property. (3) Waived the 1953 annual 25-day work period regulation with a renewal of all mining claims in order to give local prospectors an equal 'break' with the wealthy outside corporations. (4) Agreed to carry out surveys leading to the early construction of six-mile and three-mile stretches of road connecting the new main highway with the Anacon- Leadridge and New Larder 'U' properties, respectively. Surveys Conducted. - Since Brunswick Mining & Smelting's 30 million-ton base metal strike, claimed to be one of the largest in Canadian mining history, an estimated 250,000 acres throughout New Brunswick have been surveyed geophysically by Canadian, United States and provincial mining groups as well as individual prospectors, with 50 diamond drills operating in the Bathurst area and 10-15 elsewhere in the Province. Latest developments from the staking rush that has blanketed the Province include:(1) A reported titanium strike by Fundy Bay Copper Mines, Ltd., in the Ramsay Brook district about 35 miles south of Campbellton.(2) A manganese strike in the Jacksonville area, north of Woodstock, by Strategic Materials, claimed to be larger than that of the Canadian Manganese Company's finds at Jacquet River, 40 miles east of Campbellton andTetagouche Falls, eight miles west of Bathurst. (3) Lead-zinc-copper discoveries at Temple andMeductic, York county, by Jack McClaskey, Toronto, and N.B. associates, showing interesting veins of massive pyrites and sulphides. (4) Impressive new finds on the New Larder 'U'lead-zinc-copper property.(5) A base metal find in the Nigadoo district of Gloucester county.(6) Discovery of copper in Westmorland county.(7) Lead-zinc-copper finds in Albert County.(8) Copper-nickel strikes in Charlotte County.(9) Discovery of radio-active minerals in the Hampton-Norton district, Kings County. (10) Lead-zinc-copper finds near the old antimonymines in the Lake George district, York county, and discovery of antimony near Welsford, Queens County. Trynor Co. contract. - Trynor Construction Company, Ltd., has been awarded a $50,000 contract by Brunswick Mining & Smelting to strip the over-burden onits old Bathurst Iron Mine property. First to sink a shaft and go into production,Keymet mine near Elmtree, 16 miles northwest of Bathurst, has completed construction of a 200-ton mill, which is expected to be in operation early in February.Kingston Uranium Mines Ltd., a Saint John Group, is reported ready to commence drilling operations on its Norton-Hampton district claims, where a radio-active mineral authority claims the company has a 50-50 chance for a mine, the first of the new year.Fundy Bay Copper Mines expects to commence drilling on its Ramsay Brook titanium claims before the end of the current calendar year. New Calumet Mines Ltd. Has had encouraging results from deeper drilling in the Orvan Brook (Gloucester County) lead-zinc-silver deposit discovered in 1938.Strat Mat and Fundy Bay Copper are reported drilling on a 20-square mile concession in the Jacksonville district. Further Investigations. - International Nickel isreported to have carried on aerial electro-magnetic surveys over various areas of the Province, and J.C. Udd further investigations on his nickel claims at St. Stephen.Burnt Hill Tungsten Mines, Ltd., report locating another surface vein showing good grades of tungsten on the company's York County property, between 50 and 60 miles northeast of Fredericton. Construction on a 100-ton mill is already well under way, and the company plans to continue its mining operations during the winter. Diamond drilling is already well under way on the McCluskey and associates base metal strike at Temple and as soon as hole No. 1 is down to 500 feet drilling will commence on the syndicate's Meductic find. Deep trenching and drilling exploration on the Canadian Manganese Company's manganese claims at Tetagouche Falls, eight miles west of Bathurst, is already well under way. Both Noranda Mines and M.J. Boylen, Ltd. have outlined substantial tonnage of base metal ore on a concession 12 miles northwest of Bathurst pioneered by the Fredericton-owned Rocky Brook- Millstream Syndicate, but subsequently optioned to Canadian Mining interests.Promising. - Drilling on the Brunswick orebody to a depth of 1,000 feet has shown it to live up toexpectations, and while Brunswick's second property. Anacon-Leadridge, as yet is incompletely explored along the strike and in depth, sufficient work had been done by late summer to indicate a persistent ore zone over a length of 1,400 feet, with indications of some ore up to 600 feet to the north, and with some 3,000 feet of favorable unexplored ground to the south. At both Brunswick's properties it is likely that the known ore bodies will persist below the 1,000 ft. level and that other bodies will be found down to even greater depths. The same applies to other properties in the immediate vicinity, even though lacking significant surface showings, and one authority states it is not out of the way to think in terms of 100 million tons or more as the eventual total for the Bathurst area. Start Next Year. - Tests on the original Brunswick orebody have shown that a profitable operation is feasible and the company will probably commence mining operations during the winter or spring with the scale of operations estimated at least 6,000

Daily Telegraph - Sep. 23, 1879 A Metalliferous Belt in New Brunswick. - By Edward Jack. - Any person who has examined the rock formation on the Saint John, between Fredericton and Woodstock, must have noticed a belt of granite and associated rocks crossing that river near Sullivan's Creek and Bear Island. This also crosses the Province in a N.E. course, extending nearly or quite to the Bay of Chaleur. South of this there exists a belt of rocks in which various metals and minerals have at different times been found. Commencing at Lake George, on the west side of the Saint John, we find various and in some cases extensive veins of sulphide of antimony, quartz accompanying which, the Hon. Mr. Hibbard states, has frequently yielded an assay of about $4 worth of gold to the ton of rock. The metalliferous district crosses the Mactaquac and Keswick, and I was shown by the late Mr. B. Friel a very fine specimen of sulphide of antimony which he informed me he had found in Smoky Brook, a branch of the latter stream. Thence the Nashwaak is crossed and I am informed by Mr Alexander Gibson that two or three days since he, in company with some others, obtained about 30specimens of gold near Burch Island, on that river, and that in the neighborhood of the place of discovery there was a large vein of rusty and honeycombed quarts in the bed of the river. The Taxis and Southwest Miramichi are next intersected and last summer Mr. S. Freeze, D.C.L. Surveyor, showed me several pieces of gold, which he had, himself, found on the former river and the late Mr. S. Shea, of Woodstock, told me that the best chance which he found for gold washing on the Miramichi was near Price's Bend. Graphite is found on Salmon Brook and there occursat Burnt hill, molybdenite. Thence crossing the Dungarvon we again find molybdenite on Bamford Brook and reaching the Northwest Miramichi the yellow sulphide of copper is there found. Farther still to the N.E. copper and manganese are found at the Nepisiguit and Tatagouche. Near Bathurst bridge, on the subcarboniferous rocks, there is found copper ore deposited in pockets, evidently from solutions, the primary source of which was on the adjacent and older rocks. The proximity of the granite belt appears to have had some connection with the deposit of metal and Bernard Van Cotts, in his treatise on ore deposits, says that nearly all the mineral wealth of Cornwall is found in close proximity to the granite. The district above referred to is largely covered by forests, and is well intersected by rivers and streams offering good rock exposures, and it is not at all improbable but that careful explorations made by competent persons may bring to light valuable veins of metals, which may at some future day become a source of labor in place of the forests, which are disappearing so fast before the lumberman's axe. I need not reca[illegible]ate several genuine finds of alluvial and quartz-bearing gold, one of which has been lately reported. They will be fresh in the memory of all who take an interest in the subject."

Codes: 0084 / 0666 / 2050 / C1 / IDX_Names: Serpentine River; Muniac River; Birch Island Gold; Tobique/ Giberson Gold;

St. Croix Courier - Mar. 22, 1892 New Brunswick as a Gold Producer (The Colliery Guardian). - The amount of information in the hands of the public respecting the gold bearing districts of the province of New Brunswick is very small. There have been frequent reports of the discovery of gold at various points. According, however, to an opinion expressed by Professor L.W. Bailey, the majority of such appear to have been largely unfounded, although rocks nearly resembling those of the auriferous belt of Nova Scotia, and believed to be of the same age, are largely developed in the province. In connection with these rocks many of the reported discoveries of gold have been made.They are composed of slate and quartzite belts, and border the great central granitic axis of York and Northumberland counties. A great part of this region is still densely forest-clad and difficult of access, but should any portion of it prove to be auriferous the discovery would be of inestimable value to the province. Among the points at which gold has been reported in small quantities maybe mentioned the vicinity of the St. Croix River, in Charlotte county, the Nashwaak river above Stanley, in York county, the Muniac River, in Carleton County, and the Serpentine river in Victoria county. The head watersof the Tobique river would also appear to offer prospects of important discoveries, according to a report which has reached us from a correspondent in Restigouche county, and we recommend this district to the prospectors, as worth remembering when in the vicinity."

Codes: 0126 / 0901 / E6 / IDX_Names: Nigadoo; Elmtree; Southwest Miramichi/ Dungarvon/ Taxis Gold;

S.J. Daily Sun - Nov. 3, 1882 New Brunswick Silver Mines. - Operations and Prospects in the Northern Counties - The Elm Tree, Nigadoo and Gloucester Mines - Gold Hunting on the Little South West. - Interview with Major R.R. Call. - This week, Major R.R. Call, of Newcastle, has been in the city on business connected with the Elm Tree silver mine in Gloucester County, in which he is largely interested. On Wednesday evening he was waylaid by the interviewer of the Sun, with the following result:- Rep. - You are largely implicated in mining enterprises on the North Shore, I believe? Mr. Call. - Yes, I have had considerable to do with several concerns of the kind. Just at present I am devoting particular attention to the Elm Tree Mine, and on the fate of that hangs the destiny of all the silver mines on the North Shore. Rep. - Perhaps you would condescend, in your capacity of the North Shore Bonanza Monarch, to enlighten readers of the Sun with a brief sketch of the mining enterprises of that locality? Mr. C. - Most certainly, although in regard to the euphonious title you have conferred upon me, the nomination is respectfully but firmly declined. The Nigadoo silver mine, on the Nigadoo Stream which empties into Bay Chaleur, was the first mine prospected on the North Shore, but as the Elm Tree mine just now has the prominence of all others, I will describe what we have done there first. The vein is situated on the Elm Tree River, crosses it diagonally, and has been traced for a distance of two and a half miles, so that the supply of ore is practically limitless; the only question is as to the quality of the ore and the readiness with which it can be raised to the surface. From the point where we started to sink the shaft, on a high bank overlooking the river, we have followed the course of the vein for fully a mile further up stream, and about one and a half miles down river. The shaft we have been sinking strikes the vein at an angle of about 45 degrees. Two crews of men, one by day and the other by night, have been employed digging during the season, and the shaft has been sunk to a depth of 38 feet. As the workmen approach the footwall the ore becomes richer and the indications are much more favorable. The vein, as you know, is enclosed within walls and these walls are as smooth as the plastered wall of this room, the body of ore lying there separate and distinct from the rock of the country. Just now, in consequence of having tapped a water vein, the water keeps pouring into the shaft at the rate of 1200 gallons per hour, and the pump at present employed only lifts 1,300 gallons per hour at high pressure. I have just completed the purchase from Messrs. Wisdom & Fish of a Knowles steam pump, which has a capacity, running at three-quarters speed, of 5,000 gallons per hour. Rep. - What are the chief features and apparent extent of the mine? Mr. C. -

Well, as I have stated, we have traced the vein a distance of 2 1/2 miles along the river, and the specimens unearthed at various points are precisely similar. The vein has an average width of six feet, but, for working purposes, is practically much wider than that, from the diagonal direction in which it is pierced by the shaft. For half the distance down, the shaft is 11 feet by 7 feet, but when we reached the solid rock we reduced its dimensions to 8 feet by 6 feet. The bottom of the vein will, in the opinion of Prof. Bartlett, State Assayer of Maine, never be reached, and the supply of ore is inexhaustible. The mine is well located, being a short distance below a splendid water power, within four or five miles of the Intercolonial station at Petit Rocher, and only four miles distant from the Bay. The rock, however, is difficult to work and all the ore has to be raised by blasting. Sometimes as much as 10 tubs of ore will be dislodged by a single blast, while at other times scarcely as much as a man can lift is raised. Detached lumps of first-class ore are frequently raised weighing from 80 to 150 lbs., and the results continue to look more and more favorable as the shaft descends. Rep. - Do you not anticipate serious trouble from the water? Mr. C. - No, I think there is very little danger of that. The water does not appear to be in the vein itself or even between it and the adjacent soil, but rather in the natural rocks of the surrounding country. I forgot to mention that between the vein, which is composed of silver, lead and a sprinkling of gold, and the contiguous country rock there is a substance called kaolin, which mineralogists affirm to have been produced by the friction of the ore vein with the natural rock. From this kaolin a species of china-ware is manufactured. Rep. - What is the value of the ore? Mr. C. - The value of anything is the difference between its cost of production and its market or contract value, from an industrial standpoint, and a definite answer to such a conundrum is impossible. The preliminary expenses involved in the development of a mine of this character are considerable and the result is not always adequate to balance disbursements. An average ton of the crude material is estimated by Prof. B. to be worth $15 while occasionally a ton of pure galena will be raised worth $200 or $250. There is all the way from $2 to $10 worth of gold in a ton of ore and it is estimated, if the indications continue to improve at the present rate, that the mine can be worked profitably for the gold it contains alone. Rep. - Are there any other veins of a similar character in the vicinity? Mr. C. - Well, we have had - Rep. - Who are we? Mr. C. - The directors of the Elm Tree Mining Co., are, John Sadler, Wm. Muirhead, jr., Wm. A. Hickson, of Chatham; John Ellis, W.R. Payne, of Bathurst; John J. Adams and Thos. D. Adams, of New York, and yours truly, R.R. Call, of Newcastle. We had, I was about to say, a number of men employed in locating different mines the past summer, exploring and prospecting, etc., but they did not discover anything better than the original find; so we bought up two more miles of land adjacent to the Elm Tree and surrounding it, which we shall develop more fully in the future should the latter prove a bonanza. Rep. - What are your plans in respect to the development of the mine? Mr. C. The capital stock of the concern is $500,000, and for the immediate purposes of experiment we decided at our first meeting to allot 20,000 shares of $5 each, as treasury stock, to be sold for $2 per share. Stockholders cannot sell any of their stock except this treasury stock, and the proceeds of that must be applied to the development of the mine. This would give us $40,000 with which to carry on the work, but as a matter of fact we have not sold many shares yet - only just sufficient to work the mine - as we believe we have a good thing and do not want to sell more than what is absolutely required. What we propose doing is to erect works for crushing ore as fast as raised and then concentrating it by the application of water. By a continuous process of reduction, we shall bring the mineral within one-tenth of its former bulk, so that ten tons worth $15 each will become one ton worth $150, the labor being cheaply performed at the mines and an immense saving being effected in the freight to the United States where we expect to have our chief market. The best works for smelting and working the material of a mine such as ours is at Newark, N.J., and we shall probably send most of our concentrated ore to that place. Silver is a cash article, and, after deducting the percentage of smelting, we will have a very respectable margin of profit. The gold and lead will be separate from the ore and treated likewise. We have no fears for the quantity of ore we shall be able to produce and have the best reasons for entertaining sanguine feelings as to the quality of the same. Very little water power is required to run the concentrating machinery, and that power we can obtain from the falls a few yards above the mine. The cost of production will be quite light. Labor is cheap and plentiful. We pay our present force $1 per day and they find themselves and live in a shanty or rocker-house, a few yards from the mouth of the pit. We have a building over the shaft 23x15 feet, which contains a blacksmith's forge, the pumping apparatus, hoisting gear, etc. Other Properties. - Rep. - How about other silver mines in your locality? Mr. C. - I am not so well posted in regard to them, from the fact that I am not so deeply interested in them as in the Elm Tree and also because the latter is the only mine that is now in active operation. The others are awaiting the result of our experiments and should they turn out favorably, no doubt they will all fall in line, and there will be a genuine boom in mining circles at the North Shore. The Nigadoo, which was the first mine discovered, has suspended operations, the managers having resolved to abide by the verdict of the Elm Tree. The Nigadoo Company includes some good names who will not let the enterprise drop without a fair trial, such as, Kennedy F. Burns, M.P., Bathurst, president; Rev. Edward Hickson and John H. Harding, St. John, James Hickson and the Messrs. Ellis of Bathurst. It is believed they have a good property; they will have to blast deeper down than they contemplated when they commenced. The Nigadoo mine is situated on the Nigadoo River about 9 miles from the Elm Tree mine. It's capital stock, I believe, is $150,000. It is thought that the Nigadoo find is not so much a regular vein, similar to that of the Elm Tree, as a pocket, or detached deposit, which while not so extensive as a vein is liable to be very rich in places, as in the case of the Silver Islet Mine of Lake Superior. The Nigadoo mine is 8 miles from the Bay and is situated on a species of peninsula formed by the river and one of its branches. There is a good stream of water which can be utilized if necessary and the situation of the mine, with the formation of the rock adjoining, is highly prepossessing. The ore is very similar to that of the Elm Tree with the exception that it contains no traces of gold so far as is yet observed. Some very fine specimens have been turned out. Additional outlay is required to develop its true character. The lands held by the company comprise 100 acres. Located around the Nigadoo mine is the property of the Gloucester Mining Co., 640 acres in extent, which was prospected by the present Elm Tree incumbents and Messrs. Edward & James Hickson, before the latter mine was discovered. No work is being performed on this mine, awaiting the outcome of the Elm Tree enterprise. Samples have been tested, however, that were shown to be very rich in silver and lead. This property, bordering on all the boundaries of the Nigadoo, is necessarily located on both sides of the stream. In case the Nigadoo pans out well, immediate steps will be taken to develope the Gloucester property. ....Gold Hunting on the Little Southwest. - Rep. - This, then, comprises the condition and prospects of mining operations on the North Shore at present? Mr. C. - Yes, with one important addendum. Messrs. Allan Ritchie, Robert Ritchie and James Brown, of Newcastle, have again obtained the right to locate several miles in the county of Northumberland. They have had parties prospecting for gold on the Little Southwest the past year, and have obtained several promising samples, though whether the supply will warrant seriousattention has not yet been made manifest. After purchasing Crown Lands for mining purposes, the parties have one year to locate their mine from the date of sale. These gentlemen have shown their faith in the discoveries made by buying up these lands for a second term, which gives them another year to prospect. The way in which the deposit was discovered was very singular. Frequently logs coming down the river run upon or are jammed among the bars and rocks with the result that large fragments of rocks, etc., frequently adhere to their extremities and require careful attention on the part of the millmen. In this case a large lump of beautiful gold quartz was discovered by a workman at Ritchie's mill, imbedded in the end of a log. The conclusion was at once formed that there must be a rich deposit of gold-bearing quartz somewhere between where the log was cut on the river and the head of tide. This was a year ago last August, and since then several quartz formations have been found. It is now believed, however, that the chief deposit must be located further upstream. Since the mining fever broke out on the north shore, everybody has been carried away with it (myself among the number) and a reasonable conclusion is that the attention given to the subject will at least bring about a more general knowledge of the mining facilities of the Province than has heretofore existed. Samples produced from all parts of the three counties, Restigouche, Gloucester, Northumberland, show the presence of silver to be quite general, and its location in paying quantities is now the chief aim of the explorers. The ElmTree Company have a gold mine located in Restigouche which exhibits very favorable symptoms. Major Call was remarkably frank in all his statements, having apparently no desire either to conceal or

Woodstock Dispatch - Dec. 1, 1897 The Giberson Mine. - Up River People Doubt ThisStory. - A story has been going the rounds of the papers to the effect that the lost Giberson mine on the Tobique has been discovered. An account of the discovery appears to have been telegraphed to a Bangor paper, from Fort Fairfield, and to have been copied by our own papers. In this report it is stated that nearly a score of years ago one Giberson was a lumberman on the St. John river. He explored his own tracts, and after he had bought some land in the Tobique region, which is not far from the eastern Maine border, he went over the tract carefully in order to locate the streams and the nest growth. It was while he was engaged in this task that he discovered the gold mine that his reports made famous in that section. Giberson was alone on his exploring trip, but he mined enough at the spot to discover that the deposits were rich and extensive. He brought out a bag full of samples that he collected over quite a wide radius. These he carried to St. John and had them tested by experts. The ore was pronounced rich enough to return large profits to anyone who chose to mine it. In fact the assayists were enthusiastic over the quality of the specimens that so Giberson assured them, were not culled, but had just as he had picked them up. For, he explained, he was as anxious as anyone else to know exactly the right of the matter. He proposed to operate the mines himself, and he did not want to start out under any misapprehension. With the earnest assurance of assayists behind him, Giberson hurried off up the river with supplies intending to start right in and work his new property. But in his haste to reach the place he rode on a train loaded with fresh arrivals from the old country, and from them caught emigrant fever so-called. He was put ashore, and in a few days died without disclosing the secret of the location of the mine to any one. The story goes on that in spite of all effortsthe lost mine could not be placed. But, says the Fort correspondent, one George Bailey has come to town with valuable specimens, and with the assurance that he has made the long expected find. After prospecting Mr. Bailey's final discovery of the mine was made in a rather singular fashion. He had shot a duck near a small pond, and in dressing the fowl for his dinner he discovered in the crop some unmistakeable traces of gold. He resolved to hunt that particular section over more carefully than he had done. In fact, he went all over the ground again, and at last came across the work that unfortunate Giberson has accomplished in getting out his samples. As soon as Bailey was certain of his final he came out to Fort Fairfield and made preparations to spend the winter at the mine. He went in last week with supplies for several months and took a companion with him. They do not expect to do much in the way of mining this winter, but will crack off what ore they can and will endeavour to locate leads and otherwise to prepare for active operations in the spring. Along with his other supplies Bailey took a liberal stock of dynamite, and proposes to open the ledge in every direction so as to get at the heart of the deposit and to ascertain its extent. Here is the story as it appears, it being only necessary to add that according to the account, Bailey who is spoked of as a practical geologist, has received mining claims from the government. A Dispatch representative was in Andover last week. He heard a good deal of talk over the supposed find, but the general impression was that it would not turn out to be Giberson's lost mine. There is faith in this lost mine, many old residents remembering the incident, substantially correct, as

Richibucto Review - Dec. 2, 1897 Gold on Tobique. - The Lost Giberson Mine Discovered by One Bailey. - Fort Fairfield, Nov. 22. - George Bailey has returned to town with specimens of gold ore that he claims were taken from the famous lost Giberson Mine. For months Bailey has been searching for this place.The mine has for years been partly a well established fact and partly a myth. Now Bailey's return seems to establish the fact that Giberson really told the truth. Under these circumstances Fort Fairfield and the Tobique region near by in the province is having a little Klondyke excitement of its own. Nearly a score of years ago one Giberson was a lumberman on the St. John river. He explored his own tracts, and after he had bought some land in the Tobique region, which is not far from the eastern Maine border, he went over the tract carefully in order to locate the streams and the nest growth. It was while he was engaged in this task that he discovered the gold mine that his reports made famous in that section. Giberson was alone on his exploring trip, but he mined enough at the spot to discover that the deposits were rich and extensive. He brought out a bag full of samples that he collected over quite a wide radius. These he carried to St. John and had them tested by experts. The ore was pronounced rich enough to return large profits to anyone who chose to mine it. In fact the assayists were enthusiastic over the quality of the specimens that so Giberson assured them, were not culled, but had just as he had picked them up. For, he explained, he was as anxious as anyone else to know exactly the right of the matter. He proposed to operate the mines himself, and he did not want to start out under any misapprehension. With the earnest assurance of assayists behind him, Giberson hurried off up the river with supplies intending to start right in and work his new property. But in his haste to reach the place he rode on a train loaded with fresh arrivals from the old country, and from them caught emigrant fever so-called. He was put ashore, and in a few days died without disclosing the secret of the location of the mine to any one. Within a month from the time of his death dozens of parties went into the wood and searched carefully for the Giberson mine. But the tract is a broad one and it is pretty certain that few of those who hunted knew much about geology or about locating gold mines. Some of them brought out some ore, but no one ever succeeded in finding the real deposit that Giberson described to the few he had taken into his confidence. Mr. Bailey is a practical geologist, not exactly a scientific one, but a natural one who has in the past found many valuable deposits in the region along the St. John. For some time now he has been diligently searching for the lost mine. It was slow and tantalizing work, for the deposits had been most cunningly hidden away by nature. Mr. Bailey's final discovery of the mine was made in a rather singular fashion. He had shot a duck near a small pond, and in dressing the fowl for his dinner he discovered in the crop some unmistakeable traces of gold. He resolved to hunt that particular section over more carefully than he had done. Daily Sun - Jan. 3, 1898 Gold Fever is Genuine. - Fort Fairfield Excited Over Discoveries Near New Brunswick Border - It Is Supposed to Be the Old Giberson Find. - (Bangor Commercial). - The Tobique River Klondyke, which, as recently described in the Commercial, has created so much excitement in northern Aroostook, is uppermost in public discussion in Fort Fairfield. The fever is spreading like wildfire, and people who two weeks ago would turn up their noses and laugh at the prospectors are now fitting out for a trip over the mountains to the scene of operations. There is no longer a doubt in anybody's mind but that gold is there and in sufficient quantities to make it pay for the digging. Several discoveries have been made lately that excite the people. John Stewart of Andover, N.B., only six miles from Fort Fairfield, claims that he has located a solid ledge of mineral deposit that measures 280 feet across, and that he has traced it back a distance of half a mile. He has sent several barrels of the ore to United States and Canada for analysis, and as a result two of the chemists have given encouragement. From Ottawa he received the news that his claim would pay for the working in both copper and gold, and from St. John parties received the following figures: This test was made from a barrel of the ore: Copper, $23.40 to the ton, Gold, $5.77 to the ton, Nickel, $3.80 to the ton, Silver, $6.40 to the ton, with a small amount of platinum and iron. The chemist in his letter asked Mr. Stewart tomeet him at Andover the following Monday, when he would go with him to the scene of his operations, but Stewart refuses to take anybody into his secret, and will procure a diamond drill which the provincial government furnishes and will work his claim unaided by outsiders. The has caused some excitement and sent several new prospectors over the route. But this is not all. Prof. Geo. Bailey, a scientific geologist of Fort Fairfield, spent twelve years in prospecting for the Giberson mine, so called, and is satisfied that he has located a paying claim. Several prominent Fort Fairfield citizens are in a position to show quantities of the stone, and a number of strange men, who appear to be mining experts, are in town, and its supposed that Stewart's shipments of ore have sent them here from other states. Bailey for the past dozen years has been looked upon as a sort of crank on the mining subject, but two years ago, when one of the Hopkins brothers in his market was sold a brace of ducks that had a dollar and sixty cents worth of gold in their crops, it made folks think he was not quite so cranky after all, and as a result several parties have been prospecting near the country where the ducks came from ever since, and some good looking quartz are found. ... George E. Bartlett, of G.E. Bartlett & Co., with Dr. Frank Whitehouse and Delbert Stevens, have personally experimented with specimens brought from some of Bailey's claims, and are satisfied that both gold and copper is there, and in sufficient quantities to guarantee that the claims will be worked. These are all responsible men. Bailey with two men has returned with ammunition and provisions to the scene of operations. A gentleman who holds claims in Cape Town, South Africa, has appeared in town, and although he does not say much, it is supposed that he is here for no other reason than to develop some of the discoveries made by Bailey during the past twelve years. The gentleman claims that he has lately arrived here from the gold regions of Mexico. He is satisfied that the gold is here, although he says it may be very deep in the earth. Dr. R.H. Perkins, Mell Bennett and several other gentlemen are interested in another claim. They say that their claim is a white quartz, three small veins, that shows free gold. Fifty years ago, George Giberson, a lumberman, found a very rich deposit of gold while in search of timber somewhere on the Tobique. He went to St. John, where considerable excitement was caused by his find, but on his return he was taken with the emigrant fever and died. Many people believe that some of the new discoveries are near the Giberson lumber works. The Tobique country is on the same range of mountains as those in Nova Scotia, where the gold mines have been in successful operation for twenty years. It has a wonderful variety of mineral deposits. Coal is found along its banks in several places. It has an endless supply of the best quality of fire clay, and its mountains of plaster are said to be of sufficient size to furnish all America with plaster

S.J. Daily News - Oct. 14, 1864 Our Mineral Resources. - The development of the mineral resources of the Province is daily acquiring increased importance, not only in consequence of the gradual decline in the lumber trade which has so long been one of our most lucrative sources of profit, but because the attention of American and English capitalistsis being turned to our mineral lands to a greater degree than at any former period. This remark applies more particularly to the Americans, who are quietly securing the most valuable mining properties as yet opened out, and are anxious to extend their operations wherever a suitable and promising field for the investment of capital presents itself. The antimony mines of Prince William are in the hands of a Boston Company who will prosecute their development with energy and undoubted advantage. Parties from the same city are making careful enquiries respecting the range and probable extent of theiron bearing rocks of Woodstock with a view to share in the profits which those remarkable ores offer to enterprise and capital.

Albert County itself bears witness to the singular advantages which the mining industry, properly directed, is capable of affording - its Albertite, Gypsum and building materials finding a greedy market in the United States, and the fortunate owners of the mining locations, well deserved profits for their investments. But we should like to see the people of the Province share, as they certainly ought to do, in the advantages presented by the mineral treasures of their own soil, and it was with much satisfaction that we noticed at the late exhibition at Fredericton a very marked increase in the representation of our mineral wealth. In describing the general features of the exhibition we glanced at the display exhibited by Professor Bailey, Mr. Matthew and Professor Hind, and we now propose to notice more at length the results of the explorations made during the past summer by the last named gentleman in the Northern part of the Province. Our readers are probably aware that Professor Hind has been engaged in ascertaining the probable area occupied by the already celebrated ""Quebec Group"" of Sir William Logan, the distinguished Canadian Geologist, which he discovered to exist on the Upsalquitch River in the county of Restigouche, in the early part of the summer. The ""Quebec Group"" is now known to be the great metalliferous formation of America, and it has long been recognized as such under different names, but without a suspicion of their relation to one another, by the American and Canadian Geologists. It was in 1860 that Sir William Logan first ascertained the true connection of the different metal bearing rocks of Canada and the United States, and because he satisfied himself that they constituted but one great metalliferous group and that this group was enormously developed in Lower Canada, and particularly near Quebec, he named it the ""Quebec Group,"" and as such it will very probably be recognized by the geologists of all the different States of the Union in which it is known to occur. As already stated, Professor Hind discovered in the early part of this summer that the ""Quebec Group"" comes to the surface on the Upsalquitch and the Nepisiguit Rivers, having there a breadth of about forty miles. He has subsequently ascertained that this important group stretches through the Province, and enters the State of Maine south of Woodstock, and extends a few miles north of that town - forming a belt across the Province not less than 30 miles broad. His collection of rock specimens with their associated minerals, at the late Exhibition, was chiefly from this group as it occurs in New Brunswick; and they were obtained from four lines of exploration which he has made across it. Among the minerals exhibited with the mother rock were copper bearing diorites, black magnesian slates which are supposed to be one seat of the gold not only of New Brunswick but of Nova Scotia and Canada. There were exhibited also what are called the ""Glauconite Slates"", an important member of the ""Quebec Group"", together with red slates and their associated iron ores, purple manganese slates, porphyries red and green, and gold obtained from the drift gravels and sands of the Nipisiguit, Upsalquitch, Tobique, Campbell river, Serpentine, &c. It results from a study of the mineral collection exhibited by Professor Hind that some idea can be obtained not only of the mineral resources of the localities which have been the scene of his operations, but also of the direction in which practical miners should expend their energies. It will be apparent to every one that the ores of metals exhibited by themselves, without relation to their geological range or distribution, cannot convey to a stranger, or to scientific men who may be consulted by capitalists, an adequate idea of the mineral wealth of a parish, county, or Province, because such ores may represent the richest portion of a mineral vein which would soon become exhausted if vigorously worked, as, unhappily, the dear bought experience of many in this Province is able to prove; but when metalliferous rocks extending over a hundred miles or more in one continuous belt are discovered and properly described, we feel satisfied that it requires time only to reveal the mineral treasures which experience and science assures us they contain. The map which illustrated the geology of the carboniferous area in the valley of the Tobique points out to any and every enquirer the place where to find his sandstones, his grits for millstones, his limestones, his gypsums, his firestones, housestones, argillites, &c., and a map of the ""Quebec Group"" of New Brunswick would point out the copper bearing rocks, the manganese and iron series, the lead and antimony series, and we hope in due time the rock in which the eager prospector may find his gold. We shall look for Professor Hind's report with much interest, and are glad to learn from himself that he intends to spend the remaining portion of the season in examining the geology of Albert, King's, Queen's, Charlotte and St. John Counties. We must not omit to notice the beautiful sea green and red argillites, the dolomitic limestone and the fine blue slates of the Upper Silurian rocks which lie to the North of the ""Quebec Group"" in this Province. Although they have not exhibited much metalliferous wealth, yet they are rich in valuable materials for construction and decorative purposes."

S.J. Daily Sun - Apr. 2, 1881 Mining in Maine ... long ... ...Bartlett ... The iron mine at Mount Katahdin in the north of the State must not be passed over. It has been in operation with varied success for a number of years, and now turns out 500 tons of pig iron per month. A market is here afforded for New Brunswick manganese, an ore not yet known to exist in Maine and which is indispensible in the purifying of iron. This mine belongs to the iron-bearing belt of rocks of which the Woodstock Iron Mine forms a part and which runs some distance into New Brunswick. There is every possibility that mineral may bediscovered in paying quantity in the western part of this Province, and particularly in Charlotte County, where several mines are in operation already, at Mascarene. The indications along the coast of the Bay of Fundy show mineral in several places, and it is hoped that this important industry of mining which is springing into operation all around us will soon be carried on in many places in our own Province."

Carleton Sentinel Dec. 3, 1853 As we promised last week, and for the information of those of our readers who have not seen them we now proceed to give a short sketch of the Iron Works, &c., at the Upper Town and the operations there carried on. TheIron Ore is brought a distance of three miles from theirinexhaustible mines in Jacksontown, and laid on a layer of wood placed on skids to admit air underneath and piled alternately with layers of wood and charcoal to a height of 6 or 7 feet in long piles, about 20 feet wide, here it is roasted or calcined until it becomes easily broken into suitable sizes for the Blast Furnace. Charcoal is made in 6 large kilns, holding from 40 to 50 cords each, 3 taking about 8 to 10 days from the time of packing in the wood, to taking out the charcoal, which, when made, is taken to large Storehouses for use. On the yard we also saw some of the new Iron Ore, lately discovered in immense quantity about 300 yards from the Furnace - this ore a Clay Iron Stone, we were informed, when mixed in certain proportions with the other, produced an Iron superior to any ever manufactured here. There were piles of a new limestone from the Sheriff's Hill, only about 600 yards from the Furnace, lately found - the nearness of this last effecting a great saving of transport, the Company having formerly to go 10 miles for Limestone. We next visited the Tunnel-head, where the furnace is filled or charged with the Charcoal, Ores, and Limestone, the Furnace is 35 feet high and 10 feet wide at its greatest width. The Engine house contains 3 Steam Engines for the Blast Furnace, of which only one was working, being sufficient to drive two large Iron Blowing Cylinders, which acting like immense Bellows were continually forcing air into a large Receiver, from whence it is conducted through pipes to the bottom of the Furnace, and there blown in through 3 Tuyeres, set close to the fusing mass of materials and having water continually passing through them to prevent their melting. Steam is raised in the Engine-house by the Gas or waste heat from the Furnace, being conducted under and returned through the Boilers - the same heat taken from the Furnace in another direction, when requisite, heats the air passing through the heating ovens, thus giving Steam and Hot-blast without any extra expense, and effecting a very great saving of fuel. - There was a third Engine supplied with steam, from the same Boilers, and used to set in motion a Circular Saw, and a large hammer for Blooms from a Puddling Furnace adjoining. On our way to the Casting-house, we were shown a Lime-kiln, Mortar-mill, Blacksmith's shop and Brick-yard, all very convenient for the Company's operations, and on their own premises. In the Casting-house we observed a man moulding Pig patterns to run the liquid Iron into - another was wheeling out the Cinders as they cooled. Being near Casting time we walked about, saw large heaps of the Cinders or Slag extending in the River, on the bank of which, the Pig Iron is piled in 3 ton heaps ready for shipping - the landing is one of the best on the river and accessible at all times during the navigation season. Close by the Casting-house is the line laid down in the preliminary survey of the St. Andrews and Quebec Railway, which, when completed will put these works in communication with the seaboard during the shutting up of the river navigation. It is now time to cast, or draw off the Iron melted during the previous 12 hours, and on returning we found men busily engaged tapping the Furnace, below where the melting Cinder was lava-like flowing over. The liquid Iron flowed along a Gutter in the sand, and soon filled one of the Beds of moulds or Pigs we saw making, it was then directed into another, and continued running until a third was filled, being, as we were informed, over three tons - this is done twice in 24 hours. As the Iron was near done running a large flow of Cinder came rushing out and was led over one side of the Gutter where it soon formed a small pool of liquid fire. We now wended our way homeward and in passing, must not omit mentioning the Company's Store and Boarding house, between which the road already partly graded runs to the mines at Jacksontown, - here the Railway is to be placed for the transport of the Ores and Limestone which lie in one continuous route. As we stated in our last the result of the present experiments has proved highly satisfactory, Iron can be produced of excellent quality and abundant quantity, and the Company are so far encouraged as to meditate an enlargement of their Capital Stock which the Act of Incorporation empowers, with a view to operations on an extended scale and the manufacture of the Iron into Bars. We wish them that success which their enterprise well deserves, and with which we think the destinies of this flourishing County particularly interwoven. No need of going to California or Australia if the mineral wealth of our County be only properly developed. Carleton possesses a Steel-making Iron Ore in quantity sufficient to render Great Britain independent of Sweden or Russia for generations, and which only requires an outlay of some of the superabundant capital of Britain to make it as well known in London and Sheffield as the best works of those Countries. We repeat, our County is rich in Mineral wealth.We have seen a very rich specimen of lignite, the outcropping of Coal found not over 3 miles from where we write, which, ignited well and burnt away leaving but very little residue. We have also been shown Silver-leadfluxed and melted from Ore found in this our County. These sources of Mineral wealth and our high Agricultural Capabilities warrant the inference that Carleton is soon to be destined to take rank as one of the richest Counties in the Province of New Brunswick."

On our way to the Casting house, we were shown a Lime kiln, Mortar mill, Blacksmith's shop and Brick yard, all very convenient for the Company's operations, and on their own premises. In the Casting House we observed a man moulding Pig patterns to run the liquid Iron into - another was wheeling out the cinders as they cooled. Being near Casting time we walked about, saw large heaps f the cinders of Slag extending to the River, on the Bank of which, the Pig Iron is piled in 3 ton heaps ready for shipping - the landing is one of the best on the river, and accessible at all times during the navigation season. Close by the Casting House is the line 13 laid down in the preliminary survey of the Saint Andrews and Quebec Railway, which, when completed, will put these works in communication with the seaboard, during the shutting up of the river navigation. It was now time to cast or draw off the Iron melted during the previous 12 hours, and on returning we found men busily engaged in tapping the furnace, below where the melting cinder was lava-like flowing over. - the liquid Iron flowed along a gutter in the sand, and soon filled one of the beds of moulds or Pigs we saw making, it was then directed into another, and continued running until a third was filled, being, as we're informed, over three tons - this is done twice in 24 hours. As the Iron was near done running, a large flow of cinder came rushing out and was led over one side of the gutter where it soon formed a small pool of liquid fire. We now wended our way homeward and in passing must not omit mentioning the Company's Store and Boarding House, between which the road already partly graded runs to the mines at Jacksontown, here the Railway is to be placed for the transport of the Ore amd Limestone which lies in one continuous route. We repeat, our County is rich in Mineral wealth.We have seen a very rich specimen of Lignite, the outcropping of Coal, found not over 3 miles from where we write, which ignited well and burnt away leaving but very little residue. We have also been shown a Silver leadfluxed and melted from from Ore found within our County These sources of Mineral wealth and our high Agricultural capabilities, warrant the inference, that Carleton is soon destined to take rank as

Codes: 0309 / P7 / IDX_Names: Welshpool; Lepreau/ Pocologan Silver;

St. Andrews Standard - Dec. 23, 1857 Mineral Resources of Charlotte County - Several of our contemporaries have noticed that the copper mine on the property of the Hon. J.J. Robinson at Welshpool, Campobello, is now being worked successfully. - The ore is reported to be of a superior quality, and abundant; it is also asserted that the speculation will prove remunerative to those engaged in it. Specimens of iron ore and coal have also been discovered on Campo Bello, and the adjacent islands. In the Parish of St. George, we understand that some years ago silver ore was discovered in the vicinity of Red Rock, from which some small articles were manufactured, but either owing to the lack of the raw material or want of capital nothing further was done. At Mascarene in the same Parish, and at Old Woman's Oven in St. Patrick, large quantities of copper ore have been sold to the Americans who shipped them to the United States. Since Dr. Gesner's geological survey of this County, it has been well known that the County of Charlotte abounds in mineral resources, which only require capital, skill and energy to develope them. We trust the day is at hand when capitalists will be induced to invest their money in working these mines, and that the investment will prove remunerative to all concerned. We look forward with confidence for brighter days for the County of Charlotte; - the Railway although in its incipient stage of traffic, has convinced every unprejudiced person what may confidently be expected when it is opened to Woodstock, and the incalculable benefit it will be not only to its shareholders, but to this County."

Codes: 0425 / D8 / IDX_Names: Millstream Iron; Northumberland County Gold;

S.J. Daily Sun - Sep. 27, 1889 The Mineral Wealth of New Brunswick. - The Bathurst Courier is jubilant over the discovery of iron in Gloucester county. This deposit is found on the northern side of the River du Moulin, seven miles from Beresford

Station and a like distance from Bathurst. The seam is said to be a mile long and ten to forty feet wide. The analyst reports a yield of 66 per cent. Of pure metal from the ore which, according to the Courier, is richer than the product of any other Canadian mine. The discovery of this deposit and the recent find of gold at Black Brook, give the Courier great hope that Gloucester may yet be famous for its mineral wealth. Whatever may be the facts regarding these particular discoveries, it is safe to say that New Brunswick affords a good field for prospectors. While mine hunters have scoured the province of Nova Scotia from end to end and side to side, this province, with the exception of a few districts, has been left severely alone. The geological survey has paid some little attention to New Brunswick, but under Dr. Selwyn's management the work of the geological survey has much less economic value than it should have for what it costs. The learned director has a certain scientific curiosity, which is better gratified by the study of fossils than by the discovery of valuable mineral deposits. The study of fossils is a proper business, if carried on by scientists who are engaged for that purpose or who do so at their own instance. Perhaps Dr. Selwyn may be building better than most people know, but from all that may be learned from the printed reports his explorations have not been of much visible worth so far as eastern Canada is concerned and especially this province. Even if the survey were under more practical management it could not accomplish what is usually accomplished by the man who is prospecting for a fortune and minerals at the same time. This adventurer has been long abroad in Nova Scotia, but the greater part of the area of the province has not yet been seen by the prospector or his friend the promoter. What rewards await the future explorer who shall make more thorough search of the earth's treasures, who can say? We know what harvests have been won and are now gathered from the deposits of lime, plaster, freestone, granite, and manganese. The value of our coal fields is still uncertain. That there is iron in abundance in more places than one is well known, but no one can yet say what may be the value of it all. An ore that is not worth smelting this year may, as new methods of working are discovered, be found richer than all others. As yet very little is known about the quantity or kind of the mineral wealth underlying this province. If all were known it could still be impossible to fix a limit to the future economic value."

Daily Telegraph - Jul. 23, 1864 Mining Matters in Albert. - Mr. McLellan, M.P.P.,who is in town, has shown us a specimen of a mineral greatly resembling some descriptions of coal. It has just been found in Hopewell in large quantities, and may yet prove to be exceedingly valuable. Coal, brighter in appearance and more oily than the Albertite, has been found in the parish of Hillsboro'. In the parish of Almaa large number of leases have been taken up by parties who expect to find copper, - among others by our townsman, Edward Allison, Esq., and Alexander Wright, Esq., of Salisbury. Albert is so exceedingly rich in mineral wealth that announcements of new discoveries are scarcely noticed now."

Daily Telegraph - Aug. 7, 1880 Albert County. - ... Mineral Deposits. - Albert affords a fine field for the geological explorer, and the justly celebrated Hugh Miller would have found, here, many Schools and Schoolmasters to excite interest and stimulate his favorite study. Accepted theories might, however, be more disturbed than strengthened by a critical examination of the characteristics of this district. A considerable belt of metalliferous rock,follows the higher ranges from Shepody Mountain, westward to St. John County, and contains more or less of gold, copper, tin, iron and telluride - quicksilver has lately been discovered, the locality known only to a few, andasbestos is reported near the western line, a short wayfrom the Bay shore. Alma is the parish richest in metals so far as known, and the copper beds there have exchanged owners at high rates, though little has yet been done in working. Pockets of manganese may be seen at Waterside and Germantown in Harvey and in Hopewell, where theMessrs. Steadman expended $60,000 in erecting works for manufacturing chemical products from local deposits. Lime rock is plentiful in Elgin, Harvey, Hillsborough and Hopewell, and in the last named parish, a company is engaged in its burning and preparation for market. Marble exists in several places, but has not yet attracted the attention of capitalists.Very fine freestone is found all along the shore of the bay and on the Petitcodiac. Two quarries at St. Mary's and one at Curryville on the railway line are being worked at present. Gypsum of the best grade outcrops in many places.The rock is being exported from Hopewell, about 3,000 tons being now ready for shipment; and in Hillsborough the Albert Manufacturing Co., at present managed by Joseph T. Tompkins, Esq., has, since 1854, carried on a large business. The proposed capital was œ50,000, and, in this case, the objects of the original charter have been exceptionally well carried out, though always laboring under the disadvantage of the high tariff of the United States. The company has continuously afforded local work for a number of men at all seasons, and has greatly promoted the carrying trade. Railways have been built; a superior factory has been erected to replace the one burned; and, with the necessary equipment of wharves, stores, warehouses, etc., the company has added much to the appearance of the village. The excavating, road making, trucking, cooperage work, grinding, calcining, barrelling, shipping, etc., have for a number of years secured for Hillsborough a hum of which few villages can boast. The recent increase of 7 « per cent duty on imported calcined plaster has, perhaps, enabled the company to place larger quantities in the Canadian markets, whatever may have been the counteracting influences of the tariff regarding it in other directions. The Hillsborough Plaster and Railroad Company of 1851 has not continuously operated. Other valuable gypsum properties are held by Sir A.J. Smith and others. Of these James Blight, Esq., is local agent, and this gentleman, in fact, did a great deal of initiatory work in developing the business. Coal in limited seams may be seen in everyparish, mostly cannel of inferior quality, but the most important carboniferous deposit, yet discovered, lies in the interior of Hillsborough. This has long been called Albertite, and was first noticed, accidentally, by the Messrs. Duffy in 1848, was obtained from the Crown in January, 1850, a mining licence over a mile square, and their rights were shortly purchased for œ3,000 by a company, of whom the late Edward Allison, Esq., was the chief promoter. A charter was granted in 1852, and the noted lawsuit ensued between Henry Gesner, Esq., a proprietor of the soil, vs. the Albertite Mining Co. Wilmot, J., the late Hon, J.M. Johnson and Hon. J.H. Gray, now a B.C. judge, were among the counsel employed. The trial lasted several weeks, and the twelve jurors, who were instructed to determine and report, what the substance was, must have found their first lessons in geology rather tedious while listening to words of learned length and thundering sound, employed in the testimony as given by several of the most celebrated scientific men of the Continent. The substance had the chemical properties of coal, but the geological formation differed from all recognized theories. It differed from the Trinidad asphaltum in luster and fracture. The savants were evidently puzzled; but the jury said it was coal. A later conclusion, however, made it consolidated oil, and it is now known under the name of Albertite. Between costly litigation and unskilful management the net earnings were small till, in the person of John Byers, Esq., the company secured the services of one, who combined practical knowledge with executive ability. In one year about 15,000 tons were shipped, worth $15 per ton on the wharf. Latterly the export is less, as the drifts are at great depth, and the facilities for cheap working are becoming more impaired. It is hoped that further searches may restore confidence in the extent of this valuable article. Albertite is also found in minute quantities in Midland and other parts of Elgin and in Hillsborough, and it is known to exist in Hopewell in considerable quantities, by an old discovery; when its value was unknown, which late searches have failed to recover. The Princess Alexandra, East Albert and Prince of Wales companies, of which Mr. Blight is manager, have each expended large sums in freehold leases and prospecting work, but excepting the finding of comparatively narrow veins of Albertite nothing has resulted beyond the very useful employment of labor in the locality. In Rosevale and other districts are found large quantities of oil shale or bituminous rock, containing about 45 to 50 gallons of refined oil per ton, besides a residuum of pitch or asphaltum, making the whole volatile matter over 60 gallons to the ton. The oil is very pure and exceedingly valuable for illuminating purposes. Mineral oil exudes from the soil on McLatchey's farm in Hillsboro, and at Hopewell Hill, but the coming millionaire, who will first strike a flowing fountain, is not yet known, either to himself or others."

Codes: 0662 / 0607 / LIME / H5 / C1 / G4 / IDX_Names: Vernon Mine; Letang Peninsula; Lime - General; Victoria County Gold; Tobique/ Giberson Gold; Mascarene - General;

Daily Telegraph - Aug. 7, 1880 The Gold Areas in New Brunswick. - Mr. Edward Gilpin, inspector of mines for Nova Scotia, has published a book on the Mines of Nova Scotia, already noticed in the Telegraph, in which, at several places, he alludes to the mineral wealth of New Brunswick. Among other things which the book contains is a history and description of the gold mines of Nova Scotia; and the author advocates the prosecution of the survey of that Province at the joint expense of the Dominion and Provincial Governments. Mr. Gilpin does not seem to make any allusion to the discovery of gold in New Brunswick, and it may be well to say something about the localities where the precious metal has been met with in this Province. Gold is not very uncommon in certain metamorphic or altered rocks, such as slates and quartzites; but, while not unfrequently present in such rocks, it is usually found in such minute quantities that the cost of extraction swallows up the value of the product. When this is not the case, and the gold occurs in greater abundance, there is a chance for mining it with profit. As Quebec, to the north of New Brunswick and Nova Scotia to the south, both have their gold mines, it is not unreasonable to look for gold in the similar rocks of New Brunswick. There are parts of the province where such a search would probably be undertaken in vain. Those unpromising regions are the following: 1st. The large area (about one quarter of the province) occupied by the coal measures. This area may be roughly described as a triangle having its base on the Gulf of St. Lawrence, and its apex at Oromocto Lake in York County. Then there is another large tract where the rocks are those of the lower carboniferous series, mostly red sandstone and shale. This also may be regarded as barren of gold. Finally, there are several large areas of intrusive granite and hard trap rocks in which gold hardly need bt looked for. The most promising parts of the province for gold prospecting are the belts of metamorphic slates found on both sides of the great triangular area of coal measures. The discovery of gold in these rocks has been announced on several occasions, and in some cases the discovery has been verified. Prof. H.Y. Hind, who was employed to make a survey of the northern part of New Brunswick, reported the presence of gold in small quantities in several of the streams flowing from the highlands of that region. Afterward Mr. Charles Robb was sent down by the Geological Survey of Canada to investigate this region and appears to confirm the discovery of gold on the Serpentine, a branch of theTobique. He does not, however, speak very hopefully of the result obtained up to the time of his visit, for he says: It would require the expenditure of a larger amount of capital than has hither to been applied, in order to establish the profitably auriferous character of the region. Gold, it is asserted, was found on the Muniac stream last year, and it has this year been reported from streams further south in Carleton County. On the south side of the coal measures gold has been found in the vicinity of St. Stephen as described by Prof. L.W. Bailey's report on the mines and minerals of New Brunswick, and it was discovered in the analysis of ores from the Le Tete peninsula, and was found by Dr.A.A. Hayes, of Boston, in samples sent from near Randall's quarry and Lime Kiln at L'Etang. These localities are in Charlotte county, but there is another further east, namely the Vernon mine in Albert county, in the ores of which, according to the report cited, Dr. Hayes discovered gold to the value of $22 to the ton. That more frequent and valuable discoveries of gold have not been made in New Brunswick need not be thought surprising when it is considered that by far the greater part of the country is forest clad, and elsewhere the ledges are mostly concealed by earth. There is but a short coast-line in the districts where gold may be expected to be found, and in this respect the advantages for discovering are much less than in Nova Scotia. There are so many indications of the existence of gold in New Brunswick that it is quite probable that remunerative deposits may yet be found, and gold mining be established as one of the regular industries of the Province. The remunerative character of gold mining in Nova Scotia, as recently reported, may stimulate search for the same precious metal in New Brunswick."

Geology - General;

Morning Journal - Feb. 7, 1866 Rock Records of New Brunswick - A Lecture, by Professor L.W. Bailey, A.M. (continued) : Let us return again from our wanderings to our starting point, the river and City of St. John. I have already said that a large portion of the town rests upon the hardened clays and sands of old Primordial beaches. Towards the lower portion of the city, however, near the present site of the gasworks, and thence extending downwards and outwards into the Harbour, are beds of a very different character, and formed at a much later period; they now rest conformably or nearly so on the older Silurian rocks, and not against their tilted edges, showing us the latter had been slightly, if at all, raised before the beds now under consideration were deposited. As the earlier Azoic rocks formed an island, along whose sides the waves washed up the earlier Silurian beaches, so the latter in turn, formed a shore for the deposition of the later Devonian beds. These latter are very various and of great thickness, fully 10,000 feet indeed, showing that this portion of the Province always changeable, but comparatively firm during the Silurian period, had again become the theatre of 4 rapid oscillations. Volcanoes were again active on a gigantic scale. The high ridge in the Parish of Simonds, known as Bloomsbury Mount, represents one of these volcanic vents and is indeed composed of the materials, once molten lava and glowing ashes, thrown from the earth's interior. The fiery streams spread far and wide. We may still trace them over much of the country, crossing the Harbor from Red Head to Manawagonish, while in Charlotte County, similar outbreaks formed the wild and picturesque hills of Chamcook and the St. Croix. But these eruptions were in part at least submarine and therefore less destructive in their action. Nor did they characterize the whole age, being most powerful at its beginning and its close. For immense periods the land was comparatively undisturbed. It was probably of an upland rather than of a marshy character, and was clothed to some extent with vegetation. Ferns, with the most graceful of foliage, were abundant and probably farlarger than now, while trunks of pines found here and there imbedded in the rocks, tell us that there were also forms of terrestrial animal life. Insects we know hadmade their appearance, for we may find their remains, still beautifully preserved, in their stony tombs. In the cliffs of Carleton the action of the sea is constantly revealing their curious forms, and both ferns and insects may be there obtained with little difficulty. Some of them were like our modern Day Fly, though far larger, while others more nearly recall our common locust. The honor due to the discovery of these interesting remains, interesting because they are the very earliest traces of insect life yet found upon the globe, is due to a native of your Province, now absent in Brazil, and is such as may well stimulate others to similar researches. In the seas of the Devonian age there had also been an introduction of new forms of life. Fishes, nowhere to be found in the earlier seas, now lived in vast numbers, and, to judge from their remains, of very great size. Though not yet recognized in the rocks of the Province they are abundant in the Devonian beds of New York, and especially in Scotland, where the writings of Hugh Miller have rendered famous the Old Red Sandstone beds which formed their place of burial. I would gladly here delay to describe in more detail these curious inhabitants of the ancient ocean, but as my purpose in this lecture is chiefly to confine myself to the actual occurrences and fossil animals of our own Province, and as many curious changes yet remain to be described, I must deny myself the pleasure. I cannot, however, dismiss the consideration of the great Devonian age, without calling your attention to the large area which the rocks of this period now occupy in your own and adjacent counties, and the promise which they afford of large and valuable mineral deposits. The greater portion of the Parish of St. Martins, in St. John County, fully one half of Albert County, and a portion probably of King's, are covered by them. The large and rich deposits of iron ore at West Beach and Black Riverappertain to this series, as do also the Vernon Copper Mines at Goose Creek, and the Alma and Gordon Mines at Salmon River. At those and at many other localities the ores are good and promise to be abundant, while there is every reason to expect that when the woods, which now everywhere densely cover this promising district, shall have been removed, new and equally rich deposits will be found. The metalliferous beds, in many peculiarities, very closely resemble the copper bearing rocks of the ""eastern townships"" in Canada, and may, like them, yield rich returns of iron, lead, zinc, copper, nickel, chromium and titanium, as well as silver and gold. The presence of these metals in the rocks of the Devonian series naturally leads us to the consideration of their origin - and now I must invite your attention, while I endeavour to make plain to you one of the grandest events in the geological history of New

Brunswick, an event indeed which not only marked the period in which it occurred, but which has also done much to shape the whole subsequent history of the Province. Recall if you please to your minds the series of changes which we have so far witnessed. We commenced, you will remember, our geologic history with the elevation of the Portland island as a low narrow strip of land, and have found that as the periods advanced, this island gradually increased in extent by the deposition of new beds around its borders, the results of wave action and the currents of the sea. The movement, however, was not wholly one of elevation, for the Primordial rocks are found on both sides of the Portland Ridge, and both they and the later Silurian and Devonian strata probably once covered its summit, showing that a dpression, equal at least to their thickness must also have taken place. As this thickness amounts to over 12,000 feet by actual measurement, it follows of neccesity that which belongs to the Devonian ..?.. being formed near the ocean level, the Portland rocks must have been 12,000 feet below that level, a difference equal to the depth of the great telegraphic plateau in the present Atlantic Ocean. There were then, through all these earlier times, movements of vast extent in this portion of America. They were, however, probably slow in their action, perhaps not exceeding a foot in a century, and though of constant recurrence and of sufficient magnitude to change the geographical conditions of the continent, did not disturb the general tranquility, nor result in any wide-spread extermination of life. We have seen that these oscillations became more and more frequent towards the close of the Devonian age and that volcanic action, upon a gigantic scale, then plainly indicated increasing instability in the earth's solid crust. Vast force had been long at work, of which those outbursts were but the signs, and though from time to time they might find some local vent, their action was only delayed and not subdued. The strain upon the continent was becoming greater and greater with every successive era. At last it could be withstood no longer, the period of tranquility was over, and an era of disturbance, or upheavals, and of mountain-making now began on a vast scale. The strata which in all the earlier periods must have been horizontal or nearly so, (for water can only deposit horizontal beds), were now pressed into gigantic folds, huge crevices were opened here and there to the profoundest depths, and from these depths issued hot vapors and mineral exhalations or streams of fiery fluids, poring over and baking by their intense heat the surrounding rocks. Everywhere around us we may trace the signs of this eventful period. You may see it in every street of your city. The beds, above which we sit, once soft sand and clay upon the beach, now stand in many places quite on end, and are at times even turned completely over, while they have at the same time been hardened into compact and unyielding slates. Nor has this taken place upon a small scale only. Whatever Silurian or Devonian rocks are found in the Province, they are similarly folded and hardened. Some of these folds are of gigantic size, the span being as much as several miles and the height not less than 2000 feet. Of course, when these folds were forming, the rocky beds must have been far softer and more pliant than at present, yet, they did not always yield. Near the summits of the folds, where of course the stream was greatest, they frequently gave way, and deep chasms or gigantic cracks were formed. Sometimes the beds on one side of the fissure would slide down along those on the other, and there is a locality, a few miles south of and parallel to Loch Lomond, where the beds have thus slid bodily down to a depth of at least 5000 feet, an amount more than double the height of any or our existing mountains. Through the crack or

Codes: 0666 / H5 / IDX_Names: Muniac River; Victoria County Gold;

Carleton Sentinel - Oct. 11, 1879 Gold in Victoria County. - The fact that gold existed in this and the neighboring County of Victoria, is not of late discovery. For many years it has been known that the beds of the Becaguimic, Shktehawk, Muniac, some tributaries of the Tobique, and other streams were more or less auriferous. The late W.S. Shea, we believe, was one of the first to draw public attention to the above facts. After personally prospecting and experimenting, so strongly impressed was that gentleman with the belief that gold in paying quantities could be found along the streams above named, that he, associated with others, immediately secured the leases of the land through which some of them flowed. At the time we refer to Mr. S. and his associates made some practical tests in different sections of the County, but owing to the high price of labour and material was unable to experiment farther than simply to establish the fact of the presence of the precious metal. At that time, too, the gold was only found in the bed of the streams, and the obstacles presented by the water were of such a character as to prevent further tests without the outlay of a largeamount of capital. From time to time a number of gentlemen have been in consultation upon the subject, until this fall they determined to to investigate, and by more extensive and perfect arrangements convince themselves of the extent and character of the auriferous deposit on the Muniac. While we agree with the Company that it would not be wise to raise what might prove false expectations or create undue excitement in the public mind, still we think it but right to inform our readers as to the general character of the enterprise and intimate upon what the hopes of its success are based. During the past few weeks investigations, but with very crude appliances, have been going on at the Muniac, and these have been attended with important developments. Not only has gold been found in the bed of the stream but as well in the flat land adjoining, and to a distance of some two hundred feet from the bank of the river. Long years ago, doubtless, these flats formed the bed of the river; the surface consists of a rich alluvial deposit to the depth of between two and three feet; under this deposit is found two feet of gravel, and then comes clay, on the surface of which most of the metal is found; the clay contains a large portion of gravel, intermixed with which the golden grains are also found; the bed rock has not yet been reached. The tests thus far made have, of course, been more for the purpose of learning the extent of the auriferous deposit than for the profit which could be anticipated from mining with the simple apparatus so far employed. It must suffice for the present to say that some very fine specimens have already been discovered, and that so satisfactory have the experiments proved, that the gentlemen interested intend making immediate preparations for entering upon mining another season, aided by all the necessary and modern appliances, feeling assured that the same course has been followed in other mining districts where the inducements were far less than those presented on the Muniac. We wish the enterprising gentlemen success, and shall be glad from time to time to note the progress of their operations."

Codes: 0666 / H5 / IDX_Names: Muniac River; Victoria County Gold;

S.J. Daily News - Oct. 14, 1879 Gold in Victoria County, N.B. - The Carleton Sentinel, in its last issue, devotes a considerable portion of its editorial space to the consideration of the question of the gold deposits of Victoria County. It starts out by telling its readers that the existence of gold in Victoria is no new discovery, some shrewd people having been aware of the existence of several, valuable spots for years. It describes where, when and by whom gold was discovered, the efforts made by the prospectors of the olden time and now, and much else besides that is at least interesting to know. And it speaks encouragingly of the prospects of those who are delving after it now. Whether all that has been so far ascertained of its presence in the county will justify the expenditure of much time or means, it is not for us to say. At any rate,it is not well to be carried away by the enthusiasm of the moment in such matters. Gold-getting, like the ordinary kinds of wealth-getting, requires patient and persistent effort, steady endurance, and generally work of the very hardest kind, as many who have engaged in the business in past times can testify. Still, for all that, the fact that it is troublesome to get and difficult to find in considerable quantities, furnishes no proof that it does not exist in more than one section of the Province. Speaking of the presence of the auriferous material in Victoria, the editor of the Sentinel says: For many years it has been known that the beds of the Becaguimac, Shiktehawk, Muniac, some tributaries of the Tobique and other streams were more or less auriferous. The late W.S. Shea, we believe, was one of the first to draw public attention to the above facts. After personally prospecting and experimenting, so strongly impressed was that gentleman with the belief that gold lay in paying quantities could be found along the streams above named, that he, associated with others, immediately secured the leases of the land through which some of them flowed. At the time we refer to Mr. S. and his associates made some practical tests in different sections of the County, but owing to the high price of labor and material was unable to experiment farther than simply to establish the fact of the presence of the precious metal. At that time, too, the gold was only found in the bed of streams, and the obstacles presented by the water were of such a character as to prevent further tests without the outlay of a large amount of capital. From time to time a number of gentlemen have been in consultation upon the subject, until this fall they determined to investigate, and by more extensive and perfect arrangements convince themselves of the extent and character of the auriferous deposit on the Muniac. The Sentinel does not think it proper to raise what might prove false expectations nor to create undue excitement in the public mind. This is eminently proper. But it deems it right to inform its readers as to the general character of the latest enterprise, and to give some intimation of the grounds of its hopes of success. This is reasonable, and because it is so we append what follows: During the past few weeks investigations, but with very crude appliances, have been going on at the Muniac, and these have been attended with important developments. Not only has gold been found in the bed of the stream but as well in the flat land adjoining, and to a distance of some two hundred feet from the bank of the river. Long years ago, doubtless, these flats formed the bed of the river; the surface consists of a rich alluvial deposit to the depth of between two and three feet; under this deposit is found two feet of gravel, and then comes clay, on the surface of which most of the metal is found; the clay contains a large portion of gravel, intermixed with which the golden grains are also found; the bedrock has not yet been reached. The tests thus far made have, of course, been more for the purpose of learning the extent of the auriferous deposit than for the profit which could be anticipated from mining with the simple apparatus so far employed. It must suffice for the present to say that some very fine specimens have already been discovered, and that so satisfactory have the experiments proved, that the gentlemen interested intend making immediate preparations for entering upon mining another season, aided by all the necessary and modern appliances, feeling assured that the same course has been followed in other mining districts where the inducements were far less than those presented on the Muniac."

Louisiana Copper; Letete Mine; Sandstone, Building Stone, Monument Stone, etc.; Carleton County Gold;

Morning Journal - Oct. 11, 1867 Exhibition. - Minerals. - Messrs. G. & B. Matthews, who have devoted particular attention to the Mineralogy of New Brunswick, Mr. Janion, who represents Messrs. Johnston & Co., of Liverpool, who are still carrying on their search for Copper at Letete, Charlotte County, Mr. W. Shea of Carleton County, Mr. J.J. Fellows, of Fellows & Co., Mr. E. Withers of Shediac, Mr. Scoullar, and Mr. Davidson are the principal exhibitors. Some of these collections are very similar to what they were when shown in former exhibitions, but the rich specimens of gold, obtained on the Becaguimec by Mr.Shea, the silver-bearing Antimony from York, the fine show of copper from Letete, the rich copper ore from Ellet River, the Manganese shown by Mr. Markham, the building stones from Albert (Mr. Stevens, exhibitor) and other places, the salt from Springhill, shown by Mr. Allison, form additions to our mineral collections which are of great interest, and which suggest that even in mining, New Brunswick may yet take a high place. A thorough Geological survey of the Province will shortly be made, on the part of the Dominion, and under the management of Sir William Logan, which will have the effect of doing much to determine what prospect there is that mining operations in this Province may be undertaken with scientific sanction."

Quaco Manganese; Adams Island; Simpson Island; West Beach Magnetite; Shepody Mountain Manganese; Woodstock Fe; Tetagouche Falls Manganese; Grey Brook Gypsum; Gypsum; Lime - General; Mascarene - General; St. Martins Coal; Kent County Coal; Queens County Coal;

S.J. Daily Sun - Jul. 15, 1881 [and similar version in Daily Telegraph - Jul. 15, 1881] Educational Institute. - Addresses by ... Mr. G.F. Matthew ... - Useful Minerals of New Brunswick. - ... Prof. Burwash, of Sackville, was received as an honorary member on the floor of the Institute... New Brunswick's Useful Minerals. - Dr. Rand then introduced G.F. Matthew, Esq., A.M., who delivered an interesting address on Useful Minerals of New Brunswick. Mr. Matthew said the first Europeans who settled in Acadia found themselves in a country abounding with game and fish and almost too well wooded. As the lumber resources were diminished the people were led to turn their attention to the products of the mine. The increase of manufactures in our midst will no doubt causea greater demand for our minerals and greater knowledgeof them will be of value. He would first give a sketch of the useful minerals of New Brunswick. In describing theuseful minerals he did not purpose to confine himself to the simple minerals, but to describe as well the variouscompound and impure substances of mineral origin, orcomposition, which are available for economical purposes.In this connexion various earthy deposits and rocks whichhave an homogenous structure will be noticed. There are anumber of these mineral species, which from theiroccurrence in large masses, or as being more valuable than others, are worthy of a place among the economical minerals; and among these the ores of metals hold a prominent place. Our knowledge of metals has grown up of late years, our ancestors knowing nothing of them. The occurrence of these metals in New Brunswick would be still unknown were it not for the researches which have given to modern chemistry the power to analyze and pick them out from their combinations. Prominent among the metals of vital importance to the community is iron. Ores of this metal are known to exist at several localities in New Brunswick but only those of Woodstock have been largely mined and smelted. The Woodstock ore is chiefly of the hematite species, and extends from Aroostook County in Maine to and across the St. John River into Peel parish of Carleton County. About 40,000 tons are said to be smelted in Woodstock Iron Works. Some of the iron ore beds of this district contain a large percentage of manganese. Similar manganese iron ores are found at Markhamville, King's County, and at West Beach, St. John County. A kind of iron ore which is a secondary product, resulting from the decomposition of other iron ores, is called bog iron. This ore is found in thick beds, especially in the carboniferous districts of York, Queens and Sunbury. Magnetic or black oxide of iron is a third ore of this metal, while a fourth one is thecarbonate. Beds of this latter ore have been found in the coal measures of Queens County and elsewhere. The fifth ore, which occurs in many places but usually in small quantities, is the sulphuret of iron. At Moore's Mills, Charlotte County, it is quite extensively found. The pyrites at this place is intimately mingled with calcite and the deposit extends in an east and west direction for several miles. Another metal occurring in large quantities in New Brunswick is manganese, which is extensively mined at Markhamville, King's County. Manganese ore is found in three other places - at Quaco, Shepody mines, and near Bathurst. The copper ores of New Brunswick are mostly sulphurets, but for some reason this mining industry has not had a healthy or continued growth. Adams and Simpson's Islands and La Tete peninsula in Charlotte Co. and Salmon River in Albert Co. are the most promising places for copper mining. Galena or sulphuret of lead is the only metal of this kind in New Brunswick that is worthy of mention. It is an ore that in this region silver is often associated with. Zinc ore is not common in this Province but has been found in small quantities - at Campobello and La Tete in Charlotte Co. Antimony, a rare metal in most countries, is not uncommon in this. It is known to exist in at least four places among which Lake George in York Co. is best known, where operations have been carried on since 1862. Much of the ore is reduced at the mine and converted into metallic antimony. Among the minerals that occur in largequantities are gypsum and limestone. One of the most extensive quarries of gypsum is at Hillsboro. Some of the rocks are as white as snow. At Petitcodiac there are also large beds of gypsum, where it has a breadth of 40 feet, and is laid bare for a mile. Limestone and marble occur at many places in New Brunswick. Pure white crystalline marble and verd-antique marble are found in Portland, St. John County, and variegated red marble at Gagetown,Queen's Co. Of combustible minerals, four kinds in thisProvince are worthy of notice. Bituminous coal has been discovered at various places, and has been mined at"

IDX_Names: Markhamville Manganese; Vernon Mine; Granite; Charlotte County Gold; Grand Lake Coal; Albert Mines; Geology -

Miramichi Gleaner - Nov. 23, 1861 Geological Survey. - Last week we penned some remarks on this survey, which we published. We give below some extracts from the Colonial Empire on the same subject, which convey some interesting intelligence respecting the Geological features and the Mineralogical capabilities of the Northern Counties:- ""It may not be generally known, that Sir William Logan extended his researches in Gaspe into this Province, as far as Bathurst, in order to complete his observations upon the limestone rocks of that district. These limestones are of the Silurian formation, and abound in the fossils which characterise it. When Sir Roderick Murchison, about twenty years since, was contending for the establishment of what is known as the 'Silurian System', he went himself to Archangel in Russia, and sent an Agent to this Province (the secretary of the Geological Society of Cornwall), who visited the Restigouche, and found close to Dalhousie, under the cliffs near the Bon Amie rocks, (Charlefort's Hill) in the Silurian limestones there, a variety of fossil remains well developed, which proved beyond a doubt the soundness of Sir Roderick's theory. When taken to England the fossils were found to correspond exactly with the fossils obtained from a similar formation, by Sir Roderick himself, at

Archangel; and the soundness of his Silurian theory has not since been disputed. ""To the Southward of the Silurian basin of the County of Restigouche, there is a belt of metamorphic rocks which crosses the Province from Mars Hill to the Nepisiguit; in this formation copper and manganese have been found extensively, and gold was observed more than ten years ago. ""Passing over this belt of rocks, which stretch across the whole breadth of New Brunswick from Southwest to Northeast, and offer a great barrier to the construction of a railway through the entire province, there is found a wide extent of sandstone country,belonging to the coal formation, which extends along the whole eastern coast of New Brunswick, from Baie Vert to the Bay of Chaleur. From its wide base on the Gulf of St. Lawrence, this sandstone country narrows to the eastward, and on the river St. John, is found 30 miles from thesea, beyond the granite quarries at the head of the Long Reach. Between these quarries and the Bay of Fundy, there is another belt of metamorphic rocks, containing beds of altered slate with veins of quartz of the description known elsewhere as producing gold. That gold will be found in the district, there can be very little doubt; but in what quantity, has yet to be determined. A nugget of half an ounce was found several years ago, in the bedof the River Digdeguash, worn quite smooth by attrition, thus affording proof that it had been borne from some spot near the source of that river. ""At this moment, researches are going on at the expense of private parties, in the County of Albert, which bid fair to produce valuable results. In that country, in addition to the wonderful coal, called Albertine, which furnishes such quantities of Paraffine oil, other minerals of value have lately been discovered. Among these are veins of copper ore, which in beauty of colour and crystallization almost rival the Siberian malachite. A nodule of this ore bearing 60 to 70 per cent of copper, nearly egg-shaped, and weighing about three pounds, is now in the City, and is intended to be sent to the Great Exhibition in London next year where there be little doubt it will attract quite as much attention as the gold of Nova Scotia. ""A mine of manganese in King's County has latelybeen opened, and is now being worked. - The ore is nearly black, highly crystallized, and is being carted to the Railway Station at Sussex, for transport to this City, whence it is shipped to England. Last week quantities of it were at the Sussex Station, affording ocular proof of the mineral wealth of New Brunswick. ""All these things point out clearly the absolute necessity of a complete Geological Survey of this Province, by competent persons. There is evidently great mineral wealth within its boundaries, and the structure of its rocks from the St. Croix to the Restigouche, are of a character to indicate that they are worthy of the most careful examination, and will furnish much mineral wealth of various descriptions, Gold included."

Daily Telegraph - Sep. 6, 1866 Mining Matters in Albert County. - To the Editor of the Telegraph:- I have much pleasure in informing you that at present the Agricultural prospects of this section are magnificent, and that the development of our Mineral resources is being pushed forward...The Albert Coal Mine Company have shipped some 10,000 tons; have 1300 tons on the wharf awaiting shipment; and are raising, probably, 100 tons per day. The Alexandria Coal Mining Company, - under the direction of Mr. Blight - operating a short distance to the westward of the Albert Mines, have sunk one shaft 160 feet; and are now engaged in another, which they have sunk to about the same depth; and are putting up a powerful steam engine to facilitate operations. The East Albert Coal Mining Company are operating to the eastward of the Albert Mines, about half a mile from the Petitcodiac River, where they have discovered several small veins of a very superior quality of Albert coal. They have sunk several trial pits on the vein, and are now engaged in sinking a permanent shaft near the great road, and have got down 160 feet. They are also going to put on this mine a large Steam Engine immediately to enable them to go down more rapidly. The Prince of Wales Company have sunk to the depth of 462 feet North East of the Albert Mines. At the present a temporary suspension has taken place with this Company; but I was informed by the agent that they would resume operations immediately. The Victoria Company, located near Stoney Creek on the Petitcodiac, after going to a depth of 400 feet, have for the time being closed, on account of the recent high rates of gold. C.D. Archibald, Esq., of England, hasexpended a large amount of money on roads and bridges to aid the development of the Albert shale; has erected lodging house, machine shop, saw mill, and partially opened several of the rich mines; and is now in a position to commence manufacturing to any extent, as soon as circumstances will permit. Mr. Dunlop, in Elgin, has had several men since early in the season engaged in developing the Shales on Coverdale River and Prosser Brook, the result of which, I think, has not yet been proved, but I believe he is very sanguine of success. He also has in course of erection, and nearly completed, a large Steam Factory, (near the Petitcodiac Station) for the manufactory of spools and 13other articles. He met with considerable loss lately in lumber, by the freshet, which may retard progress somewhat. Messrs. Vernon and Kinney have had some hands employed for quite a length of time, in opening theirCopper Mines in Alma. The Manganese Mining Company at Hopewell, - where a superior quality of that article has for a number of years been obtained to a considerable extent - has been mostly engaged of late in making new openings and preparing for future operations. This very brief (but accurate) account of what is actually transpiring must not be supposed to exhaust the resources of this County, for as yet they are scarcely touched. ALBERT"

Miramichi Gleaner - Dec. 7, 1861 Gold in New Brunswick. - Last week we announced that good specimens of gold-bearing Quartz had been discovered in this County. We are indebted to the Colonial Empire for the following intelligence in reference to the discoveries of gold in several localities in the Province. We hope the intelligence respecting the ""vein of gold-bearing quartz of superior richness,"" discovered in the Northwest branch of the Miramichi, may prove correct. For all the purposes of commerce, to facilitate trade, to enable persons to conduct their business satisfactorily, to encourage enterprising persons to engage in manufactures, and to develop the capabilities of this section of the Province, gold, or some other precious metal, has been long desired by our people. The Empire says: ""The probability that gold will be found in this Province, in considerable quantity, grows stronger as from day to day we hear of its being found in sections of country very widely apart. In Quaco, near the Bay of Fundy, several persons are seeking gold, and it is said are finding enough to pay them fair wages. In Albert County, further up the Bay, two small specimens of gold were found accidentally a few days since in a bed of the brook that flows into the Bay, by a person who was travelling in that quarter. Upon Scoullar's Brook, a tributary of the South Branch of the Oromocto, some three hundred persons it is said have lately been digging and prospecting, nearly all of whom have obtained gold in greater or lesser quantity. But the finest specimens yet found in the Province, have been brought to Fredericton by two gentlemen who were fly fishing on the North West Miramichi, and by chance struck upon a vein of gold-bearing quartz, of superior richness to anything found in New Brunswick. The precise location is of course a profound secret, and will probably remain so until satisfactory arrangements can be made."

S. J. Daily Globe - Jun. 23, 1862 and Morning News - Jun. 23, 1862 Gold Quartz. - We have seen several specimens of quartz with the gold as large as peas, sticking in the sides, which have been taken out of a locality near Smith's Creek, Kings County; and the indications are that gold in any quantity may be had there. Persons are hard to work taking out the quartz. Steps are about being taken by certain enterprising persons residing in Kings, to get up a company to go to work in

Codes: 2050 / 2051 / E6 / IDX_Names: Birch Island Gold; Steward Brook Gold; Southwest Miramichi/ Dungarvon/ Taxis Gold;

Evening Gazette - Oct. 29, 1890 The Occurrence of Gold in New Brunswick. - It is a very remarkable fact that the existence of gold in Nova Scotia was only discovered within a few years, and that now since public attention has been directed to the fact of its occurrence there, new discoveries are being daily made. Such being the case, and seeing that the rocks in the gold districts of Nova Scotia so much resemble some formations in New Brunswick, we may at any moment expect to learn of gold deposits being found in this province, which can be as profitably worked as those in Nova Scotia. We are aware that gold in small quantities has been found on the Becaguimec, and Muniac, two of the branches of the St. John, as well as on the south-west Miramichi. Mr. Freeze, Crown Land Surveyor, also found gold on the head of the Stewart Brook, a branch of the Taxis. This was seen by Mr. Edward Jack, who has informed us of the fact. This find he says was made some years ago, and he further said that Mr. Freeze informed him at the time he showed this gold to him he had also found gold on the Dungarvon. For some time there have been parties at work in Nova Scotia who have been obtaining gold from the lower carboniferous rocks, and we hear that a trial has been made of 4 tons of rock of this horizon, which in fact formed part of a cliff, yielded 4 dwts of gold to the ton. An enormous yield if it be considered that there are mountains of this rock there. Now the lower carboniferous rocks cross New Brunswick, and we also know that small quantities of gold have been washed from the sands of certain streams by which they are intersected. Should, therefore, the present extensive mining operations which we are informed are about being carried out at Gay's River, in Nova Scotia, in the lower carboniferous district, prove remunerative, a great impetus will be given to gold prospecting in New Brunswick. In this manner the Gazette unlike some of its contemporaries, has not allowed itself to be carried away by the bold assertion of weak and ignorant men, who falsely claimed to have made gold finds in New Brunswick, but the opinions which it expresses are based on the testimony of cool headed and intelligent men, who understand the subject which they undertake to discuss."

Codes: 2050 / I1 / IDX_Names: Birch Island Gold; Stanley Gold - General;

Fredericton Daily Gleaner - Sep. 12, 1890 John S. Manzer, of Houlton, Me., who has had several year's experience in gold mining in California, was in Stanley last week, and reports that the specimens of gold found at B. McMinneman's farm are rich, and thatit would be a payable concern if worked. The Rev. J.S. Mullin discovered recently on the manse lot, specimens of gold in good paying quantities. Lots of specimens have been discovered here, but men of capital are wanted to come here, investigate and work the claims found."

Codes: A1 / IDX_Names: Kings County Gold;

Morning News - Aug. 12, 1861 and St. Andrews Standard - Aug. 14, 1861 Gold in New Brunswick.- Several specimens of goldbearing quartz got at Hammond River, may be soon at this office.- Persons having any knowledge of such things may examine them and pass whatever judgement they please upon them. If the specimens do not actually contain gold, they indicate that gold is not a great distance off.- [Morning News"

Morning News - Aug. 14, 1861 Gold In New Brunswick. - We expect to be able shortly to pronounce that genuine gold is to be found in this Province, say three miles above the Hammond River Bridge. A company of Australian and Californian miners left Hampton yesterday morning, carrying working implements with them, for the purpose of prospecting, and convincing themselves beyond a doubt, whether there is gold or not. In the mean time we have to say that there is every indication of a favorable result."

Morning News - Nov. 15, 1861 Gold in New Brunswick. - Dr. Dawson, the Geologist, has just published a paper on the Gold Fields of Nova Scotia, in which he says - ""It is to be anticipated that the connection with the auriferous deposits of the United States may soon be effected by the discovery of gold in New Brunswick."" We hope our friends in Kings County are able by this time to report to us something favorable as to the result of their prospecting and digging? We are informed that there has been a company at work at the ""Mechanic's Settlement"" for some time, and that they take out gold enough to pay them for their trouble. Who will inform us authoritatively upon this point? We have heard of discoveries of gold having been made in the vicinity of this city within the last few days. A gold nugget reached town this week (and is now at Lloyd's Agent's Office) which was taken from a new mine, somewhere near St. Mary's on the Bay Shore, N.S. The Shipbuilders working on a vessel near by, threw up their adzes, hammers, and axes, and struck into the lead, and each man has been bringing out handsfull of gold every day since - so we learn from a good quarter."

Morning News - Sep. 25, 1861 County Kent. - ... The ""Colonial Times"" of Thursday last is responsible for the following: It is said that Quartz containing Gold has been found in the vicinity of the Catholic Chapel, Kingston. Large pieces can be gathered without much trouble. One of those we saw at Mr. Brait's Store; it had been broken in two, and the yellow metal was glistening through all its veins. The Kingston people did not appear to be much excited on the subject - no rush was making to the locality. There are so many practical jokers in that vicinity that it was not impossible the ""quartz containing gold"" has been made to order. If there is really gold to be found there we shall hear more about it pretty soon."

Morning News - Sep. 30, 1861 and Morning Freeman - Oct. 1, 1861 Gold Found. - Specimens of the genuine article found in the Parish of Norton, may be seen at the Ossekeag Station, Hampton. We also learn that gold has been found in several localities, but as yet we have only seen the Northern article. - News"

Codes: A1 / IDX_Names: Kings County Gold;

Morning News - Jul. 28, 1862 Gold Specimens. - We have some specimens of gold bearing quartz taken from a district in King's County; but we understand that nothing can be done with the owners of the land so as to enable persons of enterprise to go to work. They will neither ""gee nor haw"". Being impressed with the notion that the whole of their rocks are gold, and that a fortune is in store for them, to be gathered immediately, nobody can approach them with anything like a reasonable proposition. Like the dog in the manger, they can do nothing themselves, nor will they allow anybody else to

S.J. Daily Sun - Feb. 8, 1884 Sussex, Feb. 7.- Mr. Gould, a mineral expert, is of the opinion that he has made a valuable find of gold within a few miles of Sussex."

Weekly Record - Fri. Nov. 30, 1888 W.H. White, Esq. is exhibiting a specimen of gold quartz which he claimed was found within six or seven miles of this village. Gold quartz of which this specimen is claimed to be a fair sample, the whole face being covered with gold, would be worth at least $10,000 a ton."

Daily Gleaner - Jun. 14, 1890 and S.J. Daily Sun - Jun. 14, 1890 Gold Discovered at Gagetown. A letter received in the city last evening by a former resident of Gagetown states that great excitement has been caused in the quiet town of Gagetown by the discovery of gold there. In a letter to a gentleman in this city, received tonight, it is stated that while Joseph Erb was removing earth and stone from his cellar recently, he noticed a metal in the rock that looked like gold. More of the same kind was found and taken to Mr. Best of St. John, who analyzed it and has reported the rock to contain the precious metal in encouraging quantities. A number of specimens are now being collected for the purpose of determining the exact proportion of gold contained in the rock."

St. Croix Courier - Jun. 19, 1890 A reported discovery of gold in Gagetown has awakened quite an excitement in the central counties of the province."

N.B. Reporter - Jun. 14, 1893 Gold at Gagetown. - Mr. Thomas H. Gilbert, of Gagetown, says that in the vicinity of Gagetown there is a large quantity of gold like that which is causing the sensation at Memramcook. He thinks that if the Memramcook fields are profitable, Gagetown has latent wealth."

Miramichi Gleaner - Jan. 23, 1949 The Gold Fever. - The Saint John Morning News has the following hit at the Gold mania, now so extensively raging in the United States, and partially in the British Colonies. Now's Your Time. - We observe hand-bills posted up in the streets, inviting such of our young men as feel goldish, to join an expedition now fitting out in the United States for California. Particulars are to be had of the advertiser, at present stopping in one of our hotels. We can assure our citizens that gold can be had in this province, in any quantities, particularly at Sussex Vale, merely by digging for it. Commence next spring boys, and turn up the soil, and you will find more gold in this Province than is to be had in

Codes: A1 / Y2 / LEGI / IDX_Names: Kings County Gold; Saint John County Gold; Legislation, etc.;

Morning News - Sep. 25, 1861 Mines and Minerals. - It is to be hoped that at the next meeting of the Legislature, some action will be taken with respect to the law controlling all Mines and Minerals found, or to be found, in this Province. The law as it now stands operates against the development of some of the best resources of the Province, and militating most seriously against the introduction of population and capital, two things essential to our progress and prosperity. The chief objection to the law is that the Government are prevented from granting leases (say for gold mining purposes) for a longer period than three years, subject of course to renewal, but upon uncertain terms; and the lessee is to pay 5 per cent. on the value of all he obtains by his operations. The objection to this will at once present itself. No man, or Company, will set to work and spend large sums of money - a preliminary necessity - in the way of sinking shafts, and preparing machinery - in order to mine advantageously, they shall be allowed to continue their operations. We are informed upon good authority, that had it not been for this law, lead, copper and silver mines - these articles are known to abound in certain localities - would have been opened long before this, and perhaps thousands of men would be employed to-day more remuneratively than they could have been in any other way. Some time since we hinted that gold-bearing quartzwas to be found in certain quarters in Kings County. Since then we have heard of the precious metal having actually been taken out of the quartz; and the quartz of a rich quality, has been found in various parts of the Province - as near our City as Lily Lake, at Musquash, &c. To our personal knowledge, gold exists in a certainlocality, known to a few persons. But the trouble in the way is the law. People say, and very justly, ""of what use is it for us to dig and spend our money, first find out the gold and open up the mines for the benefit of others, even for the benefit of those who may have thrown obstacles in our way, or laughed at us, who will have an equal claim with ourselves, and the same chance of succeeding, and yet would not risk a copper at the start"". The reader will at once see the force of this objection. A Company is to be formed immediately; but no work will be done until after the Legislature has met, and it is known whether the Company will be allowed to commence operations upon more favorable conditions. If the Legislature fails to make any relaxation in the Law, the company will be disbanded and the gold remain in the earth, or not worked out to any extent. The secret of its whereabouts will remain with the owners of the soil and a few others. Now we believe that this law is coeval with the days of old fogyism, when high protection principles ruled all legislation, when free trade was a nightmare, an ogre of most frightful mien. The right for the exercise of this Royalty, as it regards this Province, is founded upon the concessions made by the English Government at the time of surrendering to us the control of the casual and territorial revenues, including the ""mines and minerals,"" and everything else appertaining to the soil. It was simply a transfer from the Imperial to the Colonial Governments, made upon certain conditions. Our Legislature, therefore, has the right to alter or abolish this anti-free trade restriction altogether. But, the question may be asked, has the Government any more right to the gold, the silver, the copper, to be found upon a man's private property, than it has to the crops which grow upon the same soil, or the timber which is converted into a marketable commodity. It is labour in all cases that makes the thing productive. The government in point of justice, has as much right, which is no right at all, to tax the farmer 5 per cent., upon the produce of his Farm, as it has to tax him 5 per cent. for his labor in digging gold out of the bowels of the earth, which after all is only an article of merchandize, as much so as the marsh muck which is purchased by the farmer of his neighbors, for the enrichment of his upland. We contend then that the Crown has no right to tax a man for the products of his own property; and that he ought to be at liberty, or lease his right to others, to take out all the gold and silver he can find upon it, whether in the shape of turnips, potatoes, stones, of the thing itself called gold. Gold found upon ungranted lands is of course the property of the Government, and therefore should be subject to its control. If wrong in the conclusions we have arrived at, we shall be obliged to some correspondent to state his objections. Of course we are prepared for the answer that the Government of Nova Scotia exercises jurisdiction over its Mines and Minerals. But this answer does not meet the case - it is far from furnishing a reason of justification for the arbitrary exaction complained of. We must have an answer sustained by sound reasoning - by arguments the weight of which no man of common sense will fail to discern the force of. In California there is no Government interference - no taxation on mining operations. Any man has a right to prospect and dig for himself, wherever he pleases, so long as he does not meddle with the claims or rights of others. In Australia there is no restriction. An excise duty is levied upon gold exported. This seems to be fair enough. The effect of this free trade system if carried out in this Province would be most beneficial. We believe, if the law is repealed, or modified in a satisfactory way, that there will be mining operations going on next summer in at least twenty places, far and near, on the line of railway and the post roads. The gain to the Province will be an increase of population, which we want - an increase in the general revenues - in fact, the advancement, prosperity and general contentment of the inhabitants. Are not these of more importance than the supposed benefits to be derived from the restrictions under the present law? On the other hand, if the law remains as it is the effect will be just the opposite to that we have just stated, because there will be no gold digging operations. We shall get along just as at present, without any of those advantageous aids which a little wisdom might have obtained for us. We hope that some hon. member will be prepared to bring this subject forward next winter."

Codes: A5 / IDX_Names: Charlotte County Mn;

S.J. Daily News - May. 22, 1863 The Standard says that Manganese has been discovered in the County of Charlotte."

S.J. Daily Sun - Jul. 20, 1882 Grand Lake Fire Clay. - Yesterday two car loads of fire clay, which came from Manning's property, Grand Lake, was shipped to Coldbrook Rolling Mills. The clay is found under the coal bed and is said to be of considerable value."

Codes: C1 / IDX_Names: Tobique/ Giberson Gold;

S. J. Daily Globe - Sep. 6, 1862 Gold Discoveries on Tobique. - We predict an extensive gold discovery in our County. - There is no doubt but that the precious ore exists in rich abundance up the Tobique. We are reliably informed that specimens have been found, and submitted to parties who have mined in California, and pronounce it superior to any ore ever seen in the well known land. Indeed some returned Californians are among the party at present engaged in digging and blasting.- Victoria Guardian."

S. J. Daily Globe - Sep. 20, 1862 We lately saw a party who had been gold prospecting on the Tobique River. He had gone up that stream some distance, and also up several of its tributaries, but could find no gold. He says that it is quite certain gold was discovered there twenty-five years ago, but none has since been found."

Carleton Sentinel - Oct 15, 1864 Fredericton Exhibition. --... Mineralogy. The contributions in this department are from Prof. Hinds and Bailie; Hon. Capt. Robinson of Campobello, and Mr. Matthews, St. John. Prof. Hind's collection is very large and interesting; among them we noticed specimens of the gold from Tobique, &c. ..."

S.J. Daily Globe - Sep. 11, 1866 The last number of the Victoria County Express contains little or no notice of the boasted gold discoveries on the Tobique."

Morning Journal - Apr. 17, 1868 Gold Discoveries. - Some very fine specimens of gold from Upper St. John (River de Chute and Tobique) have been lately exhibited here, and the impression seems to be gaining ground that New Brunswick will ere long rival Nova Scotia in the production of gold. I had the curiosity to step into the Crown Land Office and notice the mining licences and find quite a number taken out on the various branches of the Tobique as well as other streams."

Daily Telegraph - Jun. 6, 1868 and S.J. Daily News - Jun. 10, 1868 Some very rich gold-bearing quartz has been discovered upon the banks of the Tobique River, in Victoria County, N.B. Mr. John L. Turner shew us some specimens the other day, which were brought from there. They have been tested and found to contain $14 to the ton. If the deposit is extensive it will prove a valuable discovery.- Aroostook Pioneer."

Carleton Sentinel - Feb. 4, 1871 Mr. Editor, - At different times the attention of your readers has been directed to the presence of gold up the Tobique. - Specimens of auriferous quartz, richer than anything of the kind in California, according to the testimony of retired miners, have been found; but hitherto no attempts have been made to ascertain whether it would yield sufficient to pay a profitable return for the expenditure required. Provided the necessary arrangements can be made with the government, we understand that a party from the neighboring State will begin operations next summer. Every encouragement should be given by the Legislature towards the project. We believe that a party in Carleton, at present, has a lease of a large portion of the section, who apparently is not disposed to prosecute the work. The following extract from a letter of the party referred to will speak for itself:- I have not forgotten my mineral specimens I brought from your place. The little crumb I had of your friend was good gold. I want you to find out where he got that and how much he thinks there is of such quartz back. He told me he knew of a site for washing he thought would be good if there could be a machine to gather the dust; that I can furnish, that will separate the smallest dust and all of it, and likewise a quartz crusher, and man that will come next summer that is well posted in the business; has served a good many years in California. I want you to find out all the particulars, the cost of a site, and how far it will be from your place. The piece of flint you gave me had a little gold in it. If the parties all live till next summer, we will come up and settle the gold excitement or create more than has been. I will only add that the party in question is thoroughly reliable. Yours, C.W.S.B. Tobique, V.C., Jan. 31, 1871"

S.J. Daily News - Feb. 7, 1871 Tobique gold.- A correspondent of the Carleton Sentinel says a party from the State of Maine intends to make an attempt to prosecute gold mining on the Tobique River next summer, provided the necessary arrangements can be made with the government. Specimens already tested indicate that the yield may be sufficient to pay a profitable return for the money and labor invested. At any rate they will either ""settle the gold excitement or create

Carleton Sentinel - Apr. 27, 1889 Gold. - In a recent issue, your Andover correspondent refers to the Giberson gold as a myth. Mr. J.D. Giberson, however, is in possession of the original find, and it is rather material for a myth. It is also said that Mr. E. Hutchinson of Andover, is the possessor of a small piece of the first (and only, as, yet) find. Mr. G.W. Grant has also a piece of quartz, quarried on the Odell, showing gold to the naked eye. The Victoria Mining Association would, perhaps, do well to try their luck on this vein."

Carleton Sentinel - Feb. 15, 1890 Parties digging for coal on the Tobique last October met with, at least, enough to encourage their early resumption of work in the spring. Gold, silver and lead specimens obtained last summer will confirm the faith of the rankest skeptic with regard to the Tobique's great future. With a good decent local subsidy for the Tobique Valley Road, matters will brighten up considerably all around. Why in the name of fair play should we not receive it? Mr. Blair in the interest of a most important section of country, will assuredly grant it."

Codes: C1 / IDX_Names: Tobique/ Giberson Gold;

Moncton Daily Transcript - Feb. 18, 1890 Coal, gold, silver and lead are believed to exist in available quantities on the Tobique River, Victoria Co."

St. Croix Courier - Feb. 20, 1890 Persons digging for coal on the Tobique last October met with, at least, enough to encourage their early resumption of work in the spring. Gold, silver and lead specimens obtained last summer will confirm the faith of the rankest skeptic with regard to the Tobique's great future."

Woodstock Dispatch - Dec. 8, 1897 Humboldt Sharp had quite a trip up the Tobiquerecently, spending some seven weeks on the head waters. He took with him a barrel of flour and some other groceries, shot a moose during his tour, and with a couple of other men he remained in the woods till the provisions gave out. Mr. Sharp claims to have got further up the river than anyone is reported to have been yet. He brought some seventy-five pounds of quartz which he thinks is well loaded with gold, and which he has sent away to be assayed. He thinks there is gold on Tobique all right."

N.B. Reporter - Dec. 8, 1897 Humboldt Sharp, of Woodstock, claims to have madea gold strike on the Tobique. He is having the quartz assayed."

Woodstock Dispatch - Dec. 15, 1897 and St. Andrews Beacon - Dec. 23, 1897 A Mountain of Quartz. - Where White Men are Scarce. - Last week the Dispatch had an item regarding a prospecting tour made by Humboldt Sharp away up the Tobique. The Dispatch was a little astray in stating that this work was done on the Tobique. As a matter of fact, the most satisfactory results were found on the head waters of the Nepisiguit, a river which empties into the Bay of Chaleur. With Mr. Sharp, were Coles Dugan and Ellis Smith. They left Upper Woodstock on the 13th of October, having provisions for two months. They took a horse with them, and packed their stuff on the horse's back, for fifty miles. They went up the Serpentine, on the Tobique, four miles, and there crossed over twenty miles to the Nepisiguit. By this time they were 210 miles from Woodstock, and they claim to have been in a land which was seldom or ever visited by white men. It was here that, tradition says, an old Indian, Ambrose Bear, lived for twenty years, and brought up a family without once coming out into civilisation. They claim to have found a mountain about 600 feet high covered with solid quartz, containing minerals in paying quantities is a matter of opinion, and the prospectors in question express their firm belief that it does. At all events they have brought out a considerable quantity of ore, and expect soon to know what experienced assayists have to say about it. Mr. Dugan told the Dispatch that game was plentiful in the district they visited. They killed an elk, and saw a number of moose and caribou. On an occasion they saw three or four caribou within a period of a quarter of an hour."

Daily Sun - Jan. 18, 1898 The Tobique river gold regions still furnish a prominent topic of conversation. Charles Hurley came down to Andover this week and brought the startling news that Frank Ferguson of New Hampshire had found a rich vein of gold bearing ore twenty three miles above the mouth of the Serpentine river, where it enters into the Tobique. Hurley said that Ferguson had shown him a small bag filled with pure gold and several bags of white quartz. It did not require the aid of a glass to satisfy a man that it was gold. In some of the quartz he said there were the veins of gold that would satisfy any man. - Hartland Advertiser."

N.B. Reporter - Jan. 19, 1898 The Tobique Gold Regions. - The Tobique river gold regions still furnish a prominent topic of conversation. Charles Hurley came down to Andover this week and brought the startling news that Frank Ferguson of New Hampshire had found a nice vein of gold-bearing ore twenty three miles above the mouth of the Serpentine river, where it enters into the Tobique. Hurley said that Ferguson had shown him a small bag filled with pure gold and several bags of white quartz. It did not require the aid of a glass to satisfy a man that it was gold. In some of the quartz he said there were the veins of gold that would satisfy any man. - Hartland Advertiser."

S.J. Daily Sun - Jun. 28, 1899 Andover, June 21. -Manzer Giberson of Arthurette has found on the Serpentine some very good specimens of quartz rock containing gold. A quantity of it has been sent to Montreal to be tested. The prospects seem so bright that a company has already been formed to develop the mine."

Weekly Record - Fri., Jan. 31, 1903 A capitalist named Dr. D.W. Goff, is reported to have secured certain lands and mining concessions, in Carleton County, N.B., on the headwaters of the Miramichi River, and has men working, mining for gold, which it is said is in good paying quantity. We trust the rumor is correct."

Woodstock Despatch - Nov. 11, 1908 Gold on the Tobique. - Henry Youle Hind, M.A., who in 1865 made a geological survey of part of the Tobique for the N.B. Government, was up on the Wapske last week, a branch which he was not on in 1865. He was accompanied by Wm. E. Stewart, Wm. Bay, Thos. Robinson, of Salmon River, and Todd Brewer, of Woodstock. Mr. Hind gave quite a favorable report on the prospects of that district for mining purposes, and especially for gold. He expects to return next summer and make a more extensive search. - Perth News."

Codes: C1 / IDX_Names: Tobique/ Giberson Gold;
1921 in 'The Story of Knowlesville' by Judson M. Corey, 1985, p. 145, Keystone Printing, Saint John. - (Original source is a story told by Roy Hemphill to author). - Gold Excitement. - About 1921 there was a local gold exploration. A stream driver named Giberson, on one of the tributaries of the Tobique, was crossing the O'Dell as he was taking an overland route to a settlement. He noticed a nugget of gold in the stream bed. He reached itwith a split stick. This triggered interest and competition in trying to find the fictional 'Giberson Gold Mine.' Mr. Giberson left a few clues. He was going home because he was ill; he died of pneumonia. In Knowlesville, the Avery Brothers, Jack and Arthur, were at loggerheads over the prospect. Jack Avery got Jack Lyons, from Caribou, Me., to go with him. They rented a hand push car at Juniper and went up the C.N.R. tracks on their way to the Serpentine and other streams. Jack made a second trip accompanied by Ernest Sewell. Arthur made a second trip with Osmond Frazier."

S.J. Daily News - Apr. 14, 1883 Dorchester's oil well is exciting considerable interest in the neighborhood."

S.J. Daily Sun - Jun. 14, 1899 Boiestown. - A party of prospectors explored Trout Brook, and returned with some good specimens of gold-bearing quartz. The auriferous region is being visited frequently and many claims have been taken. Further developments are expected shortly."

S.J. Daily Sun - Sep. 7, 1900 Boiestown, Sep. 5. - F.A. Furbish, a mining expert of Philadelphia, was here last week and paid some of the gold bearing streams of this section a visit. On his return Mr. Furbish expressed himself as highly pleased with his trip, which combined business with pleasure. He thinks these streams rich in the yellow metal, and

S.J. Daily Sun - Sep. 15, 1900 Boiestown, Sep. 11. - Messrs. McCluskey, who have been so journing for some weeks on the tributaries of the Miramichi, looking into the mineral wealth of the various streams, returned on Saturday and are stopping at Duffy's Hotel. They expressed themselves as satisfied of the fact that gold is present in most of the streams

S.J. Star - Jul. 24, 1902 Gold on Miramichi. - James Myers, who is in the city today, says yesterday's Fredericton Gleaner is showing some rare and excellent samples of gold quartz which he claims to have found while enjoying a recent fishing trip on a branch of the Miramichi. Mr. Meyers says that he traced the quartz vein for some distance, and it is said to be

Weekly Record - Fri., Jan. 9, 1903 The discovery of supposed rich bodies of silver lead ore or galena carrying gold, on the Taxis River, near Stanley, is causing some comment. Areas have been taken up and the property protected by a Mr. Griffin. Nephews of the wealthy Carnegie are putting up the money, so it is stated, and the prospects are very good."

Codes: E9 / IDX_Names: Charlotte County Gold;

Morning News - Aug. 16, 1861 and Morning Freeman - Aug. 17, 1861 Gold in Charlotte. - The St. Andrews ""Standard""of Wednesday says:- The rich quartz collected at the Chamcook Lakes is now being quarried, that there is gold to be had, we learn is true, but whether it will not cost more to get it than it is worth is a problem yet to be reached."

St. Andrews Standard - Aug. 21, 1861 The Gold Excitement here has been increased by the discovery of rich Quartz rock in the vicinity of Macadavic."

New Brunswicker - Aug. 24, 1861 The St. Andrews Standard says that a rich quartz rock has been discovered in the vicinity of the Magaguadavic."

Bay Pilot - Jun. 16, 1881 The Gold Quartz find, which set the Church Deacons and others in St. Stephen prospecting on Sunday, has turned out to be a specimen of gold quartz stolen from the mantle piece of Z. Chapman."

St. Croix Courier - May 26, 1881 Gold Mine.- For the past few days the wildest excitement has prevailed in certain circles. Groups of men have been seen collected at the corners and in the stores, discussing the momentous question, Where is it? On Saturday, Sunday and Monday, with picks and hammers, parties, were scouring the land in the vicinity of Porter's mill stream but were unable to discover the coveted bonanza. The cause of all this unusual disquietude is the report of a gold mine which Mr. John Townsend claims to have discovered. Specimens brought by him to town are pronounced by old gold miners the richest they have ever seen. Unless he receives $2000, Townsend refuses to disclose the place where the ore was found but intimates that it was in the vicinity of Porter's mill stream. A company was immediately formed and all the land at that place secured. An offer of $200 cash and a share in the mine was then offered to the discoverer, but he would not reveal his secret. He has, we understand, opened negotiations with several parties but nothing definite has been arrived at. Many stories, plausible and improbable, have been afloat, from which we have gleaned the above. Several assert that they know pretty well where the specimens were found, but wisely shake their heads when questioned. We have an idea on the matter but will keep mum and await further developments."

Codes: E9 / IDX_Names: Charlotte County Gold;

Daily Telegraph - May 27, 1881 St. Stephen. - ... Gold. - The town is in a fever of excitement over a supposed gold mine in this vicinity. On Saturday a specimen of rich gold-bearing quartz was displayed in town, said to have been found near the Grand Southern Railroad, at the shipyard. Numbers of town people were out yesterday in search of the mine, and the rocks in all directions within walking distance of the town have been chipped and hacked, but without avail. Parties are out again today with picks and hammers in search of a mine. There are various speculations in regard to where the specimen came from. Sone aver that it is from one of the gravel pits of the Grand Southern Railroad and that this end of the road is

St. Croix Courier - Mar. 18, 1897 St. George - Steps will probably be taken in the near future to develope the gold mine."

St. Andrews Beacon - Oct. 27, 1898 Sheriff Stuart is displaying some very rich gold quartz, said to have come from Charlotte County. Mr. N. Treadwell, who is an authority on ore, says that this ought to yield $1500 to the ton."

St. John Star - Oct. 18, 1902 and St. Andrews Beacon - Oct. 23, 1902 More Gold. - (Cor. Bangor Commercial). - Robert Clark, of St. Stephen, has in his possession some rich specimens of gold-bearing quartz. Mr. Clark declines to disclose the name of the locality in which the specimens were found, but intimates that surprising developments will be announced later. The parties who own the land where the quartz was found are not desirous of selling out to anyone, and should the precious metal be found in paying quanitites, will operate the mint without outside aid. The specimens are usually rich with gold, and if the same ratio bears out through the ledge from which they were taken the owners certainly possess a bonanza. A number of persons, who have examined the samples of gold bearing quartz in Mr. Clark's possession, have insinuated that they were brought from Colorado, but the gentleman insists that they were found within a few miles of St. Stephen, but declines to name the exact locality."

Codes: E9 / LEGI / IDX_Names: Charlotte County Gold; Legislation, etc.;

St. Croix Courier - Nov. 20, 1902 Some people must still think that there are minerals in Charlotte County. James N. Clarke has applied for a license to search for minerals on land on Dennis Stream, St. Stephen, and B. Dick and Melvin Simpson want prospecting licenses on land at Mascarene. Probably nobody will oppose them."

Codes: G3 / L5 / IDX_Names: Granite; West Isles Copper;

St. Andrews Beacon - Jun. 10, 1897 Prof. Bailey, of Fredericton, was in St. Andrews a few days ago seeking mineral specimens for the Dominion government. He took away with him some fine samples of felsite, obtained near Chamcook Lake. Some of the richest specimens of copper ore he has ever seen were recently sent him from West Isles."

Codes: G4 / IDX_Names: Mascarene - General;

St. Croix Courier - Sep. 13, 1877 Copper.- This item does not refer to Hon. Lucius Seth Huntington, but to a good bonafide concern. Messrs. Thieckens and Connaughton are said to be busily engaged in mining copper near St. George."

Bay Pilot - Jul. 1, 1880 Another Discovery of Mineral Deposit in Letete, Charlotte Co. - Mr. Peter Hoyt of Letete has discovered on his land a mineral vein, consisting of iron, pyrites, traces of copper and silver lead ores, which from a superficial examination looks very promising. Mr. Hoyt will either sell or try to form a Company to work the mine. The land is adjacent to the Revenue Silver and other mining Co.'s works, and close to the shore of the bay."

St. Croix Courier - Jul. 15, 1880 More ore.- We have just received some fine specimens of copper and galena ore from the property of A.J. Seely, Esq., St. George. Although they are knocked off the surface, they have a rich appearance of galena, copper and gold traces. Mr. Seely has eight lots in the same range of the Mascarene leads, and is willing to sell the property and the mining right, which we think is a rich one."

Codes: G4 / IDX_Names: Mascarene - General;
Bay Pilot - Jul. 29, 1880 To the Editor of the Bay Pilot. - Sir:- You ask me for my opinion of the probable productiveness of Charlotte County for minerals. In my wanderings I have found in this county mineral belts unsurpassed in character, traversed by lodes or veins presenting the most flattering indications of an abundance of minerals, more especially in the northern part of the county, where large and well defined lodes are found traversing, and in conformity with the strata, with gentle undulations and heavily charged with mineral matter, so much so, that in some places their true characters are difficult to ascertain, on account of their oxidation by the abundance of sulphuret of iron which they contain. Many of the lodes contain mispickle in unusual quantities, sulphuret of copper, sulphuret of iron, lead ores, &c. Auriferous and argentiferous indications are very prominent in the lodes, as well as in the strata in which they are imbedded. The same being of Lower Silurian or the great mineral bearing age, or period. In fact I have found silver in some of the rocks. For gold I have not tested any of the quartz, but feel sanguine of its presence there. The lead ores I found to contain a very small per centage of silver, such as is usually found in these common ores of galena, nor have I found in any samples of lead ores which I have tested from all parts of the Province, sufficient to pay the cost of extracting. Yet strong reports of silver deposits are current, and one of the proprietors of a so-called silver mine told me that their silver ore gave an assay of 8 per cent. (afortunate find) as this equals over 700 dollars to the ton for silver alone, independent of the great quantities of copper and lead ores they are raising. I fear that this must be an error, or shares would not be offered for fifteen cents per share, and if as rich or even half so rich as stated to me, a single individual with but little means would need no assistance to bring large revenues into his coffer. A separate assay and of choice samples is of no importance whatever, either as qualitative, or quantitative value. I disregard all such things, as in a parcel of ore, for the market, I could select samples yielding 30 per cent. or more, and others with gangue valueless, so that the average value of parcel, would not yield over 6 per cent. Error may have arisen from various causes, probably from inexperience in mining and minerals. The effectual working of a mine cannot be done by book reading but by long and practical experience and careful watching of the characters and changes in the lodes, as well as in the strata through which they pass, or are likely to come into conjunction with, and other important points independent of their bearings. The mere finding of a vein containing mineral is not a sufficient guarantee to sink a shaft or hole so called, to ensure success, but to waste money it is sure, especially under the guidance of novices. Proofs are not wanting in this. I am strongly impressed with the idea that not far in the distant future New Brunswick will prove her Charlotte, to be one continuous source of revenue by her mineral wealth. The only things necessary, are capital with competent managers to develop the mines, and there seems an almost certain guarantee of great remuneration in return for their outlay, if carefully selected properties be attended to. I think that a wide margin should be given to silver lodes, better accept it as lead and silver lodes. Probably potter's lead containing some silver would be the most appropriate, and less apt to mislead the public or to injure legitimate mining. J.B.K. (Probably J.B.

St. Croix Courier - Jun. 3, 1880 and S.J. Globe - Jun. 11, 1880 A new mine.- It is proposed in St. Stephen to form another company for the purpose of opening up still further the apparently large deposits of ore at Mascarene. Several gentlemen left here on Saturday night and arriving at that place, inspected the ground where lies the expected bonanza. The prospects appear more favorable than was anticipated, large percentages of copper, silver and lead ores, being found in the lodes examined. Several specimens were brought home by the party. The company when organized will, we understand, be called The Passamaquoddy Mining Co."

S.J. Daily Telegraph - Jan. 21, 1881 Copper Mining. - The St. Croix Courier speaks favorably of the prospects of the Letete copper mines. Now let us have a little crow over that fact as an evidence of the value of the N.P., and a sure proof that it has not ruined the country."

St. Croix Courier - Jun. 9, 1881 Ed. R. Russell, Esq., has a new silver mine at Back Bay. He considers that there are the best indications for a valuable deposit. Assays have been made by Prof. Burwash and Dr. Girdwood, of Montreal, both of whom entertain the opinion that the mine is rich in mineral wealth."

St. Croix Courier - Apr. 9, 1896 St. George. - Thadeus Dick, formerly of Letete, but now of Colorado, has struck a gold lead that yields about $240 per ton. His many friends here are pleased to hear of his good luck."

St. Croix Courier - Jun. 9, 1898 St. George. - A prospecting party, with James O'Brien, M.P.P., at its head, is shortly to commence operations near this town. They are confident of success."

St. Croix Courier - Feb. 18, 1954 Encouraged by Find in L'Etang Area. - Preliminary assays of ore samples taken from the L'Etang are in Charlotte County have evidently been encouraging. One of Canada's large mining corporations has had specimens of the outcroppings examined and after the first study sent back two men to look into the area further and obtain more samples. Copper, lead and zinc are believed to be the most interesting finds. The entire area has been staked by Louis Acker and associates. A more thorough examination of the region may be carried out later this year."

N.B. Courier - Sep. 3, 1853 and St. Andrews Standard - Sep. 7, 1853 Gold is said to have been discovered in the vicinity of the Beckaguimick, in the County of Carleton. Numbers of people are flocking thither in search of the precious metal. We hope they will not be disappointed.- Woodstock Reformer, Sept. 1."

Codes: G5 / IDX_Names: Carleton County Coal;

Novascotian - Sep. 12, 1853 The report is very current here that Gold in great abundance has been discovered in the valley of the Becaguimec, a stream eight or ten miles above Woodstock. There is considerable rush to the place and it is certain that bags of the dust have been forwarded to St. John on trial. We believe the whole to be a misapprehension. -

IDX_Names: Carleton County Gold;

Morning Journal - Oct. 16, 1867 Prospects of Gold Discoveries in New Brunswick. -Several explorers have, at different times, and in different counties, found grains and small nuggets of gold in New Brunswick. We doubt, if in any case, the gold has been found in the vein to which it belonged; it has apparently, almost invariably, been found in the sands of rivers, which have been washed away or detached from the matrix of the rocks. This was the case with specimens of gold shown by Mr. Shea, in the Exhibition, and which were obtained from the Serpentine, Coldstream, and Becaguimec rivers. The important question is. - Where are the original rocks and lodes? Has the gold been carried to our borders in the far distant ice period, from far distant sources, or are the sources near at hand, and easily discoverable? The latter is by far the more probable supposition, and if it be, a fresh impetus will now be given to the search for gold, and the necessity of a geological survey, with practical objects in view, will be very keenly felt. This is a want which we are enabled to state, the Government of the Dominion is resolved promptly to supply. In the meantime, Mr. Shea, who is a California miner, and others, will redouble their efforts. The Woodstock Acadian thus notices Mr. Shea's explorations:- ""In the bed of the stream, running from the projecting point of the intervale down under its lee, Mr. Shea had a sluiceway formed of boards, some 200 feet in length. The sluice was made in about 12 feet lengths of three boards nailed together as a bottom and sides, making a trough of 12 inches in width by 9 in depth. The upper end was ballasted with stones in the stream, so that the water flowed into it. The joints were placed on trestles and the upper end of the sluice was about 18 inches above the stream. The descent of the stream not being great, Mr. Shea had not been able to secure a sufficient grade of more than 20 or 30 feet in length of the sluice. - 'Riffles', as the miners call them, had been fitted lengthwise at the lower joints of the sluice, and quicksilver deposited for the purpose of collecting the fine grains of gold which might find their way down the trough."" A Pike's Peak man panned some of the sand and got some particles of gold. They then turned their attention to the sluice: -""A young man had been engaged for a day or two previous in shovelling into it from the bed of the stream the materials of which it was formed, pebbles, sand, &c., and in stirring up the contents, so that the great body of it was washed away, and but a few shovelfuls were left in the lower boxes of the sluice. In this, if at all, was to be found the ore. Mr. Shea set to work to reduce this, by washing, until only sufficient was left to fill the pan. This he panned out, the mercury, which should contain the gold in its grasp, settling to the bottom. This was collected, and the loose quicksilver got rid of by straining through a linen pocket handkerchief, nothing better being at hand. The remainder was placed upon a shovel and gradually heated over the fire, to drive off the mercury. And to the intense satisfaction of the anxiously watching party, the residuum was four or five dollars' worth of nearly pure gold. ""This was the second washing up. One had taken place a few days previous, at which over three dollars worth of gold had been obtained. The sluice, only erected for the purpose of experiment, was in may respects defective, and a large proportion of the fine dust which would have been secured by proper appliances, had undoubtedly been washed out at the bottom of the sluice, and lost. The gentlemen present estimated that the excavation made amounted to about three cubic yards, which thus had produced, with the rude means used, say eight dollars' worth of gold. This is considered a handsome production. ""The Shicktehauk does not, we believe, present indications as favourable as do the Muniac and Serpentine""."

Codes: G5 / IDX_Names: Carleton County Gold;

Miramichi Gleaner - Oct. 19, 1867 Gold in New Brunswick. - From time to time we have been informed by parties, that grains and small nuggets of gold have been found at the head of several of the streams in this and the neighboring Counties of Gloucester and Restigouche, and we have at various times seen paragraphs in the St. John and other papers in the Province, chronicling the discovery of gold by exploring parties in various localities. We learn that Mr. Shea, a returned Californian, has, during the past two years been making explorations in the Counties of Carleton and Victoria. It would appear, by specimens on show by him at the Exhibition, that he has succeeded in his efforts by finding the precious metal in the Serpentine, Coldstream and Becaguimac rivers, but whether in such quantities as would remunerate him if he went extensively into the business remains to be seen. The Woodstock Acadian gives an interesting account of Mr. Shea's explorations, from which we take the following extracts. ""In the bed of the stream, running from the projecting point of the intervale down under its lee, Mr. Shea had a sluiceway formed of boards, some 200 feet in length. The sluice was made in about 12 feet lengths of three boards nailed together as a bottom and sides, making a trough of 12 inches in width by 9 in depth. The upper end was ballasted with stones in the stream, so that the water flowed into it. The joints were placed on trestles and the upper end of the sluice was about 18 inches above the stream. The descent of the stream not being great, Mr. Shea had not been able to secure a sufficient grade of more than 20 or 30 feet in length of the sluice. - 'Riffles', as the miners call them, had been fitted lengthwise at the lower joints of the sluice, and quicksilver deposited for the purpose of collecting the fine grains of gold which might find their way down the trough."" A Pike's Peak man panned some of the sand and got some particles of gold. They then turned their attention to the sluice: -""A young man had been engaged for a day or two previous in shovelling into it from the bed of the stream the materials of which it was formed, pebbles, sand, &c., and in stirring up the contents, so that the great body of it was washed away, and but a few shovelfuls were left in the lower boxes of the sluice. In this, if at all, was to be found the ore. Mr. Shea set to work to reduce this, by washing, until only sufficient was left to fill the pan. This he panned out, the mercury, which should contain the gold in its grasp, settling to the bottom. S.J. Daily News - Oct. 21, 1867 GOLD DISCOVERIES IN NEW BRUNSWICK. - Gold seekers have recently been at work, in Carleton and Victoria Counties, and not without success, if we may credit the accounts published in the Woodstock Acadian. The principal explorer has been a Mr. Shea, a returned Californian. This gentleman has been for some time at work, and the scenes of the more recent of his researches have been the Beckaguimac, and the Coldstream to the Valley Shicktehawk. The discoveries made during this trip are thus spoken of:- ""In the bed of the stream, running from the projecting point of the intervale down under its lee, Mr. Shea had a sluiceway formed of boards, some 200 feet in length. The sluice was made in about 12 feet lengths of three boards nailed together as a bottom and sides, making a trough of 12 inches in width by 9 in depth. The upper end was ballasted with stones in the stream, so that the water flowed into it. The joints were placed on trestles and the upper end of the sluice was about 18 inches above the stream. The descent of the stream not being great, Mr. Shea had not been able to secure a sufficient grade of more than 20 or 30 feet in length of the sluice. - 'Riffles', as the miners call them, had been fitted lengthwise at the lower joints of the sluice, and quicksilver deposited for the purpose of collecting the fine grains of gold which might find their way down the trough."" A Pike's Peak man panned some of the sand and got some particles of gold. They then turned their attention to the sluice: -""A young man had been engaged for a day or two previous in shovelling into it from the bed of the stream 17 the materials of which it was formed, pebbles, sand, &c., and in stirring up the contents, so that the great body of it was washed away, and but a few shovelfuls were left in the lower boxes of the sluice. In this, if at all, was to be found the ore. Mr. Shea set to work to reduce this, by washing, until only sufficient was left to fill the pan. This he panned out, the mercury, which should contain the gold in its grasp, settling to the bottom. This was collected, and the loose quicksilver got rid of by straining through a linen pocket handkerchief, nothing better being at hand. The remainder was placed upon a shovel and gradually heated over the fire, to drive off the mercury. And to the intense satisfaction of the anxiously watching party, the residuum was four or five dollars' worth of nearly pure gold. ""This was the second washing up. One had taken place a few days previous, at which over three dollars worth of gold had been obtained. The sluice, only erected for the purpose of experiment, was in may respects defective, and a large proportion of the fine dust which would have been secured by proper appliances, had undoubtedly been washed out at the bottom of the sluice, and lost. The gentlemen present estimated that the excavation made amounted to about three cubic yards, which thus had produced, with the rude means used, say eight dollars' worth of gold. This is considered a handsome production. ""The Shicktehauk does not, we believe, present indications as favourable as do the Muniac and Serpentine""."

S.J. Morning Journal - Feb. 24, 1868 Gold is found in small quantities in drift on the Beckaguimac stream in the County of Carleton."

S.J. Morning Journal - Feb. 24, 1868 Mining - It is said that the Government have given to Mr. S. Shea, of Woodstock, his mining leases and that he intends commencing gold washing on the St. John during the coming season."

Codes: G5 / IDX_Names: Carleton County Gold;

S.J. Daily News - Mar. 4, 1873 Woodstock Mines. - There are many quartz veins in Woodstock vicinity, and one has recently been found containing graphite, tellurium, gold and silver."

Carleton Sentenil - Nov. 22, 1879 Glassville. - An Important Discovery. - We are glad to record that gold has been discovered here. My informant is an old miner and returned Californian, who says the deposit is one of exceeding richness.

The discovery was accidental and was made by one Durrah, also an old miner. Shortly after the discovery and before he could advantage himself by it, Durrah was taken with his last sickness, and knowing his days to be numbered, imparted the secret to my informant. We saw a piece of gold (and have it now before us) measuring over one and one half inches in its largest diameter, we are assured that it is the genuine article; besides the larger, we also were shown other smaller pieces of the same precious metal."

S.J. Globe - Nov. 24, 1879 We are glad to record that gold has been discovered at Glassville. The discovery was accidental and was made by one Durrah, an old miner. Shortly after the discovery and before he could advantage himself by it, Durrah was taken with his last sickness and knowing his days to be numbered, imparted the secret to my informant."

S.J. Daily Sun - Jul. 24, 1880 and Bay Pilot - Jul. 29, 1880 Gold Near Woodstock. - Gold lead was discovered on Dew's farm a short distance above Woodstock on Monday last, which gives promise of being a rich strike. Mr. Dew, who has been in the States for some time and only recently returned, at once proceeded to the spot with Mr. Samuel Baker of Woodstock, an old and experienced miner, who spent a day in the locality and made several washings. A number of rich and valuable nuggets was the result. A gentleman in this city who has seen some of these nuggets, and who know something about gold and gold mining, says that it is pure heavy lead gold, and if it continues to pan out as well as it did for one day's washing, it will be a regular bonanza. - the gold was taken to Boston by Mr. Dew to obtain the opinions of experts thereon; and it is said that he is making arrangements there to get up a company to work the claim."

IDX_Names: Carleton County Coal;

Moncton Daily Transcript - Mar. 11, 1890 Mr. William McCluskey, while cleaning out a water course that crosses his farm, a mile from Upper Woodstock, found some specimens of gold bearing quartz, very rich in the precious metal. A vein of quartz traverses several farms in the neighborhood."

IDX_Names: Carleton County Gold;

N.B. Reporter - Jan. 12, 1898 Craving for Gold. - Next to a war rumor, the rumor of gold discovery, especially near home, awakens an interest and quickens the pulse as nothing else can. Being aware of this fact, a practical joker some years ago, by sprinkling gold dust along the river bank above the Government House created a regular boom in the town but was the means of causing neglect to legitimate business. The same desire after gold is alive today and the reported gold discovery in this county caused quite a ripple in various quarters and a desire to visit country cousins in a certain locality. Lately Wesley Brewer, who knows gold when he sees it went on a visit to the Southampton mine where there is a crew working taking out rocks. Prospects are fair he states but do not compare favorably with the rock that he has in his possession, that came from his Klondyke. The men have great courage in blowing the rocks on the side of the hill; they think they will strike it richer as they dig below the surface."

Codes: H5 / IDX_Names: Victoria County Gold;

S.J. Daily Globe - Oct. 23, 1865 Gold. - The Grand Falls correspondent of the Carleton Sentinel reports the announcement that gold exists in Victoria County in paying quantities; and hopes that the Government will do something - he does not say what - in the matter. If gold is so plentiful, why do not the people of Victoria County pitch in and enrich themselves without Government aid?"

S.J. Daily Globe - Sep. 4, 1865 The result of gold prospecting in Victoria County shows that the article is to be found in several streams and on the banks of the main river, but not in paying quantities."

Miramichi Gleaner - Sep. 30, 1865 Gold in Victoria County. - A correspondent of the Acadian, published in Woodstock, asserts - ""that there is not the slightest doubt but that Gold exists in abundance in Victoria County,"" and he urges the Government to offer a reward to encourage discoveries."

S.J. Morning Freeman - Aug. 21, 1866 The search for gold is now vigorously prosecuted in Victoria County, and so far the seekers seem to be quite satisfied with their success."

S.J. Daily News - Aug. 22, 1866 The search for gold is now vigorously prosecuted in Victoria County, and so far the seekers seem to be quite satisfied with their success. - Fmn."

Chignecto Post Mar. 30, 1893 Gold in Albert.- Says the Moncton Times: A discovery of gold bearing quartz has recently been made in the mountains some miles from Moncton. Several samples have been assayed by W.R. Gould of Sussex, some giving a large percentage of iron, and others a good percentage of gold. The mine was discovered by a former resident of the mountains, who has spent some years in mining in Nevada. H.F. Bennett of Albert County, who recently sold a plaster quarry at Hopewell to Windsor, N.S., parties for $10,000 cash, was also in town one day recently with"

Codes: I1 / IDX_Names: Stanley Gold - General;

N.B. Reporter - Aug. 23, 1899 The Gold Region. - After lively competition under the hammer, Mr. Geo. Gregory has become the owner of the late Major McLean's farm at Stanley. It brought the sum of $500."

Semi-Weekly Telegraph - Jun. 3, 1899 The Stanley Goldfield. - Stanley, May 31. - Much interest is being displayed at present in the search for gold. During the past few days Councillor Havelock Kelly and Mr. Daniel Elliott has had an experienced miner employed working their claim in the village. On Monday they built a small sluice and sluiced through about a half a cart load of sand, and upon cleaning up the dirt they had several fine specimens of the shining metal. The miner expressed himself that if the bank were 12 feet deep and the other conditions as good as that from which he took the sand, that he would guarantee that a man could make $20 a day."

N.B. Reporter - Jun. 14, 1899 Around the Gold Fields. - Anticipation of success still lurks in the minds of our capitalists who control areas in the vicinity of Cross Creek, and several gentlemen spent the week prospecting in the neighborhood. One of the most generally interviewed men lately was John Stennick of Oromocto, who came all the way from California to test for himself the quality, extent, and prospect for mining in Stanley. It may be stated that John is well pleased as far as he has gone and has provided himself with some samples of quartz, which he exhibits, and ventures the opinion that these specimens if taken from a Californian mine would flood the district with thousands of miners in twenty-four hours. Mr. Stennick, who has spent much time in Australia as well as California contrasts the conveniences here with the tremendous difficulties to be overcome in other countries. People in search of gold away in northern Oregon and through the Yukon country carry their lives in their hands. Pestilential prairies and unearthly canyons, swift waters and treacherous falls, devils in Indian form and cutthroats innumerable are encountered on every hand, while smallpox, fever and poverty are so prevalent that hundreds of men rather than continually face this doleful experience commit suicide. But, said Mr. Stennick, when I go back to California and show the people the gold streaked rock inlaid by the Almighty's hand, and when I tell them that no canons have to be penetrated and no rivers to cross, but that they can ride all the way to the diggings in a palace car, they will come to Canada by the thousand and crowd this city to such an extent that miners' tents will be pitched in all the squares and streets and wherever a stake can be driven. This will make a tremendous demand for real estate and will necessitate another tramp around the city by the new board of valuators whose work is probably begun a year too soon. Success to the Stanley gold miners!"

St. Croix Courier - May 10, 1900 Gold Bubble Bursts. - The leases of the great number of mining areas in the vicinity of Cross Creek, York county, taken out last spring by residents of Fredericton and Stanley as the result of the reported discovery of gold by one Harris, have nearly all expired. Although they could have been renewed by the holders at half the original cost, none have thus far availed themselves of the privilege. Thomas Gordon of Marysville has made application for fifty-four areas, including the forty areas formerly held by Harris, on which the gold bearing quartz is alleged to have

Codes: I6 / G3 / G4 / IDX_Names: Silica, Tripoli, Diatomite, Infusorial Earth; Granite; Mascarene - General;

S.J. Daily Telegraph - Jun. 3, 1873 Saint George and Its Resources. - ... Having some idle time on his hands, the writer determined to visit the now well known Red Granite region which commences at the Canal, as the stream from Lake Utopia emptying into the Magaguadavic is called. This is distant two miles from the village, thence this granite extends north about two miles, forming high hills on either side of the river. Two companies are at work quarrying among these ancient mountains, whose origin and constitution is so involved in the mist of ages. One company formed principally by St. John merchants, the other by New York capitalists. The New York Company have, as manager, a gentleman from Peterhead, one whose business has been for years the manufacture of Peterhead Granite. He is well adapted to the duties of his office, being eminently practical. The beauty of the St. George granite consists not only in its color, but in the regularity of the perfect transparent quartz crystals, thus giving brightness to the semi-opaque felspar which alone is colored red; there is in it but little mica or hornblende, either of which are incapable of receiving a polish. The New York Company contemplated erecting polishing works at St. George, and the Saint John company intend building a tramway from their quarry to the sea; a distance of little more than three miles. In so far as location is concerned either company seems to be equally well situated. Hearing that the same kind of stone had been found at Bocabec on the shore of Passamaquoddy Bay, and that there was a sample in St. Andrews, I examined a piece at Mr. Clark's hotel, but found it valueless. I have seen or heard of no similar stone ..?.. Elsewhere than at St. George. A very singular deposit of Silica, nearly pure,and in a very finely divided state, has been found a few miles below St. George. The sample shown to me was attached to a piece of sod, extending six or eight inches beneath it, and looks very much as if six or seven inches .?. Of green sward had been repeatedly dipped into flour, and which had adhered to it every time they came in contact. The peninsula between the Magaguadavic and L'Etang is intersected by various veins of copper, sometimes mixed with lead. There are also there veins of lead, in which I hear, is a proportion of silver. All these, however, at the surface appear small. At some future day when they have been explored to some depth, they may and probably will yield such returns as will materially add to the income of the country."

Codes: J9 / IDX_Names: Queens Co. Bog Iron;

S.J. Standard - Sep. 11, 1912 Iron Deposits in Queens County. - Company Formed to Exploit Mines. - Montreal Herald: Considerable attention has been attracted to Queens Co., New Brunswick, as the result of iron deposits of considerable area having been found there a few months ago, according to Mr. H.W. Woods, M.P.P., who was in the city for the Borden reception. To the Herald Mr. Woods stated that the deposits extended over a considerable area. The iron had been examined by expert mineralogists and had been found to be of the purest variety. So much interest had been taken in the discovery that already a company had been formed to exploit the mines, and it was more than probable that a railway would be run to Welsford, where the principal deposits were, in the near future. In fact, legislation giving permission to a company to run a road through the district has already been passed. As deposits of coal had been found, and mines had been worked for some time in Queens county, Mr. Woods expressed the hope that before long New Brunswick would occupy a prominent place in the mining world. The discovery of iron deposits would probably lead to the district being thoroughly prospected by mining experts, and it was hoped that other valuable mineral deposits would be found."

Codes: L5 / IDX_Names: West Isles Copper;

St. Andrews Standard - May 12, 1869 Thos. Watson, Esq., Mining Engineer, has discovered several valuable lodes of copper, &c., on the Islands in this County, and is actively engaged in developing them."

S.J. Daily News - Jun. 25, 1870 Charlotte County - Mining is carried on to alimited extent, owing to some difficulty respecting the ownership of the lands. Copper exists in large quantities, and is of excellent quality at the Islands."

St. Andrews Beacon - Feb. 28, 1895 Copper in Charlotte.- To the Editor of the F'ton Herald. Following is a description of a piece of rock from Nestiles, [presumably West Isles], Charlotte County, and containing copper, given to me by James Russell, M.P.P. The color is grey to blackish gray lustre, resinous streak, white; it is thickly spotted by copper ore, chiefly yellow sulphide. The principal constituent of the rock is a magnesian mineral. There is not much quartz in it; when this does occur, it is in small blotches, which frequently accompany the copper ore. The rock carries some lime spar in small veins and patches. It is also thickly dotted with small black grains of a mineral resembling black horn blend, and I notice in one place some fibrous crystals of what is probably tremolite; these are of a greyish white color. A very small quantity of magnetite or of magnetic pyrites are also present; this was in such small quantity as to be attractable by the magnet only, in grains of minute size. The rock examined is probably a talcose schist, which is almost always stratified and forms alternating beds with other crystalline schists. From what I have heard from Mr. Russell and others; the location from whence this was taken should receive a careful examination by a competent mining engineer, properly authorized by the mining department of the provincial government to examine into the report upon the metalliferous deposits to be found there. Should this report be satisfactory, it may and very likely would be the means attracting capital to that part of the province. Feb. 15, 1895 Edward Jack"

St. Croix Courier - Jul. 10, 1890 Pennfield.- Some excitement has been caused on the Ridge by the discovery of a silver deposit on the farms of Samuel McKay and George H. Tatton. Specimens of the ore have been sent to New York and pronounced good.There is also a rumor of a rich marble deposit, the secret of which is held by Mr. B. Young."

Codes: N5 / IDX_Names: Charlotte County Base Metals;

St. Croix Courier - Apr. 4, 1872 and N.B. Reporter - Apr. 10, 1872 Copper Mine.- Copper ore has been found on the lands of the Spaulding family, and on lands belonging to Messrs. Connick, Mann, and Douglass, in St. David. Large lodes of quartz have been discovered twelve to fourteen feet wide, some of them traced for three quarters of a mile and terminating near the Railway in the neighborhood of Baillie Settlement, a short distance from the Railway line. We understand that Capt. W. Porter and P. Mills Abbot, Esq., have secured the right of this mine and will probably make a

Apr. 1872 - Copied from: St. Croix Courier - Apr. 3, 1902 30 Years Ago. - A Copper Mine At Moore's Mills. -..... Copper ore has been found on the lands of the Spaulding family, and also on the lands belonging to Messrs. Connick, Mann, and Douglas, in St. David. Large lodes of quartz have been discovered twelve to fourteen feet wide, some of them traced for three-quarters of a mile and terminating near the railway in the neighborhood of Baillie Settlement, a short distance from the railway line. Captain W. Porter and P. Mills Abbot have secured the rights of this mine and will probably make a large fortune out of it. We hope they will. (April 5th, 1872)"

S.J. Daily Telegraph - Apr. 9, 1872 and Carleton Sentinel - Apr. 20, 1872 Copper Mine. - The Courier reports that copper ore has been found on the lands of the Spaulding family, and also on lands belonging to Messrs. Connick, Mann and Douglass, in St. David. Large lodes of quartz have been discovered twelve to fourteen feet wide, some of them traced for three quarters of a mile and terminating near 12 the Railway in the neighborhood of Baillie Settlement, a short distance

St. Croix Courier - Sep. 19, 1878 Mineralogical.- We have in our office samples of rock from the mines of Mr. Thaddeus Dick containing galenite, &c. which has been assayed by Prof. Burwash, Provincial Assayer, yielded of silver 26 ounces 7 dwt. to the ton. Another assay gives copper, silver and lead about equal parts, say about $15 a ton."

St. Croix Courier - Dec. 12, 1912 30 Years Ago. - A Copper Mine. - Recently copperore was discovered on the property of A.H. Thompson, at the Porter Mill stream. A number of gentlemen obtained a lease of the property and have formed a company under the name of the Thompson Copper Mining Co. Geo. Thieckens has been appointed superintendent of the work, which has been carried on for some four or five weeks. He speaks very hopefully of the prospects of the mine, his opinion being that they have a good deposit of copper. The shaft is ten by six feet and has been sunk eighteen feet. The company expect to strike copper in paying quantities at a depth of fifty feet. Mr. Thieckens thinks that a find of four per cent of copper would justify the erection of smelting works and ensure the successful working of the mine."

Codes: P7 / IDX_Names: Lepreau/ Pocologan Silver;

Daily Gleaner - Jul. 10, 1890 Silver in Charlotte. - Some excitement has been caused in Charlotte Co. by the discovery of a silver deposit on the farms of Samuel McKay and George H. Tatton at Pennfield. Specimens of the ore have been sent to New York and pronounced good. There is also a rumor of a rich marble deposit in the same parish."

Codes: Q1 / IDX_Names: Springfield Silver;

Weekly Record - Fri. Nov. 27, 1891 The attention of Mr. Jas. Mott a farmer of Springfield was attracted by a peculiar looking mineral which he found existing in large quantities on his farm. He took a specimen of the rock to St. John and left it at the laboratory of Mr. W.F. Best the analyst. In a few days he received a very encouraging reply stating the specimen had been examined and was found to contain iron pyrites mixed with silver, and if found in any quantity would give good results. As it does exist in large quantities it is hoped that ere long some steps will be taken to develop its resources."

Codes: Q3 / IDX_Names: Carp Village Silver;

Chignecto Post - Feb. 20, 1879 Deposits of silver ore have been discovered in the county of Carleton, near Carp Village. An analysis of the ore gives forty-five per cent. of silver and thirty per cent. of lead, so despatch says. A company has been formed and operations will be begun shortly."

Codes: R7 / IDX_Names: Woodstock Silver;

Woodstock Dispatch - Nov. 17, 1897 On Top of a Mine. - Silver in Paying Quantities Runs Under the Town.- Such is Aid to be the Case. -Successful Assay. - Some weeks ago The Dispatch noticed the fact that Mr. W.H. Lawson of Keswick, a miner of some reputation had become interested in representations made to him by Edward Greer of this town, as to the existence of silver in paying quantities a short distance under the surface of the town. Mr. Lawrence came here and dug a hole on Green street near the corner of Elm. He took out about a hundred pounds of the ore, and it was sent to Montreal to be assayed. Mr. Greer has received a letter from Mr. Lawrence to the effect that the assay has proved highly successful. Mr. Greer has, acting under instructions taken another sample, out of a spot off Connell street, not far from Main, which has been sent away to be assayed. There seems no doubt that a good find has been made, and that a silver mine has been discovered within the town limits, which will well pay working."

Codes: R7 / IDX_Names: Woodstock Silver;

Woodstock Dispatch - Nov. 24, 1897 Mining Prospect. - Last week it was announced that there was every indication that the silver mine discovered near the woodworking factory would turn out to be a success. Those who have the matter in hand are progressing cautiously. Mining in the neighborhood of Woodstock in the past has not turned out very profitably, and when the words silver or gold are mentioned to the ordinary citizen, he is apt to assume our exceedingly skeptical expression. However the parties concerned with this latest discovery are sanguine. Something over two hundred pounds, more, was taken out of the vein on Green Street, and water was struck in the vein, about seven feet below the surface, which is supposed to be a very hopeful sign. It will be make sure that the ore can be secured in quantities worth working

Codes: V5 / IDX_Names: Albert County Mn;

Chignecto Post - Aug. 19, 1880 Manganese is found in these hills, but no active operations in it are carried on. Mr. Eskilson, in the interests of an American Company, is now prospecting."

Moncton Daily Transcript - Nov. 8, 1888 and Moncton Daily Times - Nov. 9, 1888 and S.J. Globe - Nov. 9, 1888It is reported that a rich lead of manganese has been found on Crooked Creek, about 3 miles from Albert. It is said that Daniel Cleveland, sr., discovered the lead. - Maple Leaf."

Moncton Daily Transcript - Nov. 1, 1890 Dr. A.H. Chandler has gone to Boston and New Yorkin connection with the development of certain manganese property in this and adjoining county."

S.J. Daily Sun - May 12, 1894 and Moncton Transcript - May 12, 1894 Hopewell Hill, May 10. - J.W.Y. Smith, F.P. Reidand Wm. Hood of Moncton were down yesterday visiting the manganese mine two miles from Albert, which they have had leased. The ore that they have got out is said to be of superior quality and sold at $80 per ton. It is the intention to operate the mine more extensively this summer."

Daily Telegraph - Sep. 15, 1898 Moncton. - The manganese works at Hillsboro, which have been partially closed down on account of an accident to the machinery, have resumed work."

Codes: V8 / IDX_Names: Becaguimec Iron;

S.J. Daily Globe - Oct. 2, 1865 The Carleton Sentinel has been shewn a sample of iron ore by Mr. Wm. Everett, taken from the bed near the mouth of the Beckaguimec, which is as fine a specimen of ore as the editor has ever seen."

Codes: W6 / IDX_Names: Albert County Gold;

Morning Freeman - Aug. 31, 1861 and Morning News - Sep. 2, 1861 Gold in Albert County. - A specimen of gold was shown to us the other day which was found some where in Albert County. The locality is well known to the party who found the specimen, and the report is that the quantity is not by any means deficient. The quality was tested and found to be genuine. - Westmorland Times."

N.B. Reporter - Sep. 6, 1861 From different sources we hear of the discovery of Gold in New Brunswick but nothing as yet has reached us definite enough to assign any of such discoveries a location."

Morning News - Sep. 6, 1861 Gold. - If there be not gold discovered in New Brunswick before the ice makes, it will not be because there are not many persons daily prospecting for it. We should not like to publish any of the encouraging stories told us, of the real genuine thing having been discovered in certain localities - and thus raise up hopes that might be dissipated; but we feel sanguine that in a very short time we shall be able to announce something worth while to our

S.J. Daily Telegraph - Feb. 15, 1873 Gold in Albert. - There is no longer any doubt of the finding of gold bearing quartz in Albert. The much coveted and precious metal exists in Caledonia; the only question remaining to be answered is as to whether it is present in quantities sufficient to pay for mining. This point is now in a fair way of being decided. - Times"

Daily Tribune - Mar. 7, 1873 Mining Company. - Messrs. John L. Pye, William Dawson, James Stewart, and James Nelson have formed themselves into a Company, styled the ""Caledonia Gold Quartz and Metallic Mining Company."" They have forwarded the memorandum of such an association to the office of the Provincial Secretary of New Brunswick for the incorporation of the Company. The capital stock is to consist of thirty-five thousand dollars divided into shares of ten dollars. The office of the Company is Hopewell, Albert Co. This Company is formed for the purpose of prospecting and mining any one or more minerals they may find that will likely prove profitable."

Codes: W6 / IDX_Names: Albert County Gold;

S.J. Daily Telegraph - Mar. 7, 1873 Caledonia Gold Quartz And Metallic Mining Company. - Messrs. John L. Pye, Wm. Dawson, James Stewart, Robert Godfrey, Robert W. Smith, and James Nelson, filed in the office of the Provincial Secretary at Fredericton, on Tuesday, a memorandum of Association, for the incorporation of a company to be styled the ""Caledonia Gold Quartz and Metallic Mining Company,"" for the purpose of mining gold, silver, copper, tin, etc., and such other business as may be incident thereto, with a capital of thirty five thousand dollars, to be divided into three thousand and five hundred shares of ten dollars each, and that the office or principal place of business is to be at Hopewell, in the

Daily Telegraph - Mar. 10, 1873 Hillsborough, Albert Co., Feb. 26 - Our correspondent .... further writes: Gold has been found in Albert Co. without any doubt, and it is quite likely that as soon as four feet of snow disappears you will hear of lively times in this vicinity. Any quantity of rumors are floating round about coal being found in two places in Hopewell; but I cannot vouch for their reliability."

Moncton Daily Times - Jun. 21, 1898 Albert Co. - Shepody Mountain occupies an important feature in the geography of Albert county. Gold has been prospected for but nothing definite has been done as yet."

Codes: X6 / C1 / IDX_Names: Tobique Gypsum; Tobique/ Giberson Gold;

S.J. Daily Telegraph - Feb. 9, 1872 In Praise of the Valley of the Tobique. -... From its mouth to its source it presents unusual facilities for agricultural, lumbering and mining operations. The soil being impregnated with plaster, and of a rich loam, is inexhaustible. Well authenticatedcases of successive harvests on the same soil without manure are well known, and still it is so rich that the crops last year were beyond the average. ... Of its great mineral wealth little as yet has been developed, except Plaster of Paris, of which large quantities, ground and in the rock, are every year exported, chiefly to the State of Maine, where thefarmers realize its full value. But of the other minerals there is no lack. Iron, lime, antimony and gold have been found. Gold, in dust and grains, has often been found; but where its source is, that is the question. I have before me a fragment of waterworn pebble, from which the yellow metal gleams in its virgin purity. None of your fool's gold, but the soft, rich, shining metal, which can be cut with a pen-knife or hammered flat, and such specimens are not rare, and could the silent stone reveal its birthplace or retrace its watery path, it would reveal a richness which would vie with some of the far-famed diggings of Australia or California, for practical miners have estimated its worth at $1600 per ton, in the forms in which it has been found. I will not trespass further on your space; but if again able, I will write again and give more particular information respecting this magnificent section of our Province. W."

Codes: Y2 / IDX_Names: Saint John County Gold;

S.J. Daily News - Sep. 9, 1864 and S.J. Daily Globe - Sep. 9, 1864 and Carleton Sentinel - Sept 17, 1864 GOLD!, GOLD! - Yesterday we were shown by Edward Allison, Esq. several specimens of gold-bearing quartz, richly studded with the auriferous metal, said to have been obtained near the Pleasure Grounds at Torryburn. The specimens are really very fine, equalling in appearance anything of the kind that the Nova Scotia Diggings produce. Where such specimens exist their must be valuable gold deposits. Hosts of our gold hunting enthusiasts will doubtless start prospecting. We trust that in this discovery the expectations of the most sanguine may be realized."

S.J. Morning Freeman - Sep. 10, 1864 Two small but very rich and beautiful specimens of gold bearing quartz, said to have been found on the Pleasure Grounds, by the workmen now employed there, may be seen at the office of Edward Allison,

N.B. Courier - Sep. 10, 1864 and Headquarters - Sep. 14, 1864 Gold. - There are now to be seen at the office ofEdward Allison, Esq., Commercial Bank Building, several very rich specimens of gold-bearing quartz, which are said to have been discovered by some workmen engaged in making roads in the ""Pleasure Grounds"" near Torryburn. From the richness of these specimens there is every reason to suppose that larger deposits must exist in the neighborhood."

Colonial Farmer - Sep. 19, 1864 Gold-bearing quartz has been discovered at Torryburn. The specimens are said to be very fine, equal to any produced in Nova Scotia."

S.J. Daily News - Jul. 1, 1875 Gold Quartz in Portland. - A large quantity of what may be pronounced to be gold quartz, was found on the side of Fort Howe yesterday afternoon. The discovery of such Big Bonanza has caused great discussions in the town."

S.J. Daily News - Jun. 15, 1875 The search for gold in Portland ....."

S.J. Daily News - Jan. 24, 1876 Gold rumors.- Portland is excited over the discovery of what is supposed to be gold-bearing quartz on Fort Howe by laborers excavating a cellar for Mr. Patrick McGoldrick."

Codes: Y2 / IDX_Names: Saint John County Gold;

S.J. Globe - Oct. 30, 1879 Gold quartz has been discovered on Mr. Edward G. Scovil's farm at Cold brook."

Codes: Y2 / A1 / IDX_Names: Saint John County Gold; Kings County Gold;

Daily Telegraph - Sep. 9, 1864 and Miramichi Gleaner - Sep. 17, 1864 More Gold Discoveries. - We have been shown fine specimens of native gold, in nuggets obtained a day or two since from the ""Pleasure Grounds"" near Torryburn. Good judges pronounce them to be very rich. The gold is found in milky quartz, and was discovered by some workmen while excavating roads. Further examination may possibly develop rich deposits, and the people of St. John learn to their surprise, that they live in the vicinity of a new El Dorado. Gold has also been discovered within a few days near Hampton, King's Co., in grains, some of them as large as a barley corn. This gold also appears in milky quartz. We have been shown a rich specimen of lead discovered recently near Sussex. All of these can be seen at the office of Edward Allison,

Codes: Y3 / IDX_Names: Florenceville Iron;

Chignecto Post - Jun. 10, 1880 The discovery of a large bed of iron ore in the vicinity of East Florenceville, Carleton County, three miles south of the line of the New Brunswick Railway, is announced."

Codes: Y6 / IDX_Names: Restigouche County Gold;

Daily Times - Oct. 26, 1897 and Richibucto Review - Oct. 28, 1897 and Kings County News - Oct. 28, 1897 and Dorchester Spectator Oct. 30, 1897.Gold in Restigouche. - The Railway News says: Great excitement exists at Campbellton, N.B., on account of the recent discovery of gold within a few miles of the town. L.S. Brown, train despatcher, A. Barberie, agent, and Conductor Corbett of the I.C.R. with A.A. Adams of the Royal hotel are reported to be greatly interested in what is expected to be a second Klondyke. A.A. Adams left Wednesday for the scene of the recent finds, accompanied by a number of parties interested. They have drills and other tools with them for further exploring."

North Shore Leader - Nov. 22, 1907 Finding Gold. - A report of a rich gold discoveryon the Jacquet River reached here yesterday. It was stated that the Archibald brothers who have been prospecting all summer on the river came upon a rich find on Saturday. A confirmation of the report could not be obtained from Jacquet River last night. It was learned that the mine owned by Dalhousie and Campbellton parties on the southeast branch of the Upsalquitch is turning out splendidly. The gold is assaying about $50 to the ton. Workmen have now tunnelled about fourteen feet. When forty or fifty feet in they expect to strike the ore shoot. - Graphic."

Codes: Z2 / H6 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.; Albert County Copper;

Daily Telegraph - Jun. 4, 1881 Albert County. - Great Preparations are being made at Mary's Point and vicinity for operating in freestone. A company has been recently organized in Boston, with a capital of $100,000 - $25,000 paid in - to prosecute the business at Mary's Point. They are putting on a steamer now, intending to run her regularly between Mary's Point and Boston and New York, for the purpose of transporting building stone. They have now 130 men employed at Mary's Point. A. Stevens & Co. are also resuming operations in shipping from the valuable quarry that was opened by them last year, and from which they have already shipped several cargoes. ... Explorations are going on in Alma in connection with deposits of copper ore of a very rich description that have been found there."

Weekly Transcript - Oct. 1, 1884 A find of copper is reported on the premises of Daniel Cleaveland, Lake road, not twenty rods from his house. An assay of a sample sent away gave 70 per cent of copper. The best day's work of the season, in the Memelred freestone quarry, was done last Saturday. Thirty men quarried 60 tons and dressed 35 tons of stone, two of them dressed 14 tons. The schooners Pearl and Magellan will soon load with red freestone at Hillsboro for Boston."

Codes: Z2 / H6 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.; Albert County Copper;

Moncton Daily Times - Sep. 5, 1884 Albert County. - A quantity of copper ore found in the Memel freestone quarry has been sent to Boston to ascertain its worth, so we are informed. ... There are few industries in the county that deserve more notice than the freestone quarry at Memel, owned by the New Brunswick Freestone Quarry Co. and managed by R.K. Snow. A representative of the Maple Leaf visited the scene of operations last Thursday to glean a few facts, which Mr. Fred Snow kindly gave. There are at present 60 men and 4 teams steadily employed quarrying, scabbling, hauling and piling. There are two large derricks, one of which was put up last week, and three cranes kept in constant use. The company has lately built a new engine house and blacksmith shop and now uses the old engine house as a store house. The continued wet weather, during the summer, seriously interfered with work, as the quarries were flooded, the dam that turned the brook being washed out, and the road leading to the highway was rendered so heavy that an outlay of about $300 was necessary before hauling over it was made at all safe. But notwithstanding the fact of the above serious drawbacks, the company is prospering and boasts of an unlimited supply of a quality of building stone that is very highly spoken of and which commands a ready market. The largest stone now piled at the quarry will weigh ten tons or more and is a beauty. The stone is hauled to the Hill Station and loaded on cars for Hillsboro, from which place it is shipped by vessels to the various markets. The quarry at the Creek holds about 1,500 tons of dressed stone for which there is no market at present and work has been suspended there."

Codes: Z2 / Z5 / G4 / L5 / R8 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.; St. George Slate; Mascarene - General; West Isles Copper; Dipper Harbor/ Lepreau Coal;

St. Andrews Beacon - Nov. 28, 1889 CHARLOTTE COUNTY'S RESOURCES.- We doubt if there is another County in the whole Dominion which offers such tempting opportunities for capitalists as does Charlotte County. Where is there another County so rich in natural resources; in mineral wealth, as Charlotte. Coal depositsat Lepreaux, granite and slate quarries at St. George,silver and gypsum at Frye's Island, copper on anotherisland, salt wells at the Bayside, immense cliffs of red sandstone at St. Andrews. What more could we ask for?What more do we want? And yet we have not mentioned the St. Andrews turnip, or the St. Andrews sardine, or the Grand Manan herring and cod, all of which possess considerable importance. Nor have we dwelt on the scenery, or its beautiful, capacious harbours, the fame of which is world-wide. Surely, if there is a happy people on the face of the earth they should be the people of Charlotte. And so they would be, if the capital was at hand to develop the rich resources of their County."

Daily Telegraph - Jun. 15, 1881 Economic Minerals of New Brunswick. - Although New Brunswick is inferior to Nova Scotia in minerals, it still is entitled to consideration in that respect, and it is not improbable that at some not distant day we shall see some new developments in connection with the mineral wealth of this Province. A few words now, (in answer to several correspondents) in regard to the useful minerals of New Brunswick which have been so far discovered. The coal areas of the Province are very extensive, and although the seams are thin, not more than 22 inches, and only worked at Grand Lake and one or twoother places, it is quite possible that they may have eventually be worked much more extensively. It is estimated the Newcastle coal basin alone contains upwards of 100,000,000 of tons, most of which could probably beobtained. When St. John becomes a great manufacturing city this coal will no doubt form an important factor in its prosperity. The Albertite has had a great history, but present appearances are unfavorable to that mining interest. There are several seams of anthracite in theDevonian strata at Point Lepreaux and also at Musquash. It has, however, not yet been determined whether these seams can be worked with profit, owing to the large amount of ash left after combustion. Copper ores have been found in many places inCharlotte, in Albert and elsewhere, but, so far, have not been worked with profit. Baryta, used for making, or rather for adulterating white lead, has been found at Frye's Island, Charlotte Co., where also galena and silver have been found. Minute quantities of gold have been found from time to time in several localities, but nothing has beendone in the way of mining. Argentiferous galena has been found in several localities. At Wannemake's, on Hammond River, the galena has been found to yield a fair proportion of silver. In 1878, on the west side ofMusquash harbor, yellow sulphuret of copper and galena were found in veins of white quartz, to the amount of $14 per ton, as was shown by actual assay. The hardness of the rock and the smallness of the vein are, however, against its profitable working. Considerable quantities of silver have been found in the same locality. Bituminous shales are found extensively inAlbert, Kings and Westmorland, capable of yielding from 65 to 90 gallons of crude oil to the ton, but they are of little value so long as petroleum is so abundant. Bog iron ores, believed to be of commercial value, have been found at Burton, in Sunbury, and also at Maryland in York. Large deposits of iron ore of very superiorquality are found at Jacksontown and other parts of Carleton County. Some of these samples have yielded as much as 48 per cent of iron. There seems to be no doubt that these mines will eventually be worked with profit. Black sand containing magnetic iron ore has been found at St. Martins, in the vicinity of St. John, and elsewhere. Antimony is found in great quantities in PrinceWilliam, York. These mines are worked with profit and the quality of antimony is excellent. It is largely used in making Babbit metal. Manganese is another profitable New Brunswick mineral. It is found at Markhamville, Kings County; in the County of St. John, on the South West Miramichi, and elsewhere. In addition to these minerals, there are manyothers more or less widely distributed. Clay fit for bricks and pottery is abundant. Granite in various colours is widely distributed in Charlotte and Queens, and red granite is largely exported to the United States and Upper Provinces. Graphite, or black lead, is foundnear St. John, and also in Queens county. Grindstones and freestones of the best quality abound, especially about the head of the Bay of Fundy. Gypsum is also abundant inAlbert and Westmorland. It also occurs in Kings and St. John Counties and on the Tobique. Kaolin fit for the manufacture of pottery is found in the granite districts of Charlotte. Limestone is abundant and is found of the best quality about St. John.Iron pyrites is found on the St. John and Miramichi. Saltsprings exist at Sussex and in the parish of Upham. There are other minerals of less value which might be named,but these we have mentioned are sufficient to show that the mineral wealth of the Province is by no means inconsiderable. A survey made with a view to practical economic results, rather than a mere scientific survey, might prove advantageous to the Province."

Daily Telegraph - Jun. 15, 1881 Economic Minerals of New Brunswick. - Although New Brunswick is inferior to Nova Scotia in minerals, it still is entitled to consideration in that respect, and it is not improbable that at some not distant day we shall see some new developments in connection with the mineral wealth of this Province. A few words now, (in answer to several correspondents) in regard to the useful minerals of New Brunswick which have been so far discovered. The coal areas of the Province are very extensive, and although the seams are thin, not more than 22 inches, and only worked at Grand Lake and one or twoother places, it is quite possible that they may have eventually be worked much more extensively. It is estimated the Newcastle coal basin alone contains upwards of 100,000,000 of tons, most of which could probably beobtained. When St. John becomes a great manufacturing city this coal will no doubt form an important factor in its prosperity. The Albertite has had a great history, but present appearances are unfavorable to that mining interest. There are

several seams of anthracite in theDevonian strata at Point Lepreaux and also at Musquash. It has, however, not yet been determined whether these seams can be worked with profit, owing to the large amount of ash left after combustion. Copper ores have been found in many places inCharlotte, in Albert and elsewhere, but, so far, have not been worked with profit. Baryta, used for making, or rather for adulterating white lead, has been found at Frye's Island, Charlotte Co., where also galena and silver have been found. Minute quantities of gold have been found from time to time in several localities, but nothing has beendone in the way of mining. Argentiferous galena has been found in several localities. At Wannemake's, on Hammond River, the galena has been found to yield a fair proportion of silver. In 1878, on the west side ofMusquash harbor, yellow sulphuret of copper and galena were found in veins of white quartz, to the amount of $14 per ton, as was shown by actual assay. The hardness of the rock and the smallness of the vein are, however, against its profitable working. Considerable quantities of silver have been found in the same locality. Bituminous shales are found extensively inAlbert, Kings and Westmorland, capable of yielding from 65 to 90 gallons of crude oil to the ton, but they are of little value so long as petroleum is so abundant. Bog iron ores, believed to be of commercial value, have been found at Burton, in Sunbury, and also at Maryland in York. Large deposits of iron ore of very superiorquality are found at Jacksontown and other parts of Carleton County. Some of these samples have yielded as much as 48 per cent of iron. There seems to be no doubt that these mines will eventually be worked with profit. Black sand containing magnetic iron ore has been found at St. Martins, in the vicinity of St. John, and elsewhere. Antimony is found in great quantities in PrinceWilliam, York. These mines are worked with profit and the quality of antimony is excellent. It is largely used in making Babbit metal. Manganese is another profitable New Brunswick mineral. It is found at Markhamville, Kings County; in the County of St. John, on the South West Miramichi, and elsewhere. S.J. Daily Sun - Jan. 19, 1888 New Brunswick as a Mining Country. - New Brunswick has never much parade of its mineral wealth, but notwithstanding, the province derives substantial advantage from these possessions. The economic minerals now mined or quarried in the province include coal, gypsum, granite, manganese, lime, grindstones and building stone, antimony, besides some less important substances. None of these minerals is yet worked to any extent compared with the possibilities. The province has no department of mines and no official with authority to collect returns as they have in Nova Scotia. The nearest approach to official statistics are to be found in a report for the year 1886, prepared by Eugene Coste, the mining engineer of the Canadian geological survey. This valuable work is published by Dawson Bros., by authority of parliament. Mr. Coste has been at pains to collect returns from all provinces of their mineral produce and export. The author is not able to tell us much about the coal product of this province owing to the desultory character of mining in New Brunswick. We, of course, know that a considerable quantity is mined at Grand Lake for local consumption in the river districts, and that this coal is used on the New Brunswick railway. It is also sold at St. John. Grand Lake district will next year be put in communication by rail with the outside world, and in a short time will be connected with Montreal, and the coal consuming regions of the west. Then we shall know whether New Brunswick coal fields are rich as has been supposed. The province once exported $100,000 worth of albertite in a year. The census of 1881 credits the Grand Lake district with producing 6,221 tons. We imported in 1886 from Nova Scotia 197,028 tons which at the value given to other Nova Scotia exports would be worth at the place of shipment $375,600. We also imported from other countries 34,845 tons of anthracite, valued at $111,260, and 8,992 tons of bituminous, at a cost of $17,535. It will be seen that New Brunswick has a fine home market. The antimony produced in Canada, comes mostlyfrom Nova Scotia. In 1886, the export of this province was 20 tons valued at $800. It was produced at Lake George, York County. The Rawdon mine in Hants county, Nova Scotia, turned out over $30,000 worth. Of graphite Canada exported $3,586 worth in 1886, all from New Brunswick. The quantity of gypsum produced in Canada has not been ascertained. The exports of crude plaster are givenas 442,833 tons for the Dominion, and 23,498 for this province. The value of the New Brunswick product, nearly all of which goes from Albert county, is $10,559. The quarries on the Tobique river have great possibilities, but are not yet strong competitors with those of Albert county. The total product of the manganese mines in Canada in 1886 is said to have been 4,789 tons, worth$11,499. Of this New Brunswick furnished 4,545 tons, valued at $22,054. The customs statement of export gives a larger value, the foregoing being the estimated worth at the mine. The geological survey people claim to have pretty full returns of granite production in Canada. This gives the total quantity in the rough at 6,062 tons, worth $63,309. New Brunswick is credited with 2,552 tons, valued at $34,509. It is perhaps not very easy to fix the value of the rough stone, but the value of the red granite, as turned out of the polishing works, was in 1886, four times the amount given. Mr. Coste admits his returns of other building stones to be incomplete. He has heard from producers of $??? Of value and it appears that this represents from three to four fifths of total output. Three returns from New Brunswick give 2,728 tons, worth $24,970. His return of the produce of lime quarries as also admittedly incomplete. The total amount heard fromat the statistical office was valued at $283,756. New Brunswick's share being $58,120. New Brunswick is the only province which produces lime for export. Mr. Coste returns includes brick, concerning which he has fourteen reports from New Brunswick disclosing a product worth $30,908. Four quarries in Gloucester County report an output of grindstones to the value of $22, 495. From above returns it would appear that New Brunswick stands well, both in respect to variety and quality of mineral resources. Our coal supply is only beginning to be available. The red granite industry hasbeen doubling its product every three or four years. Lime quarries have been for the past four years doubling their operations every year. The plaster export of 1886 was 50 per cent larger than in the preceding year, and fifteen per cent in excess of any previous year. The construction of the Tobique railway to Plaster Rock will bring a new field into operation. New investments were made last year in manganese properties, and it is probable that the work now in operation will be extended. The exports in 1886 were only exceeded in value by that of 1885 and that of 1880, while that year's sales were probably in excess of any previous year. The total value of mineral export from New Brunswick to foreign countries in 1886 calendar year is given by the customs returns at $101,349. The actual amount of sales outside the province were, as

St. Croix Courier - Mar. 23, 1894...This report also contains a valuable paper on 'The Present Status of the Mining Industries of New Brunswick, by Prof. Bailey, of the Geological Survey of Canada. Referring to deposits of granite suitable for ornamental purposes, Prof. Bailey says: The rock for the latter purpose is almost exclusively obtained from the vicinity of St. George in Charlotte County, where no less than four companies are engaged in fitting and bringing it to market. These with their output for the year 1892 are as follows:- Milne, Coutts & Co., 400 tons averaging $80 per ton ... $32,000 Tayte, Meating & Co., 300 tons averaging $80 per ton ... 24,000 Epps, Dodds & Co., 300 tons averaging $80 per ton ... 24,000 Taylor Bros., 300 tons averaging $80 per ton ... 24,000 -- $104,000 This is exactly the same as the output of the previous year. In addition to the above Messrs. Burpee & Co., who up to 1891 had their polishing works at Carleton, near St. John, but who have since removed to Calais, Maine, for the saving of the duty imposed in the States on manufactured rock, and who own quarries at St. George, removed from the latter about 300 or 400 tons in 1892 and probably 200 or 300 tons in the present year. The figures given in the above tables represent the amounts and value after the stone is quarried, dressed and polished, all the firms excepting the Burpees being fully equipped for doing all the work upon the spot. It will thus appear that, as the case of the lime industry at St. John, the value of the product comes almost solely from the labor put upon it. It hence becomes the means of directly distributing large sums in the payment of wages, amounting, it is said, in the aggregate, to about $5000 per month. The granite in the rough state, when quarried, costs about $12, generally, though for getting out large blocks it costs more per ton. The power required for the machinery of the polishing works is cheaply obtained from the falls of the Magaguadavic river, and all the conditions are most favorable for the development of the industry. In quality, as pointed out by the writer as early as 1872, the rock will compare favorably with the best red granite of Scotland. Quite recently, Sheriff Stuart and others are opening up a quarry of black granite in Bocabec, Charlotte County, between St. George and St. Andrews. It takes a fine polish and it is thought, can be readily marketed. There are also varieties of rock, such as felsites and porpyries, occurring in Charlotte county which, when polished, are often of great beauty, but nothing has as yet been done towards their utilization. Prof. Bailey has the following to say, also,concerning nickel in Charlotte: The occurrence of nickel in the rocks about St. Stephen has been known ever since the year 1872, when it was recognized by Dr. Sterry Hunt as associated with chromium in specimens collected and submitted to him for analysis by the writer and Mr. G.F. Matthew. Its presence, however, attracted little interest until the discovery of the nickel-bearing pyrophyllites of Sudbury, Ontario, and their value in certain processes of iron manufacture called attention to the similar deposits of Charlotte county and led to the discovery of nickel in the latter. Following upon this rediscovery it has been hoped that the St. Stephen deposits would at least approximate in value to those of Sudbury, but through delays arising from contested claims and other causes, but little has as yet been done to test their actual capacity. It is probable that this will be done during the coming summer. In the meantime it may be of interest to quote here the estimate of the ore as given by Mr. C.C. Hoffman, chemist of the Geological Survey. A partial analysis gave Nickel ... 1.72 per cent Cobalt ... 0.16 Copper ... 0.34 or, calculated upon material free from all gangue:- Nickel ... 1.82 per cent Cobalt ... 0.17 Copper ... 0.33 Similar ore was also analyzed from L'Etete, Charlotte county, and both are described as closely resembling much of the ore found in the Sudbury district. Specimens of the St. Stephen ore analyzed by other parties, gave results in some instances as high as 2.6 per cent of nickel. The quantity of ore, both at St. Stephen and L'Etete, appears to be large and the facilities for mining and shipment are good. Edward Jack contributed to the report aninteresting article on moss litter, which he says is tobe found in several places in New Brunswick, such as at Musquash and along the shores of the Gulf of St. Lawrence. Nine licenses to search, covering forty two miles, one prospecting licence, and three leases covering three square miles of nickel property, were issued to Charlotte county parties during the year; while one mining licence, covering ten square miles, has been renewed."

St. Croix Courier - Nov. 4, 1884 and Daily Telegraph - Nov. 21, 1884 New Brunswick at the New Orleans Exposition.- It was expected that the collection of geological specimens from New Brunswick, in course of preparation by Mr. W.F. Ganong for the New Orleans Exposition, would be ready for shipment the latter part of last week, but a delay of a few days was occasioned by the non arrival of some promised specimens. The collection is now nearly completed and will be shipped in a day or two. As classified, it is a good representation of the economic minerals of New Brunswick. To Mr. Ganong, great credit is due for the labor and time he has expended in preparing the exhibit, as well as to his father, Mr. J.H. Ganong, who will meet the charges of shipment and other expenses incurred. Without their disinterested offering of labor, time and money, the Province would have been entirely unrepresented at what promises to be the greatest display of the kind on this continent during the century. As it is, New Brunswick will make a creditable exhibit in one department, and many, who are entirely ignorant of the Province, will thereby be rendered familiar with its name and one feature of its resources. We append a list of the contents of the cabinet to be forwarded by Mr. Ganong:- New Brunswick at the New Orleans Exposition.- ... Ornamental and Building Stones, &c. Granite:- Dark red, three specimens, polished, dressed and rough; Light red, one specimen, polished; Salmon, one specimen, polished and rough; Gray(Spoon Island), two specimens, polished, dressed and rough - all from the works of Milne, Coutts & Co., St. George. Light reddish grey, one specimen, from the works of H.D. Wallace & Co., St. George. Freestones:- Four specimens, squared and dressed for building; two specimens, dressed for grindstones - all from the quarries of Jos. Read & Co., Clifton, Gloucester County. Whetstone:- Fine-grained, one specimen from Grand Manan, the property of Capt. Pettes. Siliceous Earth:- Two specimens, pure; two specimens with oxide of iron; from Black's Harbor, Charlotte County. Diatomaceous Earth:- Grand Manan. Limestone:- Two specimens, hydraulic and pure, fromFrye's Island; one specimen from South Bay, the property of John Lowry.Slate:- Two specimens, from S. Johnson, St. George. Combustible Materials.-Bituminous coal:- One specimen from Grand Lake. Anthracite coal:- One specimen from Lepreaux. Albertite coal:- Two specimens from Albert County. Mineral Masses.- Serpentine:- One specimen from Frye's Island; one specimen from St. Stephen. Asbestos:- One specimen from Frye's Island. Barytes:- One specimen from Grand Manan; one specimenfrom Frye's Island.Gypsum:- Four specimens. Snowy, anhydrite, selenite, from Hillsborough, Albert County. Ores.- Manganese:- Four specimens. Pyrolusite and manganite.- property of Alfred Markham, Markhamville, Kings County Iron:- Four specimens. Limonite from Grand Manan;hematite, from Woodstock, Carleton County;pyrrhotine, from St. Stephen; pyrite from Frye's Island. Lead:- Galena, three specimens, from Frye's Island, Mascarene and the Elm Tree mine, Gloucester County. Copper:- Bornite, two specimens, Kings County; copper pyrites, four specimens from Kings County: one specimen from St. George; one specimen fromMineral Vale, Kings County; peacock ore, two specimens, Mascarene; copper glance, twospecimens, from the Colonial Copper Mining Company, Dorchester. Antimony:- Three specimens. Sulphuret, 'hard' ore,sulphuret, 'soft' ore; native antimony, from Prince William, York County; one specimen of Sulphuret from Kings County. A few specimens are yet to

Codes: 0043 / 0039 / G3 / IDX_Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen; Granite;

Nov. 1893 - Copied from: St. Croix Courier - Nov. 15, 1923 30 Years Ago: J.H. Kelley, who is interested in the Carroll nickel mine, has returned from New York. He says that the yield of nickel ore sent there for treatment is so encouraging that they will go deeper in the spring in the hope of finding a profitable percentage. The New Brunswick Red Granite Co., of Maine are scowing their quarried granite across the St. Croix to their polishing mills around by way of the bridge. Black Granite. - There has recently been discovered on the mountains of Bocabec, about eight miles from St. Andrews, a species of black granite which is likely to lead to a new and most important industry in this community. From appearances, it would seem that the supply is inexhaustible and so far as tested the grade and quality of the stone for polishing purposes is superior to any granite yet quarried in this country. It is beyond doubt a real black granite, beautifully mottled and free from any soft or foreign substance to interfere with its polishing brightly and smoothly. The samples thus far taken out have been polished and finished up most satisfactorily, and are handsome specimens of as have ever been shown in this county. Sheriff Stuart is fortunate discoverer of this valuable stone and he has secured the control of the right to quarry which it is thought by granite manufacturers of the county will prove an independent fortune to him. Already he has received some good orders from the St. George granite men for stone from his quarry, for which he will receive a good price. The granite business has now become very firmly established at St. George, and is a very important industry to this county and it may be indeed that as an industry it is only in its infancy in Charlotte County. There is no possible doubt but that such stone as Sheriff Stuart is now taking out of his quarry is bound to sell in any market and needs only to be seen to be sought after by all stone dealers."

St. Andrews Beacon - Feb. 21, 1895 A thrilling narrative is told within the blue covers of the Surveyor-General's report ... for the 10 months ending 31st October ... (income from) mining, $3,158.26 ... The mining licenses include 5 for search in Charlotte, covering 25 square miles, and 1 for prospecting, covering 20 acres. Three leases for copper in this County, amounting to 2,560 acres, were also issued during the period under review. ... In treating of mining industries , it is pointed out that the samequantity of granite was quarried in St. George last year as the previous year, viz:- Milne, Coutts & Co., 400 tons; Tayte, Meating & Co., Epps, Dodds & Co., and Taylor Bros., 300 each. The total value is represented at $104,000. Incidental allusion is made to Bocabec black granite, which takes a fine polish, and, it is thought, can be readily marketed. . Speaking of the nickeldeposits at St. Stephen the report states that it is probable the capacity of the deposits will be tested during the coming summer. The report of the estimate of the ore as given by the chemist of the Geological Survey of Canada is reproduced. Calculated upon material free from all gangue, this ore shows:- Nickel, 1.83 per cent.; cobalt, 0.17 per cent, copper, 0.33 per cent. Similar ore was also analyzed from L'Etete, Charlotte County, and both are described as resembling much of the ore found in the Sudbury district. Specimens of the St. Stephen ore analyzed by other parties, gave results in some instances as high as 2.6 per cent. of nickel. The quantity of ore, both at St. Stephen and at L'Etete appears to be large and the facilities for mining and shipment are good."

St. Andrews Beacon - Dec. 7, 1893 CHARLOTTE COUNTY.- ... Then look at the natural resources of this county... The famous red granite quarries of St. George are in this county, and no where in Canada can stone be found to match it. Charlotte county can also boast of the only black granite quarry in Canada, and though it has its reputation yet to make, we have no doubt as to its ultimate triumph over all foreign rivals. Then there are the nickel deposits in the neighborhood of St. Stephen, which may some day prove a mine of great wealth to Canada. At Letang there can befound some of the finest limestone that one could wish to see, and a little further east, in the neighborhood of Point Lepreaux, promising deposits of coal have been located ..."

St. Croix Courier - Apr. 7, 1892 Minerals of New Brunswick. - Extracts from a Paper by Prof. L.W. Bailey, of the Geological Survey of Canada. - COPPER. - The ores of copper found in New Brunswick include native copper, copper glance, chalcopyrite or copper pyrites, bornite or erubescite, cuprite and malachite. NATIVE COPPER has been reported as occurringsparingly in connection with the basalt traps which form the northern half of the Island of Grand Manan. It hasalso been observed at Clark Point on the Mascarene shore of Passamaquoddy bay, and it is stated to have been found in small quantities along the coast, near the head of the Bay of Fundy. Little that is definite, however, is known of either locality. COPPER GLANCE accompanies the native copper in the traps of Grand Manan, where it has been found in small quantities of Grand Manan, where it has been described by Prof. E.J. Chapman as being sufficiently abundant to give promise of profitable extraction. Little effort, however, has as yet been made in this direction. The same mineral, and in larger quantities, has been found associated with other copper ores at different localities along the coast of Charlotte county, and on the adjacent islands among which may be mentioned Crow Harbor Island, Simpson's and Adam's Islands. It is,however, a less abundant mineral than the species nextdescribed. COPPER PYRITES OR CHALCOPYRITE is the most widelydistributed as well as the most abundant of the copperores of New Brunswick, and has been observed at many localities. The larger number of these occur along the southern seaboard, where a band of copper-bearing rocks, believed to be of pre-Cambrian age, is found to extend, with some interruptions, along the greater part of its length. Others are found in the interior, more particularly in connection with the older schistose rocks or the intrusive masses by which these have been invaded. A detailed list of these localities so far as they occur in the southern part of the province, will be found in the Report of Progress of the Geological Survey for 1870- 71. In the northern part of the province, the most noticeable localities are Bull's Creek, in the vicinity of Woodstock and the Tattagouche River, near Bathurst. InWestmorland county, ores consisting in part of this species occur in connection with rocks of the carboniferous age, near the town of Dorchester. BORNITE OR ERUBESCITE, sometimes known as peacock ore, accompanies the other ores of copper, more particularly about Passamaquoddy bay and the head of the Bay of Fundy, sometimes occurring to the exclusion of other varieties. Where abundant, it constitutes a very valuable source of the metal, and the ore of some of the most promising mines yet opened has been chiefly of this species. NICKEL. - Considerable deposits of pyrrhotitehave for many years been known to occur in different parts of Charlotte county, usually in connection with copper pyrites, but until recently have been considered to be without value. Attention, however, having been redirected to them in consequence of the developments at Sudbury, in Ontario, these have also been found to be nickeliferous, and attempts are now made to test their value. The deposits appear to be large, but, as at Sudbury, the nickel contents vary considerably. A fair average sample of 75 lbs., analyzed under the direction of Dr. Hoffman, of the Dominion geological survey, yielded nickel, 4.718 per cent., the material very closely resembling, according to Dr. Hoffman, a large proportion of the ore at Sudbury, Ont. BUILDING STONES. - Very extensive and valuablebeds of granite, freestones, slate, marble, etc., existsin the province, and in the case of the first two have been largely quarried for exportation, but have not beenthought to require extended notice in the presentconnection. The same is true of another of the rocks or minerals, including limestone, clays, infusorial earths, bog-ores, salt, &c. These may be made the subject of a subsequent contribution. LIMONITE. - In addition to the limonite referred to above as associated with the hematites of Carletoncounty, this same mineral is found at various localities in the form of bog ore. The largest deposits are upon the banks of the St. John river at Burton, in Sunbury county, and considerable quantities of the ore were removed during the continuance of operations at Woodstock, for admixture with the hematites of that locality. Spathic iron is only known to occur in the form of small veins in certain parts of Queen's and Charlotte counties. At West Beach, twelve miles east of the city of St. John, upon the shore of the Bay of Fundy, are beds consisting of red hematite mingled with specular iron ore, while at Black River, two or three miles east of West Beach, some of them with a thickness of 20 feet. They have not, however, as yet attracted the favorable notice of such iron experts as have visited them. Magnetite is not uncommon in the form of scattered grains in the crystalline rocks of the southern counties, and small veins are sometimes met with, but none has as yet been observed sufficiently large to

Daily Telegraph - Jun. 30, 1876 Our Woods and Minerals at the Centennial. - The minerals of New Brunswick, which are treated in the second part of Messrs. Bailey and Jack's pamphlet, consist of iron, copper, manganese, antimony, gypsum, bituminous coal, bituminous shale, albertite, building stones and sandstones. Deposits of bog iron ore are found in several parts of New Brunswick, the best beds being above the rocks of the coal measures in Queen's, Sunbury and York. These measures sometimes cover considerable areas attaining a thickness of 4 or 5 feet, but no attempt has as yet been made to remove or smelt them. An analysis of some ore found in Sunbury yielded 47 per cent of metal. Of the red hematite of this Province, our authors say:-The iron ores of Woodstock were first discovered by the geological survey of the State of Maine, under Charles T. Jackson, as early as the year 1836, having been traced by him from the Aroostook region in the State above named northeastward to the St. John River, and more recently to the eastward of the latter in several bands for a distance of fifteen or twenty miles, or over a large part of the northern and northeastern portions of the County of Carleton. The principal locality from which the ore has been removed is in Jacksontown, about three and a half miles from Woodstock, and about two miles from the west bank of the St. John river. As seen at this point, the ore beds (portions of which are a true hematite, while others are a hydrous peroxide or limonite) are somewhat irregularly interstratified with a of clay slate, usually bright red or brownish red in the immediate proximity to the ore, but elsewhere of a pale grey color, and highly inclined. The width is from six inches to eight feet, the average thickness being about three and a half feet ....?.... their ....?.... variable. About 40,000 tons are said to have been smelted at the Woodstock works while in operation, the resulting metal being remarkable for its great hardness and strength, and admirably adapted for the manufacture of steel. It contains a considerable percentage of manganese. Copper ores exist in considerable quantities, the best being found in the rocks of the southern coast of the Province. The attempts so far made to work these ores have as yet met with but small success, although aspecimen from Salmon River is said to have yielded 62 per cent. of copper. It is to be hoped that the copper beds f this Province will eventually become profitable. With regard to the manganese beds found in this

Province, our authors say:- Deposits of black oxide of Manganese consistingchiefly of pyrolusite but associated with more or less ofmanganite, are not of uncommon occurrence in connection with the rocks of the Lower Carboniferous formation, and have been mined to a greater or less extent at several points, such as Markhamville, Quaco and Shepody Mountain. At each of these localities the mineral is met with in connection with limestones lying at or near the base of the series, being distributed through the latter partly in the form of veins but chiefly in irregular masses or Pockets, some of which are of remarkable purity. The most important deposits which are being at present worked are those of Markhamville, under the direction of the Victoria Manganese Company. These were first opened in 1863, since which time the whole amount of ore removed has been about 6000 tons, the annual production varying from 500 to 1500 tons. Owing to the distance of the mines from railway transport, eleven miles, the ore is subject to a cartage of $3 per ton; but notwithstanding this drawback is profitably worked, the price at Sussex varying according to the quality, from $15 to $50 per ton. Manganese is also met with to a limited extent in rocks more ancient than those of a Lower Carboniferous age, near Bathurst, and in those of the Huronian system in King's County, and it is probably from these in part that the ores above described have been derived as secondary products. Another important metal is antimony, which is found at Prince William, and here again we cannot do better than to quote from the pamphlet:The occurrence of Stibnite, or Grey Sulphuret of Antimony, at Prince William, seems to have been known for a number of years, but attracted little attention until about the year 1862, when fresh discoveries indicated a considerable body of ore having been made, several companies were formed with a view to its development. Through the explorations of the latter the mineral was found to be more or less abundantly spread over an area of several square miles occurring chiefly in white quartz veins or veins of quartz and spar, intersecting hard clay slates and sandstones of undetermined age. These veins vary in thickness from a few inches to six feet, the ore being irregularly distributed through the quartz in strings or veinlets, sometimes attaining a thickness of twelve to fifteen inches. A large portion of the ore hitherto raised has been obtained within a short distance of the surface by means of trenches dug on the course of the lodes, but several shafts have also been sunk, attaining the depth of one hundred feet or more. In connection with these on the property of the Lake George Mining Company, somewhat extensive works have been erected, embracing an 80 horse-power engine, a 30 horsepower air compressor engine, a Burleigh steam drill, Blake's crusher, rollers, jiggers, etc., as well as furnaces for desulphurization and smelting. From these, when in full operation, 15 tons of metal were obtained about every six weeks; the charges (of 500 cwt.) yielding from 45 to 56 per cent. of reguins. The fluxes employed are charcoal, soda or salt cake and rosin. The value of the metal on the ground is 12 to 14 cents per pound. It is partly exported in cakes or ingots to the United States, being valued in Boston at $12.25 to $12.75, gold, per ton, and partly employed on the ground in the manufacture of Babbit metal (containing 15 to 20 per cent. of antimony with lead and tin, or in the better qualities with lead, copper and tin), valued at from 20 to 50 cents per pound.Gypsum or plaster is found in great abundance in this Province, as it is also in Nova Scotia. The largest deposits at present known are at Hillsboro', in Albert County, where the total head of rock is from 90 to 100 feet, about 70 of which is composed of soft plaster or true gypsum, which rests on beds of hard plaster of unknown depth. At Hillsboro', during the season of 1875, 129,000 tons of plaster were quarried, 5,500 tons of which were shipped in rock and 47,200 barrels ground and calcined. The uses of plaster are too well known to require any mention. The value of the deposits of plaster in this Province must increase year by year. Our authors do not give a very encouraging view of the coal mining prospects of this Province, and we quote their remarks in full: More than a third of the Province of NewBrunswick is occupied by rocks of the coal formation, which present the usual variety of conglomerates, sandstones and shales, met with in other coal regions, together with numerous and characteristic fossil remains. Seams of coal are also met with at various points, but so far as at present known, are all of inconsiderable thickness, only one, that of Grand Lake, attaining a thickness (22-26) sufficiently great to be capable of working. Being, however, usually nearly or quite horizontal, such beds as do occur cover considerable areas, and when sufficiently near the surface are readily removed. For the same reason but little information can be obtained from the surface as to the possible occurrence of thicker beds beneath, and it is necessary to resort to borings in order to prove the latter. The results so far obtained in this direction are certainly unfavorable to the existence of any such beds, or even to the probability of any great thickness to the coal formation as a whole in this region, but the latter being unconformable to the older beds upon which it rests, and these being highly disturbed, forming troughs and ridges beneath the carboniferous rocks, it is impossible that the latter may really at some point attain a much more considerable thickness and include workable beds of coal. The only locality in which mining operations for this mineral are at present conducted is in and about the Newcastle River and the shores of the Grand Lake, in Queen's county. The beds here having a thickness of about two feet, are usually met with within ten or fifteen feet of the surface, and have been removed at a great number of points over an area of over one hundred square miles, indicating a total productive capacity of about 154,948,147 tons. The coal is a true bituminous coal of the caking variety, and is employed both for household and blacksmith's use. The total annual production is at present about 3,000 chaldrons, which, delivered in the city of St. John, is sold, according to quality, from $4.50 to $8.00 per chaldron.Bituminous shales are found in considerable quantities in Albert County, and at one time an attempt was made to employ them largely in the manufacture of il, as much as 63 gallons to a ton being obtained, but this oil was unable to compete with the cheaper article from the wells. The same shales yield 7300 feet of gas per ton, and in 1865 some 2000 tons of shale was sent to the United States to be made into gas. With regard to Albertite, which is amongst the most remarkable of mineral products, our authors say:-This remarkable mineral, occurring in connection with the calcareo-bituminous shales or pyroschists above described, was first discovered by accident about the year 1850, and has been by some regarded as a true coal, by others as a variety of jet, and by others again as more nearly related to asphaltum. It resembles the latter closely in appearance, being very black, brittle and lustrous, with a broad conchoidal fracture, and like asphaltum is destitute of structure, but differs in fusibility and in its relation to various solvents. From the true coals it differs in being of one quality throughout, in containing no traces of vegetable tissues, and in its mode of occurrence, which is that of a vein and not that of a true bed. This vein occupies an irregular and nearly vertical fissure, has a varying thickness of from one inch to seventeen feet, and has been mined to a depth of 1,162 feet. The accompanying shales are in some portions abundantly filled with the remains of fossil fishes, (Paleoniscus) and it is not improbable that it was from these, in part at least, that the mineral was derived, existing perhaps at first in a fluid condition (in which state it has in some instances become the cementing material of conglomerate), and subsequently hardened into its present form. Vegetable remains are almost entirely wanting. Between 1863 and 1864, inclusive, 154,800 tons of albertite were shipped. It is capable of yielding 100 gallons of crude oil of 14,500 feet of gas per ton, and when employed with other coals it leaves as a residuum a valuable coke. About 120 men are employed at the Albert Mines.Among building stones our authors make mention of granite and syenite which form extensive beds, particularly in the county of Charlotte. Both yield good building materials, the red granite being capable of receiving a high polish, and it being possible to obtain blocks of it of any size up to 30 or 40 feet in length and 4 or 5 feet in thickness. The Bay of Fundy Red Granite Company vein gives employment to about 110 men.With regard to sandstones our authors say: This stone, commonly known in the United States as Nova Scotia stone, has been long known and highly prized, the Budreau Quarries having been first opened in the year 1856, since which time there has been shipped from that locality an annual amount of from 5,000 to 7,000 tons. The Caledonia Quarries were first opened in 1864, and now ship annually from 4,000 to 6,000 tons, while large quantities are also removed from the other localities mentioned above. The particular qualities for which these stones are prized are their colour, the facility with which they may be cut, dressed or ornamented, and their durability. The prevailing color in the Dorchester quarries is a yellowish or olive gray shading on the one hand ...?... a chocolate brown and on the other into a bluish grey, while at Mary's Point a portion of the rock is pale, purplish red,

Morning Journal - Feb. 16, 1866 Rock Records of New Brunswick - A Lecture, by Professor L.W. Bailey, A.M. (continued) : But through all this time there is nothing to tell us of our own Province, and when we do again find itparticipating in these events, what a change appears, what a scene of desolation meets our gaze! In place of the fertile valleys and wooded slopes, which in the ages last enumerated must have given shelter to such vast herds of animals, roaming even to high northern latitudes, and enjoying a warmth almost tropical, we now behold only vast fields of ice, covering the land and descending as glaciers from the higher mountain-summits, or swept along as floes and icebergs by the cold polar currents. Not a living thing remains; all is devastation and ruin. This was the great Glacial or Drift period in our history, and the evidences of its action may be seen in all portions of the Province. Wherever the rocky beds are laid bare, their surface may be seen to be worn and polished, or else to be deeply scratched and grooved as if by a cutting instrument of great power. All prominent ledges have been broken down, and the fragments detached from them may often be found at great distances from their original beds. Masses of rock occur about your city, which must have come from the cliffs of Kingston, crossing the Kennebecasis in their course. Pieces of the Woodstock iron ore are found on the slopes of the hills at Fredericton, while smaller pebbles are sometimes seenwhich would even seem to have travelled from distantCanada. Even masses of enormous size were sometimes moved, and left at great elevations on our mountain chains. Near the granite quarries in Queen's county I have seen detached and rounded masses of rock fully 30 feet in diameter, and which could not have weighed less than 4,000,000 pounds; while even on the summit of Mount Katahdin, in Maine enormous diluvial boulders are found at the height of 4,500 feet above the sea! They have invariably been transported in a southerly direction, showing that the moving force, whatever its nature, was one proceeding from the north! Geologists are divided in opinion as to the condition of America during this glacial period. All, of course, look to ice as the principal agent in producing these effects, (for water alone would be powerless to move such heavy masses,) but one party would assign the process to the action of glaciers; and the other to that of icebergs. The former supposes an elevation of the land sufficiently great to have caused the formation of one universal glacier, similar to that which now covers much of Greenland, and which, moving southward by the slope of the continent, ground away the summits of protruding ridges, furrowing and polishing the rocks like a gigantic rasp, and carrying along the worn materials frozen to its mass, we scatter them again when melted by a summer sun; the other, on the contrary, supposes a depression instead of an elevation of the land, this depression allowing the cold polar currents, which even now bring such quantities of bergs and floating ice along our North Atlantic coast, to carry the same farther west, and melting by contact with the Gulf stream or other equatorial currents, to deposit their burden, as is being done by the icebergs of the present day off the banks of Newfoundland. Which of these two theories is correct we cannot now stop to inquire. Both are ably maintained, and both would seem to account satisfactorily for the effects observed; - and it is with these that we have principally to do. What object may we ask was to be gained by thus replacing a warm and genial climate, a landscape teeming with luxuriant vegetation, and an animal life even richer than than that of the tropics, by a season of wintry cold, shrouding much of the earth in a dreary mantle of ice and snow? We have our answer in the words of Agassiz: ""The glacier was God's great plough, and when the ice vanished from the face of the land, it left it prepared for the hand of the husbandman. The hard surface of the rocks was ground to powder, the elements of the soil were mingled in fair proportions, granite was carried into the lime regions, lime was mingled with the more arid and unproductive granite districts, and a soil was prepared fit for the agricultural uses of man,"" - a soil not only capable of sustaining a vigorous vegetation, for this existed even before the glacial period, but a soil fitted for the growth of cereal crops, a grain growing soil, ""one especially adapted to those plants most necessary to the higher domestic and social organizations of the human race."" But the glacier was not the only agency involved in producing this result. Whether we accept or not the theory of great elevation during the Ice period, it is certain that towards the close of that period the land was depressed from two to five hundred feet below its present level, and that in our own Province all that portion now possessing a less elevation was then below the water. The river St. Lawrence was then a wide arm of the sea, and Lake Champlain was a deep bay, tenanted by whales and seals. The river St. John was a long estuary, extending certainly as high as Fredericton, while the Grand Lake and other smaller sheets of water were connected into one extensive tract, covering the great central basin of the Province. By these waters, whether lacustrine or marine, the materials already roughly distributed by the agency of ice were rearranged, flooded 18 streams filled the great valleys deep with fertile soil, and spread over the bare rocks a rich covering of earth. And when the land rose again, as it did before the introduction of Man, the draining which ensued still further carried on the fertilizing process, carving out the present channels of our river valleys, leaving here and there broad belts of rich alluvium and scattered sheets of water, either lakes or ponds, the great reservoirs to supply the land with constant moisture. All portions of the Province abound with evidences of both the depression and elevation of this period. Beneath some parts of your own city are beds of clay, filled with marine relics, (star fishes, shells, &c.), which were deposited when the waters covered the place where they are now found. All along the coast of the Bay of Fundy similar deposits may be seen, as well as along the St. John river, where also the the beautiful terraces which enrich its banks, as at Fredericton and Woodstock, mark the successive and interrupted epochs in the period of emergence. From the events of this period we may attempt to draw some conclusions as to the length of time involved in our great geological record. The beds of sand and gravel, washed down by torrents from the rising land, often obstructed the former beds of streams and rivers, and turning these latter from their course, compelled them to seek new channels, often by carving them through solid rock. The Niagara River, thus diverted from its proper bed, was made to excavate the wild and deep gorge, seven miles long, which now connects the Falls with Lake Ontario. The same may in part be true of the St. John and of most of the rivers in your Province. The St. John formerly poured its waters into the Bay of Fundy probably by two channels, one crossing from the Kennebecasis to Courtenay Bay, the other, more directly, from the South Bay to Manawagonish. Both of these, during the Glacial period, became filled with the thick beds of sand and gravel which still occupy them, thus compelling the river to seek a new exit by carving out the wild and picturesque channel through which it now rushes. To be continued."

Codes: 0275 / G3 / LIME / GEOL / IDX_Names: Woodstock Fe; Granite; Lime - General; Geology - General;
N.B. Courier - Feb. 19, 1842 Geology Of New Brunswick. - A report of the labours of Dr. Gesner, in exploring the mineral resources of the Province, during the past year having been made public, we have much satisfaction in referring to the work as affording further satisfactory evidence in confirmation of the generally received opinion that New Brunswick is rich in mineral resources. In his late researches, we are glad to find that in order to meet the views of His Excellency the Lieutenant-Governor, Dr. Gesner has directed his attention to the agricultural character of the districts explored; and the features of the uncleared lands have accordingly been examined, with a view of making them at once available for settlement; and so favorable have been the results of these enquiries, that several new settlements have already been projected in districts selected for this purpose. Dr. Gesner returned to the City last week after locating a party of settlers at Eel River, and another party are now preparing for departure to the same vicinity. A present benefit will thus be reaped from the labours of our Provincial Geologist by many deserving families, who might otherwise have proceeded to the United States, or remained as drones about the City, and at times a positive burthen upon the community. Having copied from the Royal Gazette the short reports made to His Excellency from time to time, during the progress of last year's exploration, it is not perhaps necessary for us to make any lengthy extracts from the detailed Report, in which Dr. Gesner has ably and minutely set forth, all his discoveries as well of a topographical as of a geological nature. We cannot, however, omit noticing the valuableand extensive deposit of Iron Ore near Woodstock, in the county of Carleton, which, on several accounts, offers advantages for the manufacture of iron and steel scarcely to be found in any part of Europe, and which is capable of supplying the whole of North America for many centuries to come. - With respect to the Great Coal Field of New Brunswick, we quote a paragraph from the Report 2 giving a description of that very extensive deposit, which will give some idea of the immense mine of wealth possessed by our Province:- [see Gesner's Report.....] It must be gratifying to Dr. Gesner to find thatthe Marl and Lime discovered by him in the counties of Charlotte and Saint John, are coming into use, and that the former is found to be of great value in agriculture, as proved by a letter from Mr. Joseph Walton, an intelligent farmer at St. Andrews, in the Report beforeus. We have before noticed the immense advantage resulting to the Province from the Granite found on the Saint John. The demand for the article in this City, increased greatly during the past year, and in some cases could not be supplied. When the vast coal field above described, and the immense beds of Iron Ore and other valuable minerals known to exist in the Province, are brought into use and made to supply the existing demands, then will the benefits of the present geological exploration be fully developed. It is expected that the Survey will be brought to a close next season, when a Geological Map of the Province will be completed, and the characteristic features of the Province, in a geological point of view, will then be easily ascertained."

Codes: 0309 / LIME / G3 / SPRI / IDX_Names: Welshpool; Lime - General; Granite; Mineral Springs;
N.B. Courier - Jul. 28, 1838 Geological Survey. - We omitted to mention in a former number, that Dr. Gesner had re commenced his Geological Survey of the Province; having proceeded to Charlotte County for that purpose. We

understand that Gentleman will not publish any account of his proceedings, until he has finally made his Report in the Autumn; but we have reason to believe that his discoveries in that quarter are of a highly interesting nature; and that he has examined the Saint Croix from its source to some distance above Saint Stephen's and the country in that neighborhood, together with the Islands in Passamaquoddy Bay which belong to the British, with the exception of Grand Manan; where valuable Lime and Granite quarries and Mineral Springs have been found. Lead Ore has been obtained on Campobello; and there is an abundance of Marl, which is valuable to the farmers in that quarter, and remarkable tertiary deposits containing numerous fossil shells. These features of the country in a geological point of view are new and interesting; and the inhabitants of this Province generally, may promise themselves much advantage from Dr. Gesner's valuable labours. -

Codes: 0530 / Z2 / G3 / GEOL / IDX_Names: Pokiok River; Sandstone, Building Stone, Monument Stone, etc.; Granite; Geology - General;

N.B. Courier - Oct. 7, 1837 LETTER IV. To His Excellency Major General Sir John Harvey, K.C.H. and C.B., Lieutenant Governor and Commander in Chief of the Province of New Brunswick, &c. &c. &c. May It Please Your Excellency: In endeavoring to discover the geological features of any country, and to obtain sufficient data whereby particular examinations are rendered less difficult, I have alwaysobserved that the sea coast, and the banks of the rivers wherever they occur, afford facilities not to be obtained through any other medium, where deep mines and quarries have not been opened. Convinced of these facts I have endeavored to lay before Your Excellency a few particulars relative to the Tantamarre, Memramcook, and Kennebecasis Rivers, and the characters of the formations through which they extend, so far as they were observed on my route. From the two former streams the River St. John is different in two important particulars; one in respect to its inestimable advantage to the country, and another in regard to the sources from which the diluvium on its banks has been derived. That part of the St. John which extends from above the falls into the interior of the country, receives no alluvial matter from the sea, as its navigable channel is elevated at least forty feet above the harbor at low water. The falls which might be considered by some an obstruction to navigation, absolutely extend it to a great distance. The impediments placed at the ""narrows"" and the sudden descent of the water at the falls preserve the level of the river above, which may now be compared to a lake. Were all the obstructions removed, and this majestic stream allowed to pass through a broad open mouth into the sea, dangerous rapids would be formed above, and its use as a common canal, and thoroughfare would be greatly diminished. It is certainly an admirable river where all the rapids are collected at its entrance - where they are locked up by the ocean twice every twenty four hours. The descent from the Meductic falls at Woodstock, (at least one hundred and thirty miles up river) is so gradual, and consequently the current of water so feeble, that long before the river can be emptied, the ""tidelock"" of the falls is closed, and a current throw back into the channel which seems to supply the waste that has taken place during the previous ebb. Instead of receiving constant supplies of sedimentary matter from the wasting rocks of the coast, during each tidal influx of the sea, the elevated situation of the river's bed and the barrier set up at its narrow mouth, prevent the admission of sand and mud, which on the banks of other rivers are so abundantly deposited. Nor do the border of this noble stream require it. Skirted with the detritus swept from the mountain's brow by falling showers, and clothed by the alluvium brought downward by each bubbling brook, a fertile deposit is formed on each of its banks, which are submersed beneath the waters of the vernal ad autumnal floods. About three miles from the Indian House, the limestone formed by the sides of the ""Narrows"", is met and overlaid by conglomerate, which is regularly stratified, and dips north-east. It evidently belongs to the formation of that rock so abundant along the Kennebecasis, being like it in every particular. The Nerepis river empties into the St. John ten miles above the Indian House - at its entrance a great change may be observed in the scenery. Instead of the bold rugged cliff of limestone and conglomerate the shore slopes gradually down to the main river, and cultivated fields decorate its border. Continuing their course in a south-west direction, the highlands already mentioned cross the St. John, and taking within their range the mountains of the Nerepis, they form a distinguishing feature of the Province. Beginning at their base, the great coal district of the country is spread out far and wide in a northerly direction, and its rocks are strongly contrasted with the oval summits of the granitic hills, and the grandeur of this primitive region into which the Nerepis extends. On the shores of Long Reach several beds of clay, sand, and gravel were observed, and to a stranger, the enormous rafts of floating timber, occupied by comfortable cabins, and whole families - the groups of children sporting on the buoyant pine - all moving slowly towards St. John, afford a truly interesting spectacle. Such is the scenery in a Province possessing four thousand miles of navigable lake and river, and such are some of the natural advantages the country enjoys. Advancing up the Long Reach the conglomerate and a coarse sandstone, may occasionally be seen forming bold eminences on the side of the river. At the ""head of the Reach"", there are two islands, apparently formed altogether of alluvial matter, from the particular direction of the current. A long arm of intervale extends along the west side of the river at a place called the ""Mistake"", where a deep creek has often been mistaken, even by good pilots for the main channel; hence this name has arisen. On this part of the St. John there are some beautiful views; at the head of the Reach the river becomes narrow, from this circumstance a blockhouse and battery were erected during the last war, on its eastern side. Not far from the lower end of Spoon Island there isa hill of granite, from which mill stones are quarried. But having passed rapidly up the stream in a steamboat, I am unacquainted with many of the interesting formations along its shores. There can be little doubt, however, that any who shall follow up those limited examinations, will reap a reward for their labour. It would be necessary to travel along both banks of this extensive river, in order to examine faithfully their structure, 3 and collect their minerals; and the time cannot be far distant when the Provincial Government will explore the hidden resources of the country and open up new channels of industry and wealth. A coarse sandstone apparently belonging to the lower strata of a coal basin, and approaching what is usually called the mill-stone grit, was observed at

Gagetown, a delightful spot sixty miles from Saint John and thirty from Fredericton. I had not an opportunity to examine its extent, and the indications of coal appearing in that neighborhood. A remark has been made, and perhaps believed to be just by many, that after the timber of New Brunswick has been felled and transported, the resources of the country will be dried up, and consequently, the Province will fall even below the level of the other American colonies - but let any one make an excursion one hundred and fifty miles up the St. John, and that opinion will be discarded from the mind. From Long Reach to the Grand Falls, a distance approaching two hundred miles following the course of the river; there are many tracts of the most fertile soil, and almost every spot along the shores of this admirable stream is capable of cultivation. The vast quantity of intervale between Belleisle Bay and thirty miles above Fredericton is of itself, sufficient to enrich the central portion of the province. Already invested with chains of cultivated fields and rich meadows, occupied by the hardy sons of Loyalists, this useful river offers to its industrious and rapidly increasing population a fair compensation for their labor, and a home for their posterity. Nor is the scenery on the river less pleasing - during the summer months when the floods of spring have subsided, there are numerous landscapes along its embankments that will vie with the richest of other countries. The dark and winding river, shaded by the tops of lofty elms, or crested with the drooping willow - the distant village seen through the fringed opening of the forest - the unwieldy raft and smoking steamboat, make up that singular variety so pleasing to most travellers, and agreeable to the fixed inhabitant. The St. John, between the Falls and Fredericton will probably average a mile and a half in width, and when the number of smaller streams, lakes and creeks, all emptying into this common reservoir are viewed, the quantity of water it conveys cannot appear surprising; and that floods should occur during the heavy rains of autumn, and from the dissolution of the snow in spring are effects common to all rivers of the kind. But it must not be supposed that all the water rushing into this lake-like receptacle, is precipitated over the falls near the city of Saint John. Many from their own observation, have supposed that a subterraneous passage to the sea gives vent to a part of the water. That idea is certainly 4 erroneous. The quantity of water is reduced by evaporation alone - this during the summer months, and under particular conditions of the atmosphere, is quite sufficient to account for the supposed phenomenon. When so large an aqueous surface is exposed to the air during dry weather, the escape of vapor is very great, and it is certain that the river will rise when the atmosphere is dense, and the weather lowering, at times when there has been no previous rain. A circumstance readily explained by the atmosphere being in a condition more or less favorable for the conveyance of water in an teriform state. I have observed many small streams to become dry at their mouths in the summer season, while toward their sources they sent forward a much greater quantity of the evaporating fluid than could be absorbed by the earth. Of all the agents employed in modifying the earth's surface none of more active than water. Its effects are certain whether they are produced by the falling shower or the rushing of the mighty torrents. Particle after particle becoming loosened from the hardest rocks by its disintegrating influence, is swept from the summit of the mountains to form new deposits in the valleys. Even the largest rocks are torn from their native beds and transported by its force to great distances. The soil thus formed is always accumulated at the lowest levels, and distinctly points out the height to which water has risen. The matter collected by these means, whether it is large stones, sand, gravel or mud, is identical with the rocks from which it is derived, unless mixed with decayed vegetables or has undergone some change by chemical affinity. The large tracts of intervale on the St. John river, have thus been deposited from the debris of its surrounding hills, and each successive freshet brings down a new stratum of sediment that semi yearly renders the soil more fertile. The vast accumulation evidently belongs to two distinct and separate periods of time. The first or most ancient is limited in extent, and forms what is generally called the high intervale. It consists of different layers of rounded pebble, gravel, sand, and sometimes beds of clay. These, whenever they appear, occupy a higher level than the more recent alluvium and are seldom or never entirely inundated by the highest floods of the present period. This, the earliest of these collections is well displayed at Fredericton, and the town is built on one of the most beautiful situations. Opposite the Capital of New Brunswick, and near a bark camp village of its aboriginal inhabitants, there is a bed of good clay, and collections of fine sand, may be seen on the level land on the border of the river at other places. These deposits belong to those called by Mr. Lyell, Newer Pliocene, although I have not been able to discover in them any organic remains whereby their relative age might be determined. The other collection of alluvium is comparatively recent, 5 and has been formed by causes now in operation. In it I obtained two species Mtyila and other shells, all belonging to the kinds now living on the shores. This deposit forms almost all the intervale along the river and being placed in the lowest situation, ie. submerged during the floods of spring and autumn. It is more than probable that the site of the river and all its intervale was at one time a Lake, whose surplus waters made their exit into the sea by a passage remote from its present mouth. It was observed that the sediment collected on the borders of the channel increases more rapidly than near the upland. This arises from the particles of alluvium being thrown down in time of freshet before they reach the more remote places, and hence also the coarse materials by falling first, will be found upon the bank, and the finer particles only are conveyed to the lowest and most remote parts. Such is the case of the Mississippi, which has been represented ""as a river running on the top of a long hill or ridge, with an elevation of twenty four feet in its highest part, and a base three miles in average diameter. First, however, remarks that this picture is not very correct, for notwithstanding the comparative elevation of the banks, the deepest part of the river is uniformly lower than the lowest point of the alluvium."" About six miles from Fredericton on the opposite side of the river, and near the Nashwasis, there is a remarkable cliff, averaging one hundred and fifty feet high, and extending some distance along the east side of the Royal Road. This cliff is composed of trap rocks which have been thrust upwards, and now form a lofty dyke in the coal measures, that were found to reach even further westward than the mouth of the Keswick. The precipice presents a bold front, and by constantly crumbling down has formed of debris rudely piled along its base. The trap is of the compact, and amygdaloidal varieties; the latter often contains numerous hollow cavities, and is perfectly vesicular. In other instances these cavities are filled with calcareous spar, and in this respect is different from the amygdaloid of Nova Scotia, which most frequently contains Zeolites. Good specimens of magnetic iron ore were found at the foot ofthe precipice, and a considerable quantity of that mineral was observed among the fractured masses forming the slope. I had much pleasure in being accompanied to this interesting spot by the Hon. J.S. Saunders, and the Rev. Dr. Jacob, with some of the students of Kings College, and the effects produced among the sandstones by the heat that accompanied the elevation of these volcanic rocks, rendered the excursion very interesting to the highly respectable party. A coarse sandstone similar to that observed atGagetown occupies the highest grounds in the rear of 6 Fredericton, the beautiful site of King's College is on this formation, and its massive columns are fine specimens of a similar rock brought from the Nashwaak, a stream nearly opposite the town. Occasionally covered with conglomerate the same rock continues its course near the entrance of the river Keswick nine miles above the capital. At numerous places the strata are covered with large boulders formed of its broken layers, and beds of gravel, sand, and clay. The impressions of leaves and other vegetable remains appear frequently, but in general they are imperfect from being exposed to the vicissitudes of the weather. The St. John here becomes more rapid, and winds its way among a number of islands. These, in summer, are decorated with green meadows, and the drooping branches of lofty elms add much to the natural beauty of the country. About two miles from the entrance to the Keswick on the south side of the river, new red sandstone forms a kind of a belt, and may be seen on both sides of the main stream. At the place where it is crossed by the road, it is very red and contains marl with a considerable quantity of oxide of iron. A bed of limestone is embraced by it, and may be observed forming a small declevity near the turnpike. The limestone is also highly colored, and as far as it was observed contains but few organic remains. Whoever exposes this lime to calcination, will find its quality improve by taking it as far from the surface as possible - by opening a deep quarry, and rejecting such masses as are in contact with its red marly covering. Near this place, I discovered in a mass of greywacke the remains of a beautiful species of a fossil coraline. The branches of this plant are spread out in the hard rock, and yet retain their original beauty, appearing as natural as if they had only been compressed between the leaves of a book. A part of this fossil is in the valuable collection of the Hon. J.S. Saunders, a gentleman of science and to whom I am much indebted for aid in making examinations in this part of the country. Following the course of the road on the south side of the St. John River, and passing over new red sandstone to the distance of two miles, greywacke slate and slate, are the prevailing rock to within two miles of Capt. Cheyne's farm, twenty five miles from Fredericton. These rocks have nothing peculiar in their appearance, and although no good roofing slate was found, it is highly probable it may be discovered here by a proper examination of the schistose hills in the vicinity of the river. The strata are almost perpendicular, and high ridges with deep ravines, give the country a most uneven appearance, and the road a number of hills not to be forgotten by any who have passed over them. Large rolled masses of granite syenite and greywacke are much more common in this than in the eastern parts of the Province, 7 where the solid formations of these rocks are placed at a great distance from the newer deposits on which these boulders are found. If it be true that these detached masses have been swept from their former positions by currents of water, these currents must have acted with less force in the western district of New Brunswick, than in other parts of the world, where they have been exiled to great distances. The effects produced by the watery elements are not, however, less manifest, for the detritus of the neighboring hills is collected in the valleys and the rocks are covered with water now blocks broken from their own strata. At the mansion of the worthy veteran officer, the coarse sandstone was again seen. This rock greywacke, and granite were observed alternately along the road to the Pokiok, where the granite prevails, and extending along the river a number of miles occupies a considerable tract of country. There are many delightful spots on the border of the main river, where it flows from among the mountains of these primary and transition rocks. One of the most beautiful of these is at a place called the Barony, the country residence of the late Judge Saunders. Four miles from the Barony, and forty two from Fredericton, there is the most singular waterfall, called the Pokiock, which rolls over one of the granite ridges of the primary mountain chain previously mentioned. The Pockiok is a narrow chasm in the granite about twenty-five feet wide, seventy-five feet deep, and one-eighth of a mile in length. Into this narrow opening the river descending from its higher channel falls over a perpendicular mass of rock, and bounding from step to step - whirling in oblique cascades, reaches the Saint John. Covered with the transient foam the main stream glides peacefully along, being scarcely disturbed by the introduction of this its noisy tributary. At the head of these falls several mills have been erected by Messrs. Allan, of a respectable family, and the owners of this romantic estate. A bridge is thrown over the dark and narrow opening, where the overhanging trees seem endeavoring to conceal the frightful gap beneath. Upon examining the remarkable chasm, it was found that the hollows on one side are placed opposite the protruberances of the other in such a manner, as to leave no doubt that they were once of contact, and have been separated by an earthquake or some other disturbance, whereby the

S.J. Daily Sun - Oct. 7, 1880 Minerals No. 2. - Geological Sequence Collection of the N.H.S. - Passing around to the northern side of the table where the mineral exhibits are placed another upright case comes into view, containing a collection of New Brunswick minerals, the property of the Natural History Society. They are chiefly for the instruction of the student and geologist, and with this object are arranged in geological sequence; that is, the minerals of each of the rock formations which exist in the Province are grouped together and so arranged that they present to the eye the natural succession of the formations in time, the oldest, or Laurentian, which from its position is called the fundamental or formation gneiss in Scotland, being represented by a row of minerals on the lower shelf - minerals which have been found mostly in the neighborhood of St. John. On looking over them we observe that they are mostly minerals from the limestones of the Town of Portland, together with ornamental varieties of these limestones, and a few minerals and ores from the gneissic rocks. The second shelf contains the minerals of the Huronian, a formation which in other parts of America has proved to be rich in metalliferous deposits. One is not surprised, therefore, to see a preponderance of the ores of metals among the minerals on this shelf. There are here also specimens of the Indian pipe stone, and of barytes, a mineral used in the manufacture of paint. More than half of the minerals on this shelf are from the metalliferous belt of rocks extending from Mispeck to Upper Salmon River in Albert County. On the third shelf are shown minerals of Silurian formation. Here also there is a great preponderance of metallic ores, including iron, lead, antimony, manganese, copper and zinc. The ores of this formation are from various parts of the Province, including the coast of Charlotte County, York County and the neighborhood of Woodstock and Bathurst. The localities of antimony ore are in this formation, and it is the one in which gold has (so far) been found in this Province. The Devonian formation present but a meager display of minerals, rock crystal from Musquash and anthracite from Lepreaux being all that are shown from it. The next formation, however, abounds in handsome and valuable minerals. Such are the manganese ores, which, though occurring in the Silurian, are in far greater abundance and perfection in this. Agate, carnelian, and chalcedony, ornamental stones, are chiefly found in this formation (Lower Carboniferous) in New Brunswick. Gypsum, alabaster and albertite are also valuable minerals, and abundant in this formation. With the exception of coal the next formation(Coal Measures) does not show valuable minerals in any abundance except at Bathurst, where there is a considerable deposit of copper mixed with lignite or coal. This copper deposit is interesting as showing how organic matter (decaying plants, &c.) can seize upon metals in solution in water and produce ore bed; and it is also interesting as showing how the minerals of one formation may be derived from another, for the copper ore the Tetu-a-gouche (Bathurst) of the Silurian slates are considered to be the source of the copper in the coal measures near Bathurst. From the Triassic, which in New Brunswick is confined to the island of Grand Manan, only two minerals are shown, and they are of a kind quite abundant in the North Mountains of Nova Scotia. Lastly, on the top shelf are displayed the minerals which have been found in the recent deposits of New Brunswick, viz., the surfaces, clays, sand, etc. The ores shown in this group are due to chemical changes which have transferred them from older formations, as the Silurian and the coal measures to the surface bed. The most interesting mineral shown here is the selenite crystal of gypsum taken from a spring in Sussex, showing how the formation of mineral species in crystalline form is going on at present time. Altogether, this collection, though not very large, is sufficient to show the great range in time during which the minerals species of New Brunswick have been formed, and the preponderance of certain kinds (as the metallic ores) in some formations and scarcity in others. Other Collections of Minerals in The Exhibition. - This case contains also a small collection of combustible minerals of New Brunswick, which is complete, however, in that it contains specimens from all the districts where combustible minerals in quantity sufficient to be economically available for fuel has beenfound. The collection contains coal from Grand Lake, anthracite from Lepreaux, bituminous shale from the Caledonia works in Albert, and other minerals of less importance. On the table beside the case containing theexhibit of the Natural History Society stands a flat case with the ores and products of the Revenue Silver Mining Company, whose mine is situated on Letete Peninsula in Charlotte Co. They exhibit a quantity of specimens of galena and zinc blende, which, by the analyses of Prof. Jno. Burwash, are shown to contain both silver and gold in quantities from $16 to $22 per ton, the gold appearing mostly in the blende-ore. This company show in their case a sample of the ore ground to a fine powder, and in the same dish a button of silver, produced by the reducing process which the powder undergoes, as a sample of the actual product of the mine. Next the box of silver ores is a handsome show case in which Mr. Wm. F. Best exhibits a tastefully arranged collection of Useful Minerals of New Brunswick, comprising such as are used for fuel for the production of metals, and various processes in the arts. Among these may be mentioned coal from Grand Lake, Albert Coal, from Hillsboro, Red Granite, from St. George, atnimony ore and metal, Pottery clay, Iron ore from Woodstock, Manganese from Sussex, Graphite from Portland, and Lime from various localities, with Red Ochre, Lead ore, etc. On the opposite side of the table is a case containing samples of silver ore from Yarmouth, N.S., sent by Mr. F. Killam and others by Mr. R. Sentall, fromKing's County, N.B. There are also turned and polished balls of red granite from the workshop of Mr. O'Neill, at St. George. In this case also Mr. Markham has placed his Electric Batteries to show the means by which that powerful and useful explosive dynamite, or giant powder, is operated in the modern methods of mining. Near by, on the table, stands a box of copper conducting wire, so that all the necessary apparatus, except the fuse, caps and the dynamite are present. Between the two stands Mr. Markham's case ofManganese ores, showing all the varieties worked at the mine, including Pyrolusite (the most valuable),manganite, a variety supposed to be braunite and an ore mixed with iron. Hematite iron ore encrusting the manganese, is also shown. These latter ores were formerly thrown away as waste products, but have now become valuable in connection with the modern processes used in the production of steel. Beside Mr. Markham's case is a box of silver-lead ore from Mr. Wanamake of St. Martin's. The crown ornament of the Mineral Department for beauty and elegance, is the display of Petroleum and its products from the wells of Ontario. Nothing could be more chaste and striking than the ornamental work in paraffine wax, exhibited under Mr. Bullock's charge, in a large show case in the middle of the table. The centre is occupied by a handsome pyramid in bleached wax and the ends by ornamental tablets of the same material. The rest of the case is filled by masses of wax and various ornamental objects made from it. On the table near by are samples of crude wax, and of the tar, gum and coke taken from the distilling retorts; and also of the oil in various conditions, from the crude oil as it flows from the wells, to the products prepared for lubricating purposes and for illumination. Scattered through the building are other exhibits which may be considered as belonging to the Department of Minerals, such as the trophy of the Spring Hill Mining Co.; the marble manufactures of Messrs. McNamee, the freestone of the Budres & Bay of Fundy Co.'s and of J.M.Steeves and Co., &c.

But most of those have been described elsewhere."

Daily Telegraph - Oct. 8, 1880 Minerals. - We had to limit our reporter yesterday in this department. He continues his notes today. ..... Canadian petroleum and its products are exhibited by Mr. Joseph Black..... In the collection of minerals from the Mechanics Institute, which we already enumerated, pretty specimens of amianthus or rock-silk, and asbestos from Charlotte Co., are to be seen. They occur in serpentine, a green mineral, of which specimens are also exhibited.On the upper shelf Mr. John O'Neil exhibits polished granite, red and grey.The zinc blende in the collection of the Revenue Silver Mining Co. contains 1.13-00 oz. troy weight of gold to the ton, not 13-00 as reported in our issue of yesterday. Probably if the mine were deepened a larger percentage might be found. The specimens from which the assays were made were taken from 10 to 15 feet below the surface only. The silver and lead ores found in this company's mine at Letete are worth $61.20 per ton, according to the assay of Prof. Burwash. The mine has not been sunk more than 50 feet yet. Nova Scotia

S.J. Daily Sun - Oct. 3, 1883 Exhibition. - Mineral Exhibit. - The Queen Mining Company, of Sussex, managed by Major Markham, furnishes amost interesting exhibit, in a small space, of manganese ores prepared for the use of consumers. The coarser or low grades are used principally in the manufacture of bessemer steel, the market for which is found in Europe; the higher grades are used in the manufacture of glass, varnishes, bleaching agents, etc., and are exported to the United States. Along with the finer ores may be seen the manganese in rocks, in which it occurs in pockets of lower carboniferous limestone, and specimens are also shown of iron ore and dog tooth spars, which sometimes occur with the manganese. Messrs. W.N. Gould and F.W. Stockton show a varied assortment of mineral ores from various districts in the Province. As these are not arranged with any degree of regularity, nor the localities given where they have been found, the display loses some of its value in consequence. Silver galena, copper, manganese and other ores are shown. Mr. Gould also has some specimens of Albertite coal, ground plaster, phosphate of lime, hydraulic limestone, gypsum, lithographic stone, asbestos and verdantique marble. The Natural History Society of New Brunswick display a fine collection of gold-bearing quartz and gold dust from the Waverley mines of Nova Scotia. The different coal companies of Nova Scotia furnish specimens of their products. Those represented at the Exhibition are the Joggins, Minudie, Acadia and Spring Hill mines, and all the different grades and qualities are shown.The different lime and brick kilns about St. Johnhave specimens of their productions on exhibition, andthe N.B. Granite Company make a handsome display both of grey and red granite. The New Brunswick Salt Springs Company showspecimens of fine and coarse salt, manufactured by them at their works, in Upham, King's County. The Lake George Antimony Mines are wellrepresented, not only by specimens of ores, but also by the different processes and materials used in the preparation of metallic antimony. The Lawrence Antimony Mine, of Queen's county, also exhibit specimens. Silver and copper ores are also shown by R.R.Call, Esq., of Newcastle, and copper ores by Dr.Goodfellow of Sussex. Very fine specimens of native copper ore, occurring in trap rock, near North Head, Grand Manan are exhibited. A map of Nova Scotia showing the occurrence of mineral ores in that Province, was sent by Dr. Gilpin of Halifax."

S.J. Daily Sun - Oct. 3, 1883 Exhibition. - Mineral Exhibit. - The Queen Mining Company, of Sussex, managed by Major Markham, furnishes amost interesting exhibit, in a small space, of manganese ores prepared for the use of consumers. The coarser or low grades are used principally in the manufacture of bessemer steel, the market for which is found in Europe; the higher grades are used in the manufacture of glass, varnishes, bleaching agents, etc., and are exported to the United States. Along with the finer ores may be seen the manganese in rocks, in which it occurs in pockets of lower carboniferous limestone, and specimens are also shown of iron ore and dog tooth spars, which sometimes occur with the manganese. Messrs. W.N. Gould and F.W. Stockton show a varied assortment of mineral ores from various districts in the Province. As these are not arranged with any degree of regularity, nor the localities given where they have been found, the display loses some of its value in consequence. Silver galena, copper, manganese and other ores are shown. Mr. Gould also has some specimens of Albertite coal, ground plaster, phosphate of lime, hydraulic limestone, gypsum,

lithographic stone, asbestos and verdantique marble. The Natural History Society of New Brunswick display a fine collection of gold-bearing quartz and gold dust from the Waverley mines of Nova Scotia. The different coal companies of Nova Scotia furnish specimens of their products. Miramichi Gleaner - Nov. 23, 1861 Geological Survey. - Last week we penned some remarks on this survey, which we published. We give below some extracts from the Colonial Empire on the same subject, which convey some interesting intelligence respecting the Geological features and the Mineralogical capabilities of the Northern Counties:- ""It may not be generally known, that Sir William Logan extended his researches in Gaspe into this Province, as far as Bathurst, in order to complete his observations upon the limestone rocks of that district. These limestones are of the Silurian formation, and abound in the fossils which characterise it. When Sir Roderick Murchison, about twenty years since, was contending for the establishment of what is known as the 'Silurian System', he went himself to Archangel in Russia, and sent an Agent to this Province (the secretary of the Geological Society of Cornwall), who visited the Restigouche, and found close to Dalhousie, under the cliffs near the Bon Amie rocks, (Charlefort's Hill) in the Silurian limestones there, a variety of fossil remains well developed, which proved beyond a doubt the soundness of Sir Roderick's theory. When taken to England the fossils were found to correspond exactly with the fossils obtained from a similar formation, by Sir Roderick himself, at Archangel; and the soundness of his Silurian theory has not since been disputed. ""To the Southward of the Silurian basin of the County of Restigouche, there is a belt of metamorphic rocks which crosses the Province from Mars Hill to the Nepisiguit; in this formation copper and manganese have been found extensively, and gold was observed more than ten years ago. ""Passing over this belt of rocks, which stretch across the whole breadth of New Brunswick from Southwest to Northeast, and offer a great barrier to the construction of a railway through the entire province, there is found a wide extent of sandstone country,belonging to the coal formation, which extends along the whole eastern coast of New Brunswick, from Baie Vert to the Bay of Chaleur. From its wide base on the Gulf of St. Lawrence, this sandstone country narrows to the eastward, and on the river St. John, is found 30 miles from thesea, beyond the granite quarries at the head of the Long Reach. Between these quarries and the Bay of Fundy, there is another belt of metamorphic rocks, containing beds of altered slate with veins of quartz of the description known elsewhere as producing gold. That gold will be found in the district, there can be very little doubt; but in what quantity, has yet to be determined. A nugget of half an ounce was found several years ago, in the bedof the River Digdeguash, worn quite smooth by attrition, thus affording proof that it had been borne from some spot near the source of that river. ""At this moment, researches are going on at the expense of private parties, in the County of Albert, which bid fair to produce valuable results. In that country, in addition to the wonderful coal, called Albertine, which furnishes such quantities of Paraffine oil, other minerals of value have lately been discovered. Among these are veins of copper ore, which in beauty of colour and crystallization almost rival the Siberian malachite. A nodule of this ore bearing 60 to 70 per cent of copper, nearly egg-shaped, and weighing about three pounds, is now in the City, and is intended to be sent to the Great Exhibition in London next year where there be little doubt it will attract quite as much attention as the gold of Nova Scotia. ""A mine of manganese in King's County has latelybeen opened, and is now being worked. - The ore is nearly black, highly crystallized, and is being carted to the Railway Station at Sussex, for transport to this City, whence it is shipped to England. Last week quantities of it were at the Sussex Station, affording ocular proof of the mineral wealth of New Brunswick. ""All these things point out clearly the absolute necessity of a complete Geological Survey of this Province, by competent persons. There is evidently great mineral wealth within its boundaries, and the structure of its rocks from the St. Croix to the Restigouche, are of a character to indicate that they are worthy of the most careful examination, and will furnish much mineral wealth of various descriptions, Gold included."

Codes: 0691 / G3 / IDX_Names: Markhamville Manganese; Granite;

Daily Times - Oct. 21, 1886 Colonial Exhibition. - Alfred Markham, of Markhamville, is an exhibitor of Manganese ore of various grades, which are interesting. Milne, Coutts & Co., of St. George, Charlotte County, are exhibitors of a polished granite pedestal which is placed in the most prominent position in the Canadian Court. It is in the centre of the saloon of the great fur trophy and supports a life like statue of Sir Hector Langevin. This pedestal is undoubtedly the handsomest specimen of granite in the Exhibition, being frequently mistaken for Tennessee marble. Many of the English newspapers have called attention to the specimens of New Brunswick granite at the Exhibition, and commented upon the possibility of a great development of trade in this direction."

S.J. Daily Sun - Oct. 19, 1889 The Mines of Canada. - New Brunswick does not take a conspicuous position in Mr. Brumell's returns, but still makes a respectable showing. Here are the items with the values as far as the returns enables the New Brunswick product to be separated from that of the other provinces. Value Grindstones … 3,793 tons $30,729 Coal … 5,730 tons 11,650 Graphite … 150 tons 1,200 Gypsum … 44,369 tons 48,764 Plaster of Paris …50,000 bbls 31,000 Manganese (exported) … 1,181 tons 16,073 Building Stone … 1,953 yds 19,680 Lime … 440,225 bush 82,993 Bricks … 5,064 m 32,294 The statement does not include granite, which for the whole Dominion is valued at $147,305. This may be a fair statement of the value of the rough stone but it is far below that of the polished granite produced in this province alone. The returns of lime produced in the province are evidently incomplete. The New Brunswick lime exports for the year are stated at $97,318, and the value produced was, of course, considerably larger. Adding to the $300,000 credited to New Brunswick by Mr. Brumell the value of granite produced, we find that the mineral product of this province is considerably

IDX_Names: Coal Creek; Granite; Grand Lake Coal;

Daily Telegraph - Oct. 28, 1880 Mining Resources. - Queens County, after Albert, is the next important mining county in the Province. Iron ore is found in various localities, but so far it has never been mined, but the coal fields of the country are extensive and have been worked for sixty or seventy years past. The principal mines are situated at Newcastle, near the head of Grand Lake, where many thousand chaldrons are raised annually, finding its market chiefly in St. John. Coal is also found at Salmon River, Coal Creek, and at Clones, in the parish of Petersville. The vein or seamis horizontal, or nearly so, and is rather thin, being only from 18 to 24 inches in thickness. There has been much speculation as to the existence of a lower or thick vein, and efforts to find it have been repeatedly made. A company bored for the lower vein some forty or fifty years ago at Coal Mines, Salmon River, and within the past eight or ten years the Government Diamond Drill was operated at Newcastle and other places, in one case obtaining a depth of about 700 feet, but without making the desired discovery. Whether or not it settles the question of a thick seam of coal in that locality is still a matter of opinion. Some time ago the then Government of the Province gave certain parties leases to raise coal at Newcastle and vicinity, and out of this a good deal of tedious litigation grew. The late Silas McMann, Esq., and Messrs. Berton of St. John (who held one of the leases) to enter upon and disturb the soil of granted lands. This was finally decided in the negative, and eventually the Government bought up the leases again. For some time past there have been rumors of thediscovery of gold at Coal Creek. The percentage of reality in such discoveries is often quite small, but a late number of the Telegraph contains an advertisement, stating that the Annual meeting of the Coal Creek Gold Mining Company will be held on the 26th of October, and it is signed by W.C. King, who is himself a practical gold miner and ought to know what's what. Let us hope that the future historian of Queens may have something good to tell us about the discovery of gold at Coal Creek. I had almost forgotten to say that there is anexcellent granite quarry near the bank of the St. John river, in the Parish of Hampstead, from which many of our principal buildings have drawn supplies of material. It is quite a descent from gold to granite, but it may be that the latter will prove the more valuable property."

N.B. Courier - Aug. 1, 1840 and Royal Gazette - Aug. 5, 1840 and St. Andrews Standard - Aug. 7, 1840 and Morning News - Aug. 3, 1840 Provincial Geology. - We are informed that an extensive deposit of Iron Ore has recently been discovered at the Head of Belleisle Bay, by Dr. Gesner, and his son. The importance of the labours of our Provincial Geologist are daily becoming more obvious. Forty men, we learn, are employed in quarrying the Granite found by him on the banks of the Saint John in 1838, and a number of vessels are now engaged in transporting the beautiful and durable rock to this City, where it is extensively used in rebuilding the Burnt District, being much cheaper and preferable to the imported varieties. We are informed that the jail at Kingston is to be built of this superior material. It has found its way to Fredericton also, and will doubtless soon become an article of commerce. It is pleasing to observe that the natural resources of the country, by the foresight of the Provincial Government, are becoming better known, and practically applied to the credit and advantage

Weekly Observer - Mar. 3, 1840 Second Report on the Geology of New Brunswick by Dr. Gesner. - We have perused this Second Report with great pleasure, first, because it is written in a very easy and pleasing style, avoiding technicalities as much as possible, and secondly, because it conveys the gratifying information that New Brunswick possesses within herself hidden treasures, greater even than were anticipated by the most sanguine, and which lead us to expect that further and richer discoveries may follow those which have already been made by the enthusiastic zeal and laborious research of our Provincial Geologist. The tract of country under examinations the past season is situated eastward of the Saint John. A line from the entrance of Bellisle River to Shediac will mark its northern side; its eastern limits are fixed at Cape Tormentine and its southern side lies along the shore of the Bay of Fundy, and the Nova Scotia boundary, or isthmus between the Cumberland Basin and the Gulf of St. Lawrence. The length of this tract is about one hundred and thirty miles, and its mean breadth forty-five miles; it embraces the Counties of Kings, St. John, and Westmorland. We have not sufficient knowledge of Geology to follow the writer through the various details connected with the survey of this valuable portion of the Province, but would barely notice some of the leading features of the Report. Of these, the great Coal Field of the County of Westmorland is by far the most important and striking in its character. This great Coal field commences at Shediac and extends along the eastern shore as far as Tedish River, thence running along an irregular line southward it approaches Sackville and meets the new red sand stone near Dorchester Island. A line drawn from Shediac to the Petitcodiac about ten miles below the Bend, marks its northern side. To the westward of the Petitcodiac the coal field becomes more narrow, but maintains an average breadth of ten miles westward until it reaches Sussex Vale; here its extremity is forked; one branch is curved northwest until it meets the source of Studholm's Mill stream, the other becomes very narrow, and disappears a few miles southwest of Sussex church. The whole length of this coal field is upwards of seventy miles, and its average breadth about seventeen miles. The remaining part of the country explored is composed chiefly of new red sandstone, and conglomerate, containing numerous deposits of gypsum, limestone and rock salt, with mineral springs. At the close of the season, Dr. Gesner discovered in the greywacke system, near this city, some fossil trees, accompanied with anthracite coal; and fine specimens of the cactus accompanying indications of the same description of coal, were found in Charlotte street, near the residence of his Worship the Mayor, and also in King's Square. - These discoveries were made in consequence of the cuttings made for levelling the streets, and open a wide and curious field for enquiry. The fossil trees were discovered on the north side of Little River near the Bridge, upon land owned by J.R. Partelow, Esq., in a quarry which had been opened to supply stone for the new Penitentiary. In removing the rock, the trunks of two large fossil trees were exposed, and several of smaller dimensions. The largest was two and a half feet in diameter, and ten feet of its trunk was exposed; the other was sixteen inches in diameter and nine feet long - both were nearly cylindrical. The original trunks are now composed of sandstone, anthracite and sulphuret of iron; the vegetable fibre of the plants still remains distinct, and is now represented by these minerals. These trees belong to the fir tribe; other small plants and impressions of leaves were also found, among them a calamite, a species of reed. According to the latest discoveries, these plants belong to the first classes of vegetables that ever flourished on the earth; they are different from any now growing on its surface, and are relics whose history cannot be traced, reminding the Geologist of the changes each kingdom of organic nature has sustained, since they were first established on this globe. The various discoveries which were made public by Dr. Gesner's first Report, have already, in several instances, been made available, and we have no doubt that those comprised in this second report will call theenergy and enterprise of the people of the Province into operation most profitably. The marl discovered near St. Andrews last year, has already been extensively employed in enriching the soil - the excellent granite on the St. John, at the head of the Reach, is now being quarriedvery extensively, and we shall this year see it employed in the rebuilding of the burnt district, and be quite independent both of Nova Scotia and the United States for the necessary supply of that most useful and durable material. But for the researches of the Provincial Geologist this granite might have remained undiscovered for many years, and we should still have continued importing an article which exists so very near to us, in abundant quantity, and of superior quality. Limestone has been discovered in many places and pointed out to the neighboring farmers, who have almost invariably availed themselves of it. Numerous lime kilns have been established in places where a few years since no limestone was supposed to exist, and lime could only be procured at much expense and with difficulty. The greatdeposit of iron, in

Queen's county, has also attracted attention, and as we understand, has been brought under the notice of some English capitalists, who intend prosecuting inquiries respecting it the coming season, and we trust it may prove all that they anticipate. The discovery of the Westmorland coal field has already raised up a host of petitioners for mining leases, and we observe that a special committee of the House of Assembly has been appointed to take the various petitions into consideration, and decide on the best course to be adopted for the interests of the province. If the unassisted labours of Dr. Gesner during two seasons have effected so much, what may we not expect if those labours are continued, and a liberal provision made for carrying them on more extensively, and in a more minute manner. We trust that the Legislature in their wisdom will see the propriety of following up these researches without delay, and on a more extensive scale, for we believe the real interests of the country will thereby be consulted, and many advantages derived, not only in an Agricultural, but a Commercial point of view. Meantime we recommend a perusal of the second Report, confident that it will

Limestone has been discovered in many places and pointed out to the neighboring farmers, who have almost invariably availed themselves of it. Numerous lime kilns have been established in places where a few years since no limestone was supposed to exist, and lime could only be procured at much expense and with difficulty. The greatdeposit of iron, in Queen's county, has also attracted attention, and as we understand, has been brought under the notice of some English capitalists, who intend prosecuting inquiries respecting it the coming season, and we trust it may prove all that they anticipate. The discovery of the Westmorland coal field has already raised up a host of petitioners for mining leases, and we observe that a special committee of the House of Assembly has been appointed to take the various petitions into

consideration, and decide on the best course to be adopted for the interests of the province. If the unassisted labours of Dr. Gesner during two seasons have effected so much, what may we not expect if those labours are continued, and a liberal provision made for carrying them on more extensively, and in a more minute manner. We trust that the Legislature in their wisdom will see the propriety of following up these researches without delay, and on a more extensive scale, for we believe the real interests of the country will thereby be consulted, and many advantages derived, not only in an Agricultural, but a Commercial point of view. Meantime we recommend a perusal of the second Report, confident that it will afford much pleasing and instructive information to every inhabitant of New Brunswick."

Codes: G3 / IDX_Names: Granite;
N.B. Courier - Jan. 12, 1839 and S.J. Weekly Chronicle - Jan. 18, 1839 Granite Quarries. - We are informed that excellent quarries of granite, were noticed by Dr. Gesner, during his explorations, last summer. They are situated at the head of the ""Reach"" and within two hundred yards of the river. The granite is said to be of a superior quality. It is remarkable that the granite heretofore used in the Province has been imported from the United States and Nova Scotia, while excellent quarries of the rock situated upon the river's side has been overlooked. The above quarries have been purchased recently by Messrs. Caleb and Justus S. Wetmore, and preparations are making for working them in the spring."

N.B. Courier - May 18, 1839 ADVERTISEMENT: Granite! Granite! The subscribers having recently purchased the Granite Quarries at the lower part of Queen's County, on the Saint John River, will deliver in any quantity of that article, either cut or in a rough state, at the quarries in St. John or any other place, at the lowest price. This Granite is situated within a few yards of the River, and is superior to any heretofore used in the Province. Caleb Wetmore Justus S. Wetmore St. John,

Morning News - Sep. 22, 1841Granite! Granite! The subscribers are now prepared to receive orders, and furnish any quantity or rough or hammered Granite, from Wetmore's Quarry. Barker & Ratcliffe. Granite Quarry, Queen's Co., April 14. P.S. - Orders left at the store of W. H. Scovil, will be attended to."

Daily Telegraph - Feb. 5, 1867 The Marble and Stone Works. - Messrs. J. & R. Milligan's works are situated on the south side of King's Square near Sydney street. The proprietors of these works have been engaged in business in our city for about eighteen years, during which time a vast amount of work has been turned out. They employ at present about 10 persons, and are occupied principally with grave stones and monument work. These articles are made in great variety, embracing much that is beautiful in design and as well as superior in general execution and finish. Specimens of their workmanship have found their way to every section of the province, and have also been distributed to a considerable extent through Nova Scotia. The Messrs. Milligan have a deservedly high reputation in their line of business, being themselves practical mechanics, and exercising a careful supervision over the work done in their establishment. They are constantly in receipt of large orders, which are executed promptly. Mr. S.P. Osgood's marble manufactory is also on the south side of King Square. At and near his present situation Mr. O. has been conducting operations in marble work for nearly twenty years. A great variety of excellent workmanship is being constantly turned out here, among which are marble mantels, also some fine imitation Egyptian marbles, marble tops for tables, wash stands, dressing cases, counters, &c., together with tombstones and monuments, which constitute the most important feature of the business. These are sold largely throughout this province, Nova Scotia and Prince Edward Island. Mr. O. informs us that in one year since commencing business here he executed orders for Nova Scotia to the extent of $4000 and that during the past year, in addition to other business, he has shipped several hundred dollars worth of his goods to Newfoundland. About ten persons are employed. Mr. Peter Cormack, in Portland, near the railway station, is largely engaged in the preparation of building stone to be shipped to Portland, Maine. He is also doing a considerable business in the gravestone and monument line, two large granite monuments now under way, which will be, we are told, when completed, the largest yet erected in the province. He has on hand some very fine marble mantels, including some specimens of genuine Egyptian marble. About thirty persons are at present employed in connection with all these branches. We understand that Mr. C. has large orders yet to fill for Portland. The granite here used comes from Mr. Wetmore's quarry, near Spoon Island, on the St. John river. We learn that the quarry can furnish an excellent quality of granite in any size that may be required, blocks having been turned out thirty five feet in length. Steam power is used in Mr. C.'s works to operate the saws used in cutting up the stone into the required shape. The establishment gives constant employment to a blacksmith in making and sharpening tools, &c. Besides the establishments above referred to, Mr. Wm. Tay conducts a considerable business at 56 Duke street. A good variety of articles in stone and marble is usually manufactured here; the business at present going on being the preparation of building stone, hearth stones, stove-pipe stones, &c. A number of hands are employed. The winter season is of course much the dullest of the year in this as in every other branch of the business; hence, it is only fair to add that the total number of persons employed in marble and stone work, in connection with the establishments we have named, will be largely increased in the spring. At present about fifty-five persons are employed. A feature of considerable interest in connection with this business is found in the great improvement which has taken place in the appearance of our cemeteries throughout the province during the past twenty years. Formerly the burial places of our city were rude and unadorned compared with their present state, while in the country districts a few rough stones were the only marks set up at the graves of the departed. Now, in city and country, neat and tasteful monuments and tombstones are everywhere found in the various cemeteries and graveyards. To this improved state of affairs the energy and taste of our city marble workers

Morning Journal - Dec. 28, 1868 Granite For Saint John. - The granite which is being quarried at Eagle Rock, Nerepis, for the bridges of Western Extension, is a very fine description of stone, quite equal in quality to any granite on the continent. After the Railway is opened we expect to see this stone much used for building purposes in St. John. Montreal has been beautified and built up by using the limestone which is found in abundance near that city; why should not St. John be built up in the same manner?"

Morning Journal - Dec. 28, 1868 Granite For Saint John. - The granite which is being quarried at Eagle Rock, Nerepis, for the bridges of Western Extension, is a very fine description of stone, quite equal in quality to any granite on the continent. After the Railway is opened we expect to see this stone much used for building purposes in St. John. Montreal has been beautified and built up by using the limestone which is found in abundance near that city; why should not St. John be built up in the same manner?"

Daily Telegraph - Jun. 18, 1868 Red Granite Quarry. - We learn that a Quarry of this valuable Granite has been recently discovered in Charlotte County. The quality is said to be excellent, being but little inferior to the highly prized and expensive Aberdeen granite. It is capable of receiving a high polish, and will probably be in great demand. The Granite has been traced for five miles in one direction, and believed to exist in enormous quantities. A few persons will probably control

S.J. Daily News - Mar. 11, 1868 NATIVE ROCK. - A very fine specimen of Granite was placed upon our table yesterday, which was quarried on the property of Mr. M. Ferguson, situated between Torryburn and Rothesay. Both in beauty, texture and quality it seems quite equal to the much famed Aberdeen stone of the same description. In these times when there is a prospect that so much of this material will be required for public works, why are we so deficient in public enterprise as not to open our own rocks and supply the market with an article so much in demand, and which has hither to been imported, the home product being quite equal to the foreign."

Morning Freeman - Mar. 12, 1868 Granite. - We have examined specimens of Granite taken from the property of Mr. Matthew Ferguson, near Rothesay. This Granite is very hard and likely to be durable, and appears to meet all the requirements of granite for building purposes. An enormous mass of the material exists on Mr. Ferguson's land, and we understand that this gentleman is anxious to meet any persons requiring the same on the most liberal terms. It lies within a few rods of the railway, the public road and the Kennebecasis, thus affording threefold means of transportation. If the Beacon light is to be rebuilt of granite, and a breakwater is to be constructed in our Harbour by the Marine Department (of which there is some talk)..??.. contractors will do well to make enquiries respecting the granite on the property before

S.J. Daily News - Aug. 16, 1869 Massachusetts block of granite weighed 1,283 1/2 tons ..."

S.J. Daily Telegraph - Apr. 12, 1871 Granite Quarries. - An exchange says: The granite quarries on the main Nepisguit River, four miles from Bathurst, N.B., are coming into prominent notice. Large quantities are being quarried and business there is brisk, and promises well for the summer, in view of the Intercolonial Railroad operations there about. We hear of another excellent granite quarry likely to be opened and worked in Charlotte County."

Mar. 1871 - Copied from: St. Croix Courier - Mar. 7, 1901 30 Years Ago. - It is rumored that some New Yorkers are going to St. George to open a granite quarry."

St. Croix Courier - Mar. 9, 1871 Good for St. George.- It is rumored that some New Yorkers are going to St. George to open a Granite quarry. "

St. Croix Courier - Mar. 30, 1871 Granite Quarry at St. George.- The company recently referred to in this paper, as organized for the purpose of opening and working a granite quarry at St. George, is composed of gentlemen belonging to St. John. The granite is very fine, of a reddish color, and is well suited for ornamental purposes."

Jul. 1872 - Copied from: St. Croix Courier - Jul. 3, 1902 Thirty Years Ago (July 4). - A new granite quarry of great value has been discovered at St. George, near the head of Lake Utopia. The stone is of a dark red color and commands a high price in the New York market. It is principally owned by Col. D. Wetmore and is to be worked by an American company."

St. Croix Courier - Jul. 4, 1872 and S.J. Daily Telegraph - Jul. 5, 1872 and Carleton Sentinel - Jul. 20, 1872 New Granite Quarry.- A new granite quarry of great value has been discovered at St. George, near the head of Lake Utopia. The stone is of a deep red color and commands a high price in the New York market. We understand it is principally owned by Col. D. Wetmore, and is to be worked by an American Company. An engineer and staff are mow at work surveying and locating a road to the place of shipment, and making arrangements for immediate active operations."

Daily Tribune - Jul. 6, 1872 New Granite Quarry. - The St. Croix Courier says:- A new granite quarry of great value has been discovered at St. George, near the head of Lake Utopia. The stone is of a deep red color and commands a high price in the New York market. We understand it is principally owned by Col. D. Wetmore, and is to be worked by an American company. An engineer and staff are now at work surveying and locating a road to the place of shipment, and making arrangements for immediate active operations. There is a report in town that the stock of this company was taken up in New York in an hour, and that a million of dollars constitutes the paid up capital. The material is said to be the red marble or granite, similar to that found on the property in which Mr. Fellows and others of this city are interested."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Telegraph - Jul. 15, 1872 Red Granite. - The schooner N.J. Glass which arrived from St. George yesterday afternoon brought the first shipment of red granite that has been taken from the new quarry at St. George. It comes to Mr. Peter Cormick and is a valuable article for ornamental work on buildings, monumental, etc."

St. Croix Courier - Jun. 20, 1872 St. George.- The proprietors of the granite quarry at St. George have engaged a number of men for the successful working of it, and that operations were commenced on Tuesday."

Oct. 1872 - Copied from: St. Croix Courier - Oct. 16, 1902 30 years Ago. - The quarrymen at St. George are using, in the granite quarries, a new explosive called ""giant powder""."

St. Croix Courier - Oct. 3, 1872 and Daily Telegraph - Oct. 4, 1872 Granite.- The Passamaquoddy Red Granite Co. is the name of the Company owning the Lake Utopia quarries. The proprietors of the Molly Hill Granite Quarry have bought a piece of land and a wharf property near the mouth of the river, to be used as a shipping place for their stone. It is situated some three miles below the head of tide, and will be open to navigation at all times of year. A new face just opened at Porcupine Mountain in the Utopia quarries, gives a better quality of stone than any found before."

St. Croix Courier - Oct. 17, 1872 A New Explosive.- The quarrymen at St. George are using in the marble quarries a new explosive, called ""giant powder"". It is a German invention, and is partly composed of nitro-glycerine. It is about the consistency of dough, can be cut with a knife, is of a whitish color, uninjured by water, and is said to be safer and very much more powerful than common powder."

Daily Telegraph - Oct. 22, 1872 An Excursion to St. George. - ... The next morning dawned bright and clear, to the joy of the party bound for the Red Granite Quarries. A delightful day is spent in wandering among these granite mountains, wading through mud, stumbling over broken off blocks of granite, risking one's life climbing to the summit of some lofty crag where, perhaps, one false step would land you at the bottom of a ravine or leave you dangling from a rugged rock. These dangers, however, were unheeded or forgotten in the beautiful views presented, the interesting bits of natural history written upon the rocks and mosses, and in the animal life abounding in this seclusion, to say nothing of the enormous wealth buried in these mountains only waiting development. ..."

St. Croix Courier - Sep. 5, 1872 The St. George Granite Quarry.- Men are now engaged in getting out granite at the head of Lake Utopia. A quantity of stone will be shipped to New York this season so as to introduce it in that market."

S.J. Daily Telegraph - Apr. 25, 1873 Red Granite. - A new Red Granite Quarry at Bocabec is well reported. It is some nine miles from St. Andrews, in the district of St. George, and within a mile and a half of a convenient place for shipping, the route being one very favorable for a tramway. The specimen left at this office looks well, being fine-grained and very firm."

Daily Tribune - Aug. 6, 1873 St. George Red Granite. - A shaft of St. George Red Granite, polished in New Haven, was received by Mr. E.N. Sharp yesterday, and drew a crowd of sight seers. The surface is so smooth that the assertion of a legal wag that it was covered with glass was accepted by many as true. The shaft is to be set up in front of the Tribune Building as a standing advertisement of the superior quality of the granite supplied by the St. George Company. Polishing mills will soon be in operation at the quarries."

Daily Telegraph - Aug. 6, 1873 Red Granite. - A Splendid specimen of red granite from the St. George quarries was received at the office of the Secretary, E.N. Sharp, Esq., yesterday. It is in the form of a polished shaft, four feet nine inches long and ten inches in diameter. The polish is perfect and glass-like, and the color of the specimen higher and more brilliant than that of the best imported Scotch granite. the polishing was done at New Haven, Conn. The shaft is to be set up at the door of the Company's office, Prince William street."

Codes: G3 / IDX_Names: Granite;

Daily Telegraph - Aug. 7, 1873 [For the Telegraph] The St. George Red Granite Mountains. --A few days since I had the pleasure of accompanying a small picnic party to the summit of Mount Trunion, one of the highest peaks of the Red Granite Mountains at St. George. We arrived at the quarries at 3 o'clock p.m. The quarry where the company is at present operating is a snug little triangular nook in the side of Mount Trunion, facing the river, eighty feet above its base, and occupying an area of about half an acre. The ascent to it is smooth and regular, and not too steep to admit of a good carriage road to within two hundred feet of the quarry; here there is a flat of, perhaps, half an acre, upon which are erected the blacksmith's shop, and sheds in which the stones are dressed. From this flat to the quarry the grade is heavier, and here there is a sluiceway, two hundred feet long, down which the rocks, after being blown off the sides of the adjoining ledges, trimmed and squared in the quarry, and hoisted and swung on board of sledges, by means of a giant crane, are sluiced at a 2.40 rate, as we had the pleasure of witnessing, to the yard below, where they are dressed ready for polishing. The sluice in going down hauls up an empty one, thereby keeping an empty sledge at the head of the sluice when wanted, and saving the time and labor of hauling it up. The face of the quarry, for the two sides of the triangle, are solid, perpendicular ledges, forty or fifty 15 feet in height, and as even as if hewn down. Above, the mountain recedes in irregular bluffs to the summit, three hundred feet above the level of the river. After watching the operation of stone quarrying for a little time, our party continued their journey to the top of the mountain, which was only reached after a good deal of laborious climbing, but when the summit was gained our eyes rested upon a scene that amply repaid us for our journey, one of the most beautiful panoramic views that the continent of America affords, lay before us. The verdant valley of the Magaguadavic, bounded on each side by sloping hills and rugged granite mountains, can be seen for a distance of eight miles. At the lower end of the valley, three miles distant, where the river takes a mad leap into the sea, stands the village of St. George; and at the upper end, five miles distant, where the waters from above leap down a precipice of twenty feet, the Second Falls Village appears in view. The river, which the eye never loses sight of in its whole course down the valley, save here and there where a clump of trees hides it from view for a short distance, looks, from the mountain top, like a great bright chain lying along the valley and connecting the villages. Looking away to the southwest the eye rests upon Passamaquoddy Bay, L'Etete Passage, Eastport, Campobello, McMasters and Deer Islands, the White Horse and Grand Manan; and to the southeast there is a good view of Lake Utopia, L'Etang River, the Bay of Fundy and the Wolf Islands, while to the northeast the blue hills of Piskahegan meet on the horizon. After feasting our eyes on the prospect before us, our attention was attracted by a feast of another description, and our appetites being sharpened by our journey, we made a descent upon the edibles. One of the directors of the St. George Red Granite Company, in honor of our visit, had a Union Jack hoisted on top of the mountain, and here, beneath ""the flag that braved a thousand years the battle and the breeze,"" but for the first time waved o'er Mount Trunion, we sat down to refreshment, and opened a discharge of miniature artillery in respect to the old flag, by popping off ginger beer bottles, etc. Our picnic was a pleasant one, and we would heartily recommend Mount Trunion as the place for a picnic. Yours, etc., uill"

S.J. Daily Telegraph - Aug. 15, 1873 St. George. - The first cargo of red granite from St. George goes to New York by the schooner Ben Bolt. It is shipped by the Bay of Fundy Red Granite Company."

S.J. Daily News - Dec. 2, 1873 Sale of Red Granite stock. - Attention is directed to the advertisement of the sale of a number of shares of the Bay of Fundy Red Granite Company stock, which takes place today."

S.J. Daily News - Dec. 2, 1873 ADVERTISEMENT: Bay of Fundy Red Granite Stock. The subscribers will sell at Public Auction, at Chubb's Corner, in the City of Saint John, on Tuesday, the 2nd day of December next, at 12 o'clock noon:- Ninety-Five shares of the above stock, if not previously disposed of at a private sale. Nov 27 Pugsley, Crawford &

S.J. Daily News - Dec. 5, 1873 and St. Andrews Standard - Dec. 10, 1873 Discovery of Red Granite. - Red granite, equal, it is said, to Aberdeen, has been found on the Pokiok by Mr. Jas. Rouse, of York County."

Daily Tribune - Dec. 9, 1873 and S.J. Daily Telegraph - Dec. 10, 1873 St. George Red Granite Company. - The annual meeting of the St. George Red Granite Company was held at the Board of Trade rooms at 11 o'clock yesterday. The following gentlemen were chosen directors: Peter Cormack, Sam'l. Johnson, C.H. Fairweather, B.S. Hall, James I. Fellows, J.P.C. Burpee, Edwin Fisher. At a subsequent meeting of the Board, Mr. Burpee was re-elected president, and Mr. E.N. Sharp, secretary-treasurer."

S.J. Daily News - Dec. 10, 1873 The St. George Red Granite Company. - The annual meeting of this Company was held at the Board of Trade Rooms 11 o'clock yesterday forenoon. The following gentlemen were chosen directors: Peter Cormack, Sam'l Johnson, C.H. Fairweather, S.S. Hall, Jas. I. Fellows, J.P.C. Burpee, Edwin Fisher. At a subsequent meeting of the Board, Mr. Burpee was re-elected President, and Mr. E.N. Sharp, Secretary-Treasurer."

Codes: G3 / IDX_Names: Granite;

Daily Tribune - Dec. 11, 1873 N.B. Red Granite.- [From the Boston Journal of Commerce]. -The men of the Provinces are daily growing alive to the natural resources of that section, and to the profit to be obtained from a development of them. Mining companies have, within the past few years, been organized, and these enterprises have been generally very successful. Recently was organized the Bay of Fundy Red Granite Company, having as stockholders some of the most enterprising capitalists of St. John. The company is working rich red granite quarries, situated on the St. Croix River at St. George, N.B., and the granite is declared by competent men to be unequalled by any in the market. Already large contracts for it have been received, and several public buildings are to be erected of this stone. In appearance the granite is largely similar to that composing the pillars at the entrance of the Sears Building in this city, and the richness and grandeur can therefore be judged of. A new Shore Line from Portland to St. John, via Calais and St. Stephen, is now contemplated, and this line would greatly develop trade between the Provinces and the States, which cannot but be of

St. Andrews Standard - Feb. 19, 1873 The St. George Red Granite Company recently organized with a capital of $60,000, half of which is paid up, intend to commence operations early in the spring. The granite is of the best description, and is said to be equal to the Scotch, but finer texture, and is as suitable for monuments as building purposes. It is owned by a St. John company, C.P. Burpee, President, and E.N. Sharp, Secretary. The company has purchased the red store and about an acre of land, near the mouth of the river, for a place of shipment, and will lay a tramway to the quarry which is about three miles distant. All the necessary implements have been ordered, and a large wharf will be built on the opening of

Daily Tribune - Feb. 20, 1873 The Red Granite Quarries. - Both of the St. George Red Granite Quarries will be worked next summer. The St. John Company has contracted for sleepers and timbers for its tramway and wharf."

Codes: G3 / IDX_Names: Granite;

S.J. Daily News - Feb. 25, 1873 A Product of New Brunswick. - The St. George Red Granite Company and Its Prospects. - A Fine Specimen of Our Mineral Wealth. - For some time past the attention of the public has been directed to some fine specimens of red granite, which have been taken from a quarry in the neighborhood of St. George, and, which for closeness of grain, beauty and richness of color, and capability of taking a fine polish, surpasses even the world-wide reputation of the products of the famous Peterhead and Aberdeen quarries. This granite was discovered by Mr. Peter Cormack of this City about four years ago in the neighborhood of St. George. Mr. C. has had a large experience in the quarries of Peterhead, and is able to form a thorough and correct estimate of the qualities of this new stone. He has subjected it to the test weather and it has far surpassed the expectations formed by the most sanguine of those who form the Company. Some of the finest portions of it have been exposed to the action of the frost during the past severe season without the slightest apparent injury to the texture or finish. Among these are some monuments in Mr. Cormack's yard, near the St. John Railway Station, an examination of which ought to convince even the most skeptical that New Brunswick has mineral wealth, which though still undeveloped, is destined to be a mine of wealth to this country. There are several fine monuments of stone to be seen on the Yard, among which is one for the grave of the late Mr. Wm. F. Starr. This shows the fine color and beautiful texture of the stone, and the polish which it can receive. No effect whatever is produced by rubbing any hard substance over the smooth and polished surface, and the superior finish which it takes is not liable to be defaced. The monuments of this granite, when placed in the Cemetery, will fully equal those brought from the Scottish quarries. The Company which was formed in October last for the working of the mines, is composed of practical and 7 energetic men, and they are fully alive to the merits of their discovery and its importance in increasing the prosperity of the Province. The Company was formed under the General Act of the local Legislature, and at the coming session they intend to apply for a special act of incorporation. The names of the Directors are Messrs. Peter Cormack, Hall & Fairweather, J.I. Fellows, I. & F. Burpee, E. Fisher, J. & G. Lawrence, H. Laurence Sturdee, W. Godsoe, C.A. McDonald Edwin Frost, and E.N. Sharp, Sec'y., of St. John, Mr. S. Johnson, St. George; Mr. H. Fisher, New York, and Capt. Moody of Halifax. The capital stock amounts to $60,000 which has all been paid in with the exception of two shares. The amount of each share is $1000. Sufficient work only has been done to get as much stone as will suffice to test its quality and adaptability for building and other purposes. The Company is to commence active operations as soon as the season is opened. Contracts are now out for the building of a railway or tramway from the quarries down as far as deep water on the Magaguadavic, a distance of three and a half miles. Here a wharf will be built and vessels will be enabled to come up and be loaded with the granite as it is quarried and carried down. The quarrying will be commenced as soon as the snow is off, and a large force of men will be employed at once; and before the end of the year there is no doubt but that between one and two thousand men will be at work. The hill where the granite has been found and where the quarries will be established is about one mile from the town of St. George. It is a bluff about five hundred feet high, and is supposed that the supply is inexhaustible in extent. Only a portion of the outside proved to be of a crumbly nature, and the pieces which are in Mr. Cormack's Yard have been taken out below the surface and have been found to be close and hard in grain, and to split very evenly. The further below the surface it is worked, as a matter of course, the finer the stone will become, and some years will elapse before the finest portions shall have been reached. It is but safe to predict that before that time it shall be known and prized over the whole Continent, and be one of the principal articles of export from the Province. Comparing it with the granite of the Peterhead and Aberdeen quarries it is fully equal in texture and color, if not superior. It exceeds the granite from the Scottish quarries in that a column of almost any size necessary for building purposes can be taken out without a spot or a flaw in it. It is well known that this is not the case in the granite from the old country quarries, a great deal of it being spoiled by flaws. This with the duty on it and the large freights across the Atlantic make it a very expensive article for building purposes. When the quarry at St. George shall be in operation the granite can be placed in the Dominion and United States markets at less than half the cost of the Peterhead granite. The beauty of this latter for building purposes can be appreciated by those of our readers who have seen the beautiful and imposing structure, the Moulson Bank Building of Montreal, which is built of freestone, the columns being of Peterhead and Granite. The exports of New Brunswick have not been extensive if we except lumber, and it must be plainly evident to the commonest observer that the forests of New Brunswick cannot for any considerable period bear the demands that have been and are now being made on them. To be sure there is a quantity of coal exported from this Province. Mr. Fellows has been an exporter of Hypophosphites, and Mr. Foster's tacks are known out of the Dominion as well as in it; but outside of the single article of lumber, New Brunswick is far behind the sister provinces and the adjacent States in her export trade. It is conceded both at home and abroad that her undeveloped resources are unbounded and all that is wanted is a sufficient display of capital and enterprise to make this one of the most productive portions of the Dominion. All that is asked by the company who have started this new branch of industry in our midst is a fair trial of the merits of the granite, and it is but just that their undertakings should be encouraged both by the Dominion and Local Governments. The New Post Office building, which is about being put up in this city, the foundations of which are already being laid, ought to be such a structure (we have waited so long for it), as to be an ornament to this City and Province. If it be built of this beautiful material it cannot fail to be so, and it will stand for generations, not only the pride of our citizens and the admiration of strangers, but a monument of the products of our own Province, and an epoch in the history of our mineral wealth. The Company will make an offer to the Dominion Government to supply the stone for the Post Office building at little or no profit to itself in order that the new material may be brought before the public and the erection of a handsome and costly structure be secured to our citizens. Of course the material is of too costly a description to make it a common article for buildings, and the demand for purposes of ornamentation, for columns, freestone buildings, will no doubt be fully equal to the supply. If the contract for the stone be secured by the St. George Company the result will be the construction of one of the handsomest buildings in the Dominion. The color of this granite, a very handsome specimen of which may be seen at this office, is a rich rose or salmon colour, very equally diffused. Some pieces that have been taken out are of a lighter texture. Heretofore the Peterhead stone has been used in this country for monument work, being too costly for building purposes, but from the facilities for procuring it from the quarry at St. George, it will come into extensive use as an ornamental building stone, and particularly as it may be used in a chiseled state or polished, or in its rough quarry face, which would make a very handsome building front. The value of the importation of the quality of stone from Scotland to the United States is about $82,000,000 per annum, the business has restricted by the high price of the material in Scotland and the cost of transportation. The stone has been polished and completely manufactured before its shipment, no polishing works having been employed for this kind of stone on this side of the Atlantic. The monuments that have been made at Mr. Cormack's yard, the present season, are the only ones that have been made in America. When the work of quarrying is commenced, a polishing machine will be put upon the spot and the stone polished as required before shipment. It is not easy to over estimate the amount of traffic which is likely to arise from this source, as there exists on the Continent no other quarry other than the one in the neighborhood of St. George. The tendency of late has been to produce architectural effects by contrast of colour rather than by elaborateness of detail. Since the discovery of Red Granite in St. George has been made public, it has been adopted for some very important buildings in the United States, among which, we may mention the building that is to be erected in Central Park, New York, for a museum of Natural History. The building when completed will be much larger than the British Museum. Several other large contracts have been entered into by the company, and the

S.J. Daily Telegraph - Jan. 31, 1873 The St. George Red Granite. - The Gazette announces that Jacob S. Brown, Abram Volk, Charles C. Ward, John M. Moffitt and George G. McGlashan, all of New York, have compiled with the usual formalities of incorporation. The company is to be styled ""The Bay of Fundy Red Granite Company,"" for quarrying, working, polishing, shipping and selling stone, metals and minerals. The capital is $200,000 in 2000 shares of $100 each, and the place of business St. George."

S.J. Daily News - Jun. 4, 1873 Red Granite of St. George. - Considerable interest is being awakened with regard to the red granite of St. George. Its adaptability to the requirements of our country as an ornamental stone, has been settled beyond a doubt, while the facilities for carrying on the operations of the company will, in a short time, be such as will prove a great industry to that section of Charlotte County in which the works are to be located. The stock of the Company is being sought after, and with the management of such gentlemen as compose the Company, can scarcely fail to be a safe and profitable investment. Some beautiful specimens of this stone, when polished and cut, have lately been seen and admired in the yard of Mr. P. Cormack."

Daily Tribune - Jun. 13, 1873 Glass Cutting. - At the office of the Secretary of the Red Granite Co., Tribune Building, may now be seen a plate of glass, five-eighths on inch in thickness, through which a pattern of scroll and filagree work was cut in the short space of eight minutes. The work was done by aid of sand, propelled by steam. The polishing machines of the Red Granite Co. which will shortly be in operation at St. George are worked on the same principle."

S.J. Daily News - May ?, 1873 The Red Granite Company. - As will be seen by advertisement, the stockholders of the Red Granite Company are to hold a meeting on the 27th inst. The Directors meet today and, among other business, will consider the question of whether the tramway shall be run by steam or horse power. Mr. Sharp and Mr. Fellows returned on Saturday evening from St. George where they had been preparing matters for early operations, and a number of working men will go down on Monday next. A blacksmith shop will be put up at the Quarry and the requisite bellows, anvils, steels for drills and implements have already been forwarded. The tramway from the Quarry to the wharf at the Red Store will be three and a half miles long and will be put in operation at once."

S.J. Daily Telegraph - May 9, 1873 St. George. - The Red Granite Companies are preparing for operations immediately. About twenty men are now employed putting up buildings and clearing off the quarries, for the workmen who are coming next week. The St. George Company intend building a railway from the quarry to Saltwater, a distance of three and a half miles. It will probably be commenced in ten or twelve days."

Daily Tribune - May 12, 1873 The St. George Red Granite Co. - A number of the Directors of the above company returned this morning from a visit to their quarries at St. George. Operations will be commenced at the quarries on Monday next. A comfortable boarding house has been provided for the workmen, a number of whom are expected to go from this city on Saturday. The sleepers for tramways are all out on the ground ready for use, and the tools for blacksmiths and workmen will be placed on the ground at once. A special meeting of Directors has been called for Tuesday, May 27th, at which it will be proposed to 10 increase the capital stock. At that meeting it will also be decided whether the polishing mills will be located at St. George or in this city. The enterprise is now in the hands of energetic capitalists, and liberal dividends will doubtless reward their enterprise."

Daily Tribune - May 15, 1873 Native Building Stone. - The best friends of the country are those who work for the development of its resources, and one of the most valuable of our resources is our stone. The price of wood advances, and the danger of its too lavish use becomes more apparent every year. In a few years men will not think of erecting fine warehouses or residences of hemlock and pine, but will use brick or stone. The building stone found in these Provinces is not surpassed by the product of any other country. The quarries now worked are paying large profits to the owners and doing much to benefit the general public. The two quarries at St. George will soon be in full operation, giving work to a large number of laborers, supplying a market for home produce, and materially increasing the exports of the Province. The stock of the St. George Red Granite Company is already held at a premium - cannot be bought at any price. But these are not the only valuable deposits waiting to be quarried. Among our most valuable deposits of building stone is that at Port Philips,

S.J. Daily Telegraph - May 15, 1873 St. Stephen. - Red Granite. - A number of men are now employed by the R.G. Company of St. George, clearing up the quarries and erecting buildings for the workmen. Railway. - In about a week from date the St. George Company intend to begin the building of a railway from the granite quarries to saltwater, a distance of three and a half miles."

Codes: G3 / IDX_Names: Granite;
Daily Tribune - May 27, 1873 The St. George Red Granite Company. - A meeting of the St. George Red Granite Company was held in the Board of Trade room at 11 a.m. today. There was a full attendance. The company placed itself under the new act of incorporation, and increased the capital stock from \$60,000 to \$300,000, part of this amount to be placed in the market. It was also decided that a polishing mill be established at St. George forthwith. A committee was appointed to revise the by-laws, after which the meeting adjourned to meet again on Monday next at 11 a.m."

S.J. Daily Telegraph - Nov. 11, 1873 Red Granite Stock. - An opportunity will be afforded to-day to those who wish a good investment, of obtaining stock in the Bay of Fundy Red Granite Company, forty-five shares of which are to be offered at auction."

St. Croix Courier - Nov. 13, 1873 Red Granite.- Messrs. W. McDonald & Son, Milltown have received an order for a large lot of shafting gear, pulleys, &c. for the Bay of Fundy Red Granite Co., which is being manufactured at their shop, Milltown. We are glad to know that the company is pushing matters forward so energetically."

Daily Tribune - Oct. 7, 1873 St. George Red Granite Quarry. - Mr. Johnson, of St. George, N.B., the resident director of the above Company, is in town. He reports the construction of the Company's works near St. George progressing satisfactorily. The Tramway (2 ft. 6 inch gauge) has been completed from the quarries to the Polishing mills, a distance of three quarters of a mile. The foundations for these mills are laid, and the frame is nearly all raised. The design of the building is a hollow square, 150 feet across. One corner tower with two of the sides of the square (121 feet in length each) will be all that will be constructed now. A fifty horse-power engine and boiler, constructed by Messrs. Allan Bros., of this city, has been sent down to St. George, and will be put in position in a week or two. Fifteen of the columns for the new Post Office in this city have been quarried, two of them dressed, and four others are on the blocks. Several hundred tons of stone of various sizes have also been quarried, some of the blocks being 16 feet long, and as square as hewn timber. There have been for the last month forty men constantly employed in these works, and the development is being pushed on with all possible speed. A monumental order from Greenwood Cemetery, New York, has lately been received by the Company."

S.J. Daily Telegraph - Oct. 16, 1873 St. George. - A. McGlashin, Esq., the Superintendent of the Bay of Fundy Red Granite Works, has just returned from Scotland, with the requisite machinery &c., to fit up the large workshop in course of erection. He also brought out his wife, three children and nurse, as he has decided to make his home in St. George - and four stalwart Scottish, skilled workmen, to take charge of the works."

S.J. Daily Telegraph - Oct. 16, 1873 There is great activity at present in St. George. Both Granite Co.'s are prosecuting their works with great vigour, and ere winter sets in, the various establishments required to dress and polish granite, will be completed. Mr. McGlashin says his countrymen at home are quite skeptical about the existence of any quantity of red granite in New Brunswick."

Daily Tribune - Oct. 20, 1873 St. George Red Granite. - There will be an excursion to the St. George Red Granite Quarries on Thursday, the party going by the steamer City of St. John and returning the following day. Mr. F.T.C. Burpee, President of the Company, has invited two hundred merchants and others to go as the guests of the Company."

S.J. Daily Telegraph - Oct. 20, 1873 Excursion - The excursion from St. John to the works of the St. George Red Granite Company by the ""City of St. John"", on Thursday next, promises to be a very enjoyable affair."

S.J. Daily News - Oct. 21, 1873 Red Granite Quarries. - The Red Granite Quarry Company, through their President, Mr. I. P. C. Burpee, have invited a number of persons to visit the Quarries on Thursday, 23rd inst. The trip will be made in the steamer ""St. John"" and the party will return the next day."

Morning Freeman - Oct. 21, 1873 On Thursday next a number of gentlemen, invited by the company, will visit the Red Granite Quarries at St. George. The quarries furnish stone of fine grain, beautiful in colour, and great size, and should prove very valuable."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Telegraph - Oct. 22, 1873 St. George Red Granite Quarries. - Preparations for working the Red Granite Quarries at St. George are now being prosecuted vigorously by both the companies engaged in it. The Bay of Fundy Company are erecting an extensive building in the village, on land purchased from F. Barry, Esq., adjoining his mill. The stone will be floated down the river on scows from the quarries - distant 3 miles - to the polishing works, where they will be dressed by the workmen, and polished by machinery driven by water power. The St. George Company have also located their works, which will be driven by steam power, half a mile from the quarries on a twenty acre block of fine intervale land on the river, within two miles of the village. They are erecting, for their dressing and polishing works, a building 150 feet square, with a yard 98 feet square in the centre; or rather four two story buildings 29 feet square, connected in the form of a square by four one story buildings, each 29 feet wide, and 92 feet long, thus leaving a yard in the centre containing 8,464 square feet. A railway is already built from the quarries to the buildings, down an easy grade just sufficient to allow a loaded car to run of its own accord, from the quarries to the polishing buildings in one minute. The empty cars are hauled back by horses. This company has special facilities for conveying the stone to the mill very quickly. A stone may be hoisted and swung out of the quarry on a crane, sluiced 200 feet down the side of the mountain, taken up by another crane and placed on the car, and in five minutes from the time it was taken hold of in the quarries, it will be in the mill, all accomplished with very little labor. The railway terminus will be at deep water, distant three miles from the works and two miles from the village - where the stone may be shipped in vessels of almost any size at all seasons of the year, excepting mid-winter. This company has a contract to furnish 18 columns 12 feet long, 1 ft. 10 in. diameter at base, for the new Post Office building in this city, several of which are cut, ready for polishing, and present a very beautiful appearance. They have also several good specimens of monuments ready for polishing, and no doubt before the winter sets in the polishing mill will be in full operation. If we may take for a criterion, a double house which was commenced on Friday morning last, and at noon on Saturday following was enclosed and studded off inside. The company purposes erecting several of these houses on their grounds for the workmen, and judging from the manner in which the ground is being laid off by Mr. Johnson, one of the directors, we would not be surprised to see a pretty little town spring up near the site of these really important works."

St. Croix Courier - Oct. 23, 1873 The Red Granite Quarries.- The excursion from St.John to St. George to-day in the interest of the St. George Red Granite Quarries promises to be a very enjoyable affair. St. Stephen and St. Andrews will also be represented."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Telegraph - Oct. 25, 1873 St. George. - A Trip to the Red Granite District.- The Town -- Its Industries, Etc. - Preparing For Business. - The Lake and Its Legend. - On Thursday morning a party of St. John gentlemen, consisting of capitalists, merchants, members of the press and others, left the city for St. George by the steamer City of St. John. The excursion was got up by the St. George Red Granite company, with a view of affording those invited the pleasure of a trip over the attractive water route to one of the most important localities in New Brunswick, but principally, of course, for the more business-like reason of having the value of the new quarries as fully and generally understood as possible. Prominent amongst the party were Gen. Warner, Sheriff Harding, John Magee, John McMillan, James I. Fellows, J. DeWolf Spurr, William McGee, A. Chipman Smith, George S. DeForest, James Trueman, E.N. Sharp, H. Lawrence Sturdee, and others. On the way down everything passed off pleasantly, and with the real enjoyment which always characterizes such excursions, when they are made up of St. John men. Dinner was provided by the steward, Mr. Knight, on the order of the company for their guests, and about one o'clock the mouth of the Magaguadavic River was reached. The party went on board the tug boat Utopia, which connects with the City of St. John regularly, and proceeded to St. George, which is about four miles up the river, on its left bank. Of course the captain of the boat was at the wheel, because he knew the channel of the river best, and the engineer was permitted to retain the control of the engine, while nobody seemed disposed to perform the duties devolving on the fireman. In all other respects the St. John men owned the boat and everything movable and immovable pertaining to her, and enjoyed their temporary possession with a vigor and enthusiasm which must have conveyed to the dwellers beside the river and those on the shipping they passed the impression that a marine circus had become one of the institutions of the day. With a continued salute of firearms from the upper deck, and amid the screeching of the steam whistle, heartily, yet with comparative faintness, sent back from the crowd on the wharf, the landing of the excursionists was effected and the business part of the proceedings commenced. The gentlemen named above selected a many seated Express wagon for the conveyance of the party who had been sea-sick and still retained large quantities of explosive exuberance, and having placed them in it, under the charge of William Magee, Esq., as a controlling influence, they were started off for the quarries, to be followed by the older and more staid members of the party. Carriages of various kinds being in waiting, the visitors and citizens of St. George who accompanied them formed quite a cavalcade as they took the upriver road towards the red granite mountains, which stood three miles distant, rising hundreds of feet on either river bank and receding in two ridges beyond view. The area owned by the St. George Red Granite Company consists of a block of land lying on the right bank of the Magaguadavic, containing about 1,600 acres, and commencing half a mile above the mouth of the channel which leads into the famous Lake Utopia. It is almost entirely composed of red granite, and were it only half the size it is there would be practically an exhaustless supply of stone for all the purposes for which it may be required. It is in possession of a stock company with an authorized capital of $300,000, which is divided into shares of $100 each and is being offered to investors at ten per cent off the par value. The value of the stone first attracted the attention of Peter Cormack, Esq., and next of James I. Fellows, Esq., of St. John, who, with the aid of Samuel Johnston, Esq., of St. George, secured the property from Mr. Hugh Mathewson, who was the principle owner, and others. Mr. Cormack had taken out and dressed several very nice monumental stones for the St. John Rural Cemetery, and their quality, as established in the opinion of all good judges who saw them, together with that of specimens taken abroad for the inspection of builders, resulted in inducing capitalists to take hold of an enterprise for the development of the quarries on a large scale. An Act of incorporation was procured and the Directors chosen under it, on 12th December last, are as follows:- John P.C. Burpee, Esq., President, Isaac Burpee, S.S. Hall, C.H. Fairweather, James I. Fellows, Peter Cormack, Esqrs., of St. John, and Samuel Johnston, Esq., of St. George. E.N. Sharp, Esq., is the Secretary. A few men were set at work on the southeastern portion of the mountain, near what is known as Cleopatra's Needle, which has already formed the subject of an illustration in the Canadian Illustrated News. Out of this rock, which is in reality a huge boulder, some very handsome pieces from ten to sixteen feet in length have been taken, eighteen of which, intended for columns for the St. John Post Office, are now being dressed and will be polished as soon as possible. They vary in length from ten and a half feet to twelve feet nine inches, and will be 22 inches in diameter at the lower end. These, with some monuments, are now preparing at the quarry for transportation to the polishing mill. The work at the quarries is under the superintendence of Mr. John Sleeth, of St. John. When the excursionists arrived at the mountain on Friday afternoon they found men at work in a large shed cutting and preparing stone, while others were at the upper end of a ""sluice"", which was the point at which the quarrying was done. The sluice is about ten feet wide, and two hundred feet long, and lies on an incline of about 20 degrees. One half of it is divided off by a strip of scantling, which extends from the bottom to the top, with a corresponding strip on the outside edge, and between the two on the plane a rough and strong sled or drag passes down with the stones from the quarry. The sled runs with great velocity and is unchecked until near the bottom of the sluice, where a rope, attached to it and reeved through a block at the top is drawn tight with a switching motion and draws a smaller drag up the sluice on a portion of its other half. When the stone reaches the bottom, however, it has sufficient momentum to cause it to slide or tear ahead off the sled, and sometimes it is partially buried in the ground where it stops. There is a winch crane at the top of the sluice by which the stones are easily handled and adjusted on the drag, and at the bottom there is a similar crane by which they are taken up and placed on the cars at the quarry end of a tramway, half a mile in length. This road is quite an undertaking. It was surveyed by John McCallum, Esq., C.E., who merely blazed out the route, and S. Johnston, Esq., who appears to be chief and only manager, put some twelve men on it and finished it all up within two months. It has wooden rails faced with iron, the rails being let down half way with the sleepers, and wedged firmly into position. The gauge is 2ft. 6in. The grade of the tramway is of sufficient descent to give a rate of speed of twenty miles an hour to the cars which, near the end of the road run on level rails to the polishing mill beside the river. The empty cars are at present drawn up again to the quarries by horses, but the grade is quite easy enough for an engine, which may be procured by and bye to do the work. At the river end of the tramway the company own an additional twenty five acres of good land, mostly level, and they are erecting a large building in which they intend to put the machinery for polishing, considerable of which is now on the ground. The boiler and engine, as well as the other machinery, is from Allen Bros.' foundry and shops, Carleton. Mr. Israel Longley, of St. John is now erecting a building 150 feet long and 26 feet wide, which with an ell, also under construction, will form two sides of a rectangular structure having a central yard or area of over 8,000 square feet, into which the tramway will run after passing through the building. The supply of sand for grinding and polishing the stone is obtained at present from the shore of Lake Utopia, and the company have now some 250 bushels in their new building ready for use. It is sharp and possess all the qualities which are desirable for the purposes of the company, who, after they have started the works, expect to use the sand near the site of their mill, which, they think, is as good as the other. The company have purchased an acre of ground at what is called the Red Store wharf, on the river side, three miles from the quarry, and something less than a mile below the town, on the opposite side. The purchase includes the wharf. Arrangements have also been made for the right of way from the polishing mill to the wharf, sleepers and rails have been bought and the iron already secured to continue the tramway to the company's deep water terminus, where shipments of the products of the quarry may be made nearly all year round. Excelsior. - When the excursionists saw the men of the quarry nearly a hundred feet above them working on the perpendicular face of the rock, they lingered only to see a large block sent down the sluice, when the most aspiring started for higher regions. A prominent artillery officer stopped in the van to catch his breath, and occupied the time by attaching his pocket handkerchief to a pole, after which he climbed higher until he had gained the brow of the crag, where, with the last inhalation of which his lungs were capable, he cried ""Excelsior"", waved the flag, stuck the pole in a crevice, and fell back in the lichens and blueberry bushes which crept out as if to have a look at the advancing enemy who, with drill and powder, were mining away their hitherto undisturbed seclusion and threatening their existence. The excelsior man was soon joined by less hasty adventurers, on the arrival of whom he sat up, and when an officer of the company appeared with a party by the name of Martell, there was general jubilation, and all signs of exhaustion disappeared. A few words of dedicatory character were spoken by Mr. Sharp, Mr. Cormack and other gentlemen, a watch fire was lighted, and the Grand Lecturer ordered it put out, and then a further exploration of the extent of the mountain was made. The further the party went the greater and higher the mountain appeared, until the pursuit of the red granite subject was abandoned, and while some returned others who remembered their cosy homes set about gathering magnificent lichens for their ferneries. Most of this party had copies of the Telegraph in their pockets and they sacrificed them by turning them into wrappers for the mossy treasures they had found, while others brought their pocket handkerchiefs into play for the same purpose. Then they descended to the red granite business again, and after witnessing the shooting of a huge rough ashler down the sluice and introducing Mr. Martell to the workmen a start was made for the polishing mills, the members of the press and others being invited to a seat on the cars, the remainder going in wagons. The ride down the tramway was a very enjoyable one, but too short to admit of its being fully appreciated. The party examined the new building, as well as the boiler and portions of the machinery which lay about ready for erection and then they were called together by Mr. Sharp, who after a few words of welcome, beheaded Piper Heidsick and proposed the Chief Magistrate of the United States. General Warner, being called for, made a very appropriate speech, referring to the increasing social and business intercourse of his own country with Canada, and the mutual benefits accruing to each therefrom. He had a very high opinion of the quarries on both sides of the river, and thought they were all that could be desired, in both quantity and quality. He had no doubt that the industry being developed by the St. George company, as well as by the other company over the river, while it would afford employment and be of great advantage to the people of the vicinity, would divert the red granite trade of his own country, where there were no quarries of it yet discovered, from Scotland to New Brunswick. All other things being equal, he knew that the business men of the United States would purchase here in preference to sending their money across the Atlantic. Then Samuel Johnston, Esq., was called on to respond for the company, which he did by saying that he was more of a workman than a talker. Mr. Sharp proposed the City of St. John and called on Sheriff Harding, who responded in a practical speech, in which he referred to the Spring Hill coal enterprise, which was a move in the same direction as the development of the Granite Quarries of St. George, forming the basis of labor for the people, and a good investment for those who had money to spare. He complimented Mr. Cormack as an enterprising Scotchman, and felt that success would attend the undertakings of the company. He congratulated Mr. Sharp on his success with the Spring Hill enterprise as well as with the present one, and proposed his health, which was drunk with cheers. Mr. Sharp made a brief speech, expressing his thanks for the honor done him. He added that he had interested himself to a considerable extent in the development of two or three very important industries, for his own benefit as well as that of others. He had made some money out of it, but could say that every dollar that had so found its way to his pocket had gone there honestly. He thanked those who assisted him in his undertakings, and felt that those present who had not done so could not but now feel that his representations concerning the St. George Red Granite Company's property were correct, and more than verified. He concluded by proposing the Spring Hill Coal Mining Company, and John Magee, Esq., as representing it. Mr. Magee, in the course of his remarks, was of opinion that in view of our diminishing wood supply we must look to our mines and quarries for the sustaining of our country. Our coal and stone were being very well developed, and he would now like to see a good iron mine or two opened. The Red Granite mountains in view were sufficient to keep three or four companies busy, and there need be no jealous rivalry between them either, as the market was large enough for all. Mr. Sharp next proposed the Bay of Fundy Granite Company, and called on its treasurer, Thomas Barry, Esq., of St. George, who reiterated the sentiments just expressed by Mr. Magee and thanked the party for the hearty reception they had given to the toast. The Press was proposed by Mr. Sharp, who called on Mr. Smith to respond. Adam Smith, Esq., of the St. Andrews Standard, spoke very eloquently to the toast, after which everybody made for his wagon or carriage. Most of the excursionists, including those who had joined the party from St. Stephen and St. Andrews put up at the hotels, although some were hospitably entertained by S. Johnston, James Moran, Chas. Magee, Mr. Lynott, and others. At Bogue's Hotel a very enjoyable social time was had. In the morning some of the excursionists visited the polishing mill and quarries of the Bay of Fundy Red Granite
